

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

OCCASIONAL NOTES.

OUR prognostications for the coming year are a Teaching University Bill, which will be introduced early in the session and pass without much difficulty; and an Organization of Secondary Education Bill, which will not be introduced till after Easter, and will certainly not reach a third reading. Even the *Times* allows that the former question is ripe for legislative treatment, and it is ridiculous to suppose that a minority of Convocation, led by one timorous University member, a County Councillor, and a Q.C., can block a measure which represents a working compromise agreed upon by all the interested parties after years of anxious deliberation and negotiation. The utter collapse of the "Westminster" scheme is of good augury. The latter question is, in our opinion, no less ripe, though the *Times*, with comic gravity, taxes Dr. Fearon and the Headmasters with raw haste, and every year that it is postponed makes the problem not easier but more complex. Yet there is no doubt that any Bill which honestly endeavours to carry out the recommendations of the Royal Commission will bring into the arena conflicting interests and excite serious antagonism. Such a Bill could not, even if the Government chose (which they certainly will not), be rushed like the Voluntary Schools Relief Act, and we had far rather wait than have piecemeal legislation. A Bill, for instance, conferring increased local powers, with no reorganization at the centre, would arouse a storm of opposition among secondary teachers throughout the country, and unite in a solid phalanx the Headmasters' Conference, the Headmasters' Association, and the Teachers' Guild.

THE Headmasters' Conference met in a regular London fog, and they were themselves for a short period be-fogged during the discussion of Mr. Francis's amendment. The scene was, indeed, different from their last London meeting round the hospitable board of the Merchant Taylors' Company, and a cynic of the baser sort remarked: "Quis enim virtutem amplectitur ipsam, prandia si tollas?"

Yet the faithful few (we do not mean those who attended the frugal dinner at the Holborn Restaurant) were rewarded for their pains, and we can report distinct progress all along the line. The first resolution on educational legislation merely reaffirmed what was passed at the last Conference, but this time there was no dissentient voice, and the meeting seemed bent on speeding a national reform rather than on safeguarding their particular interests. Mr. Keeling, too, spoke in very different terms of higher-grade schools from those he used at the Cambridge Conference, and made it clear that he had no wish to cripple or obstruct them, but simply desired that they should be co-ordinated with the grammar schools. Mr. Bell gave a masterly exposition of the present position of the teachers' training question, and, what is more, he seemed to carry the house with him. Dr. James, indeed, professed himself of the same opinion still, but even he was forced by the strong current of opinion to say: "Video deteriora proboque, meliora sequor."

ON the question of entrance scholarships the advance was still more marked. It was not disputed that the preparatory masters must better know the needs and capacities of their pupils than the Headmasters, and the three resolutions framed by the Headmasters' Committee went far to meet their wishes. With a little more tact the third resolution, abolishing Latin verse, might have been carried, and the *impasse* into which Mr. Francis led the Conference avoided. But far more efficacious than any resolution was Dr. Fearon's statement as to the method of awarding Winchester scholarships, and his report of the results. Like Mr. Lyttelton, we wholly fail to see why, if an all-round boy turns out the best scholar at Winchester, smaller and poorer schools like Felsted and Rossall should prefer specialists.

IN spite of the practice of Winchester, we fear the preparatory master still believes that, if a boy is first-rate at classics or at mathematics, he will get a scholarship, and that the other subjects do not really count. This prejudice, if it be one, will not be removed by the qualifying examination which several speakers recommended. We would suggest a simple expedient which would bring conviction to the minds of the most sceptical. Let the qualifying examination in English, French, history, and geography be held first, and only those candidates who satisfy the test be allowed to enter for the final examination in classics and mathematics. Were this plan generally adopted, we should hear no more of children in knickerbockers devoting twenty hours a week exclusively to classics or mathematics.

THE annual meeting of the Modern Language Association, which followed on the heels of the Headmasters', was a contrast both in attendance and in speakers. The hall was nearly full, and the Modern orators were far less unanimous than the Ancient. The out-going President, Mr. Welldon, gave a short, practical, and pithy address. The testimony of a Senior Classic, who has himself taught modern languages, that he is unable to discover the alleged educational superiority of classical over modern linguistic studies, is invaluable. We only wish that he could have delivered it "in another place," and not where he was preaching to the converted. On the vexed question of native *versus* foreign teachers, he took the middle ground that for lower forms, where discipline is all-important, Englishmen are best, but to teach the highest classes an Englishman rarely possesses an adequate knowledge of the niceties of a foreign tongue.

ADMIRABLE as was Mr. Welldon's address, it was eclipsed by M. Paul Passy's *conférence*, which was a veritable *tour de force*. Speaking in English, without a note to aid him, he gave a clear, logical, and lucid exposition of the use of phonetics in teaching, faultless both in idiom and pronunciation. Only an occasional intonation bewrayed the foreigner. There was no resolution before the meeting, and the debate that followed, though lively enough at times, and adorned by the weighty speeches of Dr. Sweet and Mr. Lloyd, tended to be desultory. Mr. Fabian Ware raised a definite, but a side, issue. Mr. Ware pleaded eloquently for a national system of transcription; but the Internationalists, as far as the debaters went, were in the majority, and Mr. Rippmann spiked his heaviest gun by stating that Professor Vietor had abandoned his own phonetic alphabet in favour of M. Passy's.

OF the Holloway Conference we have spoken elsewhere. It is sufficient here to note that the Women's University is, for this generation at least, dead and buried, despatched to the same limbo as the Westminster Teaching University. Mrs. Bryant declared that she had never even heard of a woman who was in favour of it, and the only two male supporters among the delegates, Professor Case and Mr. Strachan Davidson, flatly contradicted, and so cancelled, one another. With characteristic outspokenness, Mr. Pelham pronounced it a dummy that had been dressed up and trotted out on the electioneering stage, and should now be decently stowed away by the property man. Mr. Bryce regretted the absence of Sir W. Hart Dyke (does he need converting?); we missed the Bishops to celebrate the obsequies of the child of their adoption.

WE are getting used to Sir J. Gorst's Manipurings, but among the Merchant Venturers at Bristol he ran amok. "Why," he asked, "is educational progress so slow?" "Because," he answered, "the administration, the government, of our country is in the hands of an aristocratic party which holds its position by the will and favour of an ignorant democracy, which it therefore desires to keep in ignorance." Epictetus describes a cynic as one who must be beaten and yet must love those who beat him. Sir John kicks against the last half of the definition.

THE appointment of Mr. G. H. Rendall to the Headmastership of Charterhouse School, in succession to Dr. Haig Brown, was a surprise, but not an unwelcome one, both to Carthusians and the scholastic world. The other three select candidates were Mr. St. John Parry, Fellow of Trinity College, Cambridge, Mr. Burge, Fellow of University College, Oxford, and Mr. E. T. Page, an assistant-master at Charterhouse. The claims of the first were strongly backed by Oxford, those of the second by Cambridge, and it was generally anticipated that the fact of Mr. Parry's being an old Carthusian would turn the scale in his favour. Mr. Rendall is a son of the well-known Harrow master, was himself educated at Harrow, and, like his father, a Fellow of Trinity College, Cambridge. He succeeded Mr. Selwyn, of Uppingham, in 1887, as Principal of University College, Liverpool. Though never a public-school master, he has had there to deal with a class closely corresponding to a sixth form, and has made his mark both as a teacher and an organizer. Some will remember his statesmanlike speech at the Cambridge Conference on Secondary Organization. Several papers have hailed the appointment of a layman as a new departure, but we understand that Mr. Rendall intends to take Holy Orders, following the precedent of Dean Bradley, Archdeacon Wilson, and Mr. Glazebrook. We hope

that Mr. Page will not omit his periodic letter to the *Times*, though he must regard the appointment with mixed feelings.

IRISH University affairs are all in the air just now. It seems to be assumed quite generally that Government will next session bring in a Bill for the establishment of a Catholic University in Ireland. Under these circumstances one of the London dailies narrates the pertinent advice given to Mr. Arthur Balfour, when he accepted the post of Chief Secretary, by Lord Morris, then Chief Justice: "Young man," said the great officer of law, "you don't know much about Irish affairs. Take the advice of an owld man who knows a great dale. Let no divil of mischief ever timpt ye to touch the Irish education question." We are ourselves inclined to think that a little more time might easily be granted to the Royal University, so that Catholics may learn to know what they really want, even supposing the Government should be willing to endow a Catholic University. The Royal has not yet been at work sixteen years—it is perfectly open; Trinity is so substantially, so that there exists no crying grievance. It is idle to compare Ireland with Scotland as regards the number of its Universities. Although Scotland had three Universities founded within a century—St. Andrews in 1411, Glasgow in 1450, Aberdeen in 1494—yet no two appear within twenty years of each other. And, though Scotland is a "poor" country, yet since the Reformation it has not been poor educationally. Until the present generation, its primary and secondary systems have made it a pioneer in matters educational. Ireland has scarcely felt the wave of reform which has passed over Britain, and has made many of us so alive to the fact that education is linked, and must be co-ordinated, from the lowest primary school up to the University itself. We shall give next month an interview with Monsignor Molloy which is an able exposition of Catholic aspirations.

SUCH is the conflict of opinion in Ireland that few persons have any idea of what is wanted either socially or educationally. So late as 1845 Government established colleges, pretty much on the German model, at Belfast, Cork, and Galway. In 1850 the Queen's University was founded to confer degrees and distinctions upon the students. In 1882 we have this University dissolved and its business taken over by the Royal University, chiefly an examining body after the London pattern. An undoubted effect of its foundation has been the emptying of the excellent colleges in the towns named, because residence in these towns, the following of professors' lectures, ceased to be absolutely necessary; students could cram up these subjects anywhere. The handsome buildings at Cork and Galway are half empty, and will probably so remain as long as Ireland suffers from examination fever. And now Irishmen complain that they are members of a University (Queen's) which has ceased to exist, and are thus deprived of prestige; others cry out that the Royal is no University at all; others again want a Catholic University endowed by the State, and another University for Belfast, and —. And so we have the whole question in the melting-pot once more, with little hope of satisfying any body of men, or any single man, save, perhaps, him who will be President of each new University. And that is not quite certain either.

IT is amazing with what light-hearted *insouciance* certain members of the new London School Board would compel it to assume the functions of relieving officer. We have not a word to say against the feeding of London's hungry children; the heavy and increasing cost of our elementary school system does not secure the efficiency we

require from it where children are starved. But at the debate on December 16, on the whole question, it was not denied that the London School Dinners Association has done its work excellently, having last year a balance of £300. Even if the Association had failed, this would not prove that the School Board should take up work for which, so far as we know, it has no particular qualification. Let the shoemaker stick to his last, and the Board to elementary education. It was elected for that purpose; it has to struggle against increasingly unpopular rates; why should it even debate the shouldering of a burden which would add to its many difficulties?

EDUCATION is now free; but, because the State and the local authority between them provide free education, that is no reason why parental responsibility should be discouraged in the matter of providing food. If food, then why not clothing? If clothing, why not shelter? Why not have all children in great institutions, everything "held to them," to use a convenient Scotticism? We dare to prophesy that the undermining of parental responsibility would prove the removal of the strongest incentive to the marked improvement of the condition of the working classes which this notable reign has seen, the very gravest error possible. There are conditions of existence which thoughtful men and women deplore; an army of social workers is toiling to remedy them. Let us see to it that we do not make room for more taxes. We are not without the light of experience to guide us in this matter. In 1875 New York passed a "Children's Law." Magistrates were authorized to commit destitute children to the public and private institutions of the district, and to order the payment of two dollars a week for each child out of the taxes. As a result, the number of persons who shuffled their children on to the State was amazing. We fully agree with Mr. Bowie, that the School Board as caterer would be a mischievous and disastrous policy.

THE famous Clause VII. of the New "Directory" of the Science and Art Department has by no means been the dead letter hoped for in some quarters. On the contrary, to use the phrase of one of the chief South Kensington officials, it has "caught on like wildfire." Within a week after its publication, applications to be recognized as an "Organization for promoting Secondary Education" in their counties began to be sent in from County Councils and county boroughs alike. Surrey was first in the field; Hampshire and East Suffolk were not far behind; Burnley and Portsmouth soon followed, and nearly a dozen more have since filed their applications. The time of the Inspectors of the Department, from Captain Abney downwards, is taken up in holding local inquiries all over the country, though, as yet, the necessary formalities have not been completed in any given case. The procedure usually is for the Technical Education Committee concerned to pass the formal resolutions adopting Clause VII., and transmit them to the Department. An interview between the local official and a Inspector of the Department follows, and instructions are given that every school and class in the area which is in connexion with the Department should be notified that the application has been made. On a given day, two Inspectors descend upon the Committee applying, question it as to its programme, objects, and intentions, and produce and deal with any objections which may have been sent in. If, as is usual, there has arisen no opposition, objectors having been bought off by a promise of fresh grants, the inquiry is a mere formality, and the report is received in due course. Some persons affect to believe that no actual recognition will be given to anybody until the

fate of the proposed measure of next session is known. Knowing the fear in which the Department stand of their own offspring, and the extent of the political (including religious) influence which is exercised at present behind the backs of the responsible officials, we should not be at all surprised if there prove to be some truth in this surmise.

WITH the ordinary critic, pedant and schoolmaster are synonymous terms, and, when Mr. Collins wishes to trounce some unfortunate editor of an English classic, he declares he is as ignorant as an usher, or, when Mr. Charles Whibley disagrees with some literary judgment of Thackeray, he compares that great man to a dominie. When, however, the general critic enters the *champs clos* of pedagogics, the laugh is generally on the side of the teachers. Thus a fortnight ago the leading article in *Literature* discussed, under the fanciful title of "A Holiday Task for Parents," the vast subject of school books. Well, we had not read far before we began asking ourselves whether we had not mistaken for an original article some newly-discovered *Spectator* of Addison's, or an unpublished chapter of the "Parent's Assistant." First, we learn that the ordinary holiday task for schoolboys is a portion of Cæsar's "Commentaries," or a version of "Paradise Lost" into Virgilian hexameters. Next we are told that books on the theory of teaching are useless, while books on the art of teaching "are not numerous, and we need not say much about them." Benighted as this sentiment seems to us, it is, we allow, shared by most public-school masters. We have next a denunciation of "Mangnall's Questions" as a desultory or unsystematic method of imparting information, and of "Sandford and Merton" as too goody-goody for Young England of to-day. Lastly, we learn that Balbus and his wall have gone out of fashion, and that aids to language teaching have improved. But, if there is less of *Propria quæ maribus* and *As in præsentis*, it must not be supposed that modern languages are ousting Latin and Greek. On the contrary, there is a "tendency to a more cordial recognition of the supremacy of the classics." And so our Rip Van Winkle concludes that there are too many aids to ignorance and a plethora of educational literature. If this is educational literature, so say we.

MR. BRYCE does not see any immediate prospect of an Education Bill which shall incorporate the findings of the Royal Commission. In the meantime there is a growing activity on the part of local authorities. At Portsmouth, for instance, a conference has been held of representatives from the various educational authorities in the town. Only a brief summary of the discussion has been issued, and we can form no opinion on the details. Dr. Dufton, representing the Science and Art Department, had prepared a scheme to co-ordinate existing agencies. We give no opinion on the scheme; but the important point is that an attempt should be made to obviate competition and all its attendant miseries between the various schools in the town. It is an administrative rather than an educational question; but, as we said last month, the teacher is only too often hampered by inefficient administration. A *concordat* at Portsmouth would be welcome news.

WE have already stated our opinion that the curriculum of the Science and Art Department for Schools of Science is based on the assumption that pupils should remain three or four years in order to get any considerable benefit from the course. But there is no small body of testimony to show that the first two years of the course

afford a very satisfactory training even for pupils whose education then stops. The Department, however, inclines to the former view, and has caused great consternation by issuing a warning that in cases where a large percentage leave before the completion of the course "it will be a question whether the school shall continue to be recognized as a School of Science." It is amusing to note that, while the National Union of Teachers are strong in their condemnation of Sir John Donnelly's letter, and blame the Headmasters' Association for it, the Headmasters, in their own organ, can scarcely find language strong enough to express their dismay. It will be a great pity if any school which is now maintained chiefly by South Kensington grants should have to close its doors.

IT may be possible that the change proposed is rendered necessary owing to the greatly increased demands upon the Department, and to the obduracy of the Treasury in limiting the sum at its disposal. But we prefer to believe that it is part of a deliberate scheme to raise the position of the Schools of Science. The last "Directory" has made an attempt to raise the standard of entrance to these schools; and this latest edict insists upon a three or four years' course. This seems to us as it should be. But we conceive it can only be a step leading to the formation of another class of school to meet the needs of those boys whose parents cannot afford the full course. There must be the higher primary school as well, where the curriculum is planned as a two years' continuation for ex-standard children. Such schools should have an equal claim to support from the Science and Art Department, though they need not be termed Schools of Science.

WHEN Sir John Gorst assures us that the Vice-President is "a bit of a sham," and that he may be likened to the figure-head of a ship, whose course is directed by the steersman behind, we are inclined to suspect the modesty that would minimize real influence. But it may mean no more than that Sir John has taught his audiences to expect humorous shafts of self-depreciation, and that he now feels bound to satisfy the expectation. His remarks on the need of greater local effort, when he distributed the prizes at Enfield Grammar School, were excellent. "Local effort," he said, "local superintendence, and local activity are more likely to produce the ends in view than all the Bills which Parliament can pass." And "there may be mis-education, but there cannot be over-education." It is just to prevent the former that we would like to see a strong central authority, both to stimulate and to control local activity. The bogey of German competition was trotted out; but Sir John was on this occasion, we conceive, too alarmist; at any rate, we fail to find chapter and verse for his authority. Where Germany excels us is in "system." So much of our educational work is rendered futile and ineffective for want of proper co-ordination.

"YOU came to this school to be wedded to Latin and Greek, and not to flirt with German." Thus Mr. Curzon's headmaster to him when he humbly asked to be allowed to study the more modern language. It is the fashion now to decry the old classical training; but Mr. Curzon at the Mansion House perhaps overdid it in his efforts to descend to a "commercial" audience. The practical is everywhere superseding the ornamental, he says, and so the future clerk must study, and study alone, those subjects that will prove of practical value in the counting-house. But, when Mr. Curzon proceeds to outline a curriculum, "the practical man" may well shake his head

in doubt. First is to be placed the study of our own tongue. Here we cry at once for a definition. And, to our shame, no one has yet produced a satisfactory statement of what the study of English should consist. And the utilitarian will ask where is the practical result of a knowledge of Chaucer or of Ruskin, of Lindley Murray or of Clarendon Press Shakespeare notes. Except in so far as correct orthography is concerned, the study of English has a high but not a utilitarian value.

IN the second place, Mr. Curzon puts a mastery of one, and, if possible, of more than one, modern language. This, of course, from the assumed point of view, is quite sound. French and German may be distinctly utilitarian. Then would come history; after that geography, and, finally, science. There is no doubt that "commercial schools" have a great future before them. They should give a two years' course of special training after the general education of the school. But the present difficulty seems to be money. The "whisky-money" is almost entirely spent on scientific and technical instruction. The Chambers of Commerce have taken the matter in hand, and are supported by some County Councils. So that something may soon be done in this direction, though we confess that Mr. Curzon's scheme of studies is too vague, and not practical enough to satisfy those who boldly cry "utilitarian," and nothing further. The pity of it is that those who utter this cry do not realize that a narrow training on one definite line does not produce a capable man, and, consequently, does not produce a capable clerk nor a capable workman.

WE confess to a certain feeling of irritation when this "utilitarian" argument is put forward in an unintelligent way. The object of education is to produce a capable citizen of good character. The aim is distinctly utilitarian. At the same time, it deserves all the highest-sounding epithets that can be discovered. Capacity in the counting-house is not necessarily formed by the study of commercial geography and handbooks of commercial correspondence. The intelligence is to be evoked and the character formed by the best methods known to educators. When the intelligence has been once trained the special technical knowledge can be readily acquired. That is but the veneer: the mainspring of character and intelligence is to be sought elsewhere. "I would rather," said a successful science teacher the other day—"I would rather my boys knew the tale of Troy than the component parts of the atmosphere." "Greek," to quote a *Times* article a few days ago, "is the key to the noblest thoughts that have moved mankind, the influence of which is still felt in every department of mental activity." Noble thought precedes noble action, and the educator's part is to endeavour to produce the noble thought.

OUT of ten or eleven training colleges where secondary teachers are taught, many provide no religious teaching." This sentence is attributed in the newspapers to the Archdeacon of London. It implies a reproach on secondary training colleges which, we believe, arises from a misapprehension. Primary training colleges continue the general education of the student at the same time that they give instruction in the art of teaching. And so religious instruction is naturally included. The circumstances in a secondary training college are different. Here the candidate is assumed to have completed his general education and to need instruction only in the art of teaching and in the sciences underlying that art. To give special religious instruction is

no more the duty of a secondary training college than it is of a medical school or an engineering college. By the way, the Report of the Joint Training Committee is now complete; but, as it has not yet been presented to the councils of the represented associations, it is still to be regarded as a privileged document, and so we refrain for the present from full discussion of its details.

THE question of home lessons, which is now being discussed in some quarters, depends very largely upon the circumstances of the school. We have already stated our opinion that too much home work has often proved a serious evil. The important thing is that time must be occupied somehow. The mischief is always ready for idle hands, and much more for idle brains. In a boarding school where boys are under proper supervision the out-of-school preparation may be wisely limited, especially in summer. There are games, and the hundred and one interests of good boarding-school life. In day schools for young children who come from "cultured homes," and whose leisure is well filled up by home interests, there is little if any need for home lessons. But in the large number of middle-class day schools where the only possible, or at least the usual, form of out-of-school evening recreation is loafing in the streets, for such boys severe home lessons are a most valuable safeguard.

"GOOD reading is the first training of the beginner, the last crowning excellence and consummate perfection of the finished master of all perfected culture." This sentence, which sums up Mr. Thring's valuable advice as to reading aloud, might well stand as the text of two interesting circulars which the Education Department has just issued on the teaching of reading—one to Inspectors and the other to heads of training colleges and pupil teachers' centres. Both circulars are written with great point and directness. They state that, while the teaching of reading, as at present carried on in primary schools, is, for reasons given, "unsatisfactory," and if continued on present lines is not capable of "any great ultimate improvement," yet that good reading is quite attainable if training-college students are properly instructed. Of the primary importance of good and clear articulation and expression, on the part both of boys and of masters, there can be no doubt; but in practice its importance is often lost sight of in secondary schools. And not a few schoolmasters would gain some valuable hints from these two circulars.

IT must be admitted that boys are often allowed to read and to answer in a slovenly way. The danger of this is well pointed out by Mr. Thring. Indeed, in his picturesque way, he describes "articulation" as "the Aladdin's lamp which is to whisk everything into its place," and "revolutionize the whole world of tuition." "Nothing more than a rigid, absolute, unflinching exacting of articulate speech, and the pronouncing the final syllable of each word firmly, distinctly, and unmistakably." These truths need laying to heart. The elementary teacher may indeed wince at certain outspoken phrases in the circulars, such as the impossibility of teaching "in the midst of confusion and clatter"; the encouragement of "hypocrisy" by pattern-reading. The cynic may chuckle at the thought that after more than twenty years of inspection Her Majesty's Inspectors have to be warned to pay attention to the first of the three R's. But two things may be noted. First, the teacher is not responsible for the fact that he may have to teach reading to fifty children in a room where other classes are being held. He would gladly change this. And,

secondly, the new *régime* is turning the grant-awarding machine into an intelligent inspector of methods and results.

WE have received from John Paget, Anglo-Indian Scholastic Agent, *alias* William Ridley-Carr, a long rigmarole of which one sentence will suffice—"I have been inveigled from London by the Home Office, the Treasury, the Lunacy Commission, and the Commissioner of Police combined, and made away with secretly into country prisons." We recall the old epigram:

'Tis said that Baxter Rose & Norton
Deny the plaintiff's Arthur Orton;
They can't deny what's more important,
That Arthur's done what Arthur oughtn't.

TECHNICAL EDUCATION.

THE existing provision for agricultural education in England and Wales is adequately summarized in the Report of the Board of Agriculture for 1896-7, rendering an account of the stewardship of the Parliamentary grant of some £8,000, which has been entrusted to that Department for educational purposes. Of £6,950, distributed among various institutions, £6,000 was allocated to eight collegiate centres. It appears from a return that twenty County Councils are acting "in more or less close association" with these centres. It is estimated that in 1896-7, out of £513,000 allotted to all forms of technical education in fifty English counties, £78,000 was devoted to instruction of a character "which could be separately distinguished as agricultural." Instruction in dairy-work was given in all but six of the counties, and experimental work undertaken by twenty-eight out of fifty in England, and by seven out of twelve Welsh counties.

As it is pointed out in the report, the collegiate centres "are designed to serve not only the purpose of a college for the training of a more or less limited number of students pursuing a continuous course of study for two or more successive years, but also to offer, as occasion demands, facilities for a variety of other shorter courses of instruction, and for the maintenance of a qualified staff available for the conduct of local classes in the surrounding county areas, and the direction of organized experimental work." This, in a few words, fairly represents the possibilities of a "collegiate" centre, and, no doubt, the policy of the Board has helped to concentrate local resources, which might otherwise have been less effectively employed.

THE number of in-college students taking regular courses in agriculture at the eight centres was less in 1896-7 than in the preceding year. The total appears to have been 107—69 in the first year, 31 in the second, 5 in the third, and 2 in the fourth or fifth. In 1895-6, of a total of 125 students, 70 were taking the first-year course, so that 29 did not continue their studies for the second year, while only 5 out of 41 continued for the third year. This can scarcely be regarded as a satisfactory prospect for collegiate instruction in agriculture. The total of 107 students were distributed as follows:—Bangor, 8; Leeds, 4; Newcastle-on-Tyne, 12; Aberystwyth, 5; Reading, 14; Nottingham, 8; Cambridge, 18; Wye, 38. In addition there were 95 students at the eight institutions for shorter courses of instruction.

THE contributions of County Councils to the collegiate centres—which in 1896-7 amounted in round figures to £13,700—may be regarded as payments for work done rather than subsidies for collegiate work and general maintenance. The grants of the Board of Agriculture, therefore, are presumably made chiefly in the interests of the in-college work. If this is so, it is not easy to understand why one particular department of a local University college, or the collegiate interests of one industry, should enjoy Parliamentary bounties denied to other departments and other industries. Moreover, in considering the claims of different centres for a share in the grant, it should be necessary to apply some such tests as those which guide the Treasury in the allocation of the grant in aid of local University colleges.

UNDER present conditions the principles which govern the Board of Agriculture in the distribution of the £6,000 among the "collegiate centres" are not sufficiently obvious. In the case of the subsidies to local University colleges, no grant to any college may exceed one-fourth of its local income from fees, endowments, and subscriptions for arts and science. The Board of Agriculture, no doubt, accept payments from County Councils for work done, as the equivalent of

local contributions, and, if so, they are well advised, for these payments may be said to represent the value of the "centre" to the localities. But this consideration does not appear to have determined the appropriation. Wye Agricultural College, for instance, received a grant from the Board equal to about 5 per cent. of its local resources; the Yorkshire College at Leeds, 17 per cent.; Nottingham, 51 per cent.; and so on; the highest being Cambridge, which received 78 per cent.

NOR is the grant given in proportion to the number of students under regular instruction, for the Wye College, with 38, received the lowest grant—£400—and Aberystwyth, with 5 students, obtained £800; while Nottingham, with 8, was awarded £600. It may also be observed that the Reading University Extension College, if it receives the same grant this year, and if the grant to the British Dairy Institute (which has now been amalgamated with that institution) is continued, will obtain £1,100, the largest grant yet given to one "centre" in the country. The British Dairy Institute is, of course, doing an excellent work, and last year 106 pupils were under instruction, some 20,000 gallons of milk being employed in the manufacture of cheese and butter. It may be noted, however, that the Midland Dairy Institute—which received no grant from the Board—dealt with 138 students and 131,000 gallons of milk. Similarly, it may be seen, the Dairy School at Worleston, and the Agricultural School at Holmes Chapel, established by the Cheshire County Council, and other schools which have come into existence in the interests of agriculture, are not aided by the Board. Possibly these apparent anomalies are capable of an easy explanation, and in any case the Board may be credited with the single-minded purpose of doing the best for agriculture with the resources at its disposal.

THE sixth annual general meeting of the Association of Directors and Organizing Secretaries for Technical and Secondary Education is announced for the 7th inst., at the Guildhall, Westminster.

THE Association of Technical Institutions will meet on the 28th inst., at the Hall of the Worshipful Company of Grocers. Sir Bernhard Samuelson, Bart., F.R.S., has consented to act as President for the year.

HIGHER-GRADE SCHOOLS, *ÉCOLES PRIMAIRES SUPÉRIEURES*, AND *REALSCHULEN*: A COMPARISON.

MR. MORANT'S clear and exhaustive account of the French system of Higher Primary Schools* will be found a valuable source of information by all those who are studying the problem of the delimitation of primary and secondary education. It is evident, not only that Mr. Morant has made a careful study of the French system, but also that he has a fair acquaintance with English higher-grade schools and that he understands their point of view. Although one may differ from some of his conclusions, it is impossible not to feel that his paper is the work of a man of wide experience, keen observation, and sound judgment. Mr. Sadler's paper on the Berlin *Realschulen* is also very instructive, but as it only deals with some twelve schools, all in one town and all founded within the last few years, it is much more restricted in its scope.

In comparing the *Écoles primaires supérieures* and the Berlin *Realschulen* with English higher-grade schools, it is useful to begin by considering the history of each set of schools. The French schools are the oldest. Mr. Morant says (page 94) that in one place after another, but especially in the greater cities, the need began to be felt as long ago as the early years of this century for schools which would provide an education higher than that of the ordinary elementary school, but different in character and scope, and especially in duration, from secondary education, whether classical or modern. Schools to supply this need were founded by the municipalities. By-and-by the State began to encourage the movement by giving grants in aid. Meantime the schools increased in numbers, and their curricula, from being vaguely continuative, began to grow more technical in character. Then in 1880 came the commencement of State organization. Since 1880 there has been a great increase in the numbers of these schools, and they have divided themselves, roughly speaking, into two classes, trade schools, and schools giving a general education, but since 1893 there

has been a marked tendency in these latter schools to give a greatly increased quantum of quasi-technical education in place of the general education which has hitherto predominated.

In England these schools began to come into existence in the early eighties, some ten or twelve years after elementary education had become compulsory. As in France, they appeared first in the large towns. During these early years most town schools with a fair proportion of seventh-standard scholars took to calling themselves Higher-Grade Schools, but the Board Schools, with their more liberal staff and their superior accommodation, were rapidly forging ahead, and by 1890 the name Higher-Grade School was practically confined to one Board School in each town, which became the Higher-Grade School. Only the very largest towns have more than one higher-grade school. The name is perhaps not a very suitable one, but it has become established. These schools all agreed in being elementary schools with a considerable number of ex-standard scholars. To find something for the ex-standard scholars to do they were taught science for the South Kensington examinations. It was found that they passed very well and earned large grants. These grants enabled the School Boards to staff and equip higher-grade schools in a much more generous manner than ordinary elementary schools without provoking serious opposition from the ratepayers, among whom these schools in their early days were far from popular. To-day the upper department of a higher-grade school has become, in nearly all cases, what is known as a School of Science, with a curriculum in which science, mathematics, and manual instruction predominate, and other subjects are treated as subsidiary.

The *Realschulen* of Berlin began to be founded in 1883. They were not an upgrowth of the elementary, but a downgrowth of the secondary system. Like the English schools they were, however, intended to provide for the further education, partly of those elementary-school boys who will in any case stay at school a year or two longer than the average, and partly to provide for the education of those promising elementary-school boys who would have to leave early because of their parents' lack of means, but who can be retained at school a little longer by a system of scholarships. They are differentiated from the other Prussian *Realschulen* by the fact that modern languages are not taught in the two lowest classes, but are begun in that class which a boy would enter who had remained in an elementary school till the age of twelve.

On comparing the history of the three sets of schools it becomes evident that they all came into existence to provide for a class of elementary-school children whose parents wish to keep them at school for two or three years beyond the usual leaving age in elementary schools, but who will nearly all leave before the age of sixteen. In France and Germany, where secondary education is at least as well organized as elementary, it was understood from the first that such pupils could not profitably be passed forward into those secondary schools where the leaving age is sixteen and upwards, and, therefore, almost from the first, governing bodies, whether central or municipal, endeavoured to frame suitable curricula for this class of pupils. In France these curricula have a leaning to technical education; in Berlin modern languages and mathematics form the most important part of the curricula. In England, where elementary education is well organized and secondary education is not organized at all, the higher-grade schools attracted no notice from the educational public until they had become thoroughly established. Then, when a certain number of local grammar schools began to lose a few pupils, higher-grade schools suddenly became famous—notorious is, perhaps, a better word—and many benevolent schemes were promulgated for their better organization. The drift of most of these schemes is sufficiently indicated by the remark of the Royal Commissioners on Secondary Education (Vol. I., page 144):—"We may hold it as certain that . . . these schools admit of correlation and development, but not of abolition or even repression." The curriculum of these schools up to about three years ago consisted chiefly of science, falsely so-called, mathematics, and drawing, with a very little literature. To-day the curriculum still consists mainly of science, mathematics, and manual instruction, but there is a fair amount of literary instruction given, and the science is taught on a rational plan. It is important to notice two things, first, that the schools have become science schools

* "Special Reports on Educational Subjects: Education Department" (Eyre & Spottiswoode).

mainly by a financial accident, and not because there was any effective demand for science teaching, and secondly, that they must be possessed of extraordinary vitality or they would have been killed long ago by the painstaking and conscientious mal-administration of South Kensington in the years previous to 1895.

These schools do not seem in France and Germany to have provoked the same hostility which they have to meet here. The reason appears to be that in France and Germany "secondary education" is a clearly defined term, and secondary schools as a body are at least as efficient as primary schools. On the other hand, in England secondary education is an ill-defined term, and secondary schools as a body are not so uniformly efficient as primary schools, that is to say, there is a greater range of difference between the good schools and the bad schools, and the average school is not so good as it would be if secondary schools as a body had been submitted to efficient inspection for the last thirty years. The consequence of this is that, while higher-grade schools have for the most part drawn their pupils from the class of pupils who attend elementary schools, they have also taken a few boys whose parents would have preferred to send them to the local grammar school if they had been sure that the latter were efficient. Some headmasters of grammar schools have thereupon fallen into a state of panic; they have dreamed of the indefinite multiplication of higher-grade schools, and have declared that the latter were useless and dangerous and ought to be abolished. When the impossibility of this course became evident they developed an enthusiasm for the reform of the higher-grade school curriculum. It would have been more easy to believe in the sincerity of this enthusiasm if it had been manifested in the days when the curriculum of higher-grade schools was really an unsuitable one, and when the headmasters of these schools had to fight single-handed a continuous battle with the military stupidity of the Science and Art Department. Latterly, however, a more reasonable spirit has prevailed, both sides have become better known to one another, and it has become evident that grammar schools and higher-grade schools have each their proper duty to perform, and that they are complementary and not antagonistic to each other.

Competition between schools is not under normal circumstances a good thing, but I do not believe that higher-grade schools ever have competed seriously with efficient local secondary schools or that they ever will do so. The extent to which competition has taken place has been greatly exaggerated. Such competition as there is will be very useful if it stimulates the weaker and less efficient grammar schools to improve their premises, their apparatus, and, above all, their teaching staff, and if it further brings about, as it seems likely to do, an official classification of existing local grammar schools into secondary, higher primary, and primary schools. Certainly, the existence of higher-grade schools has given a strong stimulus to the movement for the proper organization of secondary education.

The relations which exist between the three sets of schools, and the elementary school systems with which they are respectively connected, present some interesting points of comparison. In France, the higher primary schools charge no fee, and only grant admission to pupils who have passed a year in the highest standard of the elementary school and gained a leaving certificate. In Berlin a fee of about £4 per year is charged; boys who can pay the fee are admitted at about ten years old, and some ten per cent. of the whole school consists of boys who are passed on at the age of twelve from the elementary school by means of scholarships. In England most higher-grade schools charge a fee of 6d. a week, but they provide a large number of free places. The class which most headmasters like to begin with is Standard IV. Where a higher-grade school begins with Standard I., this is usually because it has been formed out of a previously existing elementary school. In Birmingham the higher-grade schools begin with Standard VII., a plan which meets with Mr. Morant's approval, and which is frequently extolled by people who have no personal knowledge either of the working of a higher-grade school or of the local circumstances in Birmingham. The main mischief resulting from this plan is that boys are in the school too short a time for it to exercise any real influence upon them, whether from the ethical or intellectual point of view. Further, because they come to the school later than in other higher-grade schools, they have not time to get fond of school, and so they leave earlier. The older

of the Birmingham higher-grade schools was founded thirteen years ago. It is still housed in the building in which it commenced work, namely, an old cocoa-factory, a dingy building unsuitable in every way for the work of any school, not to mention a higher grade school. It is curious to note how the three sets of schools have to face the same difficulties. In Germany, as in England, doctrinaire opinion inclines to raising the age of admission from ten to twelve, but in both countries the headmasters of the schools are emphatically in favour of the earlier age. In France the difficulty is less acute, because the pupils can fulfil all the conditions of admission and yet enter at the age of eleven. In Berlin, as in England, the teachers of the elementary schools complain a good deal that their schools are robbed of what Englishmen call the "best boys," and Berliners "das unentbehrliche Ferment." Mr. Morant does not say whether the same difficulty exists in France, but I infer that it does from his statement (page 358), that many pupils who would have profited greatly by entering a primary school and following the full course had been misled into staying at ex-standard classes where the instruction practically differed but little from that of the highest classes of the elementary school. *Coelum non animus mutant.* It is only in moments of inspiration that some schoolmasters ever grasp the fact that teachers exist for schools, and not schools for teachers.

In all three systems the schools appear to be *écoles régionales*, that is, they draw their boys from all the surrounding district. In England and in Berlin some irritation appears to exist on this score. In France the irritation seems to be absent. Probably the reason is that in England and Berlin the expense falls, or is believed to fall, on the local authority, while in France it is understood to be borne mainly by the central authority.

It is interesting to note that the money spent upon the French and the German schools is allocated neither by results of examinations nor by capitation. Yet the schools flourish, and are not less efficient than the institutions to which South Kensington doles out its elaborately calculated sixpennyworths of aid.

Mr. Morant explains (page 291) that in the French schools the conditions of admission are drawn up with the idea of excluding all children who, being intellectually unable to profit by the higher instruction given, would fail to repay the country by their improved talent and industry the value of the public funds that would be spent upon them. After taking precautions to exclude the unsuitable, great efforts are made, by means of an extensive and universally applied system of scholarships, to put these schools within the reach of the most intelligent and promising of the poorest class, these scholarships being awarded on the result of strict competitive examinations. The ends aimed at here are desirable enough, but it seems to me that the means employed would in England, at any rate, fail to secure these ends. To begin with, it is impossible at the age of eleven years to pick out with any certainty those boys who are fit to become either the captains or the *sous-officiers* of industry. An examination at that age always favours precocious boys, especially those who have a literary turn. If the examination is *à viva voce* then boys from an educated home have an enormous advantage over the shy awkward lads from poorer homes. And further, since elementary schools are by no means all alike in efficiency, a boy's chance of getting a scholarship will always depend a good deal upon what school he is attending. But there is a more serious objection than any of these. The qualities most necessary both for the captains and the *sous-officiers* of industry are strength of character and soundness of judgment combined with good mental ability. These qualities, however, do not as a general rule show themselves at the age of eleven, and boys who possess them are generally lads of good bodily constitution, not dunces, but more distinguished in the playground than the class-room. Such boys always develop slowly, and are much more easy to recognise at the age of fourteen or fifteen than at eleven. It is possible, of course, that differences of race may affect the question of earlier or later development, and in France the system may work well, but it would work badly here. The plan adopted in England and in Berlin, of admitting all comers who care to pay the fee, and reserving a certain number of free places, works fairly well, and really does secure the boys who will become the *sous-officiers* of industry, for it must not be forgotten that heredity is a factor which cannot be overlooked. The future *sous-officier* will largely be found among the children of the present *sous-officiers*.

Mr. Morant states that the dominant idea which inspires the French higher primary schools is that the schools will best serve society by developing in the children a love for the work by which they will have to get their living. This idea is well put in the quotation from Le Blanc which is prefixed to the paper: "The first and best safeguard that our schools can give for the morality of the man is to create in every scholar an aptitude for and a liking for the labour by which he will have to live." Mr. Sadler says that the *Realschulen* keep before them the ideal of a liberal education, but that their curriculum naturally leads up to a commercial life (pages 387-388). He adds that in the opinion of competent observers the ethical influences of the *Realschulen* are not inferior to those of the *Gymnasien*. As the leaving certificate of the *Realschulen* is a key to the higher positions in business life it is probable that for the children of poorer parents the ethical influences of the *Realschulen* will be based to a certain extent on the gospel of getting-on. English higher-grade schools, unlike the corresponding schools in France and in Berlin, were not founded with any definite aim. They were not even founded of malice aforethought. They owe their existence to the pressure of necessity. School Boards had ex-standard children for whom they had to provide somehow, and so they founded a higher-grade school. At first there was no very clear notion as to what subjects a higher-grade school should teach, and why it should teach them, but by a financial accident the schools drifted into teaching science. So far as my experience goes this curriculum was distinctly unpopular with the parents, but, as the only alternatives they had were to take their children away altogether or to transfer them to a grammar school, they grumbled and submitted.

In 1895 the course for organized science schools was re-organized and the grants began to be paid on a less mischievous system than formerly, so that at present the course is fairly suitable for the average higher-grade school, and with a little modification could be made a very good course indeed. I desire to believe that an ethical idea, or at any rate an idea of some sort, inspires the administration of South Kensington. *Credo quia impossibile*. But I am sure that the School Boards had to find accommodation first and ideas afterwards. It must be remembered that a School Board is not a single entity, but consists of separate members who are constantly changing. Consequently a School Board is often animated by half-a-dozen ideas at one and the same time, for the most part benevolent, but often hopelessly contradictory. I should say that some of the main ideas which have inspired School Boards in maintaining their higher-grade schools have been the desire to open out a career for promising boys, the notion that education is a good thing and cannot be too widely diffused, the notion of a ladder from the gutter to the University, the German competition scare, Robert Lowe's notion that we must educate our masters, and Herbert Spencer's opinion that due instruction should be given in science. School Boards are not yet, however, in my opinion, actuated by that clear dominant idea which guides the administration of the French schools, namely, that the workman shall be so trained that he shall love his work for its own sake. Order and intention are, however, developing themselves out of chaos and aimlessness, and School Boards are steadily setting themselves to consider what is the end that their higher-grade schools ought to serve in order to be of the most use to the body politic. A good deal of their time and thought, however, has been occupied in protesting against the arbitrary and ignorant mismanagement of South Kensington, and in repelling the attacks of different people who would have been glad to see higher-grade schools abolished. A School Board which desires that scholars in a school of science shall receive instruction in Holy Scripture and in singing, but is informed by "my lords" that "literature" includes cookery, carpentry, and dress-cutting, but excludes Holy Scripture and singing, finds it useless to sit down and consider what might be the chief end of higher-grade schools if Departments ceased from troubling. The fact remains that the English system of higher-grade schools has had up to the present no clear controlling idea from within, and that the people who are endeavouring to impose a controlling idea upon it from without are too much in the position of interested parties and too little acquainted with the facts of the case to be trustworthy guides in this very important matter. Meantime the matter is settling itself in a pretty satisfactory way. *Solvitur ambulando*.

Another interesting point of comparison between the three

sets of schools is the nature of the teaching staff. I gather from Mr. Morant's paper that in France the higher primary schools are staffed by the pick of the elementary school teachers. The Berlin *Realschulen* are staffed by highly educated and well trained secondary teachers. Mr. Sadler states the salaries paid to these men, but he does not say whether these salaries are higher or lower than those paid in secondary schools above the rank of *Realschulen*. The point is important, because it would determine whether or not the teachers in the *Realschulen* are an inferior class of secondary teachers. It is certain, however, that if twelve *Realschulen* were opened in England to-morrow they could not be staffed with teachers equal to the German teachers, because, in England, men who combine professional training with the high standard of scholarship which these German teachers reach do not exist in sufficient numbers. The English schools are staffed by men from the pick of the elementary teachers. It would undoubtedly be a great advantage if some of these men had themselves had better educational facilities in their early years, but it must not be forgotten that they are picked men, that good natural ability helped by the persevering study of maturer years does a good deal to compensate for the lack of instruction in earlier life, and that power of stimulating boys depends a good deal upon natural ability and force of character.

Oxford and Cambridge men have a curious and probably a real difficulty in avoiding the assumption that men who have not enjoyed their advantages must necessarily be inferior to them both in teaching power and in attainments. They forget that what is perhaps true when one compares types is not necessarily true when one compares individuals—that because the English are a taller race than the French, it does not follow that Mr. A. is taller than Monsieur B. They also forget that professional training counts for something, that moral force and intellectual ability are not the monopoly of any one class, and that while higher-grade schools certainly get the pick of the elementary teachers the local grammar schools can hardly be said to be staffed with the pick of the secondary teachers. The social class of the scholars attending these schools appears to be much the same in all three countries. Mr. Morant says (page 322) that the French schools are not used to any great extent by any social class higher than that of the *petit bourgeois*, though there are instances where the well-to-do classes have made considerable use of the admirable instruction therein provided. The tables given by Mr. Sadler (page 400) show that after making due allowance for the fact that the schools spoken of are all metropolitan, much the same thing exists in the Berlin *Realschulen*. In England the great bulk of the scholars are the children of skilled workmen and of the shop-keeping class. Besides this the schools usually contain a fair proportion of children of well-to-do people who are willing to risk the loss of a little social prestige in order to be sure that their children are being soundly taught, of children of widows with small means and other persons in reduced circumstances, and of children of very poor people who exercise great self-denial in order to keep them at school.

As to the occupations which pupils take up on leaving comparisons are difficult to make. Any comparison with Germany is vitiated by the facts that all the German schools referred to are metropolitan, while London has scarcely any high-grade schools of the type under consideration; that the privileges conferred by German law on pupils who have passed through the *Realschulen* must exercise a powerful influence in deflecting the boys towards certain occupations, and that the *Realschulen* very largely serve as schools preparatory to higher secondary schools. In France a deliberate effort is made to direct the pupils into industrial life, and special care is taken to avoid the production of *déclassés*. The table on page 368 shows exactly what occupations were taken up by the pupils who left the French higher primary schools in 1895. In the absence of any such comprehensive table it is difficult to speak with any great amount of certainty as to the future careers of the boys who leave the higher-grade schools. The difficulty is increased by the fact that the occupation which a boy takes up on leaving school is not necessarily the occupation he intends to follow permanently. The bulk of the boys find immediate employment either in distinctly manual occupations or in shops and offices, a fair proportion continue their education in other secondary schools or in day-classes at technical colleges and institutes, a fair proportion enter upon occupations requiring special know-

ledge in science or skill in drawing, and a few become pupil teachers. Where the father is a shopkeeper, an employer, or a workman working on his own account, the boy frequently enters his father's business, and the education of such a boy can be prolonged with advantage to himself and the public, and with little risk of making him a *déclassé*. Many of the boys who leave continue their education in evening classes, and form the most satisfactory pupils which such classes can get hold of. They have had a good start in mathematics, drawing, science, and languages, and hence they are able to take up with some degree of intelligence the study of technical subjects. A return recently prepared shows that out of ninety-eight boys who left one particular higher-grade school last July only five of those whose work permitted them to enter the evening classes at the local technical school had failed to do so. I do not think there is much reason to fear that higher-grade schools will produce many *déclassés*. *Déclassés* are far more likely to be produced by well-meant but injudicious attempts to pass forward to Oxford or Cambridge youths of scanty means and no social position, but, as a matter of fact, higher-grade schools seldom or never make such an attempt. It would be well if the parents of such boys would ask themselves the very sensible question of Mr. Morant's Frenchmen, "ce que feront leurs fils une fois bacheliers."

The fact is, the whole question of the production of *déclassés* goes a good deal deeper than the scope of Mr. Morant's article will allow him to discuss it. It is all very well to impress upon a boy the dignity of labour and the delight of doing one's work in the artistic spirit; but the boy knows and his parents know that manual labour is for the most part badly paid, and that in many cases, on account of the extreme division of labour, it is drearily monotonous. Moreover, the conditions of modern production frequently require that an article should be made cheaply rather than well, and that being so, the artistic spirit in manual work, the delight of a workman in making "a good job" of any given piece of work, has little scope. Still, if schools can do anything to foster the idea that manual work is as dignified and as useful as any of the occupations which require a black coat and are commonly called respectable, it is, I think, their duty to do it, and after some years their action might have some appreciable effect. At any rate, it is better that schools should aim at fitting their pupils for the life the pupils will have to live than that they should spend all their energies in fostering the desire to "get on," the spirit of making haste to be rich. Boys will imbibe so much of this spirit from other sources that the country never need fear that they will have too little of it. On the other hand the lesson that a man should make the most of the position he has, and cheerfully do his duty in it, is a far harder one to learn, and the influences that teach it are few and weak. Let us hope that not only higher-grade schools, but grammar schools and elementary schools may be added to the number.

SCOTTISH LEAVING EXAMINATIONS.*

By WILLIAM THOMSON.

THE Leaving Examination, in the beginning a beneficent influence, and doing a necessary service even now, is at times, and especially of late, to be likened rather to a lowering cloud that threatens to fill the whole sky. The Leaving Certificate is, undoubtedly, giving secondary education a status with the public which it did not previously possess; its very name is growing familiar, and it is every year becoming a more coveted possession. Perhaps, too, just as the Code, with all its faults, or, rather, by means of these, consolidated the primary teachers of the country as nothing had been able to do before, so is the Leaving Certificate destined to act as the prime unifier of the secondary teachers. But it is not quite fulfilling the aims with which it started. It was to "impose the smallest possible restraint on the individuality of schools." The "larger educational aims of a school," it was allowed, could not be tested by written examination at all. Unless I misread the signs, a school's individuality and larger educational aims will presently be a vanishing quantity. If candidates are to pass in a reasonable number of subjects in the Higher Grade, both they

and their teachers must turn their backs on education in the best sense. The teacher cannot deviate from the straight road to a pass without a pang of what one may call his secondary conscience; he cannot adhere to it without violating his ordinary conscience. As for the pupil, a little more of the process called raising the standard will justify him in wondering whether youth is worth living; it will presently be for him as if the fiat had gone forth: "Six days shalt thou cram, and do no other work; thou shalt not draw, nor cook, nor sew, nor handle a tool; thou shalt not play; the family and the social circle thou must shun; the Bible, and every book that does not carry marks must be laid on the shelf; thou shalt write much, but read aloud or speak hardly at all; for thee there shall be no more instruments of music, and no more song." One is reminded of the rigid metallic folds in the dress of Dürer's figure "Melencolia," which were said to typify the condition of the Europe of the time under the weight of blank intellectualism. Unless I exaggerate, that famous drawing bids fair to find a second counterpart in the state of our schools. We shall have to look for a second Luther to reveal again the merits of gladness.

If any one thinks the picture overcharged, I would simply ask him the question, "In how many of the schools of Scotland do (say) three-fourths of the Higher-Grade candidates pass in four subjects on the present standard?" Is there one? We have no reason to believe it. On the contrary, there are good schools of established reputation where not one candidate in half-a-dozen passes in four subjects. Yet this is a modest expectation. The Western Branch presses for a grouped certificate of five subjects. Nor is it unreasonable to expect three-fourths of the highest class to take a full Leaving Certificate. I question very much whether the teachers of Scotland are prepared to see even one-fourth of their pupils go out into the world, after a ten years' course, stamped with the stigma of failure. R. L. Stevenson said, of schools and colleges, that, for one great man that they completed, they unmade a dozen. We are threatened with a more pressing danger. We have to beware lest average useful citizens be spoiled in the making, go to pieces, and need to be replaced by vessels of homelier manufacture. The strain is not so severely felt in all schools, I dare say. But I can answer for it that it is felt wherever the moderate aim just specified has been attempted. The conclusion I come to is this: the present standard and a reasonable grouped certificate are two irreconcilable things. The highest level reached by exceptional pupils, or under exceptional circumstances, is adopted without inquiry at headquarters as the standard for all schools under all circumstances.

It is not necessary to go into further details as to the defects of the Leaving Examination to see that a sharp remedy is needed. Dr. Marshall's motion* of last spring, or something very like it, is the only one that can be considered satisfactory to teachers, allowing, as it does, liberty to those on the spot to think out what is best educationally for each school. If, however, that proposal is too revolutionary to be entertained by the authorities, the Association should continue to urge the necessity for an early re-arrangement of the present scheme. This ought to embrace not merely English, mathematics, and four languages, but science and other branches as well. A group of four subjects, three if one is taken on the Honours standard, should suffice for a pass, and five or six or even more might be permitted on the understanding that the marks for more than four would be handicapped on such a scale as to preserve equality. There are weighty reasons why the Honours papers should be abolished. An additional question or two in the Higher Grade paper would serve the purpose. Successful candidates might then be divided into three classes, as in the Cambridge Higher Certificate for Women. If the standard of the present papers were adjusted to the capacity of the pupils, it is generally allowed that they are skilfully set. For example, it is an educative exercise even to work through a German paper. The one marked exception is French. The biggest blot in that paper, the philology, should disappear. It is a direct incitement to pedantry, to which teachers are already

* Dr. Marshall's motion was: "That the Association re-affirms its former resolution that grouped Leaving Certificates are extremely desirable, either as a substitute for, or as an addition to, the present scheme of certificates for single subjects, but that the subjects to constitute such groups shall be fixed for each school by the Education Department, or other examining body, in accordance with the special scheme or schemes of work in such school."

* Part of the Presidential Address delivered before the Association of Secondary Teachers in Scotland, November 27.

"born as the sparks fly upward." Had it been based on the life of words, it might have had something to say for itself, but it involves a knowledge of phonetics, a subject not studied in Scotland, and it is founded on a pronunciation of Latin which may be taught, but is certainly not learnt, in Scottish schools.

It is extremely doubtful whether we shall ever get a satisfactory Leaving Examination as long as the gulf which separates teachers from the examining authority is so impassable. An examining board to which the teachers should have access is what this Association advocated from the first, and the need for it is felt more than ever now. There are numerous important facts connected with the Leaving Examination for the last few years which it is indispensable that the examining authority should know. They are not known, and the future holds out no prospect that they ever will be known. We must do what we can, however. That is why I consider it necessary to have a more formal statement of the views of the Association on the Leaving Certificate than has yet been drawn up. I see no other means towards that end than the appointment of a special committee as recommended, on my motion, by the Western Branch in these terms:—

"That, in view of the strong hold public examination is taking upon teaching, it is desirable that a permanent committee of this Association be formed, to gather the opinions of the secondary teachers of Scotland regarding the Leaving Certificate and other examinations; to formulate these opinions, pointing out defects and making suggestions for improvements; and to bring these suggestions under the notice of the proper authorities in such a manner as may be best calculated to secure their adoption."

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council, of June 19, 1884, the "Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but the "Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

TENTH GENERAL CONFERENCE, ABERYSTWYTH, APRIL 19-22, 1898.

Dr. Isambard Owen has accepted the post of President of the Teachers' Guild, in succession to Mr. James Stuart, M.P., for the year from April, 1898, to April, 1899, and will take his seat and give his Presidential Address at the Conference.

The following are the subjects for discussion at Aberystwyth:—

QUESTIONS OF EDUCATIONAL POLITICS.—(1) The Relation of the Elementary to the Intermediate Schools—*e.g.*, when the bifurcation should take place; (2) Whether it is preferable, in the organization of Intermediate Schools, to have a large number of small schools or a smaller number of large schools; (3) How far is it possible or desirable to co-ordinate County Councils with School Boards in the organization of secondary education?

PROFESSIONAL QUESTIONS.—(4) The Practical Correlation of Subjects in the schools of to-day, and Herbart's Views on Correlation; (5) The Development and Training of the Voice; (6) Child Study: how it should be conducted, and by whom; (7) The Co-operation of Parents and Teachers in the Education of Children.

The following, amongst others, have been selected for invitation to open the discussions on the above list of subjects:—The President of the Guild (Mr. James Stuart, M.P.); Mr. T. E. Ellis, M.P.; the Lord Bishop of Hereford; the Rev. the Principal of Lampeter; Miss E. P. Hughes; Mr. Lyulph Stanley, Vice-Chairman of the London School Board; Miss Penstone; Mrs. Emil Behnke; Mr. B. P. Macdonald, M.A.; Professor Foster Watson, M.A.; and Miss Alice Woods.

The following special experts on the Professional Questions will be invited to send written communications:—Dr. Rein, Dr. Stanley Hall, Dr. E. A. Abbott, and Professor Sully.

Members who wish to attend the Conference are invited to send in their names early to the General Secretary, as it is desirable that an estimate of the number likely to be present should be formed as soon as possible.

The next Teachers' Guild Lecture will be given on Tuesday, March 8, at 8 p.m., in London (place of meeting to be announced later), by F. W. H. Myers, Esq., M.A., H.M.L., a Vice-President of the Guild. Subject: "Wordworth." Any member of the Guild may attend and may bring a friend.

The Council met on December 4th, 1897. Present:—The Rev. Canon the Hon. E. Lyttelton, Chairman; Miss Anderton, the Rev. O. Bevan, Mr. H. C. Bowen, Miss H. Busk, Mr. Charles, Miss

Connolly, Miss Edwards, Mr. Frank, Professor Hicks, Miss E. P. Hughes, Mr. Langer, Mr. Montgomery, Mr. Oake, Miss Page, Miss Smith, Mr. Storr, Mr. Thornton, Mrs. Tribe, Miss A. J. Ward, Mr. J. L. Watson, and Mr. J. Wise.

The Salop Local Guild, which applied for affiliation as a Branch, was duly affiliated.

The Scheme for a Professional Joint Agency for Assistant-Masters and Tutors was approved.

It was decided to invite the College of Preceptors and other associations specially interested in secondary education (some of which have separate agencies for assistant-mistresses and governesses) to take part in a Conference, on January 17th, to discuss the feasibility of establishing a Professional Joint Agency for Women Teachers on the basis of a scheme propounded by the Guild.

The Scheme for the management of the Benovolent or Aid Fund by a Committee of the Council was approved, and the Thrift and Benefits Sub-Committee of the Executive Committee was made a Committee of the Council, and the management of the Fund was entrusted to it, with the addition of the Trustees mentioned in the Scheme.

The list of Conference subjects for Aberystwyth was settled.

It was decided to invite Dr. Isambard Owen to take the Presidential Chair at the Aberystwyth Conference.

Sixty-six applicants for membership were elected, viz.: Central Guild, 11; Branches: Aberystwyth, 49; Croydon and East Surrey, 1; Dublin and Central Irish, 1; Manchester, 2; North Wales (Colwyn Bay Centre), 2.

The General Secretary addressed a meeting, called to consider the question of forming a branch of the Guild at Ipswich, in the Council Chamber of the Town Hall, Ipswich, on Friday evening, December 10; Dr. J. H. Bartlett was in the chair, and among those present were the Chairman of the School Board, the Headmaster of the Grammar School, the Headmistresses of the Girls' High School and of the Girls' Middle School, Miss M. Williams (Local Correspondent), and Mr. G. F. Bridge. It was unanimously decided that a Branch should be formed, and a Committee was appointed to carry the resolution into effect.

CENTRAL GUILD. LONDON SECTIONS. JANUARY, 1898.

Tuesday, 25th, 8 10.30 p.m.—Section C. Social Evening, at 72 Compayne Gardens, West Hampstead, N.W. Dramatic Dialogues.

Friday, 28th.—Section F. At the Clapham School, High Street, Clapham, S.W. 7.45 p.m. Annual General Meeting.—8.15 p.m. Paper by F. Kettle, Esq., B.A., "False Gods in the Class Room," to be followed by discussion.

TEACHERS' GUILD EDUCATION SOCIETY.—The next meeting will be held on Thursday, January 20, 1898, 8 p.m., at 74 Gower Street, W.C. Mr. A. T. Pollard will open a discussion on "The Relative Value of Internal and External School Examinations." The meeting will be asked to decide whether this Society can undertake the inquiry, suggested by Professor Foster Watson at the last meeting, into the number of children at present composing a class in schools of various kinds, with a view to discovering the educational limits of the class.

BRANCHES.

Three Towns.—The first meeting of the Winter Session was held at the Athenaeum, on a Friday evening in November. Mr. G. P. Dymond, B.A., Headmaster of the Hoe Grammar School, was elected as President, and Mr. A. J. Rider, F.C.S., Headmaster of the Stoke High School for Boys, as Treasurer. A very able lecture was given by Mr. J. J. Alexander, M.A., Headmaster of Tavistock Grammar School, on "How to Teach Mathematics." The lecturer insisted that the first requisite of a successful teacher was knowledge, and urged the employment of the methods used in Newton's "Principia" and an acquaintance with differential and integral calculus, as dispelling a common but dangerous fallacy that reverse operations can be carried out by a reversal of method. Mathematics was a science and not a compendium of rules like bookkeeping, or a body of facts like history. The phrase "Mathematics and Science," as often used in school curricula, was misleading. In some respects mathematics is the greatest of all the sciences, for it is the science of space and time and their relations, and as such includes all conceptions. The study of mathematics inculcates habits of accuracy, rapidity, and clearness, which all contribute largely to what, after all, should be the highest aim of all education, the formation of character. Generally speaking, the method of procedure should always be from the simple to the complex, the concrete to the abstract, the definite to the indefinite. Regard, however, should be had to the historical order of development. The fact that the science of geometry was evolved long before that of algebra points to the conclusion that that subject should always take precedence. Euclid's elements should be used because they bring us into communion with old-world thought and are an unique example of deductive reasoning. The lecturer concluded his remarks by some particular examples of methods in the teaching of geometry, algebra, and mechanics, and the evil effects of a purely mathematical training. An interesting discussion was taken part in by Messrs. Dymond, Colson, Rider, Rev. J. Hirste Haywood, and others. A cordial vote of thanks to the lecturer closed the proceedings.

LIBRARY.

The Hon. Librarian reports the following additions to the Library :
 Presented by the Author, per Miss A. G. Cooper :—*Etudes sur la Pronunciation Classique de la Langue Française*, par Madame L. Horta.
 Presented by the Author.—*The Public School and the Special School* (three copies) (pamphlet).
 Presented by Mr. Wm. Rice :—*Bound volume of the Journal of Education for 1897*.
 Presented by Messrs. Bacon & Co. :—*Atlas of Africa ; Memory Map Atlas and Text-Book Combined ; Atlas of Europe*.
 Presented by Messrs. Geo. Bell & Sons :—*Thos. Carlyle, The Hero as Divinity*, edited by Mark Hunter.
 Presented by Messrs. Blackie & Son :—*The Merchant of Venice*, edited by H. L. Withers ; *England and the Reformation*, by G. W. Powers ; *Raleigh History Handbooks (Reign of Queen Victoria)*.
 Presented by the Roxburghe Press :—*Gladys in Grammarland*, by A. M. Allen.
 Presented by Messrs. Swan Sonnenschein & Co. :—*A Run Round the Empire*, by A. Hill.
 Presented by the University Correspondence College Press :—*A Higher Latin Reader*, edited by H. J. Maidment and T. R. Mills ; *Date Chart of English History*, by M. M. Mack and C. S. Fearenside.
 Presented by Messrs. Whittaker & Co. :—*Distinguenda*, by A. P. S. Newman ; *New Grammatical French Course (Elementary)*, by A. Barrère ; ditto (*Intermediate*).
 Purchased :—*Report of Committee of Council on Education, 1896-97 ; Second Anglo-Saxon Reader*, by H. Sweet.

JOTTINGS.

"NUNQUAMNE REPONAM VEXATUS TOTIES?"

Progressives, Moderates for months have roared
 How each the goslings of the State would stuff ;
 Crotchets and creeds have dinned us with their quarrels,
 Some shouting "Dogma !" others bawling "Morals !"
 Till our exhausted patience cries "Enough,
 The country, to a man, is now 'School-bored.'"

THE Court of Common Council has made a grant of fifty guineas to the Home Teaching Society for the Blind, which provides the poor adult blind with teachers and embossed books on loan at their own homes and in workhouses in and around London.

THE Registrar of the University College of North Wales, Bangor, has received a letter from the Clerk to the Drapers' Company, informing him that the Company will be happy to modify in the sense suggested by the College the conditions attached to their grant of £1,000 towards stocking and equipping the College farm. The grant is therefore now made conditional upon a further sum of £3,000 being raised towards the same purpose before the end of the present session. It has been arranged that students pursuing the ordinary agricultural course at the College shall in future reside for a part of that course in the immediate neighbourhood of the farm, and thus get the benefit of practical training, side by side with the theoretical instruction.

In his inaugural address as President of the Queen's College, Cork, Sir Rowland Blennerhassett advocated its expansion into a University for the province of Munster. Some, he said, appeared to think that the existing system of University education in Ireland would be improved by the establishment of a central degree-giving institution, with colleges affiliated to it in different parts of the island. He was himself certain that the centralization of University education was always to be avoided. In every country where it had existed it had worked unmitigated evil.

Literature mentions that Mr. A. C. Benson will bring out next year a biographical history of Eton and leading Etonians, with portraits reproduced from the College collection and from that of the Provost.

BURY GRAMMAR SCHOOL, Lancashire, has just received an anonymous donation of £2,000, to be dealt with as the trustees think fit. The offer was made through Mr. James Kenyon, M.P., one of the trustees of the school.

THE Gilchrist Medal, with a £10 prize in books, has been awarded to Frances Catherine Goslin, a pupil of Cheltenham Ladies' College, who has passed the B.A. Examination of the University of London in Class I.

ARRANGEMENTS have been made for a devotional meeting of school-masters at Radley College on Sunday and Monday, January 16-17, when addresses will be given by Canon Gore. Further information may be obtained from the Warden.

THE B.Sc. Examination for Honours in Engineering at Victoria University has been accepted by the Council of the Institution of Civil Engineers as exempting from their prescribed examination for associate membership.

AT the Day Training College, Cambridge, a scheme of secondary training has been organized for members of the University who intend to become masters in public schools. The course, extending over a year, will be both theoretical and practical, and only members of the University who have passed the "Little-go" will be accepted as students. The fee payable is fixed at five guineas a term.

PROFESSOR HUDSON'S evening County Council class on Pure Mathematics will be resumed after the vacation at King's College on Wednesday, January 19, at 6 p.m. The morning lectures on the Teaching of Elementary Mathematics will be resumed on Saturday, January 22, at 10 a.m.

WE ought to have chronicled last month the election to Parliament of an ex-teacher. Mr. A. H. A. Morton, who succeeds Mr. Justice Darling as Member for Deptford, was for many years master of the distinguished preparatory school at Farnborough (now Mr. Carter's), commonly known as the House of Lords Nursery. On retiring, Mr. Morton availed himself of the Clerical Disabilities Relief Act, but he still retains his Fellowship at King's College. The private-school masters will now have their representative in the House ; the National Union of Teachers have their two delegates ; the Universities are amply represented both directly and indirectly ; but secondary teachers are still left out in the cold, and, in the approaching debates on organization, there is no member who can claim to be their spokesman.

DR. JOHN CAIRD will shortly resign the office of Principal of Glasgow University, which he has held for many years. Principal Caird is one of the Queen's Chaplains in Scotland, and he is considered to be the most eloquent Presbyterian preacher since the famous Chalmers. The headship of Glasgow University is worth about £1,100 a year, with a good official residence.

UNDER the will of the late Sir W. A. Mackinnon, K.C.B., the Royal Society will come into possession of about £16,000 for the furtherance of natural and physical science, including geology and astronomy, and of original research and investigation in pathology by prizes and scholarships. Sir W. A. Mackinnon also bequeathed £2,000 to Edinburgh University for the purpose of founding scholarships in science and modern languages.

THE Headmistresses' Association will hold a meeting at Oxford next October, on the invitation of the Association for Promoting the Education of Women in Oxford.

MISS EMILY PENROSE has been appointed to the vacant Principalship of Holloway College. She has for three years been Principal of Bedford College, where she held also the Professorship of Ancient History. The appointment should do much towards filling Holloway's many empty places. Miss Penrose has an excellent knowledge of modern languages, having resided in France, Germany, and Italy. At Rome she began to give attention to archaeology. Her father was the first director of the British Archaeological School at Athens ; in 1883 she accompanied him to Greece when he was carrying on excavations at Olympia ; a few years later she passed a year beside him at Athens, deepening her knowledge of archaeology. In 1889 she went to Somerville College, gaining a first class in the Final Honour School of the Literæ Humaniores, being the first woman who ever gained this distinction. A travelling bursary enabled Miss Penrose to study classical archaeology in French and German museums. She has since lectured under the Oxford and London University Extension Societies at the British Museum and elsewhere. Miss Penrose will not leave Bedford College till after Easter.

MR. S. J. CARTLEDGE, Director of the Hanley Art School, has been appointed an Inspector under the Science and Art Department.

MR. T. A. SHEGOG has been appointed Director of Technical Instruction under the Monmouthshire County Council.

MR. F. W. MOORMAN, B.A. London, Ph.D. Strasburg, at present

Lecturer at the University College of Wales, has been appointed to the Lectureship in English Language and Literature at the Yorkshire College, Leeds.

THE Rev. James Clunes Wilson, M.A., second master at Sutton Valence Grammar School, has been appointed Rector of Billingford, East Dereham, Norfolk.

MR. ALFRED HOPKINSON, Q.C., M.P., has accepted the post of Principal of Owens College, Manchester, in succession to Dr. Ward. Mr. Hopkinson was formerly Stowell Fellow of University College, Oxford, and was called to the Bar in 1873. For some years he held the post of Professor of Law at Owens College.

SIR HENRY IRVING has been appointed by the Vice-Chancellor of Cambridge University as Rede Lecturer for 1898, and will deliver his lecture in June.

MR. R. M. BURROWS, M.A. Christ Church, Oxford, assistant to the Professor of Greek at Glasgow, has been appointed Professor of Greek in the University College of South Wales, Cardiff.

MISS AMY BELL, St. Hugh's Hall, Oxford, has been appointed an assistant-mistress in the Newport (Mon.) Intermediate School.

MR. A. S. EVE has been appointed Bursar and Secretary to the Council of Marlborough College, in succession to the Rev. J. S. Thomas.

MISS M. G. FRODSHAM has been appointed Lecturer in the Cambridge Training College. She was elected to an entrance scholarship at Holloway College in 1893, where she subsequently obtained the first Founder's Scholarship for Mathematics and the Driver Prize for Mathematics. She took the London B.A. degree and also second-class Oxford Honour Moderations in Mathematics.

THE Lords of the Committee of Council on Education in Scotland have appointed Mr. John Struthers, one of Her Majesty's Inspectors of Schools, to be Senior Examiner in the Scotch Education Department, and Mr. William Whyte, at present acting as one of Her Majesty's Inspectors in the Aberdeen district, is promoted to the charge of the Perth district in place of Mr. Struthers. Mr. S. D. Black is promoted to be a Sub-Inspector of the First Class, and Mr. F. K. S. Walker, M.A., is nominated a Sub-Inspector of the Second Class, in place of Mr. Black.

THE Lord President of the Council has appointed Mr. T. King, Fellow of Jesus College, Cambridge, and one of Her Majesty's Chief Inspectors of Schools, to be Senior Chief Inspector, in succession to the Rev. T. W. Sharpe, C.B., whose resignation takes effect at the beginning of the new year.

THE office of Astronomer Royal of Ireland, to which is annexed the Andrew Professorship of Astronomy in the University of Dublin, has been conferred upon Mr. C. J. Joly, Fellow of Trinity College, who is both a capable observer and a most learned mathematician. Mr. Joly replaces Dr. Rembrant, who has been appointed Radcliffe Observer at Oxford. Mr. Joly has been for some time engaged in editing the works of Sir William Rowan Hamilton, his distinguished predecessor in the Chair of Astronomy.

MISS LLOYD EVANS, M.A. St. Andrews, assistant-mistress at the Blackburn High School, has been appointed Lady Superintendent of the Church of Ireland Training College for Teachers, Dublin. She received her early education at the Warwick High School.

MISS D. THOMAS, Headmistress of Llanidloes Intermediate School, has been appointed Headmistress of Dr. Williams's School, Dolgelly.

THE Rev. Dr. Dolbé has resigned, after thirty years' service, the Headmastership of Latymer School, Edmonton. The post has been filled by the appointment of Mr. W. A. Shearer, M.A.

THE Rev. H. A. Watson, M.A., Headmaster of Maidstone Grammar School, has been appointed to the Headmastership of Yarmouth Grammar School, vacant by the appointment of Mr. Murray Ragg to Hereford.

THE death is announced of Mr. H. Isbister Smith, Headmaster of Uckfield Grammar School.

MR. EDWARD ARNOLD'S SPECIAL LIST OF TEXT-BOOKS FOR CAMBRIDGE LOCAL EXAMINATIONS, 1898.

ENGLISH.

ARNOLD'S SCHOOL SHAKESPEARE. Under the General Editorship of J. CHURTON COLLINS, M.A.

The Merchant of Venice. Edited by C. H. GIBSON, M.A., Assistant-Master at Merchant Taylors' School. Cloth, 1s. 3d.

The Tempest. By W. E. URWICK, M.A., Lecturer on English Literature at the Durham College of Science, Newcastle-on-Tyne. Cloth, 1s. 3d.

As You Like It. By S. E. WIMBOLT, B.A., Assistant-Master at Christ's Hospital. Cloth, 1s. 3d.

Twelfth Night. By R. F. CHOLMFLEY, M.A., Assistant-Master at St. Paul's School. Cloth, 1s. 3d.

King Lear. By the Rev. D. C. TOVEY, M.A., late Assistant-Master at Eton College. Cloth, 1s. 6d.

Hamlet. By W. HALL GRIFFIN, Professor of English Literature at Queen's College, London. Cloth, 1s. 6d.

HISTORY AND GEOGRAPHY.

A HISTORY OF ENGLAND. By C. W. C. OMAN, M.A., Fellow of All Souls' College, Oxford, Author of "Warwick the King-Maker," &c. Fully furnished with Maps, Plans, and Genealogical Tables. 760 pp. cloth, 5s.

THE SAME IN TWO PARTS, with separate Indices, 3s. each.

Part I. From the earliest times to A.D. 1603.

Part II. From 1603 to 1885.

THE SAME IN THREE DIVISIONS.

Division I. To A.D. 1307. 2s.

Division II. From 1307 to 1688. 2s.

Division III. From 1688 to 1885. 2s. 6d.

In ordering, please state the period required, to avoid confusion.

A HISTORICAL GEOGRAPHY. By the late Dr. MORRISON. New Edition, Revised and largely Re-written by W. L. CARRIE, English Master at George Watson's College, Edinburgh. Cloth, 3s. 6d.

A SHILLING GEOGRAPHY. By the late Dr. MORRISON. Revised by W. L. CARRIE. Cloth, 1s.

FRENCH AND GERMAN.

FRENCH WITHOUT TEARS. By Mrs. HUGH BELL, Author of "Le Petit Théâtre des Enfants." A Graded Series of French Reading Books, carefully arranged for young pupils beginning French. With Humorous Illustrations, Notes, and Vocabulary.

Book I., 9d.; Book II., 1s.; Book III., 1s. 3d.

A FIRST FRENCH COURSE. By JAMES BOÏELLE, B.A. (Univ. Gall.), Senior French Master at Dulwich College. With Grammar Exercises and Vocabulary. Cloth, 1s. 6d.

A FIRST FRENCH READER. By W. J. GREENSTREET, M.A. With Exercises for Re-translation and Vocabulary. Cloth, 1s.

LESSONS IN GERMAN. By L. INNES LUMSDEN, Warden of University Hall, St. Andrews. A Graded Course with Exercises and Vocabulary, forming a Complete Introductory Manual of the Language. Crown 8vo, 3s.

LATIN.

CÆSAR DE BELLO GALLICO.

Books I. and II. Edited, with Introduction, Notes, Hints for Composition, and Vocabulary, by G. C. HARRISON, M.A., Assistant-Master at Fettes College, and T. W. HADDON, M.A., Assistant-Master at the City of London School. With Map, Plans, and numerous Illustrations to the Section on the Roman Army. Crown 8vo, cloth, 1s. 6d.

Books III.-V. Uniform with the above. Edited by M. T. TATHAM, M.A. Crown 8vo, cloth, 1s. 6d.

A FIRST LATIN COURSE. By G. B. GARDINER, M.A., D.Sc., formerly Assistant-Master at the Edinburgh Academy, and ANDREW GARDINER, M.A. Crown 8vo, cloth, 1s. 6d.

A LATIN TRANSLATION PRIMER. With Grammatical Hints, Exercises, Conversations, and Vocabulary. By G. B. GARDINER, M.A.

MATHEMATICS.

THE ELEMENTS OF ALGEBRA. By R. LACHLAN, Sc.D., formerly Fellow of Trinity College, Cambridge. Crown 8vo, cloth, with or without Answers, 2s. 6d. Answers separately, 1s.

AN ELEMENTARY TEXT-BOOK OF MECHANICS. By R. WORMELL, M.A., D.Sc., Headmaster of the Central Foundation Schools of London. With numerous Illustrations and Diagrams. Cloth, 3s. 6d. Solutions to Problems, for Teachers only, 3s. 6d.

THE MERCANTILE ARITHMETIC. By R. WORMELL, M.A., D.Sc.

PART I. Including Rule of Three, Practice, Fractions, and Decimals. 2s.

PART II. Interest, Proportion, Percentages, Stocks, &c. 2s.

Complete, with Answers, 4s.; without Answers, 3s. 6d.; Answers separately, 1s.

Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s.; each 8 words after, 6d.
[These minimum charges do not include a copy of paper.]

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS. Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."] All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 86 FLEET STREET, LONDON, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "City Bank, Ludgate Branch." Postage Stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders should be "crossed."

American subscribers may conveniently remit through Mr. C. W. BARDEEN, 406 South Franklin Street, Syracuse, New York; or Messrs. E. L. KELLOGG & Co. 61 East 9th Street, New York.

LONDON: WILLIAM RICE, 86 FLEET STREET, E.C.

GIRLS' HIGH SCHOOLS: THEIR AIMS, HOURS, AND CURRICULUM.*

By F. STORR.

I HAD intended to discourse to you to-day on a Women's University—a subject very much to the front at present, and one to which I had devoted some attention; but then came last Saturday's Conference at the Society of Arts, which gave me my heart's desire, but sent leanness withal into my soul. It took the bread out of my mouth. Queen Anne is dead, and this generation at least will hear nothing more of a Women's University.

In my perplexity I sought counsel of my daughters. Like the patriarch Job and Harold Skimpole, I am blessed with them. I will not, like the former, trouble you with their names, nor, like the latter, with their perfections. It is sufficient to inform you that all of them have been high-school girls. "Tell me, my children," I said to them, "what your poor old father is to talk about at the Winchester High School." And the eldest made answer: "Whatever you do, my father, do not quote Kingsley's 'Be good, sweet maid, and let who will be clever.' I heard it quoted at six successive prize-givings, and it ended by making me feel quite naughty." I turned to the second, and her counsel was no less wise, but also of a negative nature—"Do not, like our last prize-giver, talk of the pleasure of looking down on a rippling sea of pretty hats with pretty faces peeping underneath them. The faces may have been indifferent pretty, but the hats were hideous." I turned to the third as my last resource, and besought her to give me some positive suggestion. She rose to the occasion—"Tell them, Papa, not to be *schooly*." "Davus sum, non (Edipus," and I can only transmit to you in its bare simplicity that oracular message, and bid you ponder on its deep significance.

I must depend on my own resources, and give you a few stray thoughts on high schools—thoughts that have been borne home to me in the course of many years in my capacity as a governor, a parent, an examiner, and a teacher.

The high school system is the creation of the last quarter of a century, and it is marvellous how in that short space of time it has taken firm root, spread all over the kingdom, and either

* An address delivered at the Annual Meeting of the Winchester High School, December 11.

killed off noxious growths or forced them to avoid extirpation by help of mimicry. This silent revolution—a social no less than an educational revolution—has been brought about not indeed without a struggle, not without heroic efforts on the part of the leaders—of Miss Shirreff, Miss Buss, Miss Clough, the saints in our calendar; of Mrs. William Grey, and Miss Emily Davies, who are still among us—but it has been a bloodless revolution; it has left no heartburnings; there are no Jacobites to trouble this women's commonwealth; there is no fear of a Tory reaction.

The fear, rather, is that it has been too successful. The present state of girls' schools is so indisputably superior to the past that there is a danger lest we should rest upon our oars. Our primary education is of shorter duration than that of any other civilized country; our intermediate education is still chaotic; we have fewer University students in proportion to the population than either France or Germany; in technical education we are still to seek; but in the higher education of women England is the envy and admiration of other countries. The good is the enemy of the better (if I may invert a French proverb), and there is a distinct danger lest we should be content with what we have already achieved, as though we had already attained the goal.

In an excellent volume of essays on "Teaching and Organization," edited by Mr. Barnett (my own part in it is so insignificant that I may venture to praise it), not the least excellent essay is that of Mrs. Sandford, on "Organization and Curricula in Girls' Schools." The text prefixed to the essay is, "Be on your guard against imperfect achievement,"—the very text that I should have liked to choose for my sermon, but a text which it seems to me is not so well suited to Mrs. Sandford's panegyrical exposition of the high-school system. Let me justify my cavil by joining issue with Mrs. Sandford on a single point. She tells us that the arrangement of hours now universal in all high schools is five mornings in a week of class-teaching, each morning consisting of five lessons of three quarters of an hour each, the afternoons being devoted to accomplishments, extras, and preparation. And she argues from the universality of this time-table—I happen to know of a good many exceptions to the rule—that it is the best of all possible systems in the best of all possible worlds. Now it seems to me that this time-table is so far from being ideally the best that could be devised, that it rather needs an apology, and can only be justified as the best makeshift possible under the circumstances; that, instead of singing a song of Deborah, Mrs. Sandford should rather exclaim with downcast eyes, like Dido:

Res dura et regni novitas me talia cogunt—

My poverty and not my will consents to this half loaf that is better than no bread. That it may be the best under existing social conditions I am not prepared to dispute. Of this Mrs. Sandford is a far better judge than I can pretend to be. But this I do say—neither Plato, nor Sir Thomas More, nor Bacon, nor Sir Walter Besant, nor Artemas Ward, nor Mr. Wells, not the most visionary philosopher or the most extravagant romancer, would have conceived such a time-table, except as the parody of a Laputan academy. What do the doctors and physiologists say to it? Ask Sir Crichton Browne, or read Dr. Clement Dukes' essay in the same volume. What would Mr. Frederick Walker or Mr. Eve say to a proposal for a similar time-table in St. Paul's School or University College School? True, we must cut our coat, or petticoat, according to our cloth, but that is no reason for pretending that the dressmaker by her skill and contrivance can make as much out of half a yard as a tailor can out of a whole yard. If in the past she has seemed to do so, if girls have held their own in the local class-lists against boys, this is because of the superior skill of the new dressmakers, and the bungling of us ancient tailors. Mistresses have been to some extent trained, masters are still wholly untrained. Girls' schools have not been shackled by traditionary methods or hide-bound by an obsolete routine. They have been free to take the gold and leave the dross of the renaissance. They have occupied a virgin soil; they have imported the best and newest machinery. But they cannot reckon on this advantage as a permanence, and, if they are to hold their own in the class-lists (to put it on the lowest grounds), they will have to adopt a more rational time-table—a time-table which makes provision for play as well as work, which allows intervals of relaxation, which does not cram all the teaching into three or four consecutive hours.

I have dwelt, perhaps, too long on a point of machinery, but it is in my judgment a very important point. What appears to Mrs. Sandford a crowning merit of high schools appears to me a signal defect. Parents, Mrs. Sandford tells us, are all perfectly contented, and neither ask nor wish for more. Well, if I am the single solitary malcontent parent, I wish to ventilate my grievance, and agitate for a reform which I think every teacher would welcome if she thought it possible.

But, whether the machinery be perfect or not, the educational edifice, we are told, stands four-square to all the winds that blow, founded on the corner-stones of religious principle, physical training, solid instruction, and parental co-operation. This is a proud boast, but I believe it in the main to be a true boast, though, not being a headmistress, I should not have dared to pronounce so undeserved and unqualified an encomium on the architecture whose full merits the occupant or tenant alone can know and appreciate. Yet it is well that even the headmistress of a high school, as she drives her triumphal car, should have a slave behind her to remind her that she is mortal. And such a Mentor comes opportunely in the person of Miss Janet Hogarth, who, in the current *Fortnightly Review*, gives incidentally her impression of high-school education. These impressions, I confess, seem to me one-sided and partial, if not prejudiced, and I can only conclude that the high-school girls with whom Miss Hogarth has been brought into contact were exceptionally bad specimens of their kind—that they certainly did not hail from Winchester. For Miss Hogarth is not one of your female Gigadibs, who "writes stately for *Fraser's Magazine*," but can speak as one having authority. Now, Miss Hogarth tells us that there is a growing dissatisfaction with high-school methods. The world is slowly waking up to the fact that there is something rotten in the state of Denmark. "What other results can be expected from a system ingeniously contrived to develop just those faculties of ready assimilation and mechanical reproduction in which the feminine mind is strongest, whilst neglecting to cultivate the independent judgment and thorough grasp of one fact before proceeding on to another, in which it is notoriously weak? Yet this, with its multiplicity of subjects, is the inevitable outcome of the high-school curriculum. How many schools, for instance, expect any written work but the copying out of practically dictated notes? How many insist upon home reading? They cannot, of course, when ten subjects are being taught in time which would barely allow of five. The consequence is that, if the high-school girl proceeds to the University, the first of her three years is wasted in learning what she ought to have learnt at school, 'the way how to learn.'"

This is, indeed, a grave indictment. This goodly edifice, this temple of learning, with its polished corner-stones, is pronounced jerry building, founded upon the sand, and winnowed by every wind that blows. Your first impulse is to accept Mrs. Sandford's certificate as that of the professional who knows, and puff away Miss Hogarth's censure as that of the irresponsible amateur reviewer. But the proverb bids us learn of an enemy, and second thoughts suggest that there may be some grounds for Miss Hogarth's criticism; that, however unfair and overcharged, it is not on the face of it spiteful and malignant; that this fair house which we have grown to love as our home, none the less because we had part in the planning, is still capable of improvement, and may need setting in order.

Of the details of a high-school curriculum I have not sufficient experience to speak with authority, nor is this a fitting occasion to discuss them, but I may without presumption attempt to commend to you two or three general principles, and leave the application of them to those whom it immediately concerns. It may be dangerous doctrine to preach, but truth compels me to premise, that it is comparatively a matter of indifference what is taught if it is taught by the right methods and with the right aims. Even the unreformed grammar schools, with what Milton called their asinine feast of sow-thistles, their undiluted Latin and Greek, turned out, under Mulcaster and Busby, Keate and Samuel Butler, sound thinkers and vigorous men of action. It is a bad workman who blames his tools, and she who sweeps a room well may, as George Herbert tells us, be doing divine work. The workman may not blame his tools, but the master is not only blameworthy, but foolish, who does not provide the best tools and machinery he can.

The first principle I would lay down is: *The fewer subjects taught the better.* This is, of course, a paradox, and I hope

no one will think of pressing it to justify that most pernicious practice, which I fear is creeping from boys' schools into girls' schools, the practice of specialization, during the last year, in a single subject in view of a scholarship. But, as applied generally to the modern programme of schools, few will dispute its pertinence. In a high school which I examined a year or two ago, I had to set for the highest form papers in English literature, physiography, physiology, domestic economy, and the laws of health. What could result from such an *olla podrida* but nausea or indigestion? Fortunately, the former is more common than the latter. A puling infant is in a healthier state than a boa-constrictor who has swallowed his blanket. The Committee of Fifteen, consisting of all the best heads in the American school world, laid down the law that no subject should be taught in schools to which an integral portion of time (at least three lessons a week) was not devoted. How such an ordinance would revolutionize our time-tables! When I hear the claims advanced of geography and *Erkunde*, of ancient history and *Weltgeschichte*, of science and natural science, of Greek and Italian, and half-a-dozen other claimants, I repeat to myself the wise words of an obscure philosopher: "Magna, immo maxima, pars sapientiæ est quædam æquo animo nescire velle." If for grown men ignorance is bliss, *a fortiori* is this so for the growing intellect; and when an indignant parent writes to the *Times* to complain that after four years of schooling his daughter did not know the height of Cotopaxi, or the date of the foundation of Rome, or the name of the Emperor of China, I should feel as a mistress that my withers were unwrung. If, on the other hand, he reported that the girl could not write an intelligent letter or follow an argument, that she thought all history dull and all poetry rubbish, that she preferred Drummond to Darwin and Marie Corelli to George Eliot, I should, indeed, be inclined to tear my back hair and confess myself a miserable sinner.

My second principle is wholly unparadoxical, and for that very reason likely to be all the more hotly disputed. It is that *knowledge is sexless*; that there should be no distinction on the ground of sex in the *ordinary* curricula of boys' and girls' schools. I emphasize the word "ordinary," for it goes without saying that the technical instruction which should follow on the secondary school course must be differentiated to suit, the different avocations and requirements of the two sexes. The brother may proceed to the school of mines or engineering, the sister to the school of cookery or nursing, but this difference does not affect the school proper.

We may assume *a priori* that men's and women's brains differ both in quantity and quality; but wherein the qualitative difference consists no physiologist has yet been found to tell us, still less has any serious psychologist pretended to draw up dual schemes of study to suit this difference. We used to be told that girls had no faculty for the higher scholarship, that they might be good at modern languages, which needed mainly the parrot-like power of imitation, but could not breathe the keener air of Latin and Greek. Miss Ramsay came out Senior Classic, and that prejudice was pricked. Next it was said that in literature women might hold their own, but that in abstract science and the highest mathematics they were all to seek. That prejudice was exploded by Miss Fawcett's Senior Wrangler-ship. And so on, and so on. Moreover I would point out that these inferences from women's supposed inferiority are double-edged. Let us, for the sake of argument, admit that women are naturally less logical than men. Is this a reason for not teaching women logic? Is it not rather a reason for trying to supplement by art the defects of Nature? Is it not Mr. Ruskin who says: "Lads should be bidden to be tender and modest, and lasses should be bidden to be brave and strong"?

But there is another and more insidious objection. It comes from those who pose as the special friends and patrons of women's education. "We do not," these gentlemen tell us, "for an instant pretend that your sex is intellectually inferior; we want you to receive as good and thorough a training as men; all we stipulate for is, that it shall not be identical. What a dull, flat, and unprofitable world it would be if men and women were brought up on the same plane, read the same books, talked the same shop, and became mentally indistinguishable! We object to this mixed education on the same ground as we object to rational costume."

The answer to this specious plea seems to be very plain. If it be the fact that Nature has differentiated mentally no less than physically the two sexes, we need be under no appre-

hension that by any artificial diet or forcing of ours we should obliterate or obscure this natural distinction. We do not turn horses into asses by feeding them upon thistles, nor will asses win the Derby, though fed on the best of oats.

And, on the other side, what overwhelming arguments there are in favour of a common culture! What better basis of *camaraderie* between brothers and sisters, male and female cousins and friends, than common studies, a common stock of literary jokes, anecdotes, sentiments, ideas! Some of you will remember, in Macaulay's "Life," the picture of a happy family thus educated. How often have I heard mothers regretting that they had not learnt a little Latin or a little Euclid in their youth, that so they might have helped their young hopefuls over the difficulties of Delectus or the "Asses' Bridge"!

Nor would analogy lead us to anticipate this dismal uniformity. In English poetry and history and fiction, studies now pursued in common, we can still detect sexual differences of taste and sentiment. To give a single instance, I never yet met a woman who appreciated the beauty of Chaucer's "Patient Griseld" or the humour of Sterne's "Mrs. Shandy."

When I said that no serious attempt had been made at sexualizing studies, I was not forgetting the last *Quarterly Review*; but, in spite of the braggadocio airs with which the challenge is there accepted, I must decline to accept my antagonist as serious. "While learning Greek and Latin is found by experience to provide an unequalled literary training for young men, a methodical study of living languages naturally takes its place in the case of young women." Again: "It is quite undesirable that the higher mathematics should play any such part in female as they play in male education." On the other hand, there is one subject, and one only, for which women show a greater aptitude than men—I defy you to guess it, if you have not read the article—it is the study of art. I must decline to discuss these *ipse dixit*'s of an anonymous reviewer with their question-begging epithets "undesirable," "natural." And, if I might hazard a conjecture, I should guess the reviewer to be a University Professor of Art who has found the women do better than the men in his own particular subject.

My third and last principle is, that *the secondary curriculum should prepare for the higher curriculum, and be framed with this express object*. Stated thus broadly, this seems a self-evident proposition, almost a platitude; but, when we come to apply it to the particular case, and translate it into "The work of the high school is to prepare for the University," it is like to prove not the least contentious of my three theses. This, I shall be told, is the old heresy of the public-school master. You are bidding us sacrifice the majority for the sake of the *élite*—a vicious proceeding in the case of boys' schools, and still more inexcusable in the case of girls' schools, since not one per cent. of high-school girls can hope to attain to the University.

A very natural objection, though, as I shall hope to show, it rests on a misunderstanding. I fancy I detect a broad grin on the faces of one or two old friends who know me, at the ludicrous notion of my defending myself against the attacks of a dummy antagonist who accuses me of aristocratic tendencies and of bolstering up the traditions of our ancient public schools. Let me at once distinguish. Nothing, in my opinion, can be worse than what I may call for the sake of brevity the present racing stable system—the picking out of clever boys and giving them a special training to win this or that scholarship. Fortunately, or unfortunately, girls' scholarships are so rare that high schools are at present hardly exposed to a similar temptation.

On the other hand, it is a powerful incentive, and a stimulus of the best kind both for mistresses and pupils, to have in prospect some further goal. As a modern-school master I feel most acutely how much my pupils suffer from the consciousness that, whatever their attainments in modern languages, there is no scholastic future beyond. In a well-ordered commonwealth it is the Universities that should fix the highest standard of learning, and I hold that not only the high-school mistress, but even the village-school master, should keep this standard in view as the ulterior, if not the immediate, goal of his pupils. And, with the broadened curriculum of our reformed Universities, there is no danger of school studies being forced into one or two particular channels.

Greek is the only lion in the path, and, though this seems a terrible monster to many clever girls, yet when it is faced it proves a very Bottom—in a lion's skin. A young friend of mine, not particularly clever, and with no aptitude for languages,

did not know her Greek alphabet in January, and passed her Oxford Responsions in June. Let us hope that this scarecrow will shortly disappear; meanwhile I sincerely hope that high schools will not, for the sake of the few, add another language to Latin, French, and German. Let them by all means, if so minded, substitute Greek for one of them.

The Universities should fix the standard of learning, but I am inclined to doubt whether eventually they will be considered the best machinery for gauging the learning of the country, at least in the preliminary stages. Their Local Examinations have undoubtedly performed a great national service in supplying a quasi-public test of good work, and so indirectly discrediting those academies for young gentlemen and finishing schools for young ladies whose stock in trade was "potatoes, poultry, prunes, and prisms, Shakespeare, and the musical glasses." On the other hand, there can be no question that these examinations do lend themselves to cram of the worst sort; that this pitting of school against school (though the Universities try to discourage it) is not a healthy form of competition; and, finally, that young University dons, with no experience of the kind of schools which enter, are not the best persons who could be chosen for the very delicate task of weighing growing brains. When I add that the numbers entering make *ziva voce* an impossibility, these Local Examinations, at least in the eyes of foreign educationists, will stand self-condemned.

Co-education is one thing, competition is another, and the more we can reduce competition the better I shall be pleased. It was necessary that women should enter the lists, and prove that they could hold their own against the men; but, now that they have done this, and shown that they are capable of profiting by the highest education, I for one should be quite content with separate class-lists for men and women. I have no desire to pit one sex against another. All I demand is *carrière ouverte aux talents*, whether male or female. Let there be no artificial barrier. Leave Nature to determine for what profession women are fitted, and do not settle it beforehand by the high *a priori* road of male logic.

To resume: University education is only profitable for the *élite* of either sex, for those pupils who have either exceptional capacities or well-to-do parents. But my hope is that the proportion of women proceeding to the Universities will steadily rise, though for various reasons it can never quite equal that of men. But, whether the proportion be small or great, it is the bounden duty of the high school to prepare for the University.

I had meant to add something on the question how far should higher education take account of the special function of the sex and prepare girls for the duties and responsibilities of motherhood; but this is a delicate subject for a man to treat, and it has been so admirably treated in a recent address by Mrs. Henry Sidgwick* that I need only refer you to it.

I have the pleasure of knowing intimately a good number of past and present Somerville and Newnham students, both married and unmarried. So far from University life unfitting them for home duties or making them discontented with home, I have found them, almost without exception, not only intellectually the brightest, but the handiest, the helpfulest, the serviceablest members of the family.

I began by breaking a lance, or, if that is an ungallant phrase, pulling a Christmas cracker, with Mrs. Sandford. Let me end by expressing my assent and consent to her proposition that religion is, and should be, the chief corner-stone of the high-school system. It has realized, as far as anything human can realize, Mr. M. Arnold's ideal for the State. The State, he told us, should be of the religion of all its children without the fanaticism of any single section. Elementary education has been the unhappy battlefield of rival sects and parties. God grant that the struggle may not spread to our secondary schools! You are at peace from such wranglings, you are brought up in the fear of the Lord, taught to seek the truth, knowing that the truth will make you free, to admire all that is noble in history, all that is inspiring in poetry, all that is beautiful in art; to realize your highest selves, not for the sake of self-culture alone, but that so you may better serve others.

O fortunate nimium sua si bona norint!

Happy high school girls! You may think this platform

* "The Place of University Teaching in the Life of Women."—*Transactions of the Women's Institute*, No. 1.

rhetoric, you may sometimes vote your lessons dull and your teachers bores, you may find now and again (as the Harrow poet sings):

Mistrust in y your spirits vex,
And total want of confidence in x ;

but believe an old man who, comparing your education with the education of the women of his generation, pronounces you thrice and four times happy, and, if with the fear of his daughters before his eyes he dared venture on a tag of poetry, would say to you, "Gather ye rosebuds while ye may." Lest any should apply Herrick's next line to myself, I will add not a word.

SECONDARY EDUCATION IN 1897.

IT would be something more than a holiday task to chronicle all that has been well said or worthily written on secondary education during the year, and all that can here be attempted is a brief summary of leading events. From 1896 we brought forward the "prospect of immediate legislation," and the resolution of the Headmasters' Conference, carried by 33 votes to 9 (notwithstanding Mr. Selwyn's vision of a little girl with a County Council certificate demanding admission to Uppingham) "that the organization of secondary education is a matter of pressing necessity, and the Government should be urged to deal with the question in the next session of Parliament." And early in January the weighty and sympathetic speech of the Duke of Devonshire to the Association of Headmasters appeared to justify the inference that he carried the draft of a measure in his pocket. However, 1897 has come and gone, and the Bill is still prospective. But the year, barren of legislative effort, has been prolific in utterances and publications bearing upon the subject. Fortunately it is unnecessary, even if it were practicable, to summarize the transactions of various associations, such as the Incorporated Headmasters, Teachers' Guild, Directors of Secondary and Technical Education, Assistant-Masters, and the like. All these bodies, if they have not succeeded in educating public opinion, have, at least, it may be assumed, done something of the sort among their own members. And they were all represented on the influential Joint Committee for the Promotion of Secondary Education Legislation, which issued its findings just before the beginning of January. To a large extent, therefore, the report of that Committee may be regarded as indicating, for general purposes, the views of the various associations represented upon it. In brief, the Joint Committee was unanimously in favour of: (1) The constitution of the central authority as proposed by the Royal Commission; (2) the creation of local authorities in every county or county borough by scheme submitted by the County or County-Borough Council to the central authority, persons possessing educational experience to be adequately represented on the local authority; (3) registration of teachers on the lines of the Bill of 1896.

The question of delimitation between primary and secondary schools was discussed, but no definite recommendation proposed. Everybody is agreed as to the necessity of a central authority, and everybody, except, perhaps, the Private Schools' Association, would probably subscribe to the plan of its constitution proposed by the Royal Commission. The constitution of the local authority and the area over which it would have jurisdiction as suggested by the Joint Committee may also be regarded as generally acceptable to all but the important interests represented by School Boards and non-county boroughs.

The registration of teachers, as Mr. Storr said at the Special Conference of the Teachers' Guild on January 14, has been among the foremost objects of the Guild from its foundation. And the weight of professional opinion is in favour of the general principles laid down in Sir John Gorst's Bill, which that organization accepts; and, if delimitation be practicable, the proposal of the Headmasters' Association differentiating between higher primary schools, designed solely for continuative elementary school work, and schools providing curricula adapted for professional, scientific, mercantile, and higher industrial requirements, affords a reasonable basis for a settlement. During the year two important Conferences were held dealing with prospective legislation. The academic discussions of the Oxford

Conference in 1893 demonstrated the necessity for the full and impartial inquiry of the Royal Commission. The Conference convened by the University of Cambridge in 1896 was a national gathering, and dealt appropriately with the issues raised by the Commissioners' Report; and it was agreed to welcome the passing of a measure in general accordance with their recommendations. The Conferences held by the Victoria University and the University of Durham, last year, on July 10 and November 13 respectively, were of special interest as reflecting provincial opinion. Both Conferences covered more or less the same ground. The resolutions relating to the central authority were practically identical, except that in Manchester precedence was given to the question of the local authority. As to the area of the local authority, both Conferences pronounced in favour of something not less than the administrative county or county borough. As to "constitution," there were certain differences of opinion between the two Conferences. Victoria adopted the recommendation of the Joint Committee, frankly admitting that the majority on the authority must consist of members of the County Council, a minority being persons nominated by the Crown, acting through the Minister of Education, and a fixed proportion representing Universities, University colleges, associations of teachers, or other educational bodies within the district; while in county boroughs a due representation of School Boards was not to be forgotten. But this local authority, it was resolved, should "act independently of the County Council." The Durham Conference on this question was much more vague, and consequently much less satisfactory. It was content to contemplate the necessity of some local body upon which professional interests should be adequately represented, and further suggested that it need not be any existing authority.

Joint Committees under the Welsh Intermediate Education Act, 1889, are not required to submit their proceedings to the County Council for approval, and the Technical Education Act, 1889, provides for the delegation of all powers, except that of raising a rate or borrowing money, to a committee consisting wholly or partly of the members of a local authority. Consequently the proviso in the resolution passed at the Victoria Conference, in favour of a committee independent of the County Council, may be regarded as within the range of practical politics. At the same time, while no doubt the administrative machinery of a County Council might to some extent hamper the work of an Education Committee, there is much to be said for facing with confidence, and without reserve, the ultimate responsibility of the duly constituted local authorities. If our system of local government—now ten years old—is to accomplish the object for which it was created, it must be trusted; it is not to be regarded as an "alien intrusive power in the community," but as summing up and representing, not thwarting, the actions of individuals. It is not a question of party or interest, but of public policy. "The real preliminary to an effective system of popular education," wrote Matthew Arnold thirty years ago, "is to provide the country with an effective municipal organization. . . . Modern societies need a civil organization which is modern." Again, referring to the relation of the State to secondary education in Prussia, Switzerland, and Italy, he wrote: "In all these countries the idea of a sound civil organization of modern society has been found to involve the idea of an organization of secondary and superior instruction by public authority, by the State."

On the problem of delimitation and grading of schools neither Victoria nor Durham offers any effective solution, and it is probably not one of those questions which can be profitably considered independently of the particular circumstances of different areas.

Of more than passing interest were the deliberations of those who met at Oxford early in May to consider the training of secondary school teachers. Another Joint Committee is dealing with this subject, and its report will probably be issued before this review appears.

The month of May was also notable for the publication of the Report of the Committee to inquire into the distribution of Science and Art Grants. The brief subsequent history of what appeared to be the most important, as it was certainly the most perplexing, recommendation is somewhat diverting. The recommendation was to recognize in counties and county boroughs in England organizations for the promotion of secondary education. "Here," it was said, is South Kensington, "magnifying itself into a central authority for secondary educa-

tion, anticipating legislation by proposing to recognize local authorities." Questions were asked and diplomatically answered in the House of Commons: the Lord President received protests and deputations. In October the "Directory" appeared with a modified version of the original recommendation. Light was still wanting as to what this presumptive organization for secondary education might be. Voluntary representative committees, constituted in the interests of co-ordination, were suggested, and some said it was proposed to recognize the associations formed to allocate the special aid grant to voluntary schools; others, again, the local association of the National Union of Teachers. Meanwhile, Technical Education Committees of County Councils notified their willingness to be responsible for science and art instruction within their areas, and applied for recognition. In December those interested in the subject were told that the only part of secondary education of which the Department has cognizance is technical education as defined by the Technical Instruction Act, 1889, and that the organization for the promotion of that portion of secondary education referred to in Clause VII. is therefore an organization generally acceptable to the various educational authorities of the district for the promotion of that portion of secondary education thus defined.

June 15th to 18th witnessed the International Congress on Technical Education organized by the Society of Arts. While it can scarcely be regarded as an effective, much less an epoch-marking, gathering, the Congress brought together a great body of raw material, which is a permanent and certainly interesting addition to educational literature. The "Special Reports on Educational Subjects, 1896-7," issued by Mr. M. E. Sadler, in July, not only more than justified the creation of the office to which he was called, but carried with it the assurance that, if in the future we erred in our educational measures, it will not be from lack of precise knowledge.

The Congress on "Educational Subjects of Imperial Interest" at the Victorian Era Exhibition was not particularly effective, and failed, apparently, to attract any considerable or representative numbers of people. In this connexion the little handbook, edited by the Countess of Warwick, and containing many interesting contributions from interesting people—more particularly "Introductory Notes on Educational Progress in England and Wales during the Queen's reign," from the pen of Mr. Sadler—must be mentioned. Of exceptional importance to the progress of higher education was the report of the Treasury Committee, issued in July, on the local University colleges. Those who are best acquainted with the valuable work of these institutions recognize the thoroughness and impartiality with which the Committee discharged their task.

The report (issued late in 1896) on a visit to Germany with a view of ascertaining the recent progress of technical education, by Sir Philip Magnus and others who were members of the Royal Commission on Technical Education, together with the report of the deputation of the Manchester City Council on technical schools and institutions in Germany and Austria, are both useful contributions to what may be called the "made in Germany" problem. It cannot be too frequently reiterated that "Germany owes her industrial success to her system of scientific training in schools and colleges, and to the close fellowship which exists between her factories and her schools."

But, as Sir John Gorst reiterated at Bristol, on the 23rd ult., the two obstacles to our progress in technical education are the extremely backward condition of our elementary education and the want of organization in the provisions of secondary education itself. The Manchester deputation was surprised at the standard of general education possessed by students in German technical schools. Of those in attendance at the Berlin Municipal Higher Weaving School, 95 per cent. possessed the leaving certificate of the first class of the *Realschule*, which ranks with the best class of our secondary schools." Sir John Gorst did not foreshadow legislative possibilities except perhaps in saying: "There was nothing to prevent Technical Instruction Committees becoming thoroughly representative and real organizations," which, with the Duke of Devonshire's utterance, in October, at Darlington, before us, is a sufficient indication of the official intention respecting the local authority. But it is the central, rather than the local, authority which professional interest regards with anxiety, and which will probably make the difficulties. "The essential starting point in any sound movement towards the reform of secondary education," said

Dr. Fearon at the Headmasters' Conference, on December 22, "is the central authority." We begin 1898 in the hope that this point, and some others, may be satisfactorily determined before the end of the year.

THE YEAR OF REJOICING.

AN ODE TO THE EMPRESS MOTHER.

IN REMEMBRANCE OF 1897.

MOTHER of Empires, and thy people's Mother !
 On whom is laid the burden, day and night,
 Of sacrificing to the public right
 Thy private pleasure,
 Not hoarding for thyself the soft delight
 Of home's sweet secrecy and sacred leisure !
 For God and People still with all thy might
 Giving to state-craft in ungrudging measure
 Thought, labour, care, as in the Master's sight,
 Teaching thy many folk to serve each other !
 Thou art not of the fools who squander amiss
 On many a passing gaud the eternal treasure,
 Or snatch at glory, fashioned for another.
 Thou never wittingly hast swerved athwart
 The straight and kingly path where walk the just !
 In thee the many million toilers trust,
 Pathetically patient ; miners swart,
 Or pale-faced women in their workroom pent,
 Who make the heirlooms for our moth and rust
 And, choked with fur or lead, may die for this ;
 And all the thousand other folk content
 To do the rough work of this troublesome life
 For bare subsistence, who, amid the strife,
 Not weeping their own sorrows, yet are seen
 With tears of joy to sing : " God save the Queen ! "
 Thou too hast toiled with many a toil unknown,
 When work has been
 A weary effort offered up alone
 Through hours that held thee at thy task, apart,
 When children's voices in their play-time must
 Have echoed often through thy longing heart !
 Nor hast thou once aside the burden thrust
 With indolent hand. God bless thee, and to-day
 Give thee a joy for which the lowliest pray—
 The presence of those dearest who are gone,
 His presence, who, before Death took him away
 And led him higher, ever up and on,
 Was thy first love, and is thy last love too,
 Who crowned thy womanhood with passionate bliss
 And held thee to thine own brave purpose true !
 He is not far, perhaps ; perchance he knows
 And, through the triumph, feels, the simple things
 That touch the loving souls of queens and kings
 As well as subjects—sympathies that come,
 As sunlight from the sun's heart comes and goes,
 Out of the heart of God who is our Home.
 Let others sing aloud in epic strain
 The outward splendours of thy peaceful reign ;
 Thy manifold sway,
 The governance of fair and dusky nations
 Who, through the round world, dream of thee, their mother,
 And, by the swift electric undulations
 Of mystic ether, weave all lands in one
 To send thee, ere the year go on its way,
 Their salutations !
 Let others sing
 Of ships majestic and a world-wide mart,
 A growing knowledge, a reviving art,
 Ease, bought by drudgery that's nobly done,
 And miracles of science !—I will wake
 With homelier note, and many a pause and break,
 Like birds that twitter on with fluttered wing,
 A song of how thy love had power to make
 Thy hearth a kingdom's hearthstone, pure and good,
 Whither the homeless look, thy mother-throne,
 The last hope of the hopeless and alone,
 Save God Himself and His redeeming rood !

My song shall whisper of thy gentle life,
 Uplifting manners, humanizing laws
 To higher ideals ! Thou, as mother, wife,
 And woman, hast made strong the cause
 Of many a trampled virtue, and withstood
 Powers in high places with corruption rife,
 Hast deepened hope of civic brotherhood
 And found among both rich and poor thy friends,
 Giving to both alike with equal hand
 A sympathy that felt, in either lot,
 Sorrows and joys they only understand
 Who know where love is and where love is not.
 And yet a cloud the sky's wide banner rends !
 Long has the East been making angry moan,
 While we, self-centred, stolid, blind to our fault,
 Deepened the shadow on our country's name.
 By love to thee at last made quick with shame,
 Let us with agony of effort assault
 The barriers we have built, and seek to atone
 For our past sin, and win thee back thine own—
 That loyal trust in thine all-conquering fame
 Which burned in India's heart, a mystic flame
 On alien altars, full of hidden power !
 We dare not lose it, dare not count in vain
 The dauntless story of a terrible past
 That buried men and women in its grave,
 A story written with the blood and toil
 Of Indian heroes, England's youth and flower—
 Of men whose lives enriched a far-off soil
 And, when our folly left a ghastly stain
 On history's page, did yet for us regain
 The adverse day, and by their death and pain
 Blot out the blot.
 Ah, let it not be said,
 Delhi was far,* and careless folk forgot !
 God save our India !
 Ay, and may God save
 A nearer treasure that away we cast,
 A treasure fashioned for adventure brave—
 Even Ireland's love, her love whose sons have bled
 For thee and thine, nor ever grudged the cost,
 Where on the field there fell the heroic dead,
 Strong in their faith to country, God, and thee !
 Love yet will conquer, Love that still must be
 Steadfast in patience and a wise reserve,
 Content in humble guise to wait and serve.
 And thou, our Empress Queen, hast lived to see
 Vast changes wrought by Love. Thou, who hast kept
 A steward's watch for all thy kingdom's weal,
 Discerning in what men call idle chance
 Or secular work, God's sacred mandate seal,
 The daily miracle of circumstance,
 Much that may be
 Of infinite future still to hurt or heal, . . .
 Thou, as a servant waiting on His hand
 Withdrawn awhile (as Mary's self might stand
 With Lazarus dead), thou, brave in self-control,
 Hast seen thy Kingdom-church awake from trance,
 Till through the slumbrous eyes looked forth a soul,
 Cast off the charnel-clothes in which she slept,
 And trembling, stumbling, through all error advance
 Into the service of the sad and poor.
 Victoria ! victorious in love,
 Who sixty years, while others laughed or wept,
 Hast worked for us and held thy way above
 All petty aims, the Master's will to prove,
 When thou didst pass our great cathedral door,
 Then in the church that is to many a home,
 A quiet roof-tree from the city's heat,
 Resounded through the over-arching dome,
 Named after Paul, a citizen and free,
 A nation's thanks to God who gave us thee ;
 And countless hearts that quick with loyalty beat,
 There dimly learned how Love's own will is done,
 Through thee, the Empress, and the lowliest one
 Of all thy subjects, who the dust has swept

* *Delhi dur ust*, an allusion to a native proverb.

From some poor crossing, serving like St. Paul
With hand-wrought-labour, if, while work enthral,
Love's law of liberty unbroken be
And no self-seeking on the service fall.

We, who obey thee, know that thou hast stood,
Through long years of courageous womanhood,
Thyself obedient to the Lord of all;
As handmaids watch their mistress, three-score years,
Through sorrow and joy and cares and hopes and fears,
Looking to Him who tends the sparrow's brood
And in the desert gave the people food,
The Love with whom there is no great nor small,
And who invested thee with love of all,
In lifelong service for thy people's good!

ANNIE MATHESON.

AN EXPERIMENT IN LATIN VERSE.

During one of our wars with China some Sikhs and a private of the Buffs fell into the hands of the Chinese. They were brought before the authorities, and commanded to perform the *kotou*. The Sikhs obeyed, but the English soldier, declaring that he would not prostrate himself before any Chinaman alive, was immediately knocked on the head.—*Extract from "The Times."*

"THE PRIVATE OF THE BUFFS."

Last night, among his fellow roughs,
He jested, quaffed, and swore ;
A drunken private of the Buffs,
Who never looked before.
To-day, beneath the foeman's frown,
He stands in Elgin's place,
Ambassador from Britain's crown,
And type of all her race.

Poor, reckless, rude, low-born, untaught,
Bewildered, and alone,
A heart, with English instinct fraught,
He yet can call his own.
Ay, tear his body limb from limb,
Bring cord, or axe, or flame :
He only knows, that not through *him*
Shall England come to shame.

Far Kentish hop-fields round him seemed,
Like dreams, to come and go ;
Bright leagues of cherry-blossom gleamed,
One sheet of living snow ;
The smoke, above his father's door,
In gray soft eddyings hung :
Must he then watch it rise no more,
Doomed by himself, so young ?

Yes, honour calls !—with strength like steel
He put the vision by ;
Let dusky Indians whine and kneel ;
An English lad must die.
And thus, with eyes that would not shrink,
With knee to man unbent,
Unflinching on its dreadful brink,
To his red grave he went.

Vain, mightiest fleets, of iron framed ;
Vain, those all-shattering guns ;
Unless proud England keep, untamed,
The strong heart of her sons.
So, let his name through England ring—
A man of mean estate,
Who died, as firm as Sparta's king,
Because his soul was great.

SIR FRANCIS HASTINGS DOYLE.

Bello Punico primo aliquot Mauri perfugae cum milite quodam gregario e legione tertia, a Carthaginiensibus capti, magistratum ad pedes se provolvere iuventur. Provolverunt Mauri ; Romanus recusat : nolle se Poeni cuiuslibet genua amplecti : quo dicto statim obtruncatur.—*Auctor Incertus.*

"MILES GREGARIUS."

Hic here cum sociis potabat nocte protervis,
Impia permiscens verba levesque iocos,
Tertia quem legio plenum ridebat Iacchi,
Crastina securum quid ferat hora caput :
Idem hodie torvi vultu non territus hostis
Asserit en partes, Regule magne, tuas,
Et, velut a Patribus veniat Populoque Quirini,
Exemplum generis stat specimenque sui.

Rusticus est et egens, praeceps, rudis, ortus ab ima
Plebe, neque attonito fert comes ullus opem ;
Sed cor stirpis habet pollens virtute Latinae ;
Est aliquid, iuris quod putet esse sui.
I nunc, dilania, si vis, huic membra ; securim
Stringe ; necem laqueo, Poene, vel igne para ;
"Delinquent alii ; mihi," dicit, "inurere nullam
Ausoniae certum est per mea facta notam."

Vitibus implicitas ulmos Latiumque remotum,
Ut solet in somnis, ire redire videt ;
Rura videt late pomorum candida flore,
Ceu nive continua ver operiret hiemps ;
Vertice pendentem molli pallescere fumum
Et patrios infra sentit adesse lares ;
"Ergo," ait, "hic surget nec nos spectabimus umquam?
Dedam ego me, vernat dum vigor, ipse neci?"

"At, quocumque pudor vocat, ibimus," addit, et acre
Durior invicta somnia mente fugat :
"Maure niger, lacrima genibusque advolvere Poenis ;
Roma, tuam prolem malle perire decet."
Non hominem supplex venerari sustinet ullum ;
Omnibus opponit lumina recta minis ;
Perstat in incepto, quamvis mors dira propinquet,
Funera non timidus sanguinolenta pati.

Quid validae prosunt rostris et robore classes,
Aut aries, nil non quo feriente ruit,
Mascula Romuleae si corda propaginis umquam
Mollitie frangi Roma superba sinet ?
Hunc igitur sonet Urbs iuvenem, sonet Italia tellus,
Quamlibet exigua re tenuique domo :
Non Lacedaemonius rex fortius occidit olim ;
Huic animi tantam vim sua Roma dedit.

H. W. M.

Shrewsbury, September, 1897.

REVIEWS AND MINOR NOTICES.

Memoir of Anne J. Clough. By her niece, BLANCHE ATHENA CLOUGH. (Edward Arnold.)

The "Memoir of Anne Jemima Clough," late Principal of Newnham College, written by her niece, is the history of a movement, and the portrait of a woman—so closely woven together that it seems perverse to attempt to separate them. As a deeply interesting study of human nature, however, the portrait of the woman will for many of us stand out in such relief that the movement will resolve itself into a mere background—useful as showing off the central figure, but not commanding any close attention. Indeed, many will possibly skip the middle of the book, which deals more exclusively with the movement for the higher education of women, and confine themselves to the remarkable fragment of diary at the beginning—the *journal intime* we must call it, for want of a better phrase—that reveals the soul of the girl ; and the portrait of the woman as she appeared in later years to those who knew her, which occupies the latter half of the volume.

The fragmentary diary, written at the age of eighteen to twenty-three, has that force that comes of an individuality so

intense that it seems to strike through the words deep into one's sympathy—the same quality that in a higher degree has immortalized the writings of Saint Augustine—or, to take a very different example, the diary of that egoistical young person Marie Bashkirtseff. The individuality is so strong that it seems to make itself felt, not by the help of the words, but in spite of them.

The diary reveals a spirit refreshing, even bracing, in its indomitableness, and a vehement, almost fierce, determination to make the best of her life for the sake of others.

"If I might choose, I would ask God to give me a long life, so as I might spend it well ; I am determined to do my best."

To this end she submits herself to a severe and relentless scrutiny and moral flagellation. She has no mercy on her faults—no excuse for them—they must and shall be rooted out. The diary for the most part consists of an account of her moral and mental progress, criticisms, quaintly candid, of her faults, with now and then something of her aims in life, her aspirations and thoughts about things in general.

Sometimes a general remark at the end of an entry sums up her self-criticisms for the day. These are often quaintly laconic—as when, after giving an account of the day's work

(Euclid, Greek, and German), she ends up with "want of exertion and too cross." "Have given way to a great deal of conceit and swaggering feelings and ways," she remarks at the end of another entry. And once, after relating a somewhat equivocal answer she gave to the question, Was she a Whig or a Tory? she ends up with: "In short, I am a great liar." "Rather lazy about my prayers," she says again. "Let my head get too full of German and other things."

Occasionally she reviews a week, or even a longer period of time, and comments on it. "Last week was certainly spent very badly. Well, we are going away on Tuesday; I must watch myself very closely for fear I get even more wrong." And, again, "One third of the year is gone. I must try to spend the next better. I have got a great deal of indolence to conquer, vacancy of mind, bad thoughts of various kinds, thinking too much of myself and all I do."

Once or twice there is a note of self-approval—as when, after deploring her contemptuous rude manners, she remarks complacently: "I believe suspicion and jealousy have been pretty nearly eradicated. I have also learnt to endure superiority without envy." "On the whole, last week was a moderate one," she reflects on another occasion. "Did my work pretty regularly." But she immediately tempers her approval. "The worst thing that has grown in me," she goes on, "is a wild boastful feeling that would lead me to give way to a great deal of wildness if I had the opportunity and did not try to keep myself in. Yes, I am sure it would lead to a great deal of wickedness. I am getting proud and self-satisfied too."

A delightful spirit of determination to get the better of these enemies to progress bursts through at times. After confessing to "proud swaggering thoughts" ("show-off thoughts" she calls them elsewhere), she ends: "This won't do. All these wild fancies must be quelled. And so they shall, or I am ruined." And there is a tinge of pathos in the following: "I am fickle and changeable as the wind. But I wish to do right, so I hope I shall manage it in time."

Besides these intense self-searchings and slashings at her faults, the fragmentary diary (all too short!) is full of original and shrewd observations, with now and then a vein of true poetic feeling. One, at least, seems to me to express very aptly the spirit of her later life.

"It seems to me," she says, "that to be quiet and to be active, or rather to be quietly active, constantly going on with untiring energy, and yet so softly as scarcely to be perceptible, this seems to me to be an approach towards perfection." Certainly a quiet activity was characteristic of her whole life. We hear of no rushing about in search of important fields for her energies, no fuss, no talk. Wherever she was she found work outside her own door, and put her whole soul into it. That the welfare of her own sex lay nearest her heart is apparent though every page of the book. But her sympathies were too wide, her affection too large, to limit themselves within any range.

It is interesting, after reading these utterances of the ardent and determined young spirit, to turn to the portrait of the woman in later years. In this part her biographer has had a more difficult task to perform than in the early part of the book, where her subject more or less reveals herself. She has little or no material in the way of letters, and has had to depend for outside help on scraps of reminiscences from those who knew her. She brings to her task, however, the sympathy and insight born of long and affectionate intercourse, and the result is a delightful portrait of an interesting and lovable character. Her difficulty is the greater inasmuch as the most striking characteristic of her subject was that indescribable power to attract affection, that indefinable "charm" which is to the human character what expression is to the human face, and which is as difficult to catch and convey in words as the latter is difficult to catch and commit to canvas. If one attempts to localize it in Miss Clough, one gathers that it lay chiefly in her extraordinary sympathy with individuals—her power of rapidly getting in touch with those about her, so that she identified herself with the minutest interests of their lives, as if they were her own—but also in the impulses and foibles of an intensely feminine nature.

Those who have been accustomed to associate with the movement for the higher education of women so-called "advanced" views, talk of women's rights, and, generally speaking, emulation of manly ways, will be surprised at this aspect of one

of the leading spirits of the movement. She was, indeed, so devoid of anything that could be characterized as masculine in appearance, manner, or nature, that she might very well have been taken for a typical old-fashioned woman of the last century. It was, in fact, mainly owing to her feminine qualities of tact and discretion that she steered the college (which she liked to think of as a ship) through the ticklish bit of water that surrounded it in its infancy, when, launched almost in the middle of the University, she observed of all observers, any want of circumspection might have wrecked it on the rock of public opinion. She showed at the same time an audacity in acting promptly on the impulse of the moment, quite regardless of established rules and conventions, that was eminently feminine, and worthy of Queen Elizabeth.

As for her work, she was truly humble, and, if she regards its results from other spheres, probably thinks she had little to do with its success. That she found her happiness in it, and in great measure realized the aims of her life, one gathers from the following:—

"She herself looked upon it" (the starting of Newnham College) "as the fulfilment of her desires, and once said to a friend who was impatient for happiness, 'I had to wait for mine till I was fifty.'"

"Heroes of the Nations."—*Hannibal, and the Crisis of the Struggle between Carthage and Rome.* By WILLIAM O'CONNOR MORRIS. (Putnam's Sons.)

This is a very readable account of the great Carthaginian. Judge Morris is a practical writer of military history, and has a wide acquaintance with it. He abounds in illustrations drawn from things new and old, and his parallels are usually apt though sometimes open to question (e.g., Austerlitz and the Trebia). He tells his story clearly and with a spirit that never flags, even in the weary years between Cannæ and the Metaurus. He is an ardent hero-worshipper, and he has a twofold object of worship, the heroic man and the heroic city which proved more than a match for him. He has made large use, not only of Mommsen, Arnold, and Mr. Bosworth Smith, but of the latest writers, Colonel Hennebert and Colonel Dodge. At the same time, he gives copious references to Polybius and Livy, and often quotes the passages in full.

The fluency of his style leads him sometimes into repetitions, especially in denunciation of the Carthaginian people and government. After all, men do not gather figs of thistles, and there is some incongruity between the praise bestowed on the Barca family and the unsparing blame of the stock from which they came. "One story is good till another is told," and, unfortunately, we are never likely to get the Carthaginian version of the Punic Wars. The evidence often leaves much to be desired, but the Scotch verdict of "not proven" finds little favour with Mr. Morris. He is unhesitating, alike in blame and praise. Many critics, from Mahabral to Napoleon, have thought that Hannibal did not make the most of his victory at Cannæ: "this judgment is a complete mistake; the military and political genius of Hannibal was conspicuously seen in his resolve not to assail Rome directly, even after Cannæ." It is one thing to say that, no doubt, Hannibal knew what he was about; it is another thing to pronounce magisterially on the question, and to say, "so Hannibal reasoned," as though one had just risen from the perusal of his dispatches. Elsewhere there is a mention of "one of those marches which we cannot trace, but the ability of which cannot be questioned."

There is the same want of caution in other things. Colonel Hennebert has argued ingeniously, but far from conclusively, that the *ξφος* of Appian ("acetum" of Livy) was something of the nature of nitro-glycerine. Our author adopts this idea, and says that Hannibal's army, for its passage of the Alps, "was probably furnished with an explosive of great power, resembling, it has been thought, the dynamite of this day." A little later he says that Turin "fell to a siege conducted with great vigour, and followed by an assault, after the explosion of an enormous mine." For the details he refers to Hennebert, who, in the absence of any particulars, has reconstructed the siege from his own imagination, and concludes that the walls were probably undermined. Hennebert, however, says nothing about an explosion. It is in the highest degree improbable that, if the use of explosives for blasting and mining had been once acquired, it should ever have been lost again, or have failed to play a prominent part in ancient sieges. At all events the passage in

Livy is a narrow basis to build such an assumption on. Unwieldy stones are even now sometimes broken up by lighting fires round them, and turpentine or petroleum might be used to make the fires burn more fiercely.

On the vexed question of the site of the Battle of Cannæ Mr. Morris decides for the left bank of the Aufidus. Here he is in accord with Mommsen and others, but he is far from doing justice to the arguments of Mr. Strachan Davidson for the right bank. These arguments have been lately reinforced by Sir Edward Fry (*English Historical Review*, October, 1897). Mr. Morris believes that the Romans fronted east and the Carthaginians west: "no doubt Polybius and Livy say they did front south and north; but Polybius (III. 114) and Livy (XXII. 46) concur in asserting that they had an equal share of sunlight; and as, bearing in mind the time required to effect the passage of the Aufidus, and to place the two armies in line, the battle could hardly have begun before one or two p.m., this almost proves they fronted east and west." But it was the *rising* sun, according to Polybius, that was harmless to both alike, for the very reason (as he says) that they fronted south and north. It may be added that in the plan given opposite page 172 the Romans are made to front north-east, in which case they would not have had the south-east wind in their faces, as Livy says they had. The statements of Polybius are so clear and definite, and hang so well together, that it would take a good deal to justify the setting them aside.

There seem to be few misprints, but "Kiepert" is spelt "Keippert" (pages 15, 16), and "Mylæ" "Mylos" (page 57), and Colonel Hennebert's name is given two superfluous accents throughout. The map of central Italy has been reduced so much as to be illegible.

"Foreign Statesmen."—*William the Silent*. By FREDERIC HARRISON. (Macmillan.)

As an historical biography this book is highly to be commended, for it sets out the character and achievements of the Prince of Orange, and the place that he occupies in history, with much force and not less brightness of expression. It would have been impossible to have so well portrayed the man and his work in a short volume if an attempt had been made to treat the Prince's career with any minuteness of detail, and to trace the changeful course of his negotiations with foreign powers; and Mr. Harrison has wisely been content to indicate in general terms the extent and ever-shifting direction of William's diplomatic labours, and to explain why he was forced continually to be scheming for fresh alliances, and often to propose or accept terms that must have been distasteful to him. It may be that the portrait of the Prince that he has given us would have gained something if it had had a little more background; if the picture had included a sketch of the social and religious condition of the Netherlands, of the constitutional position of the Provinces, and the leading characteristics of their nobles and people. As it is, the Prince's figure appears rather too much by itself. Still it stands out well, and a very striking figure it is. Not a skilful military leader, nor a man who delighted in war, William had in the highest degree the highest kind of courage: he was never daunted by defeat or troubled by the knowledge of impending danger. That he was a statesman of consummate ability is proved by the work that he accomplished in the face of extraordinary difficulties. It was not accomplished, for the most part, by methods that he would willingly have chosen; indeed, the secret of his success lay not merely in his unconquerable resolution, but in his perception of what was of vital importance and his readiness to let everything else go in order that he might obtain it. He set himself to free the Netherlands from the civil and religious tyranny of the foreign oppressor, and counted everything as of slight importance in comparison with this one great object. Though, as a petty sovereign and a noble of ancient lineage, he had no leanings towards democracy, he severed himself from the party of the nobles so soon as he was thoroughly convinced that they would not join him in open resistance to Spain, and resolutely took the tremendous step of rebellion. Knowing perfectly well the despicable character of the Duke of Anjou, he encumbered himself with that mischievous and disloyal debauchee because he believed that a titular sovereign was necessary as a bond of union between the Provinces, and that they needed the French alliance as a protection against Philip. He was bred up a Catholic; in middle life he professed Lutheranism, and he dis-

liked the bigotry and narrowness of Calvinism, but he became a Calvinist because the success of his work depended on his gaining the confidence of the sturdiest section of the people of the Netherlands. As Mr. Harrison points out, he was far in advance of his time in his desire for complete religious toleration. He did not desire merely that Catholics should keep their hands off heretics: he would have had Catholics and members of the reformed communions enjoy equal liberty of worship, and was unable to see why Lutherans and Calvinists should detest one another. "The difference is not enough," he would say, and indeed no difference would, in his eyes, have been enough to justify Netherlands in standing apart from one another while the Spaniard was still in the land. A special proof of his political genius is noticed here in his manifesto to the States in 1566, in which he advocated the neutralization of the Netherlands for the common advantage of Europe. Yet, as Mr. Harrison observes, "with all his profound insight, he did not quite understand that the Netherlands formed not one nation, one religion, one race, but two, and even more." His attempts to unite them were necessarily doomed to failure; but they must not be called ineffectual, for they bore good fruit in the greatness of Holland and the eventual prosperity of Belgium. At the end of this most interesting volume are a useful genealogical appendix and a bibliographical note giving a list of the contemporary authorities on which Mr. Harrison has based his work and the modern books that he has consulted in writing it.

The Parent's Assistant, or Stories for Children. By MARIA EDGORTH. Illustrated by CHRIS HAMMOND. With an Introduction by ANNE THACKERAY RITCHIE. (Macmillan.)

While cordially welcoming Messrs. Macmillan's pleasant illustrated edition of that excellent friend of our youth, Maria Edgworth's "Parent's Assistant," we cannot forbear expressing a wish that it could have been reproduced under another title. For, alas! we know middle-aged men and women who confess that in the days of their childhood they were deterred from looking between the covers of this book by a name suggesting contents devised to meet the taste of the parents rather than the children; and we fear that the children of the present day are even more likely than their parents and grandparents were, to be prejudiced against a book by the suspicion of a didactic intention. It is possible, however, that the reaction, which must begin somewhere some day, is now working in the nursery, and that the new edition of the "Parent's Assistant" may find its way through the hands to the hearts of hundreds and thousands of small boys and girls between now and the New Year. For our own part we have delighted in Miss Edgworth's "Moral Tales" at any and every age we can remember. We believe, however, that the proper age for reading them first is between eight and ten. Soon after ten boys get the adventure fever, and girls have a premonition of romantic sentiment, both of which influences tell against the appreciation of sober sense and clearly stated facts. But at eight a child is still undisturbed by the spirits of adventure and romance, and yet able to understand almost anything that is worth understanding, provided it has the luck to come in contact with an elder who has the gift of explaining. And this was Maria Edgworth's supreme gift. She understood what constituted an explanation, and could make any matter of fact clear to any sound intelligence. There is an idea abroad that Miss Edgworth's common-sense stories pall upon imaginative children, and only please those who are defective in imagination. But this is a monstrous mistake. We believe it was Goethe who said that the reason why poets generally chose very matter-of-fact wives is that they want a companion to steer them through the mazes of the practical sublimary world where they are not at home, not in the empyrean where they range at ease. And the same truth applies to imaginative children, who are absolutely at home in the world of allegory and fairy story, but much at a loss among practical things, unless they fall in with a guide like Maria Edgworth, who not only knows what they don't know, but knows exactly how to put the prosaic things so that a child's imagination may grasp their significance. But it is almost impertinent to waste space in expounding the theory of why the imaginative child wants Miss Edgworth's delightful little stories, when Mrs. Ritchie—whose claim to be counted among the children of imagination no one will dispute—has come forward to tell us in a characteristic preface how the stories of the "Little Merchants," and "Lazy

Lawrence," and "The Orphans" delighted her in childhood. Only one word more would we add to Mrs. Ritchie's commendation of these tales. They are written one and all in admirable English. Miss Edgeworth's style was never so good as when she wrote for children, and chose for every idea that had to be expressed the words fullest of solid meaning and the construction most easily construed. In a day of showy and slipshod writing, a book for the nursery written in classical English is an almost inestimable educational boon.

The Life of Ernest Renan. By Madame JAMES DARMESTETER. (Methuen.)

Renan has been fortunate in his biographer, and no one would have appreciated more fully than the subject of it a portrait sketched with such knowledge and sympathy, the admiration of a kindred spirit, and the critical faculty which is not blinded by excess of charity. Madame Darmesteter is an English poetess to whom, if we may borrow the phrase of Ennius, her adopted country has given a new heart. Her feelings are English; her thoughts and her style are French.

To English clerics Renan is still a *bête noire*; they continue to vilify him and misspell his name. Even those of us who have no theological prejudices find it hard to pardon his aberrations—his "Abbesse de Jouarre," his comparison of the Book of Jonah to "La belle Hélène." Renan's "detestable sentimental cynicism" is a typical note in the current *Spectator* (November 20), which catches our eye as we write. Madame Darmesteter sees no less clearly than the *Spectator* this phase of Renan's character, but she sees also that it is only a phase, and *tout savoir est tout pardonner*. This finely strung, sensitive, receptive nature, which enabled Renan to divine and interpret distant times and alien modes of thought, gave also a certain fluidity and apparent insincerity to his own philosophy of life. Hand and heart were often at variance; when most convinced himself he was impelled to play the *advocatus diaboli*; in a word, he had the defects of his qualities. Yet his dalliance with error was always platonic, and Madame Darmesteter has vindicated the epitaph he would have chosen for himself, *Veritatem dilexi*.

We note one confusing misprint, "buried [read burned] Giordano Bruno"; "Joseph" for "Josephus" is probably another; and the Greek accents and breathings need revision.

Dictionary of Quotations (Classical). By T. B. HARBOTTLE. With Authors and Subjects Indexes. Price 7s. 6d. (Sonnenschein.)

This is the second volume of the series to which Colonel Dalbiae contributed the first, of English quotations. It is a handsome volume of six hundred and fifty pages, and, unlike Colonel Dalbiae's, it has no rivals in the field. We are still inclined to doubt the advantage of the alphabetical arrangement according to the first word, not the catchword, of the quotation. Thus it would not occur to a reader who wanted to verify *infandum renovare dolorem* to look under *contingere*, and in the Greek part δ, ή, τό are still more illusive. The exact references, with indications of editions in doubtful cases, are a most commendable feature, but we doubt the value of the added translations. Non-classical readers who want to know the meaning of *cui bono?* are sufficiently catered for by the ordinary dictionaries. In such a work there must needs be *lacune*, and a cursory investigation has revealed not a few. We miss the originals of classical echoes in our English poets—"Gather ye rosebuds," "This way and that dividing the swift mind," "The sea-blue bird of March," "The violets of his native land," "A tower that stood four-square." "Patriotism" is not given in the Subjects Index, and we cannot discover the *locus classicus* of Cicero's "magnum est eadem habere monumenta," &c. We miss Meleager's *Βασιλὴν μὲν ἀλλὰ πόδα*, Petronius' *curiosa felicitas*, Aristotle's definition of Tragedy, Aristophanes' *δῖνος βασιλεύει, ἀγκύριον ἀπώλεσεν, and δ' εὐκόλος μὲν, &c.*, Sophocles' *πυκνὴ ἀκούσι ψακάδος*, and what Shelley pronounced the most imaginative line in all Greek poetry, *πολλὰς δδούς ἔλθοντα φροντίδος πλάνοισι*. The translations are generally accurate, but we have noticed a few slips—*duplex libelli dos est*, "the gift of a book is twofold"; *habet natura vivendi modum*, "nature has a standard of living"; *τὸ γὰρ αἰσθάνεσθαι πάσχειν τι ἐστίν*, "to perceive is in some sense to suffer." Will Mr. Harbottle, or some of our readers, inform us what is the origin of "Si vis pacem para bellum"?

Grammaire Pratique de la Langue Anglaise. Par M. le Professeur LARMOYER. (Neville Beeman.)

We have several times been asked to recommend an English grammar for French children. We shall in future answer: Prof. Larmoyer's, but

we must in honesty add: *faute de mieux*. It is framed on the old Ollendorffian method of rule and dialogue. The publisher's *réclame* (puff) is *colossale* (takes the cake). We find ourselves involuntarily catching the style of the exercises. Mr. Beeman informs us that a sight of M. Larmoyer's manuscript kindled his enthusiasm, and that this enthusiasm was shared by a committee of Englishmen appointed to examine it. To make doubly sure, he submitted it to a French and a Brussels house. The latter reported: "Ouvrage parfait"; the former: "Il est possible qu'un autre produise une grammaire aussi bonne; mais une meilleure jamais." The reviewer once found himself seated at *table-d'hôte* next a beautiful and accomplished young German lady, with whom he conversed in English for an hour or more. Towards the end of dinner he ventured to compliment her on her knowledge of the language. "We have been chatting on all sorts of subjects, Fräulein, and I have not noticed a single mistake." "No," said the lady with a superior air, "I have been well taught and do not make mistakes. Pride goes before a fall, and almost the very next remark of the lady was 'But I am not difficult.'" The quip courteous was irresistible—"Pardon me, Fräulein; you can say in German: 'Ich bin nicht schwerlich,' or in French, 'Je ne suis pas difficile,' but our defective insular tongue has not this idiom." The application of the epilogue is only too easy, and it would be unfair to make Professor Larmoyer responsible for his publisher's boasting; but, to prove that we are speaking by the book, we will give at random a few *bevue*s. Page 5: *bomb* is not now pronounced *bum*. Page 7: the *l* in *bald* is not silent. Page 130: "You have a pen; there is a pencil"; "Is your father within?" *There* and *within* are not prepositions. In "Reading is pleasant," *reading* is not a participle. Neither Shakespeare nor any one in his senses can have written "more worst." Prepositional constructions after verbs occupy seventy pages. Half of the phrases are superfluous, and ten per cent. misleading. "*Abouter en*, abound with": *in* is the common construction. "I approve of your conduct": *approve* simply is more correct. "Ask him out, *faites-le sortir*": rather *invitez-le*. "I ask of you to excuse him": doubtful English. These are all culled from the first page. *Œuvre parfait!* We are none of us impeccable, not even English-French professors; but what are we to think of Mr. Beeman, the Committee of Englishmen, the French and Belgic Houses? In the multitude of counsellors there is not always wisdom.

French without Tears. By Mrs. HUGH BELL. Book III. (Edward Arnold.)

Mrs. Bell's Readers are so well known that we scarcely need to add our word of praise for Book III. The stories are bright and interesting, and are continued through many lessons, thus avoiding the scrappiness, and consequent lack of interest, which often characterizes these books. There is no attempt at a systematic teaching of grammar, except by observation of the text. Perhaps by the time children have read the first two books of this series they would do better to chose a book with retranslation exercises than to continue this tearless system too long. Grammar cannot be postponed too long even if it does cost tears.

Longmans' Second French Reading Book and Grammar. By JOHN BIDGOOD, B.Sc., and J. WATSON CAMPBELL.

We offer an apology for leaving this little book so long unnoticed. The plan of construction is already well known. There are short easy reading lessons, illustrated with wood-cuts, and grammar lessons and retranslation exercises corresponding to the text. In the grammar the pupil's attention is concentrated upon one point at a time, and of this point he will find several illustrations in the text. The only criticism we offer is that the "reader" may lack interest. There is too much natural history, and not enough story. But the plan of the book is excellent, and we can confidently recommend its use for young children.

Madame Lambelle's Gustave Toudouze. Edited by JAMES BOÏELLE, B.A. (Whittaker.)

Mr. Boiello tells us that, "Apart from the human and touching interest of the story, the work would be hard to beat as an example of pure idiomatic French from a gifted and cultured pen"; and he quotes M. Flaubert's opinion, that the novel "déborde de sensibilité ou plutôt de sentiment." These criticisms would make us suspect, what indeed we believe to be the truth, that the author's charm is not one which would appeal to school boys or girls—or, at any rate, only in the highest forms. In spite of fairly full notes, a good modern dictionary would be needed; and even then it will be no easy matter to put M. Toudouze's long descriptive periods into good English.

Vingt Ans Après. By DUMAS. Edited by FRANCIS TARVER. (Edward Arnold.)

This will prove an acceptable school edition for fifth- or sixth-form work. There are upwards of two hundred pages of straightforward, fairly easy, and eminently readable matter. Indeed, a more interesting book for boys would be hard to find. The notes are almost entirely confined to translations of difficult phrases, and not too many of them. There are a few grammatical explanations. The story is for the most part self-explanatory, but a few more historical explanations would have been welcome.

Voces Academicæ. By C. GRANT ROBERTSON. (Methuen.)

These *jeux d'esprit*, as they appeared in the *Westminster Gazette* and *Oxford Magazine*, are quite racy enough to while away an idle quarter of an hour, but they will hardly stand a second perusal. Even the "Dolly Dialogues," on which they are obviously modelled, were better taken piecemeal. Mr. Robertson is one of our most promising young historians; like Dr. Johnson, he has made a night of it with the young bloods, and will go back with all the more zest to his Capitularies.

An Advanced History of England, from the Earliest Times to the Present Day. By CYRIL RANSOME, M.A., Late Professor of Modern History and English Literature at the Yorkshire College, Victoria University. Third edition. (Rivingtons.)

We welcome with pleasure a new edition of Mr. Ransome's serviceable history. His book has already received favourable notice in this *Journal*, and there is therefore no need for us to say more than that it has been carefully revised for this edition, and several alterations made for the better. We are glad that the merits of this sound and carefully-written history are recognized by those engaged in education. One still remaining misprint must be noted for correction in a future edition—on page 36, for 753 read 735 as the date of Bede's death.

GIFT BOOKS.

The Saga of the Sea Swallows. Told by MAIDIE DICKSON. Illustrated by J. D. BATTEN and H. FAIRBAIRN.

The writing of a good fairy tale demands poetic faculty of no common order. Miss Maidie Dickson is the happy possessor of such a gift of imagination as can at once unlock the gates of the ancient fairyland, and, with a wonderful air of verisimilitude, portray the fortunes of our fellow-mortals as mingling with the fates of the elvish inhabitants. We all know that is also a part of Mr. Batten's peculiar charm: his fairies are real fairies, and his human creatures are perfectly human, yet perfectly at home in their ethereal companionship. And both author and illustrator take us into excellent company. Courage and self-renunciation are beautiful to both. Moreover, Miss Hilda Fairbairn, the other illustrator, has admirably caught also the sweet pathetic grace of the second story in the volume, which, as a story, we rank higher than the first. Nor are the bad fairies forgotten. Haunting in its eerie and ugly beauty—for such is the paradox that has been achieved—is Mr. Batten's wicked elf-queen on page 74, which may be contrasted with the frank and lovely innocence of his "Little Norah on the Pooka" (page 155). As to this "Pooka," which plays so important a part, it is an interesting question whether the name be not of the same derivation as "Puck," the Welsh for fairy being, we are told, *pucca*, to which our own "pixie" is, of course, probably akin. The book is altogether delightful.

Young Chris. By L. E. TIDDEMAN. (Gardner, Darton, & Co.)—This is a pretty story of a small boy found in the snow one Christmas Eve, and brought up by a kind doctor and his wife. Chris is good without being goody-goody, and fully returns the love of his adopted parents. On another Christmas Eve we hear how he is able to show his gratitude. The story is well told, and it is a pity that the illustrations do not come up to the same standard.

Stories for Children in Illustration of the Lord's Prayer. By Mrs. MOLESWORTH. (Gardner, Darton, & Co.)—These are now published in a collected form. The idea is a good one, a story going to each clause of the Lord's Prayer, and the special meaning is in most cases well worked out. "The Faithful Tryst," "Loni and her Brothers," and "Mark's Revenge" are among the best, the incidents seeming to fit in naturally for the desired end. "The Snow Storm" is not so successful. The children never would have been allowed to start by themselves on such an expedition, and the cold and hungry night at the cottage is too obviously dragged in for a purpose.

Singing Verses for Children. (Macmillan.)

A very daintily got-up book of child's songs. Words and music are well suited, most of the tunes are pretty and taking; some, we think, are not quite simple enough for children to learn easily, for instance, "My Pegasus," or "Snowballs," but others, such as "Good Morning," "Sunshine Song," "The Little Stars," will be sure to take a child's fancy. The illustrations are very good; the least successful are "Silver Night," and "My Pegasus"; quite the most charming is the "Cradle Song," both in the illustrations to the verses and in the border design.

Messrs. Macmillan's last volume in the "Eversley Series" is *Guesses at Truth by Two Brothers*. The present reviewer can never forget the debt of gratitude he owes to Augustus and Julius Hill, though it is thirty years and more since he read their thought-stimulating essays.

Dorothy Darling. By MINNIE E. PAUL. (Hodder & Stoughton.)—Though there is nothing very wonderful about "Dorothy Darling,"

we are given a pleasant account of her and her doings, of her doll Betty, who goes through many sufferings, and of Lucinda, who, being unfortunately carried away by the waves, is obliged to become a mermaid. The pictures of Dorothy visiting and sewing are pretty, but some of her portraits are, we hope, not at all flattering. The book is nicely got up.

Song Flowers, from "A Child's Garden of Verses." By ROBERT LOUIS STEVENSON, with Music by KATHERINE M. RAMSAY. (Gardner, Darton, & Co.)—A most dainty and fascinating volume. Of Stevenson's verses it is needless to speak, and they could hardly have a better illustrator than Gordon Browne, whose children, always delightful, are at their best here. Much of the music is very pretty, and well suited to the words. On the whole, "The Swing" takes our fancy most. Words and music go so pat to each other, and the little sailor boy, with his hair blowing in the wind, just gives the crowning touch, but the two first songs, the "Shadow March," "In Port," and "Bed in Summer," all go very well. Mr. Crockett's "foreword," with its pathetic note of regret and affectionate admiration, will add to the interest of older readers, but the book will be welcome alike to old and young.

Young England, Vol. XVIII. (Sunday School Union.)—This year's volume contains much that is exciting, amusing, and instructive. "Yarns of the Deep, Deep Sea" take the place of the excellent series of stories "Told from the Ranks," which appeared last year, and are, like them, true stories, only taken from the lips of seamen instead of soldiers. For serials, there are a story of adventure in Brazil, by David Ker, which is as full of unexpected incidents and perils of the most deadly kind as it can well be, and a Malay story, by K. M. Eady, which, though it begins at school, soon lands its heroes in all sorts of difficulties in Malay. Some of the articles on our "Great Living Generals" are of special interest just now, reminding us of the good work done by Lord Roberts, and Sir Donald Stewart, and Sir George White, so near the scene of the present frontier risings. There are some suggestive papers in the "Sunday Hour," and many short stories and articles which range over a wide field, and several among the numerous illustrations are drawn with great spirit.

Jack's Mate. By M. B. COX (NOEL WEST). (Gardner, Darton, & Co.)—We get a taste of most things connected with a ranchman's life in "Jack's Mate"—cattle driving, broncho breaking, holiday camping out, the pursuit of cattle thieves, &c., with a few extras, such as a prairie fire and the discovery of a rich bed of gold, thrown in. Jack is a good honest boy, and natural enough, but his "mate" is a somewhat unreal personage. He is one of those unfortunate individuals whose nearest relations seem to take a delight (in books) in suspecting of all kinds of crimes, rather than take the trouble of considering whether anyone else was likely to have committed them. Brian is supposed to have stolen £500 from his father, and, as the obvious mode of clearing himself from suspicion, he instantly leaves England for Texas, where he remains till the real thief obligingly confesses that he took the money. Brian is, of course, the soul of honour and of pluck, and his determination to sacrifice himself for his friends is very nearly crowned with success, owing to the extraordinary line he persists in taking in the recovery of some stolen cattle. There is plenty of variety in the story.

From Story to Story. By JANIE BROCKMAN. (Gardner, Darton, & Co.)—A collection of very short stories for small children, mostly containing a moral. Children who commit various faults and (having got themselves into difficulties) are very repentant are at once forgiven, sometimes even rewarded for being sorry. There are also numerous rimes and illustrations; a good many of the latter are by Pym.

For Treasure Bound. By HARRY COLLINGWOOD. (Griffiths, Farran, Browne, & Co.)—We do not know if Mr. Collingwood really wishes to be identified with his hero and namesake, if so, he must be congratulated on having acquired "a magnificent fortune" so easily, for, though we hear of many dangers during the adventurous voyage of the *Water Lily*, he escaped them, almost all, unhurt. Anyway, the story is a good one, and, though at times the many nautical phrases are bewildering to a landsman's ears, we are soon carried away by the freshness and spirit of the book; and what can a boy want more than pirates, sharks, a real sea serpent, coral reefs, and savages, all mixed up in one delightful whole? We should have thought—but that is doubtless ignorance—that it would hardly be safe to have for one's only boat a contrivance which took nearly an hour to put together. Sometimes a yacht perversely goes down in a few minutes.

Wee Doggie. By ELIZABETH C. TRACE. (Nelson.)—The principal incidents in "Wee Doggie's" career are true, but taken from the lives, not of one but of several dogs, and many are the adventures and troubles he goes through after straying from his home. His various experiences are interesting and well described, and we are glad to hear that he is once more restored to his fond little master. If "Wee Doggie" were no bigger than he is represented in the picture, we doubt his power of keeping Paul afloat in the lake even for a few minutes.

Animals, their Ways and Claims. By EDITH CARRINGTON. (Bell.)—This is a natural history written with a purpose, but, appealing as it does to children, and not pretending to be scientific, it rather gains than loses thereby. The purpose, we need hardly add, is to inspire an interest in animal life, and so create sympathy and a horror of cruelty. Animals range from the horse to the earth-worm, and as regards the latter Miss Carrington has more sympathy with Dr. Johnson than Isaac Walton. Miss Carrington has a pleasant easy style, and the book has plentiful illustrations.

The Lost Gold of the Montezumas. By WILLIAM O. STODDART. (Hodder & Stoughton.)—A spirited story, in the times of the War of Independence in Texas, ending in the defence of the Alamo and practical wiping out of its heroic defenders. Travis, Houston, Crockett, and others necessarily come into the story, but it is with Bowie that we have specially to do. Bowie and a small party of rangers start out from San Antonio to prevent a fracas between some friendly Indians the Lipans, and the Comanches. He gets let in for a longer and more dangerous expedition than he calculated on, and his various experiences, including his discovery of the Aztec treasure, are most exciting. Red Wolf, the son of Castro, is a fine specimen of a young brave, and adds not a little to the general interest. The book is very nicely got up, and the illustrations are good.

Ida from India. By Mrs. HERBERT MARTIN (Griffith, Farran, Browne, & Co.)—When Ida first makes her appearance from India, she is about as objectionable a little girl as could well be found; the author tells us that she was selfish, thoughtless, indolent, rude, and disobedient, and we gather from the story that she was also deceitful and untruthful (though her nature is said to be frank and honest). These do not seem very hopeful materials with which to fashion, in the course of a year, a fine strong character, a devoted elder sister, winning the love and gratitude of all around her. Yet this miracle is accomplished, though we cannot say that we quite follow the process. But if Ida cannot be used as an example, she may at least serve as a warning of what to avoid.

The Adventures of a Stowaway. By FRED WISHAW. (Griffith, Farran, Browne, & Co.)—An excellent story, told with great spirit. "Alice" goes through adventures enough for several stowaways, and describes them in a very natural and easy way. Alice's lachrymose condition at school seems a little inconsistent with the "cheek" he afterwards displays, and his lordly way of treating wars and rebellions only as opportunities of amusement for himself or obstacles in the way of his plans. But this is a small detail and in no way spoils the story.

Little Folks. (Cassell.)—The volume for 1897 presents many attractions. There are two good serials—one by Mrs. Meade, whose stories are always popular, and one of sport and adventure by Edward Ellis, which all boys will like. Even for little folks the prize competition and illustrated interview seem to be *de rigueur*, and the Queen's grandchildren figure to a large extent. Many tastes are consulted, and there is a little of all sorts in the way of short stories and verses. Many of the illustrations are good, and if the colours of the large pictures are a little over bright, children will not quarrel with them on that account.

We have received from Messrs. Macmillan *Mansfield Park*, by JANE AUSTEN, its original charms much heightened by Hugh Thomson's admirable illustrations, which exactly accord with the character of the story; also *Newton Forster* and *The Pirate and the Three Cutters*, by Captain MARKYAT, with illustrations by E. J. Sullivan. Some of these have a certain rough effectiveness, but others, especially those of the female characters, are unsatisfactory. The print of this series is very clear and pleasant to read, and the volumes are light and convenient to hold.

Scarlet Feather. By HENRY J. BARKER. (Griffith, Farran, Browne, & Co.)—Blake Middleton, an English lad, goes out to Arizona to join a brother and sister, but at Cincinnati he sees in a newspaper that there had been an Indian raid on the mines where his brother was manager, and having secured the services of a noted scout as guide, he hurries to the scene of the raid, and afterwards with two companions follows the Navajoes to their own country, to revenge his brother's death and if possible to release his sister. The defect of the story is that, though there is "a great deal of fear, there is very little danger," at least the danger, except in one instance, does not come to much, and the sister's rescue is finally accomplished with very improbable ease. The journey through the gorge and the "Dry Swallow" is well described.

The Union Jacks. By J. LEY PETHYBRIDGE. (Gardner, Darton, & Co.)—This does not vary much from the usual run of school stories; the new boy who gets knocked about and unmercifully chafed, the big bully, and better sort of prefect, all have their turn; but the book is written in a bright easy sort of way and the development of the "Union Jacks," who start as a society to maintain order and authority, and end by being warlike, and considerably exceeding their powers, is amusing.

Miss Barton's Bicycle. By PENELOPE LESLIE. (National Society.)—Shows us, to begin with, some of the delights of looking after other people's children. Minna and Tim were not easy to manage or perhaps very reliable, but the bicycle incident seems rather beyond them. Mr. Dalton is one of the grandfathers of fiction, stern and repellent, who supplies scathing reproofs and handsome presents in about equal measure.

The White Witch of the Matabele. By FRED WISHAW. (Griffith, Farran, Browne, & Co.)—The "White Witch" is an English boy, stolen from his parents when little more than a baby and brought up by the Matabele. It is a question for the psychologists how far it is likely that a boy who between the ages of two-and-a-half and sixteen had never heard an English word, should recognise one like "hyena" on hearing it among the names of other animals, or that having been brought up among savages he should instinctively feel pity at the sight of needless slaughter and pain. His vanity and conceit, particularly after Marsden has taught him to shoot straight, are more natural traits. Be this as it may, his performances are varied and exciting, before he is restored to the arms of his parents, who have sought him in Evangeline-like wanderings.

Cassell's Saturday Journal, a publication which comes out in weekly penny numbers, is certainly an astonishing production for the amount of information, stories, jokes, &c., which it contains. The yearly volume, reaching to nearly eleven hundred pages, is most impressive in general appearance, and wonderfully light considering its size. It gives a little of everything, from fashionable intelligence to burglary up to date—besides serial stories by popular authors and interviews with notabilities of all kinds. Several of the large pictures are good.

A Clerk of Oxford. By E. EVERETT GREEN. (Nelson.) Leofric Wyvill's adventures begin as soon as he leaves the Priory, near which he was brought up, and last, so far as this story is concerned, till the battle of Evesham and the death of Simon de Montfort and his sons deprives him of his chosen comrade, but at the same time sets him free to become the Master of an Oxford Hall, and marry his lady love. The book gives a curious picture of Oxford life in those stormy times, and the somewhat incomplete arrangements there for the advancement of learning, before the hero follows his friend to Kenilworth. The adventures are long drawn out, and the number of characters introduced rather spoils the effect of the story as a whole.

The Child of the Caravan. By E. M. GREEN. (Griffith, Farran, Browne, & Co.) Some people take a pleasure in having their feelings mildly harrowed, if one may use such a doubtful expression, and to those we may commend "The Child of the Caravan." Nothing very bad is done to Carly—by the way, his taskmaster would have had more sense than to punish a small violinist by striking his hands—so that the pathos of his lonely life and picturesque appearance and early death can be comfortably enjoyed.

Partners. By H. F. GELKEN. (Nelson.) A school story of two boys, whose very different characters make their partnership a mutual advantage. The tie stands most of the strains of school life, and is only temporarily interrupted by the self-sacrifice of Rufus, who will not let his partner share in some disgrace which is unfairly attached to him, and so pretends that he is tired of having Tom for a friend. Tom is singularly dense on this occasion, but it all comes right in the end. The two aunts and their behaviour to the children, and that of the children to them, is altogether absurd, but the school part is brightly written.

A FELLOWSHIP for women, to be called the Geoffrey Fellowship, and to be of the value of £100 a year for three years, has been presented to Newnham College, Cambridge. It will be first awarded in June, 1898. The Geoffrey Fellow will be required to reside at Newnham College, and to pursue independent study in some department of learning, letters, or science. Candidates must be women who have obtained Honours in a Cambridge Tripos Examination, or in the Oxford Final Schools. They should send in their names to Mrs. Verrall, President of the Associates of Newnham College, before May 1, 1898. Further information respecting conditions of tenure, &c., may be obtained from Mrs. Verrall, Newnham College, Cambridge.

THE *Jewish Chronicle* prints an abstract of a deed of endowment by which Mr. B. L. Cohen, M.P., has established at Newnham College, Cambridge, a fund, to be called the Hannah Floretta Cohen Students' Fund for providing an allowance to five deserving students of the college of £5 each per annum, to purchase books. The members of the Council who attest the acceptance of the trust by the College are Mrs. Henry Sidgwick, the Principal, and Dr. Peile, Master of Christ's.

CALENDAR FOR JANUARY.

[Items for this Calendar should be sent in before the 24th of the month.]

- 1, 4, 6, 8.—Royal Institution, 3 p.m. Continuation of Course of Lectures to Children on "The Principles of the Electric Telegraph," by Professor Oliver Lodge.
- 4 and 5.—Educational Institute of Scotland. Twenty-fourth Annual Congress, at Stirling.
- 4-15.—College of Preceptors. Winter Meeting for Teachers.
- 7-10.—Alpine Club, Savile Row (R.G.S.), 4 p.m. Two Lectures to Young People on "A Geographical Holiday through Forest, Prairie, and Mountain" (Illustrations), by Dr. H. R. Mill.
- 12, 13 and 14.—Friends' Guild of Teachers. Third Annual Conference, at Birmingham.
- 15.—Post Translations for Competition.
- 18-25.—Royal Institution, Albemarle Street, 3 p.m. Lecture on "The Simplest Living Things," by Professor E. Ray Lankester.
- 19.—King's College County Council Class in Pure Mathematics resumed (6 p.m.).
- 20.—Bedford College, London. Lent term begins.
- 20-27.—Royal Institution, 3 p.m. Lecture on "The Halogen Group of Elements," by Professor Dewar.
- 21.—Royal Institution, Albemarle Street, 9 p.m. Lecture on "Buds and Stipules," by the Rt. Hon. Sir J. Lubbock.
- 22.—King's College County Council Class on Teaching Mathematics resumed (10 a.m.).
- 22-29.—Royal Institution, 3 p.m. Lecture on "Cyprus," by Professor P. Geddes.
- 24.—Bedford College, London. Art School Reopens.
Post all School News, &c., and all Advertisements for February issue.
- 26.—(First Post.) Latest time for receiving urgent Teachers' Advertisements (prepaid) for February.
- 28.—Royal Institution, 9 p.m. Lecture on "Instinct and Intelligence in Animals," by Professor C. Lloyd Morgan.
- 31.—The February issue ready this day.

CORRESPONDENCE.

THE NEW "DIRECTORY," THE INCORPORATED HEADMASTERS, AND THE FUTURE.

To the Editor of The Journal of Education.

SIR,—My friend Dr. Scott scarcely does himself justice in his letter published in your December number. In the first place, if he poses as an authority on educational matters, he ought to be aware that the question upon which I wrote was one in which, neither privately nor officially, had I the slightest interest, my own county having neither School Boards nor boroughs carrying on "classes of their own"; hence, as far as I am concerned, the clause, as distorted with the aid of Dr. Scott's Association, is as good and useful as in its original shape. As a matter of fact, I have Clause VII. in practical operation already. My letter, therefore, was "for the general."

Again, he might have conceived a gibe less colourless than that of referring to me as an "unlicensed but habitual instructor," especially when, if inclined to descend to bandy personalities, I might contrast the proceedings of instructors who are licensed but are scarcely habitual. Further, he might have concealed his inability to reply to my specific charges under a less patent fallacy than the plea of a "confidential character."

What the public want to know from Dr. Scott is: (1) exactly what his Association, or education in general, have gained by the change in the wording of Clause VII.; (2) what information his Association possessed to induce them to go directly in the face of the advice of Professor Jebb and other members of the Royal Commission; (3) how they reconcile their action with any attempts to co-operate with the County Councils and with their previous friendly relations.

However, to leave the past; those of us who are labouring and organizing to supply education where wanted, and to "work out by slow degrees" the scheme of the Royal Commission, have little patience with those who but talk and agitate with a view to obstructing our efforts. As long as Dr. Scott pursued (or pursues) a policy of construction, building up Associations and Scholarship Boards, to his own lasting credit and the good of education, I went, and will go, all lengths with him. But once the

policy becomes one of destruction, whether of Vice-Presidents, Government Departments, or Reports of Committees, I must turn to more useful work, and leave the Headmasters to stew in the School Board juice.

For your readers, the really important point is—and this my previous letter was intended to lead up to: What will be the policy of Dr. Scott's Association when the promised Bill appears?

The Government have three courses open to them. First, and most probably, they will, after all, decline to bring in a Bill. If this be so, it will be due almost entirely to Dr. Scott and his colleagues, with their "comprehensive settlement." Everybody knows that the Bill, as drafted, is a short and very tentative and imperfect one. It tends in the direction of the recommendations of the Royal Commission, but carries out only a few of them. In fact, it is a Bill of the real English "thin-end-of-the-wedge" and compromising type. It will, of course, be fought by the School Boards; they have declared their hostility to any Bill before seeing it. It only remains for the Headmasters to adopt the "policy of the altogether," blazon on their banner the words "Entire" and "Simultaneous" (which appear nowhere in the Report of the Commission), to ensure that the Bill shall be still-born.

Again, the Government may introduce the "Bill of some sort," as the Archbishop of Canterbury has told us it will be, and, finding once more the School Boards and the Headmasters—the "No Bill" and the "Perfect Bill" parties—in agreement against it, they may withdraw it. Are the Headmasters prepared to face this contingency? Dr. Scott, I fancy, is; but I also know that some of his colleagues are not. Still, the action on the "Directory" does not prepare one to expect that moderate counsels will prevail. If a Bill be brought in and if it be withdrawn, whether through direct hostility or lavish amendment and obstruction on the part of the legitimate secondary authorities, it is quite certain that the present Government will never touch the question again. The party now in opposition, if they keep their pledges to the School Boards—small areas, &c.—could never bring in a Bill acceptable to Dr. Scott's friends or likely to survive the House of Lords.

In the third place, the Government may force the imperfect Bill through in spite of the Headmasters. In what position will they be after this event? Having opposed the Bill, they will not be likely to be asked to help to carry out its provisions; they will, as in the case of Clause VII., have aroused the animosity of their natural allies, while proving their powerlessness to carry their point.

In any case except the third, vested interests will be daily increasing, and, as you point out in your leaderette, future legislation of *any kind* will be rendered more difficult. It is surely time, "at this juncture," to clear the air. The American strikers whose motto ran: "We don't want bread; we want plum-cake or blood," did not, I understand, enlist popular sympathy. The player who, finding that he has not all the best cards in his own hand, determines to trump his partner's tricks, is not generally credited with wisdom. The historic clan, which turned back in the day of battle and witnessed the defeat of its comrades because it was not given the place of honour, is not considered to have deserved well of its country. Yet these are the models of conduct set before the Headmasters for their imitation. For such persons to assume that their opinion is that of "ALL who have the interests of education at heart" is merely ludicrous.—I am, yours obediently,

H. MACAN.

ADVICE TO AUTHORS OF SCHOOL BOOKS.

To the Editor of The Journal of Education.

SIR,—Will you allow me to invite the attention of your readers to the Report on Educational Literature which was issued two months ago by the Society of Authors? I put myself forward in connexion with this Report because I was a member of the Sub-committee appointed for the purpose, and can bear witness to the care and trouble taken to acquire reliable information, and to draw serviceable conclusions.

This Report, a copy of which was sent to a list of writers on educational subjects, does not appear to have met with the attention which it deserves, for that part of literary property which consists of educational books is by far the most valuable, commercially, of any. It behoves educational writers more than any other class to look into the administration of their own

property, to ascertain what proportion of their property they are allowed to receive, and what proportion they are made to give up.

At the present moment, as the Report shows, the condition of things is very far from satisfactory. Deferred royalties of the most iniquitous kind, miserably low royalties, deferred payments, wretched sums offered for the copyright—these are only some of the grievances upon which this Report casts a light. I would very earnestly urge upon all educational writers the careful consideration of the Report.

As regards remedial measures, let me point out that, ten years ago, much the same condition of things existed in the branch of general literature. What has happened? The whole position of literary men and women has been improved—not slightly improved, but enormously improved. Royalties which were formerly 5 or 10 per cent. on the published price have gone up to 20, 25, and even 30 per cent. This improvement has been effected by the action of the Society of Authors, which made a change possible by ascertaining and publishing the exact facts as regards printing, &c., and showing what a huge proportion of the proceeds publishers were actually taking for themselves in the case of every successful book without the knowledge of the authors. This exposure strengthened the hands of authors, and made the old representations as to risk and cost of production impossible; it also simplified the work of the literary agent.

I would therefore invite the consideration of educational writers to the point that what has been done in general literature may be equally well done in educational literature. The machinery, *i.e.*, the Society of Authors, exists for all; the same methods may be applied by all; the same results may be obtained by all.

I venture to quote the leading principles recommended in the Report:—

1. Never to sell the copyright of an educational book under any circumstances.
 2. To arrive, first of all, before signing, at an understanding what the agreement gives the publisher as well as what it gives the author. If the publisher refuses to give these figures, the author should either refuse to sign the agreement, or should take advice as to the cost of producing the book, and therefore the proportion the publisher proposes to reserve for himself.
 3. The insertion of clauses in the agreement which would prevent the publisher from altering the book, transferring the book, or killing the book.
 4. Provision for improved terms if the book becomes a success.
- And, as a further security, we should urge upon all authors of educational books to join the Society of Authors, and to sign no agreement without sending it to the Secretary for revision.

I remain, Sir, your obedient servant,
WALTER BESANT.

United University Club
November 27, 1897.

COMPULSORY GAMES FOR HIGH-SCHOOL MISTRESSES.

To the Editor of the Journal of Education.

SIR,—I was much struck with the following sentences in the letter of "A Schoolmistress who Cycles, Rows, and Plays Tennis," in this month's issue: "Let the cause be what it may, the fact remains that it is almost useless for an assistant-mistress of thirty-five to apply for a post in a high school. Experience and increased power of dealing with character seem of no value." *Mutatis mutandis*, the same holds good of an assistant-master, who is counted old by the time he reaches the age of thirty. While such a state of things exists, I cannot agree with the last sentence in Miss Evans' letter, for it appears to me that however much teachers honour the dignity of their calling, those who have remained faithful to it for ten or twelve years, with little or no increase of salary, and a growing feeling of uncertainty as to what may be their lot if by any chance they should find it necessary to resign their posts, cannot but regard themselves as belonging to an "unfortunate band." The importance of athletics as a qualification for an assistant-mastership in a public school has now grown to such an extent that it requires no great stretch of imagination to suppose the time is not far distant when the headmaster of Harrow will offer a post as house-master to a future Brockwell or Richardson. It is a matter of common rumour that a 'Varsity blue, who a year or two ago made a high score at Lord's, received on the ground from two headmasters of public schools an offer of a mastership. When things have come to such a pitch, is it not a little too much to expect any one to believe that

the head masters as a body care one iota about training? And is it not a little absurd for them to say that reform in the conditions of secondary education must come from the outside, while experience in teaching and sympathy with boys are regarded by them as of no account when compared with athletic prowess?—Yours truly,

December 20, 1897. A CRICKETER, BUT NOT A "BLUE."

A NUT FOR PHONETICIANS.

To the Editor of The Journal of Education.

SIR,—Referring to the recent discussion at the meeting of the Modern Language Association on the introduction of the phonetic system in teaching the pronunciation of foreign languages, I should like to ask its advocates if any system of signs they can introduce will enable the student to distinguish, for example, the niceties in the various vowel sounds, especially those of the *e* among the different Continental nations—if they will be able to point out the fact that the English *house* and the German *Haus*, the Dutch *hij* and the English *he*, are not consonous—if they will be able to mark the distinction between, say, the French, German, and English *r*, and assist in mastering that shibboleth of the foreigner, the short English *a*, as in *hat*. If so, I would gladly cast my lot with the "Phoneticists."

These are a few of the real difficulties which confront the student who wishes to acquire an exact pronunciation.—I am, Sir, yours faithfully,
H. S. BERESFORD WEBB.

A SPECIAL SERVICE FOR TEACHERS AT ST. JAMES'S, PICCADILLY.

To the Editor of The Journal of Education.

SIR,—Your readers may like to be informed that the Right Rev. Bishop Barry has consented to hold a special service for those engaged in education, at St. James's, Piccadilly, on Sunday, January 9, at half-past three. His long and varied educational experience justify the expectation that his words will be of exceptional weight. The subject he has chosen is "Taught of God."—I am, Sir, faithfully yours,
55 Gunterstone-road, W., J. O. BEVAN.
December 17, 1897.

UNIVERSITIES AND SCHOOLS.

LONDON.

Mr. Victor Horsley, M.B., B.S., F.R.S., has been appointed by the Crown as a Fellow, in the room of the late Mr. Rivington. Mr. Horsley took many honours at the University, including the Scholarship and Medal at the Honours Examination in Surgery in 1881. He was Professor Superintendent of the Brown Institution for seven years (1884-91), and is, I believe, an ardent advocate of vivisection.

The accounts of the Brown Trust for the year 1896-7 show a total expenditure of £1,746. 6s. 6d. and a small balance in hand.

It should be noted that in and after 1899 five new scholarships, &c., will be awarded, viz.—At Intermediate Arts, Greek Exhibition of £40 a year for two years; History Exhibition of £30 a year for two years; Logic Exhibition of £30 a year for two years. At B.A. Honours, English Scholarship of £50 a year for three years (in lieu of a prize of £15); Political Economy Prize of £15.

At the Conjoint Honours Examination for B.A. and B.Sc., the Scholarship in Mathematics was taken by E. R. Darnley, who was alone in the First Class. Classics had only one successful candidate, and in the Third Class; B. Edgell has taken First Class Honours in Mental and Moral Science at B.A. with a view to D.Lit., and C. W. C. Barlow has taken a First at B.Sc. with a view to D.Sc.

Some of the Honours results were a little remarkable at Inter. Arts. last July. Thus, out of seven candidates in German only two passed, both ladies. Out of fourteen in Botany at Inter. Science all failed; but in Zoology four passed out of seven. Query: Does the standard differ with the examiners, or what is the explanation?

In all the Intermediate Examinations and at Matriculation, the younger candidates do far better than the older, and, except in Honours at Inter. Arts, those who have been previously rejected do not seem to distinguish themselves. Botany again was the most fatal subject. Matriculation, the safest apparently being Magnetism and Electricity, French, Greek, and German.

It has been resolved that the revision of the subjects and regulations in the Medical Faculty shall be entrusted to the Medical Committee of the Senate, together with the present examiners and any other teachers or examiners whose presence the Committee may find desirable. When the late changes in the regulations were forwarded to the Secretary of State for his formal approval (as is always done) he is said to have asked for longer time for examining any future changes—an indication that he does not regard this function as a mere matter of form.

There is a noteworthy change in the regulations for the Doctorate of Literature (for 1899 and after) that seems to have passed almost un-

noticed, but which makes the degree far more accessible to all appearance. The regulations for 1898 require the candidate to have passed the M.A. in Classics, *and also* (a) in Mental Science, &c., (b) or in Modern Languages, or (c) to have taken First Class Honours at B.A. in (1) English Language and Literature, or (2) History, or (3) Mental and Moral Science.

The Regulations for 1899 demand as the preliminary a pass at M.A. in Branch I. (Classics), *or* in III. or IV. (Modern Languages), or V. (History). In a few years' time we may expect D.Lit.'s to be not quite such *rare aves* as at present.

The Registrar having stated the necessity of compiling a hand catalogue of the Library at a low price, he was directed by the Senate to apply to the Treasury to sanction the necessary expenditure. As I have reason to believe that some progress has been made with the work, graduates may hope to have a handy list of the more useful works before very long.

The question of providing laboratory accommodation has been laid before Her Majesty's Government, who have it now under consideration.

It has recently been resolved by the Senate "that the British Institute of Preventive Medicine be added, for certificates required for the Doctorate in State Medicine, to the list of institutions from which the University receives certificates for degrees in Medicine."

The Standing Committee of the Senate on Examinations in Arts, Science, and Laws, recently appointed, has been divided into three Committees, viz., one in Arts, one in Laws, and one in Science, and in future there are to be four Standing Committees annually appointed, the fourth being in Medicine.

The following gentlemen have been appointed Assistant-Examiners:—*Classics*: Wm. Field, M.A., T. D. Hall, M.A., A. Waugh Young, M.A.; *Mathematics*: R. B. Hayward, M.A., F.R.S., A. Larmor, M.A., W. W. Taylor, M.A.; *English*: J. F. Davis, D.Lit., M.A., T. Gregory Foster, B.A., Ph.D., John Lawrence, D.Lit., M.A.; *French*: Elphège Janau, F. Thomas, B.A., B.Sc.; *Experimental Philosophy*: A. H. Fison, D.Sc. G. F. C. Searle, M.A., W. Watson, B.Sc.; *Chemistry*: F. D. Chattaway, D.Sc., A. W. Crossley, M.Sc., Ph.D., F. Stanley Kipping, D.Sc., F.R.S., W. P. Wynne, D.Sc., F.R.S.

It has also been decided that the two Examiners in History (Professor Edwards, M.A., and A. Hassall, M.A.) and the two Examiners in the Art, Theory, and History of Teaching recently appointed, H. C. Bowen, M.A., and F. Storr, B.A., be henceforth placed on the permanent staff.

The University has lent Sir J. Millais's portrait of Mr. Grote for the Winter Exhibition of the Royal Academy.

The Regulations in Laws are now undergoing final consideration by the Senate and will be duly published, together with the special subjects for 1900.

The deputation appointed on June 18 to explain the views of the Standing Committee of Convocation in regard to the question of the Intermediate M.B. Examination was received by the Senate, and their opinions heard, considered, and fully discussed.

The Sub-Committee on Graduation in the Faculty of Laws has held several meetings, but it is understood that it is doubtful whether it will be able to report in time for the meeting of Convocation on January 17. The general Report of the Standing Committee is expected to be presented as usual to Convocation on that date. X.

OXFORD.

The term came to an end on the 11th of last month, and the last week brought its usual pressure of College and University examinations, with all the afflicting detail of winding-up. There is consequently, little to record, and a few notes are all that it is possible or desirable to attempt.

On November 29, after a short illness, Dr. Legge, the Professor of Chinese, passed away, in his eighty-third year. At the age of twenty-four he went out to China as a missionary, and for nearly fifty years was working at the translation into English of the Chinese classics. Part of this work has appeared in the well-known series "The Sacred Books of the East," and Mr. Giles, the author of the great Chinese Dictionary, refers in his preface to the "imperishable achievements" of Dr. Legge.

The same day, November 29, was disastrous in another way to the University, for the exceptional gale of that evening, combining with an exceptionally high tide, submerged from 1,500 to 2,000 acres of land which the University holds in the Island of Sheppey. The sea broke a strong solid sea-wall, made great havoc among sheep and cattle, drowned a bailiff of one of our tenants, and, of course, has put rent out of the question at present. The rebuilding of the wall will be slow and costly, and, till it is done, every spring tide will be dangerous both to the land and to the defences. The University is already hampered by narrow means, and in 1896 had actually a deficit; it is feared that this last blow will be most serious. The benevolent and enlightened millionaire is more badly wanted than ever.

The Report of the Association for the Education of Women is a cheerful record of steady growth in the important work which is com-

mitted to them. In the course of the year a fourth Hall was formally admitted: the number of resident students has for the first time exceeded two hundred; and several new lectures have been opened to women. It is pleasant to find that the severe and unsuccessful struggle of last year to obtain the B.A. degree for qualified students has in no way interfered with continuous progress in the work itself, in the educational advantages and facilities offered to women, and in the number of those who avail themselves thereof.

The first examination has just been held, under the new statute, in the Theory, History, and Practice of Education. There were twelve candidates, ten men and two women. The examination lasted two days; and a novel feature was the distribution to the candidates, during one of the papers, of a pack of school-books, out of which they were asked to construct lesson-schemes. The list is not expected till the end of the month: and it is probably as well to remind your readers that, under the express provisions of the statutes, those who pass this examination will still not be entitled to the Diploma until they "have satisfied the Delegates of Local Examinations of their proficiency in the practice of education."

We are glad to learn that the library founded some time ago for the benefit of Oxford women students, by a gift of a large number of the late Professor Nettleship's books, has recently received a further substantial gift from the same source. Mrs. Nettleship, who made the first donation, has now presented some three hundred and fifty volumes which belonged to her late brother-in-law, Mr. R. L. Nettleship, of Balliol. Such benefactions are most welcome, and are much needed. The Halls are rapidly accumulating libraries, and it is not difficult for students to obtain admission to the Bodleian; but it is obvious that the women are at a disadvantage in the matter of books, as compared with the undergraduates who have easy access to old and well-stocked libraries in their colleges.

I have to apologise for an error in my last letter (due, no doubt, to my imperfect writing), whereby Mr. Bourne's name appeared as Bonone.

CAMBRIDGE.

From a very useful list of the names and addresses of resident members of the University, published by the *Cambridge Review*, it appears that this term the number of residents reaches 3,545. Of these, 1,825 are in college, and 1,720 in lodgings. Trinity heads the list with 750, St. John's comes next with 342, and seven other colleges follow with over 200 each.

The results of the examinations for entrance scholarships and exhibitions at twelve of the colleges have been published during the term. Dulwich has secured nine substantial awards, St. Paul's eight, Eton seven, Rugby and the City of London School six each. Out of ten scholarships of £80 a year, Dulwich is credited with no less than five.

The discussion on the Previous Examination, as we forecasted last month, was lively and pluranimous. Something was said for the retention of Paley, notably by Mr. Hamblin Smith, who, as a "Poll-coach" of vast experience, averred that he and his pupils had never wearied of the subject. Something was said against the substitution of a Biblical subject from the Old Testament, by a distinguished cleric. Much more was said, however, and in determined fashion, against the "additional subjects" as a whole. The new suggestions of the General Board were generally condemned, and the total abolition of any special examination for Honours candidates was urged on various grounds, athletic and other.

The terminal elections for offices at the Union Society have been marked by unusual excitement. It was insinuated that one of the candidates for the Presidency had actually been canvassing for votes, rumours of a secret electoral combination for promoting the return of his friends and himself were floated, and mysterious articles in the undergraduate journals hinted at the approaching reign of Tammany in Cambridge. The accused candidate repudiated the personal charges, but withdrew from the contest in offended dignity. The storm was probably got up for a temporary purpose, and, this once served, a general calm ensued. Trinity obtained four of the coveted offices.

Dr. Hill is distinguishing himself as Vice-Chancellor by his energy and freshness. He has entertained the judges of England, he has read a paper at the Nonconformist Union, he has appointed Sir Henry Irving to deliver the annual Rede Lecture in the Easter term, he has started a University Benefaction Fund, to which nearly £3,500 has been paid and some £1,500 more promised, and he has published a record of the log of his children during a recent "Run round the Empire." And withal he is praised on every side for his promptitude and attention to detail in the management of the multifarious business of the University.

Professor Ewing has obtained an important recognition of his department in the decision of the Institution of Civil Engineers to grant their Associate Membership without examination to students who graduate with honours in the Mechanical Sciences Tripos. About a hundred students are now taking the engineering course under Professor Ewing's able direction.

A scheme for the theoretical and practical training of members o

University, who intend to become masters in public schools, has been organized by the Teachers' Training Syndicate. A "Master of Secondary Method" and a "Tutor in the Theory and History of Education" have been appointed in connexion with the Day Training College, and arrangements have been made for practice, under competent supervision, in the giving of lessons, at Cambridge schools. Students must be matriculated, and have passed the Previous Examination; they must attend the Training College for a year, and give at least a week's teaching each term in one of the practising schools; and, lastly, for a certificate they must pass the theoretical and practical examinations of the Syndicate.

The Schools Examination Syndicate examined this year 94 boys' schools and 76 girls' schools. The candidates for Higher Certificates numbered 2,125 (last year 2,121), and of these 1,157 obtained certificates, 312 with distinction in one or more subjects. The number who obtained certificates exempting them from the Previous Examination or the Oxford Responsions has considerably increased. There were 948 candidates for Lower Certificates, as against 891 last year; 499 were successful (last year 495).

Dr. Herbert A. Giles has at length been elected to the Professorship of Chinese. Dr. Rivers, of St. John's, has been appointed University Lecturer in Experimental Psychology. The John Lucas Walker Studentship in pathology has been awarded to Mr. J. W. W. Stephens, M.B., of Caius, and the Exhibition to Dr. H. K. Wright, of McGill University, Montreal. Mr. Arnold Wall, an Advanced Student of Christ's College, has been approved for the B.A. degree, under the new regulations, for an original dissertation of distinction on "The Scandinavian Element in the English Dialects." Two Walsingham Medals for biological research have been this year awarded, namely, to Mr. V. H. Blackman, of St. John's, and Mr. W. Morley Fletcher, of Trinity. Mr. E. W. Winstanley, of Trinity, has gained the Crosse Theological Fellowship. Dr. Anningson, Dr. Donald MacAlister, and Professor Kanthack have been appointed University Delegates to the International Congress of Hygiene in Madrid, to be held during April next. Mr. A. F. Stabb, M.B., B.C., has been appointed University Lecturer in Obstetrics at the Medical School; and Mr. Strangeways Pigg has been appointed Demonstrator of Pathology. The Members' Latin Essay Prize has gone to Mr. J. C. Lawson, of Pembroke; the Whewell Scholarships in International Law to Mr. R. J. R. Goffin, of Jesus, and Mr. F. W. Head, of Emmanuel; the Seatonian Prize for a sacred poem to the Rev. Dr. J. H. Lupton, of St. John's; the Jeremie Prizes for the Septuagint to Mr. R. R. Smith, of Selwyn, and Mr. W. Outram, of Pembroke.

WALES.

Mr. T. H. Thomas, R.C.A., who continues to render such signal services in the movement for securing the recognition of Wales on the shield of England and the national flag, was on Monday evening, December 13, the lecturer at a meeting of the Cardiff Teachers' Guild, when, taking for his theme "The Heraldry of Wales," he discoursed delightfully for an hour on a subject which he has made peculiarly his own. Mr. Thomas initiated the audience into the mysteries of heraldry, and by means of a collection of diagrams illustrated the origin of emblems on the shield, and showed how, as alliances were contracted, the shield became divided into four grand quarters, and each of these in turn into minor quarters. With the advent of the Normans heraldry began, and was elaborately carried out during the twelfth and thirteenth centuries. He traced the development of the British Royal shield to its present form. Originally, under Henry II., A.D. 1154, the shield bore only the three lions of England: then it was quartered with the lilies *sensés* of France, which occupied the first and fourth quarters, in 1340. The lion rampant with a double border was added as representing Scotland, the shield being divided for this purpose, England dividing its quarter with France, represented by lilies. The harp of Ireland was allotted to the third quarter, first by Elizabeth occasionally, but fixedly by James I., while the fourth quarter was again occupied by the arms of England, which still retained the French arms of three lilies to a certain extent. The French arms were abandoned towards the end of the last century, and in order to fill up the fourth quarter there was emblazoned in it a repetition of the English lions which occupied the first quarter. There was absolutely no historical meaning to the blazon now in the fourth quarter, and for the purposes of those agitating for the representation of Wales on the shield this was an important fact to remember. The Irish emblem, the harp, was spoken of as the "Welsh harp gold," showing that the harps of both countries had at one period been identical. Changes in the British shield had been very numerous indeed, and the Welsh hope to see introduced ere long still another change. Badges antedated heraldry, and the badge of Britain before the advent of the Romans appeared to have been the horse, for no British coin bore a dragon; it was always a horse. The draconian ensign of the Romans, however, when the Romans left, appeared to have been carried on by the Dukes of Britain, who were referred to as the dragons of Britain. This soon also became the ensign for the British generally. From the Arthurian times and days of Maelgwyn Gwynedd the dragon was

continually spoken of down to the times of Cadwalladr Fendigaid, the last king of the British line, who died in the seventh century. It was said, though he had not been able to verify it, that the Welsh troops at Crecy and Agincourt fought under the Welsh dragon. At any rate, it was an historical fact that Richmond, afterwards Henry VII., was found at Bosworth Field, after his rapid march thither through Wales, rallying the South- and Mid-Wales people, with a banner showing the red dragon of Cadwalladr flying before his tent, thus showing that at that time the dragon was thoroughly understood to be the badge of the ancient British series of kings. The banners bearing the red dragon were taken to London by the victorious army and displayed in St. Paul's, and the dragon was used as supporter of the arms of King Henry VII., who immediately before his coronation instituted the "Rouge Dragon" pursuant of the College of Arms, in commemoration. Thus the dragon of Arthur and Cadwalladr, which had come down from the Roman period, reappeared in English heraldry as a supporter to the arms used by the Tudor monarchs Henry VIII., Edward VI., and Elizabeth, Elizabeth using it very largely. This was very interesting, because it showed that at one time Wales was recognized with regard to the Royal shield, although it had not been recognized in one of the quarters. But, though the dragon was a badge, it was well known that a badge could legally be made by the heraldic authorities into what was called a charge, and introduced into the shield. Proceeding, the lecturer dealt historically with the coat of arms of Llewelyn, the last native Prince of Wales—the four lions passant—which had always been used by the heralds when they wished to represent Wales on any shield; and it was the opinion of Mr. Joseph Watkin, one of the authorities of the Heralds' College—the first Welshman who had held that office for a couple of hundred years—that, if the arms of Llewelyn were introduced into the British shield, the proper position would be the second quarter, inasmuch as Wales was added to the kingdom before Scotland or Ireland. Speaking in an heraldic and academic sense, this would be true, but any such re-arrangement of the shield would cause a very great amount of displacement and inconvenience. What Wales desired was merely that its emblems should occupy the fourth quarter, used now only for the duplication of the arms held by England. The lecturer exhibited a number of diagrams showing how the shield would appear were the arms of Llewelyn so introduced, and also other diagrams showing the dragon in the fourth quarter. If introduced into the shield, a necessary corollary would be the introduction of Welsh emblems into the Union Jack, which would be a matter of some difficulty. The Union Jack was formed by the superimposition of three crosses one upon the other—the crosses of St. George, St. Andrew, and St. Patrick. What would represent Wales? There was no cross of St. David. There was, however, the cross *fitché* of Cadwalladr, that is, with the lower member nail-shaped, of which one writer in the *Daily Graphic* recently said that it was already the summit of the British crown, and that Wales should therefore not be further represented. He (the lecturer) had not yet been able to find authority for this suggestion, but, if the cross *fitché* were introduced into the Union Jack, it could, he thought, be done very ornamentally by superimposing it on a field of blue in the very centre of the existing crosses. Representation in some manner upon the Royal shield of the United Kingdom is desired by the Welsh, not only as a debt due to their nationality, but equally as a mark of their loyalty to the monarch at this time of the Diamond Jubilee. An interesting discussion followed, in which Dr. Treharne, Mr. Waugh, Mr. Brockington, and the Chairman participated, and Mr. Thomas was heartily thanked for his interesting lecture.

SCOTLAND.

The clerk of the General Council of Glasgow University has received a communication from the Scottish Office stating, for the information of the Council, that the powers of the Universities Commission expire on January 1, 1898, and that it is not proposed to renew them. Thereafter each University Court will assume the powers assigned by the 21st section of the Universities (Scotland) Act, 1889, and will therefore be at liberty, with the approval of Her Majesty in Council, to make ordinances with respect to the University's share of the annual grant, or ordinances altering or revoking any of the ordinances affecting the University passed by the Commissioners under the Acts of 1858 and 1889, and also to make entirely new ordinances. The Courts will find plenty to do. Apart from local questions, of which the St. Andrews-Dundee dispute is an obnoxious instance, there are large matters of policy to consider—for example, the attitude of the Scottish Universities in view of the possible establishment of a teaching University in London and of a Midland University. The appearance of these institutions in the educational field would undoubtedly affect the number of students crossing the border to attend a Scottish University.

The General Medical Council is still pressing the Scottish Universities to take steps to secure penal or disciplinary powers. The Universities have appointed a joint committee to consider this matter.

The grievance felt by the modern language teachers in regard to the bursary competition is put thus.

In this examination a candidate may not take more than five subjects,

and the subjects from which he may select are English (full marks 100), Latin (100), Greek (100), mathematics (100), French (50), German (50), Italian (50), and dynamics (50). The total mark possible is thus 450, and this mark can be got only by a candidate who professes both Latin and Greek. To a candidate who takes any modern language in place of Greek the total mark possible is only 400.

Principal Sir William Geddes has withdrawn his resignation as Chairman of the Sites and Plans Committee. He resigned on account of differences of opinion with regard to the Extension Scheme. The debt on that scheme is put down at £18,000, and to complete the scheme an additional £12,000 is necessary. An optimistic suggestion is that the Aberdeen Town Council, the public interested in Aberdeen University, and the State may be persuaded to give £10,000 each. The University must, therefore, lay disputes aside and take united action. "*Quaerenda pecunia primum, post nummos lucta.*"

At the request of the Students' Representative Council, the Marquis of Huntly has agreed to deliver a rectorial address in connexion with his election as Lord Rector of Aberdeen University for the third time. The Council has also decided to request the Senatus to enforce the wearing of academic costume by students at King's College, it being also agreed that the Arts students of the different years should wear tassels of different colours on their trenchers.

We regret to record the death of the Rev. John Fyfe, LL.D., Emeritus Professor of Moral Philosophy in Aberdeen University. Dr. Fyfe, who boasted of direct descent on the maternal side from Kant, was connected in various capacities with Aberdeen University for some fifty years. He had no claim to be regarded as a philosopher or a teacher of philosophy, but students regarded him with the kindest feelings (some with excellent reason, for he loved to assist the meritorious of limited means), and his colleagues esteemed him for his sterling character.

Reference has been made here once or twice to efforts made to secure for the Students' Union in Aberdeen permission to sell alcoholic liquors; the required permission has now been granted, to the extent of allowing one bottle of beer to be supplied at lunch or dinner. These are, it may be remarked, quart bottles of beer.

Professor Johnston has scored. An Aberdeen newspaper published "A Minister's Love Story," in which figured a Rev. Donald Grant, B.D., certified godly and clever by Professor Johnston. But the Professor has proved, from University lists, that within recent years there has been no such student at Aberdeen University.—Q.E.D.

Masson Hall, George Street, Edinburgh, has been opened as a University residence for women.

The time for the lodging of applications and testimonials for the chair of Moral Philosophy in Edinburgh University has been extended till March 21st, 1898; applications and testimonials should be sent to Mr. R. Herbert Johnston, 66 Frederick Street.

The Council of the Institution of Civil Engineers have ordered that the degree of Bachelor of Science in Engineering of the University of Edinburgh will be held to exempt candidates applying for election into the Institution from passing the examination prescribed by the Council applying to associate membership.

Edinburgh University is interested in a proposal by Mr. Munro Ferguson, M.P., to deal with the woods on one of his estates on the Continental plan. The area (over two thousand acres in extent) will be laid out so as to provide a systematic rotation, and the proximity of the estate to Edinburgh will bring it within the easy observation of forestry students in the University.

The opening of the magnificent M'Ewan Hall, Edinburgh, was made the occasion of a brilliant ceremony. On the evening of December 2, the University students held a torchlight procession, and on the following day, in the presence of a distinguished assemblage, the hall was formally conveyed to the University Court by Mr. M'Ewan. After an interesting speech, in which he surveyed the relation of the city to the University of Edinburgh, and explained how he had been led to make his munificent gift, Mr. M'Ewan turned to present the deed of conveyance to the Chancellor (Mr. A. J. Balfour). At this moment, a young Italian student, probably a victim of religious mania, rose, from his place in the front of the upper gallery, and, holding a Bible in his hand, shouted: "Hear me, ye sons of Satan. I have a message from the Lord Jesus Christ. In the fifth chapter of Revelations—" But at this point strong hands seized him, and he was passed over the heads of his fellow-students, carried down stairs, and ejected from the hall.

Suitable acknowledgment of Mr. M'Ewan's noble generosity was made by Mr. Balfour, Lord Balfour of Burleigh, Lord Rector, and Principal Sir W. Muir. Thereafter Lord Provost Mitchell Thompson referred to the pleasure with which the city had placed Mr. M'Ewan's name on the burgess roll. The degree of Doctor of Laws was conferred on Mr. M'Ewan, and he was presented by the Student's Representative Council with an illuminated address. In the evening, Dr. A. L. Pearce gave a recital upon the organ in the M'Ewan Hall.

At Glasgow, the dispute between the Senatus and the Western Infirmary over the facilities to be afforded to Professor M'Ewan has been settled by the Professor's being allowed to retain his three wards.

Mr. R. M. Burrows, Assistant Professor of Greek in Glasgow University, has been appointed Professor of Greek in University

College, Cardiff. The rumour is revived that Principal Caird will retire at the end of the current session. His health is certainly not robust—he has never recovered from the strain of the Gifford lectures—and it may well be that he desires to be relieved of all responsibility. Along with sixteen professors Principal Caird signed a petition to the Lord Provost, Magistrates, and Town Council of Glasgow in favour of opening the Glasgow People's Palace on Sunday, but the municipal authorities declined the lead of Gilmorehill. The Hunterian Museum, Glasgow University, has lately received some valuable donations.

The Court has appointed a Committee to correspond with a Committee appointed by the Senate to consider the position of the Scottish Universities with regard to training students for the civil service in India and other colonies of the empire. It is possible that by-and-by students of natural history, in Glasgow, may have the advantage of making observations in a public zoological department. The Corporation is considering the matter.

From St. Andrews we still hear of wars and rumours of wars. For a weary period Professor Pettigrew and Professor Ritchie carried on a newspaper warfare about the respective claims of Medicine and Science on the one hand, and Arts on the other, at St. Andrews.

In the Second Division of the Court of Sessions, Provost M'Gregor, of St. Andrews, and others, failed in their attempt to obtain a repeal of Lord Stormonth-Darling's decision against them in their action to obtain declaration to the effect that University College, Dundee, has not been affiliated and made to form part of the University of St. Andrews, and that the ordinances issued by the Scottish Universities Commissioners are null and void in so far as they purport to affiliate University College with St. Andrews University; or otherwise that certain of the ordinances are null and void.

At the annual meeting of the Scottish Association for the Promotion of Technical and Secondary Education, Lord Reay, who as president of the Association took the chair, lamented the prevalence of strikes, and the lack of organized secondary and technical education, in view of the keenness of foreign competition. His alarmist note, that our existence as an industrial nation is threatened, was echoed by other speakers. Among the resolutions accepted by the meeting was one urging that the regulations for science and art teaching in Scotland should give definite recognition and encouragement to the provision of suitable courses of instruction in science and art in those day schools in which such teaching occupies a secondary, although an important place, and that the position of science and art in the education of pupil-teachers and students in training colleges might now be fully considered in relation to the other subjects of study essential to the proper preparation of teachers for public schools.

The Commission appointed by the Educational Institute, to enquire to what extent provision is made in each district for secondary education, has been taking evidence in different parts of Scotland. Information has been freely volunteered by representative witnesses and correspondents. The work of the Commission is greatly facilitated by the methodical way in which the central authority laid down its main line of action. The action of the Institute is due to the fact that in many parts of Scotland real secondary schools are not available, and in consequence advanced instruction must be supplied by the ordinary public schools, but the movement is jealously regarded by some—not all—secondary school teachers, and the prominence given to some remarks directed against the Institute led Sir Henry Craik to write to the newspapers repudiating the suggestion that he had asked the Institute to gather information for the Department.

Princess Louise laid the memorial stone of the new Technical College, Paisley, which owes its existence to the conjoint action of the Borough Trustees, Messrs. J. & P. Coats, and the directors of the Paisley School of Design.

The alterations in the scheme of George Heriot's Trust, Edinburgh, have received legal sanction. Among the changes made are the following:—The arbitrary age limit for admission to the Hospital School has been changed to an educational qualification, the number of free scholarships open to pupils in attendance has been increased from sixty to one hundred, travelling scholarships of £100 have been instituted for teachers who have graduated in the University of Edinburgh and taken the Schoolmasters' Diploma, and the amount of money for bursaries generally will be increased by 50 per cent. When the revised scheme is in full operation, there will be about fifty women and at least fifty men at the University of Edinburgh holding Heriot bursaries. In issuing the regulations for the next examination for leaving certificates, the Scottish Education Department deprecates the present practice of sending in very young pupils, and trusts that in future candidates below thirteen years of age will not be presented unless their presentation is warranted by special circumstances.

At a dinner given in celebration of the 216th anniversary of the Edinburgh Merchant Company, the chief speaker was Sir Henry Craik, who took as his subject a proposition that he had already advanced on several occasions, this, to wit, that in technical education there is an undue hurry to achieve immediate results, that many reformers seem enamoured of "raw haste, half-sister to delay." He contended that the schools should not be workshops, but places rather where the foundations of all successful work are laid.

The arrangements for the Educational Institute Congress at Sterling are now complete. The Corporation, the School Board, and the Sterling Educational Trust are the patrons, and there will be the usual exhibition of school books and appliances, and the customary social functions, dinner, breakfast, conversazione, reception, excursions, &c. Among the subjects on which papers will be read are "Agriculture as an Educational Subject," "Large Schools and Assistants," "The Examination System," "The Training of Teachers," "Child Study," "Health Conditions in School Life," "The Place of History in a School Curriculum," and "The Place of Mathematics in Schools." Some of the speakers announced are Professor Wallace, Edinburgh, Dr. Ross, and Professor Lodge, Glasgow. A pleasing episode will be the presentation of the Institute's Honorary Fellowship to Sir Henry Campbell-Bannerman.

The programme gives evidence that the assistants, while looking after their special interests by means of their own organization, are loyal to the Institute as representing the general body of teachers. In connexion with the training of teachers it may be noted that dissatisfaction is being engendered with the terms on which leaving certificates are accepted as qualifying for admission to a training college, and with the refusal to increase the number of students admitted to the colleges. Very few people realize how very unsatisfactory the conditions of training are at present, but Dr. Ross will no doubt help the public to understand the situation, and to estimate the worth of proposed remedies.

A somewhat interesting address on current educational topics was delivered to the Ayrshire branch of the E.I.S. by Mr. Robertson, Chairman of Ayr Burgh School Board. It was chiefly remarkable for the very vigorous way in which he backed the teachers' claim to a superannuation allowance. No teacher could have gone into the matter more thoroughly or made out a better case.

Complaints are heard on all sides, from business men and from school inspectors, that the compulsory standard must be raised to Standard VI. At present children go early to school and get clear of compulsory attendance when they are eleven years of age, and after running wild for two or three years offer themselves for employment, and are then found to have practically forgotten all they had learned.

Aberdeen School Board is becoming a regular bear garden. Ever since last election left the Board divided into two opposing parties of six each, with a neutral chairman, who supported one party before the election and now supports the other, there have been bad feeling and unbecoming scenes. The Chairman is something of a discoverer. He has found out that the Authorized Version is responsible for the profanity of Aberdeen youth, and hence he would like to see its place in the schools taken by the Revised Version.

A short time since, we referred to the influence of the leaving certificate examination in raising the standard of teaching. Fresh proof of this is afforded by the excellent appearance made in the Glasgow University Bursary List by candidates from the Glasgow Pupil Teachers' Institute.

The Stevenston School Board insists that the parish minister shall send his children to the public school examination, in order to satisfy the Board that he is educating his children properly.

It is not quite clear whether the statement made by the Education Department, that they are considering the matter of giving financial assistance to School Boards carrying on science and art classes, means or does not mean the recall of the obnoxious Memorandum intimating that in future no money grant for Science and Art subjects would be given on behalf of scholars in day schools if their names appeared on the register of their respective schools in connexion with the Scottish Education Department.

Glasgow School Board does not see its way to take any action in connexion with the Corporation proposal referred to in the December Notes, so long as the educational area remains as at present.

IRELAND.

The year that has closed has brought an unusual number of losses to Trinity College. Dr. Sallas, the Professor of Geology, has taken a post at Oxford; the Astronomer Royal, Dr. Rambaut, has also been carried off to Oxford. Mr. Charles Joly, the Junior Fellow, has been made Astronomer Royal, while his near relative, Mr. J. J. Joly, has taken Dr. Sallas' place. Recently Mr. Starkie, the one Roman Catholic Fellow, and an able classical scholar (his fine edition of the "Wasps" of Aristophanes has just appeared), has left to take the Presidentship of Queen's College, Galway.

But death, as well as promotion, has been busy. Two months since Samuel Haughton, one of the most versatile and distinctive men ever produced by Trinity, passed away, after some years of failing health. There was scarcely a branch of science to which he had not given valuable contributions. He was Professor of Geology for many years, and entered into profound researches in both geology and physiography. To him is due the high position attained by the Medical School of his University, and his own studies in animal mechanics are invaluable contributions to physiology. In Mathematics he was equally able. Galbraith and Haughton's Manuals are classic text-books. Not alone as a scholar, but as a public man, an indefatigable helper of every Irish

scientific body, and a most witty, original, and instructive personage, his loss is deeply mourned by all classes of Irishmen. The fact that he was a Home Ruler added to his popularity beyond the walls of his college.

Shortly after Dr. Haughton's death Dr. Poole died, thus within a year making three deaths among the seven Senior Fellows. A few weeks since Arthur Palmer, Professor of Latin, passed away, after a long illness. He led a secluded life, and was a strong Conservative; hence he was scarcely known in public life, but as a classical scholar he was unrivalled, whether in learning, in style and insight, or in exquisite taste.

On December 7 Trinity College gave a banquet in honour of the centenary of the death of Edmund Burke. About 108 distinguished guests were present, including the Lord Lieutenant, and Irishmen holding important posts or notable in the world of letters. The dining-hall was brilliant with coloured lights, flowers, plants, and the College plate; and Burke's portrait was wreathed in laurel. The table was in the shape of a St. Andrew's cross, which appeared to give such a position to the speakers that they were very badly heard—a great drawback to the success of the evening. The speeches of Mr. Lecky and Professor Dowden were the most remarkable, especially that of Dr. Dowden, which is perhaps the most beautiful and just criticism of Burke he has yet put forth.

Sir Rowland Blennerhassett delivered rather an interesting address a few weeks since at Queen's College, Cork, in which he holds the post of President. He gave an historical account of Universities in Europe, and pleaded for the value of small and numerous Universities rather than large and few central ones, ending by demanding a University for Cork. He adduced the example of Germany in support of his view, and his address was of much interest as an abstract argument, but practically it will have no effect whatever. It would be hard enough to get one additional University established in Ireland—a Catholic University—without attempting more, nor is there any reason why Galway and Belfast should not have their colleges raised to the rank of Universities as well as Cork. He said nothing as to where the funds were to come from or who was to control "Cork University."

Meantime, we have had two manifestoes from the bishops anent the Catholic University. A lively Dublin weekly, *Irish Figaro*, in discussing current topics, mentioned the general belief that Archbishop Walsh had supported the candidature of Dr. McGrath, Secretary of the Royal University, for the Presidentship of Galway College, whereupon the Archbishop wrote to *Figaro* and to the dailies, emphatically denying that he had mixed himself up in any way with the "Godless Colleges," and took the opportunity to put forth a lengthy defence of the scheme of a Catholic University against the recent attacks of the Orange party. He justly pointed out the absurdity of a small minority's expecting that the whole of Irish education is to be settled solely according to their wishes.

More recently Bishop O'Dwyer delivered an address on the same subject, and, adverting to the delay in realizing a project to which "all" are practically agreed, suggested that a Bill could be brought into the House of Lords next session if time could not be made for it in the Commons. He pointed out that strong public support and agitation were needed to get the matter settled. This is just what is up to the present not forthcoming. The Catholic laity appears to be largely made up of two parties—those who belong to a class that makes no use of University education and is ignorant and uninterested, and an upper class that dreads an education entirely in the hands of the Church. Hence, the bishops have never been able to rouse a vigorous national agitation. Those who object to a clerically controlled University are silent, because they are afraid of social injury from the power of the Church; but this is not the material with which to carry measures. We live under a democratic constitution, and, if the majority in Ireland desire purely Catholic and religious education, they should have it; but they must show that they do desire it. A public meeting will be held in Dublin early in January, which may throw some light on this point.

Objections to the intermediate system continue to appear from two quarters—from educationists who desire a better use of the endowment for general education, and, on the other hand, from those interested in technical education, who think the endowment should be diverted to that object. A danger lies in this latter proposal which educationists should be alive to. The grant derived from the Customs and Excise is in England spent on technical education; in Ireland on general education—£80,000 to primary and £40,000 to secondary education. It is argued that in Ireland, as in England, this sum should be spent on technical education. If educationists continue to inveigh against the intermediate system *without offering a practical remedy*, it will strengthen this demand. Now in England there are large endowments for general education; in Ireland there are almost no funds for it. The argument is therefore fallacious. Technical education would do little good if the lower classes could not read, write, or keep accounts, or if the upper classes were reduced to the state of things in pre-intermediate days, left without either solid mental training or general knowledge. Those who wish the present endowment preserved for secondary education should keep this danger in sight.

Campbell College apparently has not improved since the sensational trial of last year. A new staff of masters was appointed; Mr. McNeill was supposed to have the confidence of the trustees, and it was hoped that all would now go well. We hear, however, that the matron, with her assistant, has left, her place being taken by a man, and that some of the masters have been given notice to leave. The number of boys, two years ago three hundred, is now about one hundred, and some of the scholarships have been withdrawn. The school was inspected six months since by Professor Mahaffy and Mr. Russell, F.T.C., but their report has not been made public. The school is largely endowed, possesses fine buildings, is regularly inspected, and governed by trustees; yet these are the results.

Alexandra College had a festival evening, "Student's Day," on December 10, when the Countess Cadogan and Lady Betty Balfour were present and "By Degrees," a play composed by Miss Sara Gyles, was performed. On the 1st December, the distribution of prizes in Alexandra School took place. There are now three hundred and five students in the College and about three hundred and seventy in the school.

The case of Mrs. Sullivan has not yet been settled. It appears that Mrs. Sullivan, the mistress of Leixlip National School, was dismissed by her manager—to leave next day. She has a high record of thirty-two years. In accordance with the Maynooth Resolutions, she appealed to the bishop of her diocese, who is Dr. Walsh, Archbishop of Dublin. He replied, that, as it was a summary dismissal, without the usual three months' notice, he could not interfere. A largely-signed memorial, sent to the Archbishop by the inhabitants of Leixlip, received the same answer. If the Maynooth Resolutions can be so evaded, they are useless as a protection to the teachers.

BEDFORD COLLEGE FOR WOMEN.

At a Council meeting held on December 10, Miss Penrose laid her resignation of her post as Principal in the hands of the Council of the College; this was received with much regret. At a Council meeting held subsequently, Miss Beatrice Edgell, B.A., was appointed to the Professorship of Mental and Moral Science. The names of the following Bedford College students appear in the B.A. and B.Sc. Honours Lists:—Rose Monkhouse, First Class Honours, English; N. M. Catty, Third Class Honours, Mental and Moral Science; B. Rickword, Third Class Honours, Classics; E. E. Humphrey, Second Class Honours, Physics, and Third Class Honours, Chemistry. Agnes Kelly, a former student of the College, now working chiefly at University College, took First Class Honours in Zoology, and was awarded the University Scholarship. F. Greatbach, also a former student, took First-Class Honours, French, deserving a prize.

SCHOOLS.

CHELTEMHAM LADIES' COLLEGE.—The following pupils, who passed the B.A. Examination of the University of London, have taken Honours: Frances Goslin, First Class Honours in French; Lily Baker, Second Class Honours in French; Kate Gaymer, Third Class Honours in English.

HAILEYBURY COLLEGE.—After an examination, held December 1-2, the following were elected to the Senior Scholarships, open only to boys in the school:—C. A. Henderson, £40; H. H. Batten, £40; H. J. Couchman (Modern Side), £40; W. Cardwell, £30; G. S. Oddie (Modern Side), £30. In the Junior, open to all comers:—O. L. V. Simpkinson, £50; A. R. Gidney (Bowden House School, Harrow), £40; A. L. Jones (Priory School, Bedford), £40; J. R. P. Postlethwaite, £30; L. A. Speakman (Arnold House, Llandulas), Modern Side, £30; E. T. Dawson (Cliff House School, Southbourne), under thirteen, £30. Since July, 1897, the following distinctions have been gained by past or present members of the school:—R. H. Couchman, R. T. L. Parr, Second Class, Literæ Humaniores, Oxford; T. P. W. Nesham and W. S. D. Craven passed into the R.M.A.; F. E. G. Talbot (1st), R. S. May (22nd), both direct from the school, R. J. F. Meyricke, W. W. Muir, A. S. Hay, W. R. Friend, A. G. N. Wood, A. G. Shea, into the R.M.C.; Rennell Roidd has received the Star of Ethiopia from King Menelik, and has published another volume of poems, "Ballads of the Fleet"; R. T. Blomfield's "History of Renaissance Architecture in England, 1500-1800," F. W. Bourdillon's "Minuscula," and Frank Podmore's "Studies in Psychical Research," have all been favourably received; J. E. Harley has gained a Major Scholarship at Trinity College, Cambridge; and J. S. C. Douglas a Science Exhibition at Christ Church, Oxford. Some alteration has been made in the Sunday work that is worth recording. Instead of the preparation and lesson lasting an hour and a half in the afternoon, the time for both has been cut down to an hour; and three times during the term, in place of both preparation and lesson, sacred concerts have been held in the chapel. Instrumental and vocal music have been performed, elucidated by short printed programmes. Those boys, a very small number, who do not elect to listen to music spend the time in reading solid books, under supervision. The annual Confirmation was held on November 17 by the Bishop of St. Albans. The health of

the school has been remarkably good during the whole term, which ended on December 22.

HIGHBURY HIGH SCHOOL.—The Company's Scholar this year is Violet Hannay Clapham, and the Clothworkers' Exhibitioner Grace E. Stubbs. Five girls passed the London Matriculation Examination in June, in the First Division, of whom Millicent Annie Barber, who was bracketed first of the candidates from the Company's schools, won the Reid Trust Scholarship (£40 a year for two years), tenable at Bedford College. Katie Aldwinckle, who stood third, has since gained an open scholarship (£50 a year for two years) at Westfield College.

MANOR MOUNT GIRLS' COLLEGIATE SCHOOL, FOREST HILL, S.E.—The annual distribution of prizes and certificates was held in the school hall on November 13. The chair was taken by the Rev. Canon Quennell, M.A., and the prizes and certificates were distributed by Miss Oxenham Cocks. Speeches relating to the education of girls were made by J. H. Selfe, Esq., who also read the examiner's report, Dr. Klein, Miss Carta Sturge. The school was examined and inspected in July by Miss A. J. Cooper, late Headmistress of Edgbaston High School.

ROSSALL.—Elegiacs, Latin Prose, Classical Literature, Prizes gained by W. K. Armistead; Examination Prizes in Upper VI., by W. K. Armistead, G. R. Pocklington, F. R. G. Duckworth. Carter Divinity: C. J. Bush and H. Fyson. English Literature, R. J. Shirt. W. K. Armistead, Exhibition, Hertford College, Oxford; G. R. Pocklington, Exhibition, Balliol College. The annual singing competitions were held on December 20, when the House Cup was won by Batson's; the solos by E. L. Anson and F. L. Williamson. Christmas holidays began December 21, and will end January 27, 1898.

PRIZE COMPETITIONS.

THE Translation Prize for December is awarded to "Capitaine Fracasse."

The winner of the Translation Prize for November is G. E. Dartnell, Esq., Salisbury.

The Extra Prize is divided between "Tremella" and "M.L.G."

Toute une montagne évidée à l'intérieur, avec des crêtes de ruines sur sa tête; deux ou trois étages d'appartements et de corridors souterrains qui paraissent avoir été creusés par des taupes colossales; d'immenses décombres; des salles démesurées dont l'ogive a cinquante pieds d'ouverture; sept cachots avec leurs oubliettes pleines d'une eau croupie qui résonne, plate et morte au choc d'une pierre; le bruit des moulins à eau dans la petite vallée derrière le château, et, par les crevasses de la façade, le Rhin avec quelque bateau à vapeur qui, vu de cette hauteur, semble un gros poisson vert aux yeux jaunes cheminant à fleur d'eau et dressé à porter sur son dos des hommes et des voitures; un palais féodal des Landgraves de Hesse changé en énorme masure; des embrasures de canons et de catapultes qui ressemblent à ces loges de bêtes fauves des vieux cirques romains, où l'herbe pousse; par endroits, à demi engagée dans l'antique mur éventré, une vis de Saint-Gilles ruinée et comblée dont l'hélice fruste a l'air d'un monstrueux coquillage antédiluvien; les ardoises et les basaltes non taillées qui donnent aux archivoltes des profils de scies et de machoires ouvertes; de grosses doutes ventrues tombées tout d'une pièce, ou, pour mieux dire, couchées sur le flanc comme si elles étaient fatiguées de se tenir debout—voilà le Rheinfels. On voit cela pour deux sous.

By "CAPITAINE FRACASSE."

A whole mountain with its centre scooped out and ruins capping its crest; two or three stories of underground rooms and galleries like burrows of gigantic moles; huge masses of tumbled rubbish; spacious halls, the groinings of which span gaps of fifty feet: seven dungeons, their oubliettes full of stagnant water, re-echoing dull and hollow the splash of a down-dropped stone; the clack of water-mills in the glen behind the castle, and, through the chinks in the front wall, the Rhine, dotted with steamboats and looking from this height like some great yellow-eyed green fish, gliding along the water's surface, trained to bear upon its back men and carriages; a feudal palace of the Landgraves of Hesse, now a mere mass of ruined masonry; embrasures for cannon and catapults, recalling to the mind the grass-grown dens for wild beasts which one sees in old Roman circuses; here and there, half buried in the broken-down ancient wall, a winding staircase, dilapidated and choked-up with rubble, the decayed spiral of which suggests some monstrous antediluvian snail-shell; the undressed blocks of slate and basalt producing in the archivolts edges jagged as saws or as gaping jaws; great bulging escarp walls, capped all of a piece, or rather lying flat upon their sides as though weary of long standing—there you have the Rheinfels. And all this you may see for one penny.

(Continued on page 52.)

The arrangements for the Educational Institute Congress at Sterling are now complete. The Corporation, the School Board, and the Sterling Educational Trust are the patrons, and there will be the usual exhibition of school books and appliances, and the customary social functions, dinner, breakfast, conversazione, reception, excursions, &c. Among the subjects on which papers will be read are "Agriculture as an Educational Subject," "Large Schools and Assistants," "The Examination System," "The Training of Teachers," "Child Study," "Health Conditions in School Life," "The Place of History in a School Curriculum," and "The Place of Mathematics in Schools." Some of the speakers announced are Professor Wallace, Edinburgh, Dr. Ross, and Professor Lodge, Glasgow. A pleasing episode will be the presentation of the Institute's Honorary Fellowship to Sir Henry Campbell-Bannerman.

The programme gives evidence that the assistants, while looking after their special interests by means of their own organization, are loyal to the Institute as representing the general body of teachers. In connexion with the training of teachers it may be noted that dissatisfaction is being engendered with the terms on which leaving certificates are accepted as qualifying for admission to a training college, and with the refusal to increase the number of students admitted to the colleges. Very few people realize how very unsatisfactory the conditions of training are at present, but Dr. Ross will no doubt help the public to understand the situation, and to estimate the worth of proposed remedies.

A somewhat interesting address on current educational topics was delivered to the Ayrshire branch of the E.I.S. by Mr. Robertson, Chairman of Ayr Burgh School Board. It was chiefly remarkable for the very vigorous way in which he backed the teachers' claim to a superannuation allowance. No teacher could have gone into the matter more thoroughly or made out a better case.

Complaints are heard on all sides, from business men and from school inspectors, that the compulsory standard must be raised to Standard VI. At present children go early to school and get clear of compulsory attendance when they are eleven years of age, and after running wild for two or three years offer themselves for employment, and are then found to have practically forgotten all they had learned.

Aberdeen School Board is becoming a regular bear garden. Ever since last election left the Board divided into two opposing parties of six each, with a neutral chairman, who supported one party before the election and now supports the other, there have been bad feeling and unbecoming scenes. The Chairman is something of a discoverer. He has found out that the Authorized Version is responsible for the profanity of Aberdeen youth, and hence he would like to see its place in the schools taken by the Revised Version.

A short time since, we referred to the influence of the leaving certificate examination in raising the standard of teaching. Fresh proof of this is afforded by the excellent appearance made in the Glasgow University Bursary List by candidates from the Glasgow Pupil Teachers' Institute.

The Stevenston School Board insists that the parish minister shall send his children to the public school examination, in order to satisfy the Board that he is educating his children properly.

It is not quite clear whether the statement made by the Education Department, that they are considering the matter of giving financial assistance to School Boards carrying on science and art classes, means or does not mean the recall of the obnoxious Memorandum intimating that in future no money grant for Science and Art subjects would be given on behalf of scholars in day schools if their names appeared on the register of their respective schools in connexion with the Scottish Education Department.

scientific body, and a most witty, original, and instructive personage, his loss is deeply mourned by all classes of Irishmen. The fact that he was a Home Ruler added to his popularity beyond the walls of his college.

Shortly after Dr. Haughton's death Dr. Poole died, thus within a year making three deaths among the seven Senior Fellows. A few weeks since Arthur Palmer, Professor of Latin, passed away, after a long illness. He led a secluded life, and was a strong Conservative; hence he was scarcely known in public life, but as a classical scholar he was unrivalled, whether in learning, in style and insight, or in exquisite taste.

On December 7 Trinity College gave a banquet in honour of the centenary of the death of Edmund Burke. About 108 distinguished guests were present, including the Lord Lieutenant, and Irishmen holding important posts or notable in the world of letters. The dining-hall was brilliant with coloured lights, flowers, plants, and the College plate; and Burke's portrait was wreathed in laurel. The table was in the shape of a St. Andrew's cross, which appeared to give such a position to the speakers that they were very badly heard—a great drawback to the success of the evening. The speeches of Mr. Lecky and Professor Dowden were the most remarkable, especially that of Dr. Dowden, which is perhaps the most beautiful and just criticism of Burke he has yet put forth.

Sir Rowland Blennerhassett delivered rather an interesting address a few weeks since at Queen's College, Cork, in which he holds the post of President. He gave an historical account of Universities in Europe, and pleaded for the value of small and numerous Universities rather than large and few central ones, ending by demanding a University for Cork. He adduced the example of Germany in support of his view, and his address was of much interest as an abstract argument, but practically it will have no effect whatever. It would be hard enough to get one additional University established in Ireland—a Catholic University—without attempting more, nor is there any reason why Galway and Belfast should not have their colleges raised to the rank of Universities as well as Cork. He said nothing as to where the funds were to come from or who was to control "Cork University."

Meantime, we have had two manifestoes from the bishops anent the Catholic University. A lively Dublin weekly, *Irish Figaro*, in discussing current topics, mentioned the general belief that Archbishop Walsh had supported the candidature of Dr. McGrath, Secretary of the Royal University, for the Presidentship of Galway College, whereupon the Archbishop wrote to *Figaro* and to the dailies, emphatically denying that he had mixed himself up in any way with the "Godless Colleges," and took the opportunity to put forth a lengthy defence of the scheme of a Catholic University against the recent attacks of the Orange party. He justly pointed out the absurdity of a small minority's expecting that the whole of Irish education is to be settled solely according to their wishes.

More recently Bishop O'Dwyer delivered an address on the same subject, and, adverting to the delay in realizing a project to which "all" are practically agreed, suggested that a Bill could be brought into the House of Lords next session if time could not be made for it in the Commons. He pointed out that strong public support and agitation were needed to get the matter settled. This is just what is up to the present not forthcoming. The Catholic laity appears to be largely made up of two parties—those who belong to a class that makes no use of University education and is ignorant and uninterested, and an upper class that dreads an education entirely in the hands of the Church. Hence, the bishops have never been able to rouse a vigorous national agitation. Those who object to a clerically controlled University are

social injury from the power of the trial with which to carry measures. We union, and, if the majority in Ireland us education, they should have it; but re it. A public meeting will be held h may throw some light on this point.

system continue to appear from two to desire a better use of the endow- d, on the other hand, from those who think the endowment should be ger lies in this latter proposal which to. The grant derived from the nd spent on technical education; in £80,000 to primary and £40,000 to ued that in Ireland, as in England, echnical education. If educationists intermediate system *without offering* then this demand. Now in England neral education; in Ireland there are ment is therefore fallacious. Techni- l if the lower classes could not read, upper classes were reduced to the days, left without either solid mental Those who wish the present endow- ucation should keep this danger in

Campbell College apparently has not improved since the sensational trial of last year. A new staff of masters was appointed; Mr. McNeill was supposed to have the confidence of the trustees, and it was hoped that all would now go well. We hear, however, that the matron, with her assistant, has left, her place being taken by a man, and that some of the masters have been given notice to leave. The number of boys, two years ago three hundred, is now about one hundred, and some of the scholarships have been withdrawn. The school was inspected six months since by Professor Mahaffy and Mr. Russell, F.T.C., but their report has not been made public. The school is largely endowed, possesses fine buildings, is regularly inspected, and governed by trustees; yet these are the results.

Alexandra College had a festival evening, "Student's Day," on December 10, when the Countess Cadogan and Lady Betty Balfour were present and "By Degrees," a play composed by Miss Sara Gyles, was performed. On the 1st December, the distribution of prizes in Alexandra School took place. There are now three hundred and five students in the College and about three hundred and seventy in the school.

The case of Mrs. Sullivan has not yet been settled. It appears that Mrs. Sullivan, the mistress of Leixlip National School, was dismissed by her manager—to leave next day. She has a high record of thirty-two years. In accordance with the Maynooth Resolutions, she appealed to the bishop of her diocese, who is Dr. Walsh, Archbishop of Dublin. He replied, that, as it was a summary dismissal, without the usual three months' notice, he could not interfere. A largely-signed memorial, sent to the Archbishop by the inhabitants of Leixlip, received the same answer. If the Maynooth Resolutions can be so evaded, they are useless as a protection to the teachers.

BEDFORD COLLEGE FOR WOMEN.

At a Council meeting held on December 10, Miss Penrose laid her resignation of her post as Principal in the hands of the Council of the College; this was received with much regret. At a Council meeting held subsequently, Miss Beatrice Edgell, B.A., was appointed to the Professorship of Mental and Moral Science. The names of the following Bedford College students appear in the B.A. and B.Sc. Honours Lists:—Rose Monkhouse, First Class Honours, English; N. M. Catty, Third Class Honours, Mental and Moral Science; B. Rickword, Third Class Honours, Classics; E. E. Humphrey, Second Class Honours, Physics, and Third Class Honours, Chemistry. Agnes Kelly, a former student of the College, now working chiefly at University College, took First Class Honours in Zoology, and was awarded the University Scholarship. F. Greatbach, also a former student, took First-Class Honours, French, deserving a prize.

SCHOOLS.

CHELTEMHAM LADIES' COLLEGE.—The following pupils, who passed the B.A. Examination of the University of London, have taken Honours:—Frances Goslin, First Class Honours in French; Lily Baker, Second Class Honours in French; Kate Gaymer, Third Class Honours in English.

HAILEYBURY COLLEGE.—After an examination, held December 1-2, the following were elected to the Senior Scholarships, open only to boys in the school:—C. A. Henderson, £40; H. H. Batten, £40; H. J. Couchman (Modern Side), £40; W. Cardwell, £30; G. S. Oldie (Modern Side), £30. In the Junior, open to all comers:—O. L. V. Simpkinson, £50; A. R. Gidney (Bowden House School, Harrow), £40; A. L. Jones (Priory School, Bedford), £40; J. R. P. Postlethwaite, £30; L. A. Speakman (Arnold House, Llandulas), Modern Side, £30; E. T. Dawson (Cliff House School, Southbourne), under thirteen, £30. Since July, 1897, the following distinctions have been gained by past or present members of the school:—R. H. Couchman, R. T. L. Parr, Second Class, Literæ Humaniores, Oxford; T. P. W. Nesham and W. S. D. Craven passed into the R.M.A.; F. E. G. Talbot (1st), R. S. May (22nd), both direct from the school, R. J. F. Meyricke, W. W. Muir, A. S. Hay, W. R. Friend, A. G. N. Wood, A. G. Shea, into the R.M.C.; Rennell Roidl has received the Star of Ethiopia from King Menelik, and has published another volume of poems, "Ballads of the Fleet"; R. T. Blomfield's "History of Renaissance Architecture in England, 1500-1800," F. W. Bourdillon's "Minuscula," and Frank Podmore's "Studies in Psychical Research," have all been favourably received; J. E. Harley has gained a Major Scholarship at Trinity College, Cambridge; and J. S. C. Douglas a Science Exhibition at Christ Church, Oxford. Some alteration has been made in the Sunday work that is worth recording. Instead of the preparation and lesson lasting an hour and a half in the afternoon, the time for both has been cut down to an hour; and three times during the term, in place of both preparation and lesson, sacred concerts have been held in the chapel. Instrumental and vocal music have been performed, elucidated by short printed programmes. Those boys, a very small number, who do not elect to listen to music spend the time in reading solid books, under supervision. The annual Confirmation was held on November 17 by the Bishop of St. Albans. The health of

the school has been remarkably good during the whole term, which ended on December 22.

HIGHBURY HIGH SCHOOL.—The Company's Scholar this year is Violet Hannay Clapham, and the Clothworkers' Exhibitioner Grace E. Stubbs. Five girls passed the London Matriculation Examination in June, in the First Division, of whom Millicent Annie Barber, who was bracketed first of the candidates from the Company's schools, won the Reid Trust Scholarship (£40 a year for two years), tenable at Bedford College. Katie Aldwinckle, who stood third, has since gained an open scholarship (£50 a year for two years) at Westfield College.

MANOR MOUNT GIRLS' COLLEGIATE SCHOOL, FOREST HILL, S.E.—The annual distribution of prizes and certificates was held in the school hall on November 13. The chair was taken by the Rev. Canon Quennell, M.A., and the prizes and certificates were distributed by Miss Oxenham Cocks. Speeches relating to the education of girls were made by J. H. Selfe, Esq., who also read the examiner's report, Dr. Klein, Miss Carta Sturge. The school was examined and inspected in July by Miss A. J. Cooper, late Headmistress of Edgbaston High School.

ROSSALL.—Elegiacs, Latin Prose, Classical Literature, Prizes gained by W. K. Armitstead; Examination Prizes in Upper VI., by W. K. Armitstead, G. R. Pocklington, F. R. G. Duckworth. Carter Divinity: C. J. Bush and H. Fyson. English Literature, R. J. Shirt. W. K. Armitstead, Exhibition, Hertford College, Oxford; G. R. Pocklington, Exhibition, Balliol College. The annual singing competitions were held on December 20, when the House Cup was won by Batson's; the solos by E. L. Anson and F. L. Williamson. Christmas holidays began December 21, and will end January 27, 1898.

PRIZE COMPETITIONS.

THE Translation Prize for December is awarded to "Capitaine Fracasse."

The winner of the Translation Prize for November is G. E. Dartnell, Esq., Salisbury.

The Extra Prize is divided between "Tremella" and "M.L.G."

METHUEN & CO., 36 ESSEX STREET, STRAND.

HEADMASTERS' CONFERENCE.

THE Conference of Headmasters met on Wednesday, December 22, at the College of Preceptors. The attendance was scanty. On the first day there were present thirty-eight headmasters and some thirty assistant-masters, but on the second day the numbers were considerably reduced. The chair was taken by the Rev. the Hon. E. LYTTELTON.

A Central Educational Authority.

The Rev. Dr. FEARON (Winchester) moved: "That, in the opinion of the Conference, the establishment of a central educational authority, on the general lines recommended by the Royal Commission on Secondary Education, is the essential starting point in any sound movement towards the reform of secondary education." The resolution, he said, was practically the same as that which was passed almost unanimously just about two years ago. That resolution was proposed by himself and seconded by the Headmaster of Harrow, and it was carried with only one dissentient [Mr. Dunn] who was no longer among them to enlighten them with his brilliant paradoxes and eminent wisdom. If the resolution were carried, he would propose a rider to the effect that a copy of the resolution should be sent to Lord Salisbury, the Duke of Devonshire, Mr. Balfour, and Sir John Gorst. The whole purpose in view was to strengthen the hands of the Government, or to stimulate them if they required stimulation. Rumour said that the Government, in the forthcoming Bill, intended to reserve this point of establishing a central authority. There was a distinct danger of patchwork legislation instead of proceeding on a logical basis. If new powers were given to local authorities without considering who the central referee was to be, they would find themselves in a mess. Whenever difficulties arose as to delimitation, appeals, &c., the infallible answer was: "This must be referred to the central authority." The question now to weigh was whether they were contented to leave matters to the combination of central authorities at present existing or whether they felt, for the good of education, that some more expert and some more able authority should be constituted, such as was recommended by the Royal Commission. Every one knew what the recommendations were. At present, in case of any question arising needing the advice or decision of a central authority, it went to the Charity Commission, the Science and Art Department, or the Education Department. He did not think the Charity Commission was a fit body to deal with such matters, and, as a matter of fact, it was very clumsy and very dilatory in its operations. It seemed to him exceedingly important to speak out. The Government were said to be afraid of opposition from the bigger schools. This fear, he believed, was groundless. All the schools represented at this Conference were (like his own, of course) presumably perfect, but, even if they were conscious of any vulnerable points, he believed the Headmasters had large enough views to accept a measure of control and organization which was for the good of the nation at large.

The Rev. G. C. BELL (Marlborough) seconded the resolution. Referring to the four central authorities who now had influence in their schools, he said that, though they had no fault to find with the Charity Commissioners' work, their action had been very slow and dilatory. The Science and Art Department influenced only certain branches of education, and those the least humanizing. By throwing all their weight into one scale they were upsetting the balance, and doing distinct harm to educational progress. The Education Department was fitted to raise the standard of education in elementary schools, but knew nothing of secondary schools. A new and central authority was eminently required in the best interests of secondary education.

The CHAIRMAN put the resolution, which was carried unanimously, and it was resolved to forward copies of the resolution to Lord Salisbury, the Duke of Devonshire, Mr. A. J. Balfour, Sir John Gorst, and members of the Houses of Lords and Commons.

The Differentiation of Schools.

The Rev. W. H. KEELING (Bradford) moved the second resolution:—"That an official differentiation, by a central educational authority, between the aims and curricula of primary and secondary schools is necessary; and that in such differentiation, while the leaving age must be the initial guide for the classification of schools, due regard must be had to the wider scope and influence of secondary education." This resolution followed naturally on the one that had just been carried. A central authority would have to deal with higher-grade elementary schools. These had been set up partly by the action of the Education Department and partly by the Science and Art Department. For the most part there were organized science schools attached to the upper portions of all these schools; and in these classes there was no limit of age and no limit of curriculum. They kept boys to the age of sixteen, seventeen, and even beyond. These schools proposed to make a further move in the direction of commercial education, and make a modern side. The schools were free, and scholarships were provided from the local taxation. In some a small fee, from 1d. to 9d. a week, was charged, and this covered the cost of books. At least half of the pupils in these

schools paid nothing for education, and had books, and often a maintenance allowance, thrown in. In this way a steady and active competition had been set up between the old endowed schools and the new Board schools. Moreover, the Science and Art Department was bringing pressure on these schools to keep their pupils as long as possible by confining the grants to those who took the three years' course. By this action they were doing away with what had been the difference between primary and secondary education, were taking away the boys who would go to the grammar schools, and so were embarrassing the financial position of these schools. The Board schools were doing a great national service in raising the standard of national education. But it should not be difficult to differentiate between the primary and the secondary education. The two systems should be complementary, not antagonistic. This, according to the evidence of Lord Reay, had been done in Holland and in every Continental country, and there should be no difficulty in deciding the difference here. The great thing was to fix the curriculum for each kind of school. In the Conference, three years ago, they solved the difficulty by fixing a limit of age (fourteen) for higher-grade schools, but the mover of the resolution acknowledged that this was a *reductio ad absurdum*. Parliament would never agree to such a limit. But it was quite possible to fix the curriculum to suit pupils leaving at fifteen or sixteen. To do this would be the duty, imposed by Parliament, on the central authority. If, at the same time, the grammar schools were strengthened financially, things would right themselves. He thought they should maintain the old national system, which had done so much in the past. The resolution was a fair and honest attempt to bridge over a great difficulty, and was in the interests of the national welfare. It was a valuable step in the way of national education.

Dr. Gow (Nottingham High School) did not think it worth while to raise difficulties about the encroachment of Board schools. If people wanted cheap schools, they would have them. In Nottingham and other manufacturing towns people of very limited incomes paid as much as £30 a year to the school rate, and the rate was put up in order to provide for the children of such parents. His complaint rather was that elementary schools were absolutely without a definite aim or curriculum. On the Code as it stood he had calculated that there were 720 possible curricula for children under thirteen. No two schools were alike, and thus it was impossible to raise a discussion upon elementary education. In regard to secondary education, he thought it might be improved by a more definite plan and by different types of schools. As to the functions of the Council in regard to secondary education, it would very much facilitate the organization of experiment. There were dozens of experiments being tried that nobody outside knew anything about, and the results were not carefully watched and compared, and were not published. If there were a central education authority, it would become the recording angel of such experiments. He heartily seconded the resolution.

Mr. H. W. EVE (University College School, London) said that this question of delimitation had been fully discussed by the Joint Committee. That Committee had carried an elaborate resolution embodying two principles capable of various interpretations, the working out of which must be left to the central authority. The higher-grade schools were supplying a national need, and he hoped that the Conference would do nothing that would tend to damp popular enthusiasm.

Dr. FIELD (Radley School) said that the antagonism between higher-grade and grammar schools was to be found only in the North of England. At Canterbury they had an excellent middle-class school, and there was no rivalry between it and the King's School. In some places where there were not those large endowed schools it might be a much more economical plan to allow an elementary school to extend itself in rather higher regions than otherwise it might do than to create a new school. There might be conditions that would render it unwise to create a new secondary school, and the needs might be satisfied by allowing an elementary school to expand its curriculum. He merely wished to deprecate the idea that the curriculum should be drawn too narrowly. The curriculum might be determined with elasticity by some body which had not merely authority over both sets of schools, but interests in both sets of schools.

The resolution was put to the Conference and carried unanimously. It was agreed to send copies to the Ministers whose Departments were concerned.

Classical Entrance Scholarship Examinations.

The Rev. H. W. MOSS (Shrewsbury) moved: "That this Conference gives a general approval to the recommendations of the Committee with regard to classical entrance scholarships." The recommendations of the Committee, which were afterwards discussed and submitted as particular resolutions, were:—(1) That entrance scholarships should not be given in such a way as to encourage specialization at an early age; (2) that, in order to meet the wishes of the Committee of Headmasters of Preparatory Schools, the Greek in scholarship examinations should not be marked as high as the Latin; (3) that no Latin verse composition paper should be set in entrance scholarship examinations for boys under fourteen, but that a knowledge of quantities and ordinary

scansion be demanded." Mr. Moss said that these were the resolutions passed in 1895 and 1896. In a *résumé* of what has led to the movement for change he referred at considerable length to the resolutions passed by the conference of preparatory-school masters. In a poll that had been taken of the preparatory masters, 120 had pronounced in favour of the first resolution, and only 3 against; 96 were for the abolition of Latin verse, and 30 against; 95 were in favour of lowering the standard in Greek, and 31 against. He thought that a strong case had been made out for meeting the views of these gentlemen; they were experts, and could estimate the needs of their pupils far better than public-school masters. What they desired was that the character of the scholarship examinations should not be such as to make it necessary for them to specialize prematurely, to the injury of their pupils and the injury of the development of their education. He should not be dealing honestly with the Conference, however, without mentioning another factor in the problem, and that was the requirements of their own schools. What was the primary object of most of them, the headmasters, in arranging their scholarship examinations? Undoubtedly it was to attract to their schools a few boys of ability. Those *Croesus* of headmasters at Eton and Winchester might arrange their examinations with a single eye to the needs of preparatory schools, but schools that possessed fewer scholarships—and those of less value—were obliged to look at matters in a more selfish way, and for those of them who were in that position it was of the first importance that their examinations should be arranged so as to discover boys of real promise. It was obvious that when a bright boy passed through the school he raised the reputation of the school and excited emulation in the classes. He gravely doubted whether the best way to get such a boy was to institute an examination that would most agree with the ideas of the preparatory-school masters. Thus history and geography were subjects capable of being crammed as mainly tests of memory. As to the second resolution, the system of marking Greek had been adopted for years in Shrewsbury with satisfactory results. As to Resolution III. he believed that a boy would derive greater benefit from Latin verse if he began it at fourteen than if he had started at an earlier age. The Conference was asked in the first place to approve generally the recommendations of the Committee, and the separate resolutions would be considered afterwards. He thought they owed a deep debt of gratitude to the preparatory-school masters, and it was plain from the letter they had sent them that the passage of these proposals would be regarded as a substantial concession to their desires.

The Rev. Dr. FIELD (Radley) seconded the first general resolution.

The Rev. Dr. FEARON (Winchester) cordially supported the recommendations. At first when the movement was started he feared there would be no practical result. But he could say that at Winchester they had been moving in the direction of the resolutions. He held that they got the best turn-out of scholars by examining them in a variety of subjects and not encouraging specialization, and in five out of six cases those boys turned out the best scholars. The first two resolutions had been acted on absolutely for some years past. He had been reducing Greek more and more; Latin in their scholarships counted four times as much as Greek, and there had been encouragement to geography, history, French, and other subjects, by always giving a full allowance for each single paper; out of fourteen scholars eight or nine were elected straight off by the aggregate of marks, and in cases where they had chosen for special merit in one subject they often found they had made a mistake. His experience favoured the election of boys who had done well all round rather than of those who had done well specially. Therefore, he for one most cordially welcomed the recommendations. At Winchester they had acted absolutely on I. and II. and were quite ready to act on III. He entirely agreed with the Headmaster of Shrewsbury in supporting the third resolution, and he had not the slightest doubt they would get as good scholars by acting on it as otherwise.

The Rev. G. C. BELL (Marlborough) stated that he followed the method pursued at Shrewsbury. There was one matter on which he had some doubt. Some boys at an early age showed a distinct faculty for mathematics, and if that was neglected it was a waste of the boy's power. The same could be said of music. Children were born with distinctive faculties. He must confess that when a boy came to them with such gifts they were all inclined to give him high honour. That, he supposed, would encourage the preparatory-school master to say that they were specializing at an early age. Then how were they to act? Were they to give a low mathematical examination which would indicate no mathematical faculty at all? On the other hand, if they were giving an adequate test, were they not encouraging specialization? He confessed that this was his difficulty, and he hoped there would be some one to show how the conflicting positions could be reconciled.

Dr. H. A. JAMES (Rugby) said that, besides Mr. Moss's reason for electing scholars, there was a more general and generous one, the wish to bring to the front poor boys of ability, and give them a chance of making their way in the world. They desired able boys for two reasons: they wanted interesting pupils, and they wanted possible winners of University scholarships. A University did not recompense all-round talent, and neither did the colleges. Therefore, if they were to succeed at the Universities—and that must be taken as legitimate and an honest ambition—it was clear that they could not be content merely to send

up all-round boys, but that they must have boys who would do specially well in certain special subjects. The Master of Winchester had said that an all-round boy would turn out as good a specialist as a specialist boy at the start. That might be true of Winchester or Rugby; it was not true of such a school as Rossall. To judge by his experience there, the mediocrity one would secure by an all-round entrance examination would never win a college scholarship. Hence he could not quite accept what the Headmaster of Winchester said on that point. And he questioned whether early specialization was altogether a bad thing; the tendency in great schools up to a certain point—the sixth form—had been to become broader, and in this way they had undoubtedly lost something. The fifth form in the public schools was only doing the work in classics which the fourth form was doing some years ago. But the question was whether, while broadening their education, they were not tending to narrow it at the preparatory schools. He was not quite clear in his mind on this subject. He was not clear as to what the preparatory masters meant by “undue” specialization. At the very earliest age he should like to see a certain amount of extra time, either for classics or mathematics, given to boys who showed an aptitude for either subject. There were points in all the resolutions which he could not entirely approve; but, with limitations in the sense he had indicated, he had no objection to vote in favour of them.

Mr. FIELD said that, unless they were prepared to adopt the Winchester system, the first resolution would remain no more than a pious aspiration. As the headmaster of a smaller school he agreed with Dr. James that they could not safely do as Winchester did.

The Rev. H. A. DALTON had tried at Felsted the Winchester plan, and been forced to abandon it. He wished to know whether by voting for the resolution he would bind himself to follow Winchester.

The CHAIRMAN: No member is binding himself to any practical action either by his speech or his vote. The experience of many years warrants me in saying so.

The Rev. A. J. GALPIN (King's School, Canterbury) asked what the preparatory masters really required. Did they ask for separate papers in divinity, history, geography, and French, or would they be content with a general paper? In the latter case, such a paper was generally set, though no great value was attached to it. Or would they like alternative papers? He greatly feared that by favouring a multiplicity of subjects they were increasing the difficulty of preparatory masters.

Dr. GREY (Bradfield College) asked whether Mr. Moss would accept the insertion of “undue” before “special.”

Dr. WILSON (Lancing College) said he thought, if the Winchester plan was adopted, there would be a danger of making an undue number of subordinate honour subjects besides classics and mathematics.

The Rev. W. H. FLECKER (Dean Close School, Cheltenham) considered there would be a tendency to make the burden on the boys of grammar schools greater still. He thought the boys were much more likely to study such subjects as history and geography satisfactorily when their studies had been first directed to such subjects as Latin and Greek. To his mind the cram of history and geography was infinitely more fatal than the cram of Latin and Greek.

The CHAIRMAN, interposing, said that, if they placed the additional subjects on their papers, they would only increase the burden of the boys. The solution, he thought, should be on the lines suggested by the Headmaster of Lancing. The examination of a boy entering for a classical scholarship would be on the old lines. The same number of marks should be allowed to Latin, but fewer marks would be allotted to Greek, and the remaining marks to other subjects. What had been proposed was that general knowledge should be considered up to the age of fourteen, and from fourteen to eighteen they should specialize. At Haileybury they had been great offenders in the way of specializing, but his intention was to take the earliest opportunity of gradually moving in the direction advocated by the Headmasters' Conference. Dr. Fearon's experience was most important, and he himself failed to see any reason for the distinction that had been drawn between large and small schools. The preparatory-school masters had for the last three years devoted an enormous amount of time to this question, and had arrived at practical unanimity. What was their motive? It could only be a jealous regard for the best interest of their boys, and a belief that under the present system the education of boys up to fourteen was being seriously damaged.

Mr. J. S. PHILLPOTTS (Bedford Grammar School) supported the general recommendations of the Committee with regard to the entrance scholarships. They should do all they could to aid the advance of national education and infuse it into the national life. It was also a serious responsibility to consider whether they were not interfering with the best course of education for boys—a course which, but for them, would have been adopted by preparatory masters. Secondary education did not aim at producing immediate results, and he felt that the moment their eyes were opened to the representation of the facts by the preparatory-school masters they would do all they could to aid them.

A vote was then taken on the general proposition, and it was agreed to *nem. con.*

On the first of the recommendations being submitted separately as a resolution,

Mr. J. S. PHILLPOTTS spoke in support of it. He said it was

desirable to exclude a commercial element that was creeping in, especially among parents. He had had warning of its existence in France from letters sent to him.

After some remarks by Mr. JAMES (Malvern College), Mr. MOSS (Shrewsbury) replied. He said he considered the best solution to the difficulty was by qualifying papers.

Dr. GRAY (Bradfield) moved the insertion of the word “special” before the word “specialization”; but on a vote the amendment was negatived, and the original clause carried.

Clause II. was carried *nem. con.*, but on Clause III. considerable discussion arose. Mr. A. L. FRANCIS (Tiverton, Blundell's School) proposed as an amendment: “That, in any entrance scholarship examination for boys under fourteen in which Latin verse is set, there should be an alternative paper.” The amendment was seconded by Mr. FLECKER (Cheltenham, Dean Close School), who considered the proposal would be in favour of boys who were not able to go to preparatory schools. Mr. PHILLPOTTS maintained that this was a rider, not an amendment. It was suggested that the words “under fourteen” should be withdrawn from the amendment; but the CHAIRMAN ruled that it could not be put in that form. The amendment was then put, and the CHAIRMAN, on a show of hands, declared it carried. Another vote was called for, and this time the amendment was negatived by 14 to 13 votes. Dr. JAMES (Rugby) called for a poll, and, voting papers having been issued, the amendment was carried by 17 to 12 votes.

The Organization of the Conference.

The CHAIRMAN moved several resolutions with regard to the better organization of the Conference. After some formal discussion the following were carried:—(a) That, with a view to the better organization of the Conference, Sub-Committees be appointed to deal with separate subjects, as may be determined, who shall in each case report to the Committee. (b) That the chairman of each Sub-Committee be a member of the Committee and be appointed by the Committee. (c) That each Sub-Committee consist of four members, in addition to the chairman, with power to add to their number. (d) That, of the members of each Sub-Committee, two at least be appointed by the Committee, who shall not be members of the Committee, and two be appointed by the Conference. (e) That Sub-Committees be appointed to deal with such subjects as the following:—(1) Parliamentary; (2) Universities; (3) Public examinations; (4) Training of masters, pensions, &c. (f) That each member of the Conference be required to nominate, on or before December 1, three members for election to fill the vacancies upon the Committee. (g) That the names of those who have obtained five or more nominations be submitted, with their consent, to the Conference for election, and that the votes of the Conference be taken on the second day on the question by voting papers circulated beforehand. (h) That the votes of members not able to be present at the Conference be counted if sent in to the chairman of the Committee by the first day of the Conference.

The Conference then took up private business, and adjourned till Thursday at 10 o'clock.

SECOND DAY.

Professional Training of Teachers.

The REV. G. C. BELL (Marlborough) moved: “That this Conference regards with much satisfaction the steps that are being taken in many quarters to promote the professional training of teachers, and accepts the principle that any man definitely selected for a mastership in any school connected with the Conference must produce adequate evidence of practical efficiency as a teacher; failing this, he shall be considered only as a probationer until he has gained a teaching diploma, of which an essential condition shall be the certificate of the headmaster of the school in which the probationer has served.” A friend who had seen his resolution in print had asked him whether he was not deliberately riding for a fall, but he still hoped that, even if the Conference did not pass it as it stood, it would carry some amendment that would give a definite impulse to training. He would spare the Conference any dissertation on the subject or upon objections that might be urged against it, or upon details of methods and systems. The dissertation had been delivered in another place, and a copy of it might be found in the *Preparatory School Review* for July. His stronger reason for not haranguing them on the subject was that he was speaking to a body which, for now nearly a quarter of a century, had over and over again affirmed the importance, advantage, and use of training, and the younger members of the profession who had not attended the meetings might be referred to the appendix of the Parliamentary Report on the Registration of Teachers. That appendix was drawn up by the present Archdeacon of Manchester, and it showed that a past generation had favoured training at a time when the reasons for it were not so obvious as at present. Beginning with 1871, year after year to 1879, with one single exception, that of 1874, the Conference had pressed the subject on the Universities and on their own members through the Committee; and since then the subject had come up at intervals, and the Conference had again and again expressed approval of training and a belief in its necessity. The Conference was in fact so deeply pledged that no one had yet ventured to imitate the courage of the two adverse witnesses

who appeared before the Royal Commission, and, if any one ventured, he should listen with interest and surprise tempered with other feelings. They had reason to believe that the English public-school education was in some respects the best in the world, but they could not shut their eyes to the fact that the character of the training of their schoolmasters was a defect in their system. After yielding to the force of the argument that training was necessary they had contented themselves with criticizing existing systems of training and showing their failure to fulfil the conditions necessary. More sincere than Marc Antony, they came to bury training, not to praise it. He wanted to put a great question to the Conference—How long were they to be content with this weak position and theoretical good will and practical shilly-shally? If they were content, let them say so, and they would thereby strengthen those who wanted a free hand in dealing with our public schools. But, if not content, they should declare their opinion and seek an improvement in their methods. The Duke of Devonshire, in his recent speech at Giggleswick, had said that “the first requisite in the reorganization of secondary education was that some means should be found of raising the standard of qualifications of the teachers. That was a matter that they might well hope the teachers themselves would take up in their own interest, for it was something very much of a scandal that parents should be tempted, as he was afraid they were in too many cases, to waste their own money, and, what was more important, the time and the opportunities of their children by sending them to inferior schools. It was said that the Universities and the College of Preceptors were taking the matter up and moving in it, but as yet the voluntary agencies had failed to establish a satisfactory test by which the efficiency of secondary schools might be guaranteed. If voluntary effort should fail, the State, or perhaps the authority that had been delegated by the State, might very well be intrusted with revision.” He ventured to think that, if they negatived his resolution or shelved it by the previous question, they would put into the hands of others who would deal with the question a weapon that they would not be slow to avail themselves of. If the Conference moved in the matter, they would find themselves seconded by the Headmasters’ Association, and also by the College of Preceptors, and by many other combinations of teachers. They claimed to be the leaders of English education, but they did not lead on this subject, they lagged behind. If, years ago, they had taken the forward step such as he urged now, they would have made an advance all along the line. He was himself acting on the lines of his resolution. But he was quite prepared to admit that they had not done so much as should have been done. That was so for many reasons. They could not tie their own hands and limit their choice among the best men by imposing on them conditions about which they would not hear a single whisper, if they presented themselves at other schools. Another reason was that the provision for training secondary male teachers had already been on the right lines. For various reasons women had shown themselves far more keen than men in seeking training, and there were several colleges, particularly the training college at Cambridge, which had been doing admirable work with great zeal and efficiency in training women teachers. They ought to show their gratitude to the agencies that had been at work in training. If they would pass this resolution and act upon it they would give an impetus to the training movement in various parts of the country that was much needed. In conclusion, he referred to the very important report of the Joint Committee on Training. This body was originally started by the Association of Headmasters. The Committee also drew to it representatives of the College of Preceptors, the Teachers’ Guild, the Assistant-Masters’ Association, the Assistant-Mistresses’ Association, the Primary Schools Association, and the Association of Principals of the Welsh County Schools. A certain number of representatives of vested interests also acted with them. The report was the product of many meetings held by the Joint Committee. If the Conference decided that untrained teachers should not be permanently appointed until they had obtained a teacher’s diploma, their difficulties would soon vanish. The solution of the problem would be largely in their own hands. The Conference had on the previous day voted to appoint a Sub-Committee on the training of teachers. Through this Committee they would be able to exercise a very powerful influence on the different bodies interested in the training system. If the Government dealt with secondary education, they would have to set on foot some system of training which any Government would be obliged to recognize as offering a satisfactory solution of a very difficult problem. (Cheers.)

The Rev. H. W. MOSS (Shrewsbury), in seconding the motion, said he felt very strongly that the long time that the Conference had been considering the question it would be unfortunate if they were to reverse their former action. He doubted whether those members of the profession who objected to definite action had at all considered the question as reasonable men. What reason was there why the teaching profession should differ widely from all other professions? What would be thought of a lawyer who objected to mastering the principles of his profession and considered that the practice of the Courts would be sufficient to instruct him? What would be thought of a doctor who objected to learning the principles of medicine? He would be considered a mere empiric, who would be brought to book by some

consulting physician called in to advise him in some critical case, or perhaps by some incisive and hard and critical remarks by the coroner in holding an inquest. He thought himself that most of them were guided in their methods by what they remembered of the teaching to which they were subjected when boys. If they happened to have been in the hands of good teachers, their pupils had the benefit. If, on the other hand, they happened to have been in the hands of bad teachers, then their pupils suffered from their misfortunes. But even those who had been under good teachers did not necessarily prove good teachers themselves after all. It was highly probable that a man might imitate the eccentricities of his teacher instead of his excellences, and fancy he was reproducing the counterpart of the methods which he himself had been taught when in reality he was doing nothing better than reproducing a parody. He felt confident also that, unless they were careful, they might bring themselves under very unwelcome legislation. They could do nothing better than pass the resolution proposed by the Master of Marlborough. But, with regard to the latter part of the resolution, he thought it would be well that a headmaster should pledge himself at some definite time to make up his mind with a full sense of responsibility as to whether a teacher who had been employed should be continued in his position and was fit for it.

Dr. H. A. JAMES (Rugby) would like to see substituted in the resolution for “accept the principle,” “will welcome legislation.” He did not believe that any action would avail unless there was definite legislation on the subject. As a matter of example he was quite ready to accept the resolution. The greater schools would no doubt continue to get their teachers from the class they wanted, but there were the lower schools, to which the matter might be more important, and the Conference might, therefore, set the example. But the resolution would be as useless as any they had passed before unless it was connected with definite legislation which would compel everybody to do the same thing. He would put this point, however: What were they to gain, and what did they lose, by having training? He believed there would be a very considerable gain in the teaching of the more elementary subjects. But he did not hold that in the higher branches of teaching training was of any advantage at all. Nor did he think that discipline could be taught. He did not believe that any amount of training would really teach discipline. The real gain would be in the lower forms. A loss, however, would occur among men who now entered the profession, perhaps without any definite resolve to make it their livelihood, but were induced to go on when they had once begun, and a great many of those men turned out extremely valuable masters. Such men might be choked off and go to some other occupation in life, where a preliminary training might be less difficult. So they might lose many very good masters. As regards Rugby and similar schools, he did not believe that training, or non-training, would make the difference of one per cent. in the dismissal of masters. With regard to the form of the resolution, he proposed as an amendment that “accepts the principle” should be omitted, and “welcomes legislation to the effect” inserted. A further suggestion was that “connected with the Conference” should be omitted.

The Rev. W. H. CHAPPEL (Worcester) seconded the amendment.

The Rev. W. H. FLECKER (Dean Close School, Cheltenham) sincerely thanked the Master of Marlborough for his persistency in bringing this subject before the Conference, and he hoped he would continue to press forward what he regarded as a vital question, if training in this country was to attain the standard it had in foreign countries. He complimented Dr. James on the much more gracious attitude he had assumed towards training.

Mr. H. W. EVE (University College School) heartily supported the motion, and thought it was all the better to recognize the possibilities of different methods of training. As to the amendment, he very much hesitated to accept what had been said as to the teaching of higher and lower subjects. Their experience of college lecturers was not altogether in favour of untrained able teaching of the higher subjects. As to men of high ability drifting into the profession, he did not see that they would be deterred from entering it by such a measure as that proposed by Mr. Bell, who had stated that one of his own colleagues would practically get his training at Marlborough College. If a man really took a liking to his profession, it would be a simple matter for him to pass an examination. If he could not, a delicate hint would be conveyed to him that he had better choose some other profession. He would much rather that Dr. James’s proposal were put in the form of a rider. They would gain by taking an independent line showing that they themselves would do all they could to promote training, and did not need it to be enforced on them from outside.

The Rev. Canon S. C. ARMOUR (Crosby, Merchant Taylors’) supported the suggestion of Mr. Eve. The resolution and the amendment stood to one another as “antecedent” and “consequent.”

Mr. J. S. PHILLIPOTS (Bedford Grammar School) also thought the amendment really a rider. He had some years ago advocated peripatetic lectures on pedagogics for public schools. A new departure had been taken by Oxford and Cambridge in the direction they aimed at. They had now established criticism lessons, visiting and model lessons in connexion with the public schools. The College of Preceptors had also thoroughly practical ideas on the method of training.

They should not only pass the resolution, but when they left the room should act on it, and get lecturers and criticism lessons at their schools.

Dr. JAMES was unable to accept Mr. Flecker's compliment. He held the opinion he had always held on training. It was of no use passing resolutions. The only thing was to have definite legislation. If the Master of Marlborough would add something to his resolution to make it effective, then he had no desire to press his own proposal.

The CHAIRMAN said that what Dr. James aimed at would really be secured by making his proposal a rider.

The resolution was then put as proposed without the amendment, and carried, with one dissident.

On the suggestion of the Chairman it was also decided "That the Conference would welcome legislation in accordance with the above resolution."

Oxford and Cambridge Scholarship Examinations.

Dr. GRAY (Bradfield College) moved: "That this Conference deplores the injurious effect upon education resulting from the continuance of the present system of fixing the dates for the Oxford and Cambridge scholarship examinations." He reminded the Conference that the motion he brought forward last year was passed unanimously. He desired to keep the fire of righteous indignation alight, not to add fuel to the flames. He thought it a defect of method at the Universities that examinations should take place in November, and it was in every way desirable that they should not take place until after Christmas. If the resolution were carried, he would ask the members of the Conference to pledge themselves not to send up candidates for scholarships before Christmas. This had been condemned as a "boycott," but he preferred to call it a wise reservation of force.

Dr. JAMES (Rugby) seconded the resolution. He feared that Balliol College, Oxford, would not give way. He was of opinion that Balliol would not suffer from the change by having the examinations after Christmas instead of in November. A representation from the Conference, through the Chairman, would have weight with Balliol.

Mr. F. H. COLSON (Plymouth College) opposed the motion. He had not himself felt the pinch. He had found the six or nine months a boy passed at school after winning a scholarship were by no means wasted, and formed a valuable relief after excessive specialization.

The Rev. Canon S. C. ARMOUR, D.D. (Crosby, Merchant Taylors'), suggested that there should be a more equal diffusion of examinations throughout the year.

Mr. PHILLPOTTS (Bedford) thought that a Committee might be asked to report on the inconvenience caused by the arrangements for scholarships, and to follow that up by asking for the intervention of the Chancellors of the Universities in the matter.

The resolution, as proposed by Dr. Gray, was then put and agreed to, with five dissentients.

Dr. GRAY withdrew his rider in favour of the proposal of Mr. Phillpotts.

Mr. PHILLPOTTS then moved:—"That a Committee be asked to draw up a report of the inconvenience caused by the arrangements for entrance scholarships in the present year, and to memorialize the Chancellors of the Universities of Oxford and Cambridge on the subject."

Dr. GRAY seconded the rider, and it was carried, with four dissentients.

The Worship of Athletics.

Mr. E. H. CULLEY (Monmouth School) moved: "That the worship of athletics has increased, is increasing, and ought to be diminished." He disclaimed any intention of making an attack on athletics as such by themselves. The value depended upon a proper proportion being preserved, and athletics being kept in due subordination. Recreation ceased to be recreation if it interfered with work, and it certainly ought not to dominate. An amusement should not be turned into a serious occupation. At present there were signs that this due proportion was being lost sight of, and there were many strong forces at work to stimulate this tendency to undue proportion. There was a devotion to entertainment and sport far beyond their true value, and he thought he had properly described it as worship. Athletics were the shortest way to notoriety. He did not know any other way in which a boy of seventeen could get himself mentioned three times a week in the newspapers. No form of academic work would attract so much attention. The higher achievements at the University passed with scarcely any notice in the newspapers, except perhaps the Mathematical Tripos at Cambridge, where the sporting element entered. There was no telegram from the German Emperor. It was, he considered, the duty of schoolmasters to say that they would exert their influence against the current, and would not stimulate it. He knew that many of the tutors at the Universities thought that intellectual subjects did not receive the same earnest attention they did some years ago, owing to this passion for athletics. There were some colleges at which it was considered good form for every member of the college either to go down to the river or to the football field, or where there was a match going on, to watch other fellows exert themselves. An Oxford tutor wrote to him: "Boys come up to us, their minds saturated with athletics. There is

by comparison no intellectual life among undergraduates." That was all very well at school, but at a University it was rather out of place. Good football, and still more good cricket, helped a man to a mastership far more than a second class. In the list of an agency he had perused, out of 150 names, 133 had *athl.* appended, and it was only modern language masters trained abroad who ventured to dispense with that qualification. He did not desire to see athletics discouraged, but only their abuse by excessive resort to them and the sacrifice of time and energies. The text he wished the Conference to endorse was: "The Lord taketh no pleasure in the legs of a man."

The Rev. A. W. UPCOTT (St. Edmund's School, Canterbury) seconded the motion.

Mr. J. S. PHILLPOTTS (Bedford Grammar School) said he should propose an amendment, as he was anxious they should look at the question broadly. He moved: "That this Conference deprecates the excessive public importance attached to special prowess in athletics, but feels that it is the duty of members of the Conference to promote by athletics, games, and otherwise the harmonious development of the body of all boys, and especially those who are least inclined for athletic exercise."

The Rev. W. H. KEELING (Bradford Grammar School) was of opinion that the resolution went a great deal too far. As a body of headmasters they had nothing to do with newspapers and the prominence they gave to sport and games, but they had to do with their schools, and could exercise control in them. For himself he thought it was most important that the masters should take a deep interest in the boys out of school as well as in it, and how could that be done unless there were certain members of the staff skilled in cricket, and so forth? He hoped the proposal would be amended so as to exclude day schools from its scope. The abuses of athletics did not apply to day schools at all. It probably would be better to withdraw the resolution altogether, and it might be presented to the Conference on another occasion in a less rhetorical form.

The Rev. W. YORKE FAUSSET (Bath College) had been asked to second the resolution, but he felt himself unable to comply. He also should prefer not to support Mr. Phillpotts' amendment, which he considered too long. He moved as an amendment: "That it rests with the headmasters of public schools to counteract by their attitude and practice the present predominance in the country of the athletic interest."

Mr. CULLEY intimated that he would accept Mr. Fausset's amendment and withdrew his resolution.

The Rev. G. C. BELL (Marlborough) said he would be sorry if any resolution or any of the amendments were passed. It would gratify him if Mr. Culley saw his way to be contented with the effect his speech would have, and withdraw his resolution in favour of the subject being again presented at another Conference in a more practical form.

Mr. H. MILLINGTON (Bromsgrove) maintained that there were abuses of the athletic spirit which should be discountenanced. The real damage was done not to the athlete himself, but to the naturally flabby boy, the hanger-on of the athlete, who wastes his time at school by getting up records. These boys were becoming positive nuisances.

The Rev. W. H. MOSS (Shrewsbury) said he would move the previous question unless Mr. Culley consented to withdraw his resolution.

The Rev. the Hon. E. LYTTELTON (Haileybury) was afraid that, if they did not show they had the courage of their opinions by passing a resolution in some form, they would run the risk of its being supposed that they were indifferent to what was said on this subject of the abuse of athletics, and that they were so given to self-worship that they could not bring themselves to the scratch and make a pronouncement on any question whatever. He thought that the evidence brought forward, and a great deal more which might be brought forward, was absolutely overwhelming, and that the matter was in a very dangerous position indeed. Those who were waiting to ascertain their position should not be wholly disappointed by the Conference not taking any action whatever. He should, therefore, be inclined to ask the Conference, if they did not wish to pass Mr. Culley's motion, to vote on the question in some other shape. Mr. Culley had offered to withdraw in favour of one of the amendments, which was certainly of a more moderate kind.

The Rev. A. R. VARDY (King Edward's School, Birmingham) held that there was a very great distinction between town schools and great boarding schools in this matter. The difficulty in town schools was to get boys to take part in sports, and in any way to take an interest in them. He should be sorry to have any resolution passed which would seem to discourage athletic sports and games in town schools. As an amendment he proposed: "While fully recognizing the value of athletic sports in school training, this Conference earnestly deprecates the increasing importance and excessive publicity that are now accorded to them."

Mr. A. L. FRANCIS (Blundell's School, Tiverton) seconded the amendment.

Mr. CULLEY intimated that he would now stand by his original resolution. What he condemned was the worship of athletics. The amendments were really in agreement with him as to the advisableness of putting a check on abuses.

Mr. FAUSSET withdrew his amendment.

Mr. H. W. EVE (University College School, London) thought it would be a great pity if they spoke with any uncertain sound.

The Conference then voted on Mr. Phillpotts' amendment, which was rejected by a considerable majority.

Mr. VARDY's amendment was next put to the vote, and carried by a decided majority. It was then adopted as a substantive resolution. On the motion of Mr. COLSON, it was agreed that the Sub-Committee should consider the subject.

Oxford and Cambridge Schools Examination Board.

The Rev. H. A. DALTON (Felsted School) moved: "That it is desirable that the schools represented at the Conference should avail themselves of the opportunities for inspection offered by the Oxford and Cambridge Schools Examination Board." He maintained that great advantages accrued from the independent criticism and suggestions that are thus obtainable. He believed that only two boys' schools—his own and Liverpool College—had so far availed themselves of the inspection offered a year ago by the Oxford and Cambridge Joint Board. A headmaster was neither omniscient nor infallible, and a tried inspector such as Mr. Kitchener could not fail to discover defects in organization or discipline or teaching which had escaped the notice of the most lynx-eyed of headmasters. It was practically certain that under the forthcoming legislation all schools would be subject to inspection of some kind, and it would be a great thing if their schools could point to University inspection as a *fait accompli*.

Mr. G. W. RUNDALL (Newcastle School, Staffordshire), in seconding the motion, said they were not omniscient, and it was only by some skilled outside system of this kind that they could possibly be made aware of improvements which to an outside mind were obvious but might escape their own notice.

Mr. EVE pointed out that the Girls' Public Day School Company had had for years a system of inspection of their own which had produced excellent results with no friction.

It being near the hour for closing business, the Conference voted against taking any decision on the subject.

The Committee.

During the sitting a vote was taken on the election to the Committee of three members in place of Dr. Baker, Mr. Moss, and Mr. Phillpotts, who retired. The Conference elected Dr. H. A. James, Mr. H. W. Eve, and Dr. J. Gow. The meeting place of the Conference next year will be Shrewsbury.

The Conference adjourned after passing the customary votes of thanks.

MODERN LANGUAGE ASSOCIATION.

THE annual meeting of this society was held at the College of Preceptors on the afternoon of Thursday, December 23. The chair was taken by the Rev. J. E. C. WELLDON, President for the year.

The Hon. Secretary's report was presented and taken as read.

Dr. F. HEATH, Editor of the *Modern Language Quarterly*, the organ of the Association, made a statement as to the position of that journal. He said that the experience of the past year had justified the decision of last year to raise the subscription to 10s. 6d., and had confirmed the opinion that he expressed at the last meeting, that one guinea was the minimum subscription upon which a worthy publication could be conducted. After a great deal of work the first number was published last summer. The second number appeared in November. The labour which those two numbers had necessitated was really quite extraordinary. It would have been impossible to produce them had it not been for the unselfish co-operation of his colleagues. Scholars throughout the country had come to the aid of the journal in a most unselfish way, and gratuitously written articles and collected materials. The work had been done for love, and not a penny had been paid to any contributor. He hoped that those persons who had helped him thus would accept his thanks for their generous action. The cost of No. 2 was a little over £31. It would be seen that the production of four numbers a year at such a cost would leave a very small margin of the income for application to the general purposes of the society. But this difficulty had been solved by an arrangement which he had entered into with Messrs. Dent & Co. That firm were about to extend their business by becoming educational publishers, and they had agreed to take over the financial responsibility for the publication of the magazine, and to increase its size. They would also pay for two articles in each number by men of undoubted repute in their subjects. The Association, on its part, was to take a copy of the magazine for every member on the books at 1s. 6d. a copy, the published price being 2s. 6d., and the Editor was to work for two years without payment. Certain changes would be made, and the magazine would be literary rather than philological and pedagogic. The present name would not cover the new condition of things, and the Title would therefore be changed to *The Modern Quarterly of Language and Literature*. The new name might be open to some criticism, but it

had been regarded as a convenient one, and its adoption did not involve any question of principle. The journal would be prepared to take a definite line on the subject of the teaching of modern languages, without dallying with the condemnation of methods unsuited to the present day. The next number would appear early in February.

The PRESIDENT then delivered the following address:—

Ladies and gentlemen—It falls to me to say a few words upon the subject of the teaching of modern languages. I shall make them as few as possible, because it is not in my power, as the Hon. Secretary knows, to remain very long at the meeting, and I must plead guilty to a certain sense of incompetence. I do not profess to be a great modern linguist, and perhaps in the administration of a public school it is not so important that the headmaster should know about modern languages as that he should know about the modern language masters. (Laughter.) But it happens that I have spent some time in trying to acquire modern languages. I doubt whether there is any person in this room who has lived in so many foreign homes as I have—not always without some suffering; and perhaps I am the only person in this room who has satisfied the test which it has for some time been my habit to apply to persons who profess themselves to be authorities upon modern languages. If a person professes a knowledge of Italian, I always ask him if he has read the "*Divina Commedia*" through; if he professes a knowledge of German, I ask him if he has read the second part of "*Faust*" through; and, if he professes a knowledge of English, I ask him if he has read the "*Faerie Queen*" through. I have fulfilled all those three conditions, and I am alive to tell you the tale. But my principal object in rising is not to give you a history of my own qualifications, which are poor at the best, for speaking on modern languages, but to express to you in the most forcible words I can command the profound interest which I feel, and have long felt, and shall feel as long as I am a schoolmaster, in the encouragement and advance of modern language teaching. To me it is not so much a conclusion as an axiom that modern languages possess great and important and ever-growing influence in the education of the young. I am one of those who have upon the whole been unable to realize the important distinction which is made between the classical and the modern languages as educational instruments. I perfectly understand the distinction between language and other subjects. I believe that language is the most powerful and most effective educational instrument, mainly because it is in its nature human. It is the product of man's own intellectuality, and it possesses that characteristic which is found in human affairs—that one is not dealing with exact and absolute truth, but is dealing with probability. It always seems to me that such a study as that of mathematics, which possesses in itself the highest value, is yet not a study which can claim the highest place in education, just because the certainty which is attainable in mathematics is not in its nature the degree of assurance to which one may hope to attain in human affairs. And, as the object of education is to fit young people for the conduct of life, I think that that subject upon which they are required to exercise those very qualities which will be evoked in life is the subject that is best qualified to fit them for the work of usefulness in life. Therefore I put language at the head of educational subjects; but whether the language is an ancient or a modern one does not seem to me so important a matter. It is perfectly true that the ancient languages, partly by prescriptive right, enjoy more advantages. I do not doubt that the amount of thought which has been spent upon the ancient languages has brought them, in their utility as educational subjects, to a point of perfection which the modern languages have not yet reached. And I do not doubt that there is some advantage in the fact that one enters upon the study of an ancient language without the temptation to regard it merely as utilitarian. One enters upon that study in a more dispassionate and perhaps a more scientific spirit. But, if that sort of advantage belongs to the ancient languages, I cannot doubt that there is advantage of another kind belonging to the modern languages. The utility which modern languages possess is a gain which it is absurd to deny. The idea that the educators of to-day are to teach whatever is useless seems to me a paradox which amounts to an absurdity. That the Universities and the schools are to be the homes of useless knowledge is a proposition which I cannot for a moment entertain. I do not say that knowledge is to be disregarded if it is not at once practically useful; but, after all, what is the function of the schools and the colleges if it is not to prepare the young for the battle of life? Therefore, if it be true that a certain study possesses a practical utility, that is not in my eyes an argument against it. It is rather a strong argument in its favour. I say, then, that the utility of modern languages as compared with the ancient languages is a point which it is unwise to disregard. There is another point. I do not know if it has sufficiently occurred to persons engaged in education that young persons feel a real difficulty in transporting themselves, as it were, into the climate of ancient life and thought. The speculations of antiquity, however valuable in themselves, are yet in many instances so different from any problem with which the modern world is called to deal, that young people are often deterred from pursuing studies which may become congenial and welcome to them because they do not feel at home in the matters with which ancient literature deals. If those same young people are encouraged to study modern languages, they find

thoughts and speculations which come home to them as natural treated in the books of modern literature, and therefore modern literature possesses for certain minds among the young an interest which no work of classical literature possesses. These are considerations which lead me to attach the very highest value to modern language teaching; and, although the headmasters of public schools are, I suppose, among the greatest obstructives to educational reform, and although in my judgment they are singularly unwilling to face the very important problems of the day, yet it is possible that a headmaster should exercise his influence not only in encouraging the study of modern languages, but in what is fully as important—in elevating the position of the modern language masters. I think I may say without presumption that I have seen under my own eyes modern languages coming to take a very different position in a school from that which they occupied fifteen years ago. I have seen devoted scholars coming to work among boys, fighting an uphill fight—a fight that was rendered difficult not only by the action of the boys, but to some extent by the action of the masters. But I have seen that fight won or greatly won. And I think that the masters of modern languages, when they feel that they can rely upon the absolute and sympathetic support of those who are responsible for the conduct of the school, feel themselves capable of doing a very great and valuable work in the school. You must remember that every subject in public schools—and of them I am best qualified to speak—depends for its importance upon the length of time it has been studied. That is a point which is not always sufficiently regarded. It is supposed that a master coming quite fresh to the work, if he is a good master in himself, is sure of success. But it takes a long time in an old public school to establish a definite tradition; and it is evident that the subjects which have been studied longest—the classical subjects especially—are held in the highest esteem. Mathematics come next. The study of mathematics runs back to the beginning of the century in some of the schools. The more recent subjects, such as modern languages and natural science, are winning their way. They are winning their way more or less rapidly, according to the encouragement which is given to them. But I think that no modern language master ought to be disappointed at finding that boys or girls do not at present attach to his subject quite the serious importance which they attach to subjects which were educational subjects in the times of their fathers' grandfathers. It would be really absurd of me to offer you a disquisition upon the importance of teaching modern languages, for upon that you are much better authorities than I can be. I have tried to teach French and German at various times, and the one result of my teaching has been to convince me that the statement which I made to you, that there is no inherent difference between ancient and modern languages, is a true one. I should like to submit to you three thoughts, drawn from my own practical experience. One question which must occur to every person engaged in the teaching of modern languages is, whether those languages are better taught by Englishmen or by foreigners. I desire to face that question with complete impartiality. There has been a growing disposition among young Englishmen to live upon the Continent with a view to acquire French or German or some other modern language. It is true that, to some extent, those languages have been acquired. I will say, in passing, that I believe that the command which an Englishman possesses of a modern language is frequently overrated. According to my experience, there is nobody who speaks a modern language properly. I mean that one's own language is the only language of which one is a complete master. I do not think that there are more than two or three living Englishmen who can speak a modern language exactly in the way in which a native would speak it, and I am practically convinced that there are no foreigners who can speak English in such a way as to escape detection. I draw from that circumstance the conclusion that it is desirable, and indeed necessary, to entrust the highest part of the teaching of a modern language to a native of the country in which the language is being spoken. That is my opinion. The native teacher acts as a court of appeal, and without such court of appeal the teaching upon the delicate linguistic questions which must arise will not be quite as exact and effective as it might be. But, although a foreigner is needed as a court of appeal, I am very clear that, in the lower departments of teaching, where the maintenance of discipline is a more vital matter than the exactitude of knowledge, there is great room for the ability and industry of Englishmen and English women. I wish that the foreign ladies and gentlemen who come to teach modern languages could get a little more into sympathy with young English boys and girls. It is an immense difficulty to acquire a practical sympathy with young persons of a nation other than your own. I do observe, and I think that you must have observed, that, where discipline is fully enforced by a Frenchman or a German, it is enforced at a cost which is unnecessary, a cost of friction or a cost of punishment. I do not know if I have the honour of addressing any natives of the great countries whose languages are principally held in view; but, if I have, they will not perhaps think it rude of me to suggest to them that they should cultivate a sense of humour, a sense of humorous sympathy, with the young people they are called upon to instruct. It very often happens that a humorous or even sarcastic remark is more efficacious as a means of maintaining order than a punishment which is set, and then doubled, and then trebled. There is another matter which I

should like to bring before you, and I mention it rather for your consideration than for your acceptance. It is this: How far is it possible or desirable to teach a modern language conversationally? Of course, you will understand that my knowledge is principally derived from one of the great public schools of England; but I have been led to ask myself whether the conversational teaching of a modern language is best carried on in an English secondary public school. I say "best carried on," because there is no doubt that, if a sufficient amount of time is given to the conversational side of modern linguistic teaching, it is possible to arrive at a result. But I have found that, upon the whole, a boy gains more conversational knowledge by living abroad for six months than he gains by taking colloquial lessons during the whole period of his life at a public school. I do not know whether you will agree with me, but I have generally advised that the boys should be sent abroad for a certain time rather than that they should attempt to acquire at school a colloquial knowledge of a modern language. We read of school debating societies which conduct their business in French. What is the nature of such debates? Sometimes they take the form of a monologue carried on by the French master. That is a very valuable exercise, but it is not a debate. Where it is not so carried on, the boys, during a great part of the debate, are listening, not to the good French of the master, but to the very indifferent French of other boys. It has appeared to me, therefore, that these so-called debates, in which a modern language is employed, do not, as a rule, conduce to a very advantageous result; but I should be glad to learn from masters and mistresses, too, whose experience is greater than my own, that a practice which has not commended itself greatly to my judgment is found to be a useful one.

I have now come to the end of my time, though not the end of the subjects upon which it would be possible for me to address you; but it cannot be unknown to you that a very interesting experiment has been made in more quarters than one, that of trying to institute correspondence between English boys and girls on one side, and boys and girls in France or Germany on the other. I am not able to say how far that experiment has proceeded. I have been permitted to take some little part in it, and I know the difficulty of it. I am pretty sure that such correspondence will not produce the best results unless it be conducted under the careful supervision of a master. Without such supervision the correspondence is apt to degenerate into frivolity. But I wish to give it as my opinion that, where the correspondence is properly conducted, it is full of interest and full of profit; and I regret very much that the conservatism of English boys, and perhaps of English masters, has produced a disposition in some schools to treat the correspondence as if it were a thing not worth thinking of at all. I believe that it would be possible to lay before the meeting some statistics other than those which I possess as regards the benefit of this correspondence; but I do wish to emphasize my opinion that it is an interesting experiment, that it is worth trying, and that it may be continued and developed with satisfactory results. This society aims at improving the position of modern languages in all respects. I do not doubt that, in so far as we improve the status of modern language teachers and the methods of modern language teaching, we are doing great service to the cause. I hope that the time is not far distant when the Universities of this land will afford to modern languages something like the same welcome and the same encouragement that they afford at present to the ancient classical languages. After all, the schools which I may claim in some slight measure to represent are, in a sense, the handmaids of the Universities, and I believe I can assure you—I do not dare to say in the name of all public-school masters, because all public-school masters never agree upon anything, but of a considerable number of the most thoughtful of public-school masters—that, whenever the Universities shall open their gates freely and fully to students of modern languages, and put them on an equality with the students of the ancient languages, we, whose occupation is to teach the young, will be ready and even eager for the change. That is all that I think I ought to say to you, and I have to conclude my address by thanking you for the patience with which you have listened to one who is a very inadequate representative of modern languages.

Mr. MICHAEL SADLER said that there had been laid upon him the pleasing duty of moving a hearty vote of thanks to Mr. Welldon for his address, and for the valuable services which he had rendered during the year of his presidency. The Association would thank him even still more for pitching so high the claims of modern languages as one of the intellectual disciplines of the noblest forms of education. One sometimes heard the work of persons who were engaged in the encouraging and improving the teaching of modern languages spoken of as though it had primarily a commercial significance. But only a few persons were called upon to practise what Sir William Harcourt had called "the arts of solicitation" in a foreign language, and the educational value of the work of the Association eclipsed entirely its commercial value. In connexion with the educational influence of the work, one could not help thinking that the Association was organizing a force which would bring about a radical change in the curricula of the higher educational subjects. But there was a still deeper reason for the work of the Association. It was impossible to belong to German-speaking Europe without feeling that they were face to face

with a tremendous intellectual movement, which was primarily concerned with fundamental ethical questions, and which had both good and bad sides. England had something to contribute to that change, and it would be good, not only for England, but for the whole civilized world, if there could be a freer interchange and inter-play of thought and practice between England and other nations. They knew that English opinion was guided to a great extent by the headmasters of the great public schools, and they thanked Mr. Welldon for giving to the Association the eminent sanction of so great a name.

The Rev. Dr. MACGOWAN seconded the motion with the greatest pleasure. Mr. Welldon had been one of the pioneers amongst headmasters in the movement for placing modern languages on the same footing as the ancient ones. The time had gone by when French and German were held to be on the same platform as dancing. Mr. Welldon had shown, by coming forward, that the headmasters of England, as a body, could no longer be accused of absolute indifference to the cosmopolitan sympathy which the study of modern languages always produced. If modern languages were taught in the way in which Mr. Welldon had suggested, they would be in no way inferior as educational instruments to either Latin or Greek. He should put them as immeasurably superior to mathematics. Mathematics claimed too much in the education of the young, and one great thing to be said against that subject was that it was utterly lacking in sympathy. Goethe had asked, who, for instance, would require in the matter of courtship that the lady should give a mathematical proof of her affection. The Universities ought to give a warmer welcome to boys who went up there at eighteen or nineteen to take up modern languages. No provision whatever was made for foreign languages upon entrance. At Cambridge, Caius' and King's gave one or two scholarships, but none of the other colleges gave anything upon entrance. He hoped that the time would soon come when the Universities would take a broader view of their mission. As to the "court of appeal" which Mr. Welldon had referred to, he (Dr. Macgowan) would suggest that no foreigner should be put on for translation, and that no Englishman should be put on for composition. With regard to conversation, he agreed with Mr. Welldon as to the desirability of sending boys abroad to learn it. He was sorry that he could not agree with him with regard to the question of correspondence. That was a matter which would require an adequate supervision, which would be almost impossible.

The vote of thanks was carried with great heartiness, and briefly acknowledged by Mr. Welldon.

A General Committee of ten members was then appointed for the coming year. The number nominated not being in excess of the number required, the list was accepted *en bloc*. The following are the names of the members of the Committee:—Mrs. Henry Sidgwick, Mr. Henry Bradley, Mr. G. F. Bridge, Mr. H. W. Eve, Professor T. Gregory Foster, Dr. W. Stuart Macgowan, Mr. C. H. Parry, Professor Schüddekopf, Professor G. C. M. Smith, Mr. A. E. Twentyman.

An interval of fifteen minutes was then allowed, and the company took tea in another apartment. On business being resumed, the President having had to withdraw, the chair was taken by Mr. F. STORR, Chairman of Committee.

Monsieur PAUL PASSY, of Paris, gave a discourse on "The Use of Phonetics in Modern Language Teaching." He said that, in order that a pupil should learn a foreign language properly, it was necessary that he should learn to pronounce it properly. It was generally admitted that pronunciation had to be learned. It therefore had to be taught, and it could not be picked up in a haphazard way, simply by the pupils listening to their teacher when they chose to listen. Good pronunciation ought to be enforced from the beginning, and it was the duty of a teacher to enforce it. Could phonetics in any way help the teacher in his task? The general tendency of a beginner in studying a foreign language was to replace unfamiliar sounds and sound combinations with such sounds or sound combinations as were familiar to him. For instance, French boys had a difficulty in pronouncing the English sound represented by *th*, and their tendency was to replace it by some sound to which they were accustomed in their own language. But he had taught English to many French boys, and he had never found one who had not been able to acquire the sound of *th* in a very satisfactory way. On the other hand, an English pupil had a difficulty at first with the French sound of the letter *u*, and ninety-nine times out of a hundred the pupil would pronounce it *yoo*, thus giving it its English sound. The sound of the English *th* might be taught to a Frenchman, and the sound of the French *u* might be taught to an Englishman, by an application of a phonetic method of representing sounds, and thus the task of the master in facilitating the acquisition of foreign sounds by his pupil might be made lighter. A knowledge of phonetics would guide the master to the easiest way of teaching any sound combination which was unfamiliar to his pupils. For this reason it seemed desirable that the master should have a knowledge of phonetics in order that he might make use of a phonetic method in teaching pupils a foreign language. He did not, by any means, advocate the introduction of phonetics as such. Such teaching would be perfectly absurd, and it might be put on a level with the teaching of grammar to children. The teacher needed grammar and needed phonetics, and the pupils also needed both, but they did not require to

have them both taught to them. The master who understood both grammar and phonetics could select with judgment and discretion from his own knowledge those things which were necessary to meet the requirements of his pupils. The selection would vary considerably, according to the aptitude, age, and knowledge of the pupils. The only general conclusion to which one could come on this subject was, that the master himself must have a thorough elementary knowledge of phonetics as well as of grammar and of the other parts of the language which he was teaching. But imparting the ability to pronounce any foreign sound combination was not by any means the same thing as imparting a correct pronunciation. A man might know how to pronounce every sound in the English language, and yet blunder considerably when he had to apply his knowledge. He might know, for instance, that there were two sounds represented by *th*, but how was he to know that one sound was to be used in the word *thin* and another in the word *then*? Unless he knew the two words themselves individually, he had no clue as to which of the two sounds of *th* ought to be used in either case, both sounds being represented by the same alphabetical signs. Again, how was he to know how to pronounce the combination *ough*, in such words as *though*, *through*, *cough*, *plough*? In pointing out these instances in which various pronunciations were associated with the same spelling, he was not intending to ridicule the English language. There were discrepancies just as great in the pronunciation of French. In cases of this sort the usual spelling of a word did not afford a clue to the pronunciation, except as to part of the word, and in the part of the word where there was a difficulty the spelling was no guide. Some teachers asserted that the language should be taught only by the ear, and that no writing should be put before the pupil. Of course such a method was possible, inasmuch as children learned to pronounce their own mother-tongue before they learned to read writing; but the time at the disposal of a teacher for teaching a foreign language was very limited, and, therefore, was it not a pity to omit to bring in the memory of the eye to help and sustain the memory of the ear? Some children had a very good memory of the ear, and others had not, and the latter were at some disadvantage in learning a foreign language. It was the business of the teacher to make up in some way for the natural deficiencies of the pupil, and he thought that it would be a great pity to discard altogether the aid which written symbols could afford. If the spelling of a language was in all respects a correct representation of the pronunciation, the difficulty of distinguishing the pronunciation in such words as *thin* and *then*, and the other examples which he had given, would not arise. The pupils would learn the language by ear, and they would also have before them an exact written or printed representation of the sounds which they had learned, and thus they would have the memory of the eye helping the memory of the ear. But, unfortunately, no language of the civilized world was written exactly as it was pronounced. But could not teachers do what was not done in the official spelling? Could not they use such symbols as would represent exactly the pronunciation of a language? Could they not use a spelling which would represent the true sound in all instances? To do this would mean a discarding of the usual spelling and the use of phonetic symbols for the writing of, say, French, English, or German, in the most appropriate way, as if the language had never been written before, and had no existing spelling. The only real difficulty in the matter was that an alphabet must be learned, but this difficulty was hardly worth speaking of. In learning a foreign language a pupil always had to learn the different values of the letters of the alphabet, and the additional difficulty of learning the few new letters which a phonetic method would involve would be inconsiderable. There was one powerful objection to the use of phonetic symbols, and that was that the phonetic writing looked strange and ugly. That was perfectly true, but it would not be necessary for the pupil to adhere to the phonetic spelling after he had learned the correct pronunciation. The phonetic symbols would be like the scaffolding of a house. When a house was built the scaffolding was pulled down. So when once the foreign language was properly learned the phonetic scaffolding could be removed; but it would be found that, in the meantime, it had helped considerably to the result. The use of phonetic symbols allowed a more truthful insight into the nature of a foreign language than was possible with the usual or common spelling. In many cases the ordinary spelling of a language obscured the real facts of language. The use of phonetic symbols tended to a more accurate acquisition of a language, not only as far as pronunciation went, but also so far as general correctness in speaking and reading were concerned. Most English children in learning French were taught, as one of the first things to be learnt, that the French plural was formed by adding *s* to the singular. Thus the singular *table* became *tables* in the plural. The natural conclusion of the English child was that the plural in French was very similar to the English, that the ending marked off the plural from the singular, and that, therefore, all that he needed to learn was the endings of the two words. If, however, he read from a phonetic representation of the words, he would find the singular and the plural written alike, and he would be thus led to see that what distinguished the singular from the plural was the article which preceded it. The child would then take particular care to be correct about the article; and,

later on, when he was called upon to write orthographically in the usual French spelling he would remember that the article of the singular had to be carefully distinguished from the article of the plural. Thus phonetic spelling called attention to the real facts of language, or, in other words, phonetic spelling taught the truth; and the truth and nothing else was the thing which ought to be taught.

The CHAIRMAN said that when the Committee first invited M. Passy to address the Association he was asked to speak in French if he preferred to do so, for it was taken for granted that every one in the room would be able to comprehend an address in that language. But they would all be grateful that the address had been given in English, for M. Passy had thereby shown, not only by precept but still more by example, the advantages of phonetic teaching.

Dr. HENRY SWEET, in opening a discussion, said that he wished to deal with the subject from a new and practical point of view. If an average, common-sense, candid Englishman was asked what were his objections to phonetics, he would say, in the first place, that he knew nothing about it. Then, perhaps, he would see the word "house" written *haus*. This had a German look, and, taking it in connexion with the frequent visits of the German Emperor to these shores, he would see in it evidence of a deep-laid plot to turn English into German. An objection of this sort had appeared in print. The man's next objection would be that phonetic methods were an irritating and perfectly superfluous innovation. But the exact opposite was true, and the unphonetic method was the innovation. The grammarians at Alexandria and Rome taught Greek mainly on a phonetic basis. The Greek accents were invented by the Alexandrian grammarians to enable their pupils to learn the pronunciation. Even English spelling was mainly phonetic four centuries ago, and it was to a great extent phonetic at the present time. There was a phonetic feature even about the spelling of the word "stone," the use of the final *e* being a clumsy device for showing that the *o* was long. The idea of teaching modern languages without phonetics was not only absurd, but absolutely inconceivable. All that the phonetic reformer did was to improve or extend the phonetic representation of words. Pupils might be taught to pronounce properly by being shown how to use their organs of speech in producing the required sound, and thus they could be led to pronounce words which they invariably mispronounced when they were guided only by their ear. They could also be taught how to evolve an unfamiliar sound from a familiar one. The organic sensations which accompanied the production of a particular sound might be used in connexion with the help afforded by the eye and by the ear, and thus the organic, the acoustic, and the visual faculties might be made to work together harmoniously. It certainly seemed strange that, thirty years after the appearance of Bell's "Visible Speech," and more than thirty years after the publication of Ellis's work on pronunciation, it was necessary to stand up and advise an audience to reimport methods which were to a great extent of English growth. The period of discussion in phonetic methods had continued long enough, and the time for action had arrived. What was wanted in England was a phonetic association bound together by a definite programme similar to that of the association to which Mr. Passy was secretary and director. Another pressing need was the periodical holding of international phonetic conferences. But the most pressing need was practical teaching. During last term he successfully started at Oxford a class in practical phonetics. The class would resume on January 24. Particulars regarding it would be found in the *Journal of Education*.

Mr. KIRKMAN thought that everybody would agree that there was a necessity that the modern language teachers should know something of phonetics, and especially that they should be able to teach boys how to fashion their mouths and their tongues in order to produce any particular sound. But the whole question seemed to be whether it was necessary to introduce phonetic symbols into the class-rooms. On that point probably many teachers would differ from M. Passy and Dr. Sweet. His own experience at Merchant Taylors' and other schools was that, if they taught a sound first of all through the ear, and made certain that the boys could reproduce it, it did not matter in the slightest what the written symbol was. He had found that, if he taught the pupils how to fashion their organs of speech, they could generally pronounce correctly from the ordinary symbols. A boy could only pronounce as the teacher pronounced, and, if the teacher insisted on accurate pronunciation, the boys would pronounce properly without the aid of phonetics.

Professor LLOYD did not think that Mr. Kirkman had much invalidated the case which had been made out for phonetics by M. Passy and Dr. Sweet, for he had said that the symbols used in teaching a foreign language did not matter. If so, why not use phonetic symbols? They were as good as any other, and slightly better. He was puzzled to know how Mr. Kirkman made the ordinary symbols work in teaching pronunciation when the same letter represented sometimes one sound and sometimes another. For instance, the letter *g* had one sound in *gun* and a different sound in *gin*. The new symbols in the phonetic alphabet employed by M. Passy, and used in *Le Maître Phonétique*, were very few and exceedingly simple. He should be astonished to find that any one had any difficulty in reading the transcriptions in *Le Maître Phonétique*. The alphabet there used

would be found a most convenient one, and one suitable for teaching phonetics in England. M. Passy had given to the subject of phonetics a greater breadth than it had previously had. It was claimed for the phonetic method that it would be a saving of time in the learning of a language. Whatever time it might occupy in being learnt would be more than compensated for in the long run. It ought to be recognized that phonetics was a part of grammar. The English boy had a belief that the sounds which he had learned in his own language were the only sounds which any human being ought to attempt to produce. Later on, the boy came to think that French boys were born to produce French sounds, and English boys were born to produce English sounds, and that it was going against the course of Nature and Providence for French people to attempt English sounds, and for English people to attempt French ones. The rudiments of phonetics should be taught as soon as a boy began to pronounce any language at all. A boy should be taught how the organs of speech acted in producing any particular sound. Boys who had such knowledge would be those who would learn the most easily how to pronounce foreign words. It was very desirable to have models showing how the vocal organs moved in the production of particular sounds. Diagrams of the organs were already provided, but it was very difficult to demonstrate the structure and action of the organs from a flat diagram. The study of phonetics was most fascinating, and he believed the time would come when it would be regarded as an integral part of English teaching.

Mr. J. J. FINDLAY said that he had understood that there was to be a resolution in favour of the introduction of phonetic symbols into English schools, and he had therefore sent to the Secretary an amendment in the following words:—"That the study of phonetic symbols should be encouraged in the University; it should not be introduced into our secondary schools except in connexion with shorthand." He had found, however, that no such resolution was to be moved. They were greatly indebted to M. Passy and others for insisting on the scientific study of sound, but he was convinced that the introduction of phonetic spelling into English schools would be quite fatal to the progress of modern language teaching in this country. It was very questionable whether written signs were a great aid in the teaching of pronunciation. When a pupil was pronouncing a language, whether in the elementary or in the advanced stage, he had no time to reflect on the action of his mouth or tongue. Reflection on such a point would be a positive hindrance to a pupil. The majority of people acquired a foreign language purely by imitation and nothing else. If pupils had an opportunity of hearing the sounds of a foreign language, they would reproduce what they heard. If pupils became accustomed to a phonetic representation of foreign words, they would imitate the sounds in their ordinary writing, and their spelling would be spoiled.

M. PASSY said that nobody valued imitation more than he did, and the method which he advocated had been called the method of imitation, in opposition to the method of construction. But he would point out that, if imitation alone was to be employed, every method of learning, except that of listening to the master, must be wiped out. He would ask those masters who thought that the phonetic method of teaching would spoil a boy's ordinary spelling whether they had tried it. It was a curious fact that it had always been found that those masters who, at meetings, had deprecated the phonetic method had done so from the point of view of theorists, and had had no practical knowledge of the subject. He had always found that boys taught on the phonetic system had learnt to read and write the ordinary symbols more quickly than boys taught in the usual way. Such was the verdict of experience.

A speaker at the back of the hall, who said that he was not a member of the Association, and whose name was understood to be Mr. Hugh, referring to the question of teaching by imitation, said that his experience in connexion with the subject of voice-production had taught him that much greater success was obtained by teaching the action of the vocal organs than by enforcing mere imitation.

Mr. HOWARD SWAN said that he thought it was a mistake to suppose that it would be necessary to introduce new signs into the English alphabet in order to represent the words phonetically. There were at the present time various rules of pronunciation which were generally well understood. If a nonsense word which meant nothing was written, every English person would be able to pronounce it, and all English people would pronounce it alike. Although English spelling was not phonetic to a foreigner, it was, to a large extent, phonetic to an Englishman. The point was that it was not entirely phonetic. But, if we would only examine the English language and ascertain what were the normal signs for the various sounds, we should be able to extract from the signs now employed the material for a regular alphabet.

Mr. FABIAN WARE moved: "That, if phonetics are to be employed with success in the elementary teaching of modern languages in English schools, it is, in the first place, imperative that an authorized phonetic alphabet be drawn up, adapted to the requirements of English pupils." He said that this resolution did not in any way commit the Association to an approval of the use of phonetics in English schools. He believed that the majority of the members were opposed to the use of phonetics. ("No.") He still thought so. There were some so strongly conservative that they were opposed to all alterations. He

had used phonetics in his work, and he was satisfied with the results of the experiment. The first object in using phonetics in the teaching of languages was to draw attention to the differences between the pronunciation of foreign languages and the pronunciation of English. One great advantage of the introduction of a foreign language in a phonetic dress to an English pupil was that it removed the possibility of the pupil attributing to the letters of a foreign language his conception of their normal value in English. A guiding principle in the application of phonetics to the teaching of a foreign language to an English pupil must be that the symbols of the phonetic alphabet should be absolutely different from the letters of the ordinary English spelling, except so far as those letters represented the same sound in both languages. The alphabet advocated by M. Passy demanded that a boy should differentiate between identical visual impressions. What was wanted was a phonetic alphabet adapted to the needs of English pupils, and strictly adhering to the principle he had laid down. A better teaching of foreign languages was an urgent national want, and the need could not be met without collective action. The resolution amounted to an instruction to the Committee to appoint a Sub-Committee.

Professor C. G. MOORE SMITH seconded the resolution. Mr. ATKINSON opposed the resolution, and strongly urged that any system of phonetic symbols which might be adopted should be an international system. It was to be remembered that Dr. Viator had himself adopted M. Passy's system. The practical advantages of adopting an international system would be many. In the first place, it would facilitate the obtaining of specially cast types. Then there was already a fairly large mass of transcripts in the phonetic style. But one of the most cogent reasons was that the transcript of reading matter in any language into the phonetic symbols ought to be performed by persons to whom the language was their mother tongue. In this way the exact pronunciation would be represented. An international system would make possible the interchange of transcripts. The difficulty of learning the new signs was not so great as some persons supposed.

Professor WALTER RIPPMMANN recommended that a Committee be appointed to consider the question and agree upon a phonetic alphabet for adoption by the Association.

Mr. SIEPMANN proposed as an amendment: "That, while this meeting is not ready to advocate the adoption of a phonetic alphabet in our schools, it is of opinion that phonetics should be studied by the masters, in order that they may be able to teach effectively, at the very beginning, a good pronunciation, and that masters who try to use a phonetic alphabet should use the alphabet of the Association Phonétique Internationale." He said that Mr. Ware had advocated the invention of a new system, but he (Mr. Siepmann) held, on the contrary, that they should adopt the alphabet which had been invented not by one person, but by many, during a great number of years.

The CHAIRMAN said that he could not accept Mr. Siepmann's proposal as an amendment. It really amounted to a direct negative.

Mr. SIEPMANN, continuing, said that the system of the Association Phonétique Internationale had many advantages which he had not now time to explain. He thought that it would be best to start boys with a phonetic alphabet which was different from the English alphabet. It would not be difficult to teach boys the values of the few additional signs in the alphabetic system of the Association. He had never learnt that alphabet, but after practice for an hour or two he was able to read *Le Maître Phonétique* easily, and he had read that publication for the last ten or twelve years. The values of the Association's signs were easily taught, and it was an advantage that those signs applied equally to different languages. He should be glad if masters would try this phonetic method, and report their experiences next year.

The SECRETARY said that the Committee of the Modern Language Association had power to appoint a Sub-Committee of its own members to consider the whole question, and, if necessary, make proposals for such an alphabet as was desired. Persons not members of the Association could be added to the Committee.

A show of hands was taken upon the question as to whether the resolution should be put to the vote, and it was decided that no vote be taken.

The CHAIRMAN thanked M. Passy very heartily for having come over and addressed the meeting on the subject.

The proceedings then closed.

ROYAL HOLLOWAY COLLEGE CONFERENCE.

A CONFERENCE, to consider the question of University degrees for women, summoned by the Governors of Holloway College, met on December 4 at the House of the Society of Arts. The chair was taken by the Right Hon. JAMES BRYCE.

The CHAIRMAN said that, when the suggestion of a University for Women had been thrown out last year at Cambridge, the Holloway Governors had felt bound to consider the desire of the founder that, in due time, the College should apply for a Charter enabling them to confer

degrees. But this was not a step rashly to be taken, and they had, therefore, determined to call a Conference, as representative as they could make it, to consider the whole question. In order to give precision to the debate, the three alternative schemes which had been put forward would be first expounded by three select speakers, but discussion was invited on other possible schemes. He would first call on Dr. R. D. Roberts to read a paper on the question:

IS IT DESIRABLE TO APPLY FOR A SEPARATE CHARTER TO ENABLE HOLLOWAY COLLEGE TO CONFER DEGREES ON ITS STUDENTS?

Dr. R. D. ROBERTS said that on May 27 he had proposed a resolution, which had been carried, at the Board of Governors of Holloway College: "That steps be taken to carry out Clause 2 of the founder's deed, and obtain a Charter enabling the College to confer degrees on its students." He had considered that the College would thereby add to its dignity, be able to suit its teaching to its own degrees, and, lastly, to try an important experiment in women's education. As for himself, he was strongly in favour of granting Oxford and Cambridge degrees to women on the same terms as to men; but this claim had been decisively rejected by Cambridge. He had, therefore, brought forward his scheme as the only alternative. Since May, however, conditions had changed, and the enlarged scope of the Duke of Devonshire's Teaching University Bill opened the door to Holloway College. Under these altered circumstances he was not prepared to press his scheme.

Mr. STRACHAN DAVIDSON next read a paper on the question:

IS IT DESIRABLE TO INITIATE A SCHEME FOR A WOMEN'S UNIVERSITY OF WHICH HOLLOWAY COLLEGE SHOULD FORM A CONSTITUENT PART?

The kind of University contemplated was one in close connexion with one or both of the older Universities. The project was an incident in the struggle at Oxford about granting degrees to women. Those who, like him, had opposed that measure, felt that the women's claims could not be met with a blank negative. Their only real grievance was that Oxford students were put at a discount when competing for scholastic posts with women from mixed Universities. Whether this disadvantage was small or great he would not discuss. It was the sole argument which appealed to the man in the street—to himself, for instance. He proposed that Oxford and Cambridge should lend their examinations as tests for the degrees to be conferred by the Women's University. For the details of the scheme he had drawn up he alone was responsible, but the principles had received the approval of the Conference of 1896. In some particulars he should like to modify it. The Vice-Chancellor of Oxford or Cambridge might countersign the diplomas to be given by the Women's University. Further, he had spoken as if the degrees were to be conferred exclusively on the results of Oxford and Cambridge examinations, but he now desired to leave the largest freedom in this respect to the Senate of the new University. But at first they would be wise to accept only Oxford and Cambridge standards. They must carefully distinguish the first stages of the University from the ultimate goal. Eventually he should hope to see a great federated University under the ægis of Oxford and Cambridge. The first step must be to invite the co-operation of the University of Cambridge, and then of the women's colleges at Oxford and Cambridge. Supposing the answer from both to be unfavourable, they need not give up in despair. They should be content with a modest beginning. The University of Oxford and Holloway College were strong enough to stand alone. Somerville and Lady Margaret's would sooner or later ask to be admitted to a share in the administration of the new University, and when next the degree question turned up at Cambridge, there would be a complete answer to the petitioners—"You have a Women's University." Such a solution would but conduce to the prosperity of Holloway College, which, as regards Oxford, would stand on a complete equality with Somerville and Lady Margaret's, whereas, if Oxford had granted the degrees or diplomas asked for last year, Holloway students would have found themselves left out in the cold. Happily for all concerned, that proposal had been defeated. They now stood at the parting of the ways, and had to decide whether the ties between Oxford and Holloway College were to be severed or brought closer together. Holloway might sever itself from Oxford, but Oxford would never cast off Holloway. If asked what Holloway would gain from Oxford, he answered that the teaching University, even if established, could not for a long time to come give anything equivalent to Oxford examinations. And though his scheme did not commend itself to the Headmistresses, yet it was far less strongly condemned than the alternative scheme of Dr. Roberts. The habitat of the new University and the admission of other colleges and students were open questions which should be decided by the governing body. He hoped that Holloway would not, by adopting the first or third proposal, cut off its connexion with Oxford, which Oxford valued so highly.

Mrs. BRYANT spoke to the question:

IS IT DESIRABLE THAT HOLLOWAY COLLEGE SHOULD BE INCLUDED IN THE PROPOSED TEACHING UNIVERSITY FOR LONDON?

Headmistresses had all hoped to see Holloway College developed as a great London University college. Increasing numbers of high-school girls were seeking a University education. In the lists of the University of London Arts degrees, published last month, there were eighty-four

men against seventy-three women, and in the first class there were ten men against fifteen women. Analysing the three periods of six years that had elapsed since these degrees were thrown open to women, she found that the percentage of women was respectively 12·2, 18·7, and 35·3. This growing demand for University education on the part of women was both a sign and warrant of increasing sympathy between brothers and sisters, enrichment both of social and intellectual life, and a new stimulus and interest to both sexes. She was not careful to discuss either Dr. Roberts's or Mr. Davidson's scheme. Whether good or bad, they both aimed at an ideal which was not yet in demand. She had never met with a woman, or even heard of a woman, who wanted a separate University for women. The definition of learning must, at least for the present generation, be what men make it, and the special needs of men virtually cover the whole field. Any qualitative peculiarity which later wisdom might discover, as appropriate to a women's course of study, would be a very small matter in comparison. Present observation only showed that women stand in a larger proportion for the central ideal of a good Arts course, as opposed to specialization in science. If new developments were in future required, there would be little difficulty in getting them. Whether they were inferior or not, Holloway degree would certainly at first be suspect. Not even free education for three years would tempt to Holloway a girl who had to make her own lives livelihood. She would go by preference to Bedford College, to Oxford, or even to Wales. The teaching University of London, as she hoped to see it, would be *par excellence* the Women's University, with courses adapted for the wants both of men and women, but she far preferred the University as it was, a mere examining body, to Mr. Strachan Davidson's University, which would be nothing but a registering body. The Secretary then read a number of letters expressing the opinions of those unable to attend.

Sir W. ANSON was in favour of a Women's University, with Holloway College as a centre.

The MASTER of BALLIOL condemned the scheme for a Women's University as fundamentally mistaken, and rejected by the great majority of women teachers.

The BISHOP of HEREFORD adhered to his letter in the *Times* last May.

Sir J. MOWBRAY thought it was not in the interests of the old Universities that women should reside in them, or take degrees.

Professor MAX MÜLLER advised that Holloway College should have power to grant degrees, but considered that women should be entitled to all the privileges of the older Universities except actual membership.

Professor VERNON HARCOURT was in favour of the third scheme. It would have seemed a risky experiment twenty-five years ago; but all the benefits then anticipated from mixed education had come to pass, and none of the evils.

The PRESIDENT of TRINITY COLLEGE wrote:—"In answer to Question I, I should be opposed to transforming an efficient college into an inefficient University. Question III.—I should at least wait till it is known what the Teaching University is like. Question II. is of wider interest. Technically it suited the purpose of the opponents of women's degrees at Oxford, and it might now be laid aside. It proposes a new type of University, such as has never been suggested for men. Even supposing that Oxford and Cambridge degrees are never to be granted to women, that is no reason why they should throw themselves into the arms of a so-called Women's University, in which degrees are wholly divorced from the three essential qualifications, residence, teaching, and examination."

Professor CASE strongly deprecated any separate action on the part of Oxford, and desired to see the two Universities move both together if they moved at all.

The VICE-CHANCELLOR of the UNIVERSITY of CAMBRIDGE dwelt on the extreme undesirability of introducing a sex distinction into University examinations.

Miss MAITLAND considered it would be unwise both for Holloway College and for the interests of women's education generally to apply for powers to grant degrees. There would be a grave danger of the standard of learning being lowered, as was the case in the American colleges for women only. Holloway College should become one of the constituent colleges of the teaching University.

Mrs. WILLIAM GREY wrote, as probably the last message she would send to her fellow-workers:—"A Women's University would be fatal to the best interests of women's education. The teaching profession is open to both sexes, and the qualifications for both should be ratified by accepted standards. Holloway degrees would be a fancy medal, not standard coin of the realm."

The Chairman then called on Mrs. Fawcett to open the discussion.

Mrs. FAWCETT said she was uncompromisingly opposed to Schemes I. and II., and favourably impressed with III. She was in a position to speak for Girton and Newnham, and Cambridge women believed that they already possessed higher privileges than those now offered them. Professor Case, in urging the common action of the two Universities, was not so diplomatic as the *Quarterly Review*. The *Quarterly Review* had let the cat out of the bag, and expressed the desire to turn the women out of the University boat in which they were now sitting. The reviewer said that the position of women at Cambridge was absolutely intolerable.

To whom? Certainly not to the women, who were increasing rapidly in numbers. As to Dr. Roberts's scheme, she regretted it for the sake of Holloway College itself. She regretted to see the College committing educational suicide, or, if that was too strong a phrase, making Mr. Holloway's project ridiculous.

Miss EMILY DAVIES contrasted the different fortunes of Queen's College and Bedford College, London, both founded within a year or two of one another. Queen's College continued to give its own certificates, and held aloof from University examinations. Its certificates had no market value, and the College had stagnated. Bedford College had accepted the London University examinations. It had already two hundred graduates, and a hundred students were at the present moment reading for the London degree. It was also in receipt of a Treasury grant of £1,200 a year as a University College.

Mrs. HENRY SIDGWICK, speaking in behalf of Newnham College, said there was not a chance of its ever joining a federated Women's University. Before the degrees of the new University could have any professional value, their own certificates would have at least the same. They did not wish to serve two masters. The proposed University was of an entirely new type. The federated Universities of Victoria and of Wales were federations of homogeneous colleges; this would have colleges with no common tie but sex. Why should women come to a common understanding as to educational requirements any more than men? Holloway could not possibly compete with the teaching given at Oxford or Cambridge, and would have to take a back seat.

Miss MARY GURNEY, having been connected with the National Association for Promoting the Higher Education of Women from the time it was started in 1871, was able to state that the proposal for a Women's University had never been mooted, much less entertained, by the Council. A degree of a college not understood by the outer world would be of little value.

Miss WELCH, of Girton College, gave her adhesion to the third proposal.

Miss LOUISA STEVENSON, Secretary of the Ladies' University Education Association, Edinburgh, observed that certificates stamped by the Vice-Chancellor would not have a thousandth part of the professional value of an M.A. degree. In Scotland, the throwing open of degrees to women had realized their wildest hopes. The Principal of Edinburgh University had remarked to her only the other day that the presence of women has already done something to raise the moral and intellectual tone of the students.

Miss JONES, of the Notting Hill High School, said that the resolution of the Headmistresses' Conference condemning the proposal of a separate University had been carried by 102 votes to 1. The letter from the Headmistresses to the *Times* of July 8, to which Mr. Davidson had referred, was signed by 151 headmistresses. In her opinion the curriculum for girls should differ very little, if at all, from that for boys. This Women's University would be a reactionary step. It would mean the trying of all sorts of rash experiments. Thus, one of its promoters opined that the course of study should be mainly literary, while cookery and the domestic arts should not be neglected!

After an adjournment for luncheon the debate was resumed by Miss Annie Rogers, Secretary of the Oxford Association for the Higher Teaching of Women.

Miss ROGERS said that what their students chiefly desired was Oxford education, not Oxford degrees. Their position at Oxford was very satisfactory. They had begun by trying separate examinations for women in various subjects, but had given them all up save one, and this was the least satisfactory. A Women's University would be opposed by the whole teaching body of women students at Oxford.

The Rev. T. H. GROSE, Registrar of the University of Oxford, said the result of the meeting was that the scheme for a Women's University was dead. As Mr. Strachan Davidson had referred to him as Registrar, he would tell Mr. Davidson why his scheme failed to arouse any enthusiasm. Oxford had traditions in which their women students shared, and in which this Queen's University students would have no part or lot. "A diploma signed by the Vice-Chancellor!" Was that common sense? Were Somerville students likely to prefer his miserable paper University to the great Universities in which they were now living? He rejoiced, however, that the scheme had been broached. It showed that the conscience of their opponents was beginning to stir, and, when once the conscience is awakened, things may go far. They used to be told that this question of women's degrees must not be touched till the question of co-education had been settled. It has been settled; while they had been wrangling and arguing, it has settled itself.

Sir JOSHUA FITCH observed that no one had yet spoken in favour of proposition No. I., which stood first in the circular summoning the Conference. The late Mr. Holloway was a man of large and generous views, but he did not understand the problem he undertook to solve. Mr. Holloway had travelled in the States, and had visited Vassar, Bryn Mawr, Wellesley. He had found all of these independent, self-contained institutions, with the power of giving their own degrees, and he desired to see a similar institution in England bearing his name. He was not aware of, or he failed to realize, the significance of the fact that there were in the United States 467 public bodies empowered to

graduate their students and give them degrees. In America a degree has no value at all. The Governors of Holloway College would do well to disregard this counsel not of perfection. No one knows better than they how many of Mr. Holloway's wishes had proved impracticable. A Women's University would mean a lower standard in literature and scholarship—at any rate, the world would think so. It was founded on a radical misconception of the theory of learning, viz., that there were distinct masculine and feminine types of knowledge. But who could map out the field of knowledge, and say which provinces were best adapted for the male and which for the female intellect? Had any philosopher ever attempted to lay down a scheme of feminine learning? At the University of London an instructive experiment had been tried, and its failure might serve them for a warning. In its early days the Senate, at the instigation of Mr. Grote, drew up a special scheme of studies for women, with a view of giving more seriousness and solidity to women's education. Two things happened. The "women's certificates" awarded on this examination scheme were very little in demand. There being a wide range of subjects allowed, it was found that the women as a rule fastened on the male subjects. The scheme was discredited and abandoned.

Professor PERCY GARDNER said that things at present were at a deadlock. If the men and women who promote the University education of women do not desire a Women's University, this deadlock would remain. Holloway College represented certain principles—the principle of the teaching of women by women, and the principle that women's education ought to be planned to fulfil the special needs of women. These principles must at any cost be maintained, and, as Holloway College was not at present strong enough to give degrees by itself, nothing remained but a federated University. Was this federation to be with the new London University, or with Oxford or Cambridge? Holloway College would find a far more sympathetic appreciation from the older Universities.

Mr. ARTHUR SIDGWICK said that he and Professor Gardner regarded the question from different points of view. From the educational point of view things were not at a deadlock. At Oxford women's work went on and grew. The remarkable interest that both Mr. Strachan-Davidson and Professor Gardner showed in Holloway College was calculated to arouse suspicions. This Women's University was so Protean in character that there was no grasping it. "It would give an education more suitable to women." In what particular subjects? they asked. "That," answered Mr. Davidson, "is a detail that the University must settle for itself." On this point their experience at Oxford was very significant. Being ignorant, they had begun, like Mr. Davidson, with this fallacy of sexually differentiated curricula. Taught by experience, they had gradually abandoned it, and its chief supporter, Miss Wordsworth, was now a complete convert to the other view. One by one the men's schools had been thrown open to women, and all they now wanted at Oxford was a clear sign that their students had got what no one denied that they had got. He was astounded to hear Mr. Davidson arguing in favour of that discredited fetish, a non-resident degree, but Mr. Davidson had incautiously shown his hand, and betrayed the motive—these out-students would be a barrier against a mixed University.

Miss MARION KENNEDY said that twenty-five years' experience of co-education had confirmed her conviction of its benefits for both sexes.

Miss EDITH WILSON gave figures showing how at the Victoria University the proportion of women to men graduates had steadily grown since its foundation in 1880. What women now most suffered from was their poverty, and the resulting over-pressure, and it would be a grievous pity if the money which should go to bursaries and scholarships were squandered on a new University that none of them required.

Professor HENRY SIDGWICK feared that the advice which he had to offer Holloway College would seem uninteresting and uninspiring. It was to do nothing. The question of a teaching University for London was approaching solution, and they could afford to wait. By joining that University, Holloway College would gain an influence it could never possess with Oxford. Professor Case's letter, the reading of which had afforded so much amusement, was a remarkable comment on Mr. Strachan Davidson's scheme. They had been authoritatively told that Newnham and Girton Colleges would never, of their own free will, enter into any relations with a Women's University. This being so, he might confidently assert, in answer to Professor Case's proposal, that the University of Cambridge, if approached, would decline to take any action. They had no wish to disturb the existing amnesty. Dr. Forsyth, the leading representative of Cambridge on the Joint Committee, had distinctly stated: "If the women's colleges refuse to join, I, for one, will take no part in furthering it." Their refusal might seem to show a little asperity, but their feeling was that their present task was quite sufficient for their energies. They were told that the Oxford and Cambridge courses did not suit the ideals of women, but he had failed to find a single argument in favour of a differentiated system.

Miss AGNES HITCHCOCK, of the Kensington High School, opposed the notion of a Women's University.

Mrs. A. H. JOHNSON, late Hon. Secretary of the Association for the Education of Women at Oxford, said she was one of the few Oxford women who opposed the grant of the degree to women. The Councils

of the Oxford women's colleges had not been officially consulted on Mr. Strachan Davidson's scheme. That scheme had been unfairly treated. The importance of the Oxford training was the residence. The fact that the men who were seeking the highest education should be adverse to women who sought the same ends was somewhat disturbing.

The CHAIRMAN said that in representing what had been said he was not expressing his views or those of the Governors, but acted simply as a mirror. After expressing regret at the absence of Sir W. Hart Dyke, he said that the discussion had been practical and business-like; but, unfortunately, it had been very one-sided. No one had a word to say for the first proposal, that Holloway should give degrees. Most of the speakers were in favour of the third proposal, though some speakers qualified their support by counsels of waiting to see what sort of a thing the teaching University of London would turn out to be. No one, whether man or woman, who had taught women desired a special University for women. As to Holloway itself, the conference could not but have been valuable to the Governors.

On the motion of Mr. STRACHAN DAVIDSON, a hearty vote of thanks was passed to Mr. Bryce for presiding.

COLONIAL AND FOREIGN NOTES.

GERMANY.

IN Berlin there are seventeen fully-classical secondary schools (*Gymnasien*), of which number six are Royal, *i.e.*, directly maintained by the central authority, and eleven municipal. The number of scholars in these seventeen fully-classical schools, all of which teach Latin and Greek to all their pupils, is 8,380. There are also in Berlin eight *Realgymnasien* or semi-classical secondary schools (one Royal and seven municipal), all of which teach Latin to all their pupils, but none of which provides instruction in Greek. In these eight schools the pupils number 4,277. The *Gymnasien* and *Realgymnasien* have a nine years' course of study. So also have the *Oberrealschulen*, of which there are two in Berlin—both municipal. These are non-Latin secondary schools, teaching no classical language, but providing a first-rate "modern" curriculum. They now contain, between them, 991 pupils. Of *Realschulen* there are twelve—all municipal. These are first-rate "modern" schools, teaching no classics, but with a six years' course, instead of one of nine years. In the Berlin *Realschulen* there are 5,194 pupils. All the above schools are for boys only. Thus in Berlin 18,842 boys are receiving a first-rate and systematic secondary education. Of these, 6,185, or very nearly one-third, are getting a "modern" education of quite admirable quality on the sort of lines suggested by Mr. Curzon in his recent speech on commercial education. The Berlin *Realschulen* are turning out, at the rate of 1,000 youths a year, an army of first-rate recruits for commercial warfare. These lads all talk and write French and English with fluency and accuracy. They are well-found in arithmetic and mathematics. They possess a wide knowledge of modern history. They have made a special study of geography, particularly on its commercial side. They have acquired a good deal of information as to physical science and natural history, and they have been carefully trained in the use of their own language. What wonder is it that we in England are beginning to feel the effects of the competition of the young business men and commercial travellers who have been thus systematically grounded in the knowledge required in their calling? What wonder that men thus trained are able to attack neutral markets with dexterous use of what Sir W. Harcourt humorously calls the "arts of solicitation," and with increasing prospects of success? They start by knowing more than our ordinary boys of the same class—and what they know directly fits them for modern commercial life. They are not the victims of premature specialization. The kind of sham commercial education which Mr. H. G. Wells has been so justly trouncing in the *Daily Mail* is not the sort of thing which the *Realschulen* give. They provide first-rate teaching, a carefully thought-out curriculum, a six years' course. Their teachers are not only academically cultivated, but actually trained for the work of teaching. And, by the offer of privileges in regard to military service, the Government has been able, not only to screw up the standard of the schools to a high level of efficiency, but also to persuade large numbers of parents to keep their boys at school for the whole course. The machine thus started runs subsequently with increasing smoothness and effect. The schools give a good education for the "rough and tumble" of the modern commercial world, and the Berlin parents are beginning to value the education, not merely for the sake of the exemption and privileges which are attached to it, but for its own solid excellence and worth. Where, however, is the central authority in England to find its leverage in the difficult and unpopular task of raising the standard of instruction and in compelling the acceptance of a carefully thought-out curriculum? The absence of compulsory military service, and the consequent lack of special privileges in the hand of the central authority, make the essential difference between English and Prussian conditions.

During the past six weeks a lively controversy has been raging in Berlin on the subject of the salaries of the teachers in the elementary schools which are under the control of the Town Council. Recent legislation in the Prussian Landtag has raised the whole question of the scale on which elementary school teachers shall be paid. Hitherto the salaries paid to this grade of teachers in Berlin have been notably above the average paid in Prussia. Starting with £60 a year, the Berlin elementary school teacher's salary has, since 1894, risen by regular increments to a maximum of £190, reached after 32 years' service. In addition to this, however, he has drawn an annual allowance of £30 to meet the rent of his apartments. A Committee of the Town Council was recently appointed to reconsider this scale. The Committee proposed that Berlin should continue to lead the market. Legislation having brought the practice of other districts nearer to the level hitherto adopted in Berlin, the Committee recommended that the capital should again take a step forward and raise the rate of salaries. The proposal was that the teachers should begin at £68 a year (retaining their allowance of £30 a year towards rent) and rise by regular increments to a maximum of £200 a year, to be attained after 32 years' service. Against this there was tabled a hostile amendment, which proposed a commencing salary of £50 a year (with the added allowance of £30 a year towards rent), rising by increments to a maximum of £200, attainable after 31 years' service. The latter scheme thus proposed to curtail a teacher's income at the beginning of his career, but to enable him to reach, at a date somewhat earlier than that named by the Committee, a maximum which is £10 in excess of that attainable under the regulations hitherto in force. The question came up for settlement on November 18, and led to an animated debate. The Council Chamber was crowded, and the excitement general. The proposals of the Committee were rejected, and the hostile amendment, which stood in the name of Lawyer Cassel, was carried by a considerable majority (64 votes to 38).

But the matter has not been allowed to rest there. Public opinion in Berlin has been a good deal stirred by the decision of the Town Council. The teachers' papers are full of indignant comments, which find an echo in important sections of the general press. Statistical calculations are bandied to and fro. It is argued by the one side that the Berlin teachers are being meanly treated; by the other side, that there is no sufficient cause for increasing their salaries at the present time. The advocates of Herr Cassel's motion contend that Berlin has no reason to become lavish in its expenditure because other cities have begun to level up their payment to a reasonable level. The Berlin teachers and their friends, on the other hand, argue that living is so much dearer in Berlin than under ordinary conditions elsewhere, that it will always be fair for salaries in the capital to be in advance of those paid in provincial cities. It is a pretty quarrel, and this is not the proper place to enter into the rights and wrongs of it. What is, however, significant to the foreign observer is this indication of a rift between the Liberal majority in the Berlin Town Council and the teachers in elementary schools. Depressed and comparatively weak in the Prussian and Imperial Parliaments, Liberalism is strong in the Town Councils of the great cities. The Liberal tradition has been to favour the elementary schools as the best means of fostering progressive opinions in the State, and to back the elementary school teachers as the pioneers of popular enlightenment—the "ecclesia militans der Volksaufklärung," as Herr Hugo Preuss calls them in an interesting article quoted by the *Pädagogische Zeitung* from the columns of *Die Nation*. But municipal government is becoming very costly, and the Liberal party in the Berlin Town Council has preferred to consult economy rather than to sanction what it regards as needless outlay on the salaries of the teachers. The Socialists, of course, have taken quite another line on the question, and the *Vorwärts* shows as much gusto in girding at Liberal "parsimony" as the Tory *Kreuz-Zeitung* in scoffing at the inconsistency of the Liberals who voted, though unsuccessfully, in Parliament in favour of a statutory minimum for all elementary school teachers' salaries higher than that which they have now adopted for Berlin. There seems little doubt that the decision of the Berlin Town Council will impair the relations between the Liberals and the elementary school teachers. Some of the latter may, perhaps, find themselves drawn towards swelling the Socialist vote, a movement which some observers allege to be already in progress in various parts of Prussia, and to have explained the anxiety of the Government to remove the worst scandals of underpayment. But beneath all these changes in party allegiance there are deeper causes at work. The old Liberal party in Prussia is at bottom Individualist in its sympathies. No one, however, can make a careful study of German education in its later developments without feeling that the whole system rests on a Collectivist basis. The tendency, sometimes frankly avowed, but usually instinctive rather than definitely thought out, is to regard the school as the engine for moulding the opinions of the rising generation. To "capture the school" and to frame its curriculum in accordance with its own ideals of Government is the underlying purpose of the extreme Imperialists and extreme Social Democrats alike. "Das Evangelium Eurer Majestät's geheiligter Person zu künden" is the enthusiastic turn which a rather literal-minded follower gives to the purpose of the one party; but *doctrinaire* Social Democracy has corresponding preconceptions of its own, which, if

it got the chance, it would like to engrave on the impressionable minds of the little children in its schools.

Now all this tendency towards using the educational machinery of the school as a means for stereotyping, or unifying, opinion on political or religious principles is inconsistent with the older form of individualistic Liberalism. As John Stuart Mill said, "A general State education is a mere contrivance for moulding people to be exactly like one another; and, as the mould in which it casts them is that which pleases the predominant power in the Government (whether this be a monarch, a priesthood, an aristocracy, or the majority of the existing generation), in proportion as it is efficient and successful, it establishes a despotism over the mind, leading by natural tendency to one over the body." So far as there still exists in Germany a party which is actuated by principles similar to those which inspired John Stuart Mill, so far will, sooner or later, the present tendencies of German elementary education meet with challenge and opposition. But the issues are not yet as clear as they will eventually become. Efficient elementary education has been one of the prime causes of German industrial efficiency, and of the subordination and discipline which characterize it. But industrial efficiency has largely added to the wealth of the very class in Germany where Individualist principles would naturally find their stronghold. Accordingly, there has hitherto been little disposition to criticise educational development on the present lines. But some observers think that they can already see signs of a turn in the tide. And the vote of the Berlin municipality may prove to have been significant of coming change.

UNITED STATES.

The first volume of the Report of the Commissioner of Education for 1896 has reached us. It is as usual a veritable encyclopædia, containing, besides the inevitable maze of statistics, nineteen lengthy articles on subjects as wide apart as "The English Education Bill of 1896" and "The Jewish Primer, as it was used in the public schools two thousand years ago." We note with some surprise that a well known educationist is referred to more than once as "Sir Lyulph Stanley"; in other respects the account of "the most important event in the recent history of education in England" is accurate and impartial. We are glad to come upon a passage in the Commissioner's Introduction which reads almost like an apology for the large amount of space devoted to questions of organization, including statistics figured and graphic. "The actual instruction given," he says, "is the ultimate objective point toward which all questions of organization must look. All discussion that relates to School Boards, supervision, equipment, costs, and such items, must have as its final object the efficiency of the teacher and of his work. But the question of maintaining and improving the quality of the teaching has become exceedingly complex as cities have grown in size, and many subsidiary questions are involved that have caused so much difficulty in their settlement that they have come to be looked upon as no longer of secondary consideration, but matters of prime importance in themselves. The selection of members of the School Board, the raising of school revenue, the appointment of the superintendent, the choice of teachers, the construction of buildings, all these involve vital questions the successful solution of which is the condition precedent upon which effective work in the school depends." This is sound doctrine, and can hardly be preached too often.

For any who take an interest in such matters we add the following figures:—The grand total of scholars for 1896 enrolled in schools of all grades was nearly sixteen millions (an increase of 308,575), divided thus—fifteen and a quarter millions in the elementary grade, about half a million in the secondary grade, and about a fifth of a million in the higher (or University) grade. The same figures divided according to control show nearly fourteen and a half millions in the public schools, and only one and a half in their private competitors. In the "common schools," defined in the Report as "public schools of elementary (first eight years of course of study) and secondary (ninth to twelfth years) grades"—the average attendance was 67·78; the percentage of male teachers 32·6 (to which figure there has been a steady fall from 43·1 in 1877; the average monthly salary for men about £9, for women about £8; the total expenditure about £37,000,000, being nearly £4 per pupil (risen from £3. 3s. in 1878), and 10s. 6d. *per capita* of population (risen from 7s. in 1870).

A curious piece of information is the statement that the average amount of schooling per inhabitant, calculated on the basis of present attendance, and expressed in years of two hundred school days each, is 4·84 (risen from 3·32 in 1870). More inspiring is the fact that the total number of students pursuing normal or teachers' training courses last year was 84,400 (more than 7,000 of whom were in Universities and colleges), being an increase of 3,862 over 1895. "It is gratifying," the Commissioner remarks in this connexion, "to note the increased support extended to public normal schools by states, counties, and cities." When are we to be similarly gratified?

The administrator, the historian, the philosopher, the sociologist, nay, the very writer of "Foreign Notes" himself, will all find abundant material in this volume for their respective purposes—in token whereof we extract the following chronological data from an interesting chapter entitled "Comparative Study of Popular Education among Civilized Nations":—"The Government in every civilized country has since 1801

either enacted a law or taken measures for the general introduction of public education. In Holland the first laws regarding public instruction were those of 1801, 1803, and 1806. In Bavaria compulsory attendance dates from 1802. In Prussia the ordinance of 1819 laid down the conditions of compulsory attendance in that State. In the Grand Duchy of Baden popular instruction was created in 1834. In the second half of the century the greater number of the German States multiplied continuation schools, and made education compulsory. The greater number of the Swiss Cantons created a system of schools between 1830 and 1848. Sweden, where education had been already well introduced in the eighteenth century, promulgated its organic educational law in 1842, and since 1850 this same law has been the law of Norway, transforming her itinerant schools into definitely located establishments. In Finland, long a dependence of Sweden, the schools that the Reformation had called into being proved inadequate, and the public schools were organized by the laws of 1858 and 1866, while Hungary has made strenuous efforts to raise her schools to the level of those of the German peoples. In France, the basic law, at east the first which was really efficient, is the law of 1833. In England the first Reform Bill had opened the doors of Parliament to the mercantile class, and England had made the first appropriation for the construction of elementary schools. The Committee of the Privy Council on Education was instituted by the English Parliament in 1839, but the first organic educational law was not passed until 1870. Some of the Italian States had school laws in the first half of the nineteenth century, but when, in 1859, Italy became a united kingdom, the law of Piedmont was adopted for the whole peninsula and its islands. The law of Spain was passed in 1857. In the United States, after a formative period, Horace Mann was appointed in 1837 Secretary of the Board of Education of Massachusetts, and the first State normal schools were founded soon after. In 1867 a National Bureau of Education was founded. In Canada the fundamental law of public instruction in the province of Quebec went into effect in 1841. The school system of Ontario dates from 1844. The first law of the province of New Brunswick was promulgated in 1833. During the second half of the present century almost all the Spanish American Republics modelled, partly at least, their school systems on those of the United States. The same activity in organizing public education has been shown in the colonies and countries under European control; as, for instance, in Algeria, Cape of Good Hope, India, British Australasia, and the Antilles. Japan, entering resolutely into the ideas of European civilization, created a system of public schools in 1872."

CANADA.

The report of the Council of Public Instruction for the North-West Territories for 1896 has just reached us. The Council deals with an area of 302,000 square miles, embracing large farming, ranching, lumbering, and mining regions, and containing amongst a widely distributed population a number of "colonies" established by different foreign nationalities. In spite of these difficulties ten years of steady work have raised the number of schools from 76 to 366 (339 of which only employ one teacher), the pupils from three thousand to thirteen thousand, and the teachers from 84 to 433, of whom rather more than half are women. The detailed figures show that the average number of pupils per school and per teacher have varied but slightly. Thirty children in the same standard to one teacher are not perhaps too many in an English Board school, but thirty children in four or five standards to one teacher must be an almost hopeless problem. Luckily, at least in some cases, the average attendance in the North-West is barely 50 per cent. There are no separate secondary schools, but the sixth, seventh, and eighth standards, the enrolment for which in 1896 was 126, 39, and 5 respectively, are termed "high-school standards," and have an entirely separate programme, based upon the matriculation examinations of the Universities of Toronto and Manitoba.

However unavailing the struggle for educational reform at home may sometimes seem, it is always inspiring to find the idea of systematized effort thus gaining ground and slowly spreading over the vast outlying districts of the world. The schoolmaster is, indeed, abroad, when his activity reaches from Alaska to Patagonia, from Reikiavik to Stewart Island. And, if new foundations are every day being laid, the greater the necessity for experienced builders to work at improvements in the superstructure. The same difficulties will everywhere appear, and it should be the privilege of those who started first to solve them. That the North-West Territories have an eye on the rest of the world is clear enough from the present report. The only title to teach, for instance, is the possession of both an academic and a professional certificate, and normal schools are referred to as the people's safeguard against empiricism; in the erection of new buildings increased attention has been paid to the conditions that affect the health and comfort of the children, and progress has also been made in beautifying the school-rooms; after careful experiment promotion examinations with the grant depending upon them have been abolished, and promotions are now made by the teachers, who are instructed to take account of health, mental vigour, and application, as well as scholarship, in determining

(Continued on page 78.)

MESSRS. BELL'S NEW BOOKS.

EDUCATIONAL CATALOGUE POST FREE.

ELEMENTARY BOTANY. By PERCY GROOM, M.A. (Cantab. et Oxon.), F.L.S., Examiner in Botany to the University of Oxford. With numerous Illustrations. Crown 8vo, 3s. 6d.

BOOK-KEEPING BY DOUBLE ENTRY, THEORETICAL AND PRACTICAL, including a Society of Arts Examination Paper fully worked out. By J. T. MEYHURST, A.K.C., F.S.S., Fellow of the Society of Accountants and Auditors (Incorporated), Author of "Examination Papers in Book-keeping." Crown 8vo, 2s.

New Volume of the Cambridge Mathematical Series.

INTRODUCTION TO EUCLID, including Euclid I. 1-26, with Explanations and numerous Easy Exercises. By HORACE DEIGHTON, M.A., Headmaster of Harrison College, Barbados, and O. ENTAGE, B.A., Assistant-Master of Harrison College. 1s. 6d.

Companion to Whitworth's "Choice and Chance."

DCC EXERCISES, including Hints for the Solution of all the Questions in "Choice and Chance." By W. A. WHITWORTH, M.A., late Fellow of St. John's College, Cambridge. Crown 8vo, 6s.

For London B.A., 1898.

JOHNSON'S LIVES OF PRIOR AND CONGREVE. Edited by F. RYLAND, M.A., Editor of "Johnson's Lives of Dryden, Swift, Pope, Milton, and Addison." Crown 8vo, 2s.

New Edition of Gasc's French Dictionary.

DICTIONARY OF THE FRENCH AND ENGLISH LANGUAGES. By F. E. A. GASC. A New Edition, reset in new type, and considerably Enlarged. Small 4to, 12s. 6d.

New Books by Messrs. Pendlebury and Beard.

COMMERCIAL ARITHMETIC. By C. PENDLEBURY, M.A., and W. S. BEARD, F.R.G.S. Crown 8vo, 2s. 6d. [In the press.]

GRADUATED ARITHMETIC, for Junior and Private Schools. By the same Authors. In seven parts, in stiff canvas covers. Parts I., II., and III., 3d. each; Parts IV., V., and VI., 4d. each; Part VII., 6d. Answers to Parts I. and II., 4d.; Parts III.-VII., 4d. each.

REVIEWS AND ESSAYS IN ENGLISH LITERATURE. By the Rev. DUNCAN C. TOVEY, M.A., Rector of Worpleston, Clark Lecturer at Trinity College, Cambridge. Crown 8vo, 5s. net.

New Edition of Conington's "Vergil."

VERGIL VOL. I. (Containing the Eclogues and Georgics.) Edited by the late JOHN CONINGTON, M.A., and H. NETTLESHIP, M.A., late Corpus Professor of Latin in the University of Oxford. Fifth Edition, Revised by F. HAVERFIELD, M.A., Christ Church, Oxford. Demy 8vo, 10s. 6d. [Shortly.]

Now ready. Vol. V. In Two Parts. Crown 8vo, 4s. 6d. net each.

GREGOROVIVS' HISTORY OF THE CITY OF ROME IN THE MIDDLE AGES. Translated from the German by Mrs. HAMILTON. [Shortly.]

HANDBOOKS OF ENGLISH LITERATURE.

Edited by Professor HALES.

NEW VOLUMES. Crown 8vo, 3s. 6d. each.

THE AGE OF MILTON. By the Rev. J. H. B. MASTERMAN, M.A., sometime Lecturer of St. John's College, Cambridge. With an Introduction, &c., by J. BASS MULLINGER, M.A., University Lecturer in History.

THE AGE OF TENNYSON. By Professor HUGH WALKER, Professor of English Literature in St. David's College, Lampeter.

New Volumes of Bohn's Libraries.

THE PROSE WORKS OF JONATHAN SWIFT. Edited by TEMPLE SCOTT. With an Introduction by the Right Hon. W. E. H. LECKY, M.P. In about Eight Volumes, 3s. 6d. each.

LONDON: HENRY FROWDE, CLARENDON PRESS WAREHOUSE, AMEN CORNER, E.C.

whether a pupil will be profited by being placed in a higher standard; instruction in temperance is compulsory in all schools; so also is instruction in morality, in which the teacher is expected "to turn the attention of pupils to the moral quality of their acts, and to lead them into a clear understanding and constant practice of every virtue."

Preparation for the "academic certificate" for teachers is given in the "high-school standards" referred to above. The examination comprises the following subjects:—Spelling and writing, the English language, rhetoric and composition, poetical literature, history, geography, arithmetic, algebra, geometry, trigonometry, chemistry, botany, and physics. Conspicuously absent are divinity, drawing, and music, though the last two are included in the school programme, and the Superintendent of Education reports that a great effort is to be made to improve the character of the teaching. Preparation for the first- and second-class professional certificates is given in the normal school at Regina during the last four months of every year; sessions for third-class candidates are conducted at convenient local centres by the inspectors under the supervision of the superintendent, who delivers a course of lectures at each. This is training under difficulties indeed, but, little as it is, it is surely all to the good. The subjects of examination for the first- and second-class certificates are the science, art, and history of education. It is interesting to note that Quick's "Educational Reformers," Sully's "Handbook of Psychology," Landon's "Teaching and Class Management," Laurie's "Lectures on Linguistic Method," and Spencer's "Education" are known and valued even in Saskatchewan. Of the 433 teachers in the schools last year, 96 (62 men) held first-class certificates, 207 (98 men) second-class, and 130 (51 men) third. Average salaries range from £150 to £80, though the actual highest is £250, and the lowest £60.

The Territories have of course not escaped the ubiquitous "religious difficulty," but, influenced no doubt by their Manitoba neighbours, they seem to have discovered how to treat it. "The minority of the ratepayers," runs the regulation, "in any organized public-school district, whether Protestant or Roman Catholic, may establish a separate school therein, and in such case the ratepayers establishing such Protestant or Roman Catholic separate school shall be liable only to assessments of such rates as they impose upon themselves in respect thereof. Any person who is legally assessed or assessable for a public school shall not be liable to assessment for any separate school established therein." The extent to which this permission is utilized may be gathered from the fact that of the 366 schools in operation last year only 9 (5 Protestants and 4 Roman Catholics) were separate schools. Of the remaining 357, as many as 329 were Protestant.

The programme contains no syllabus of religious instruction. The character, and, within a time limit, the amount, of religious instruction given in any school is determined by the trustees, who may be presumed to represent the desires of the ratepayers. Religious instruction is not allowed in any school until one half-hour previous to the closing in the afternoon, at which time such instruction as is permitted by the trustees may be given, parents having the privilege of withdrawing their children at that hour. It is, however, permissible for the trustees to direct that the school be opened by the recitation of the Lord's Prayer. In all standards above II., the text-books are uniform, care being taken by the Council of Public Instruction to authorize none written from a sectarian standpoint. In Standards I. and II., Roman Catholic schools are permitted to use certain specially authorized Catholic Readers.

THE four hundred and fifty-sixth anniversary of the foundation of Eton College by King Henry VI. was celebrated the other day under interesting circumstances. A holiday was granted the students, and in the afternoon a number of the school officials and visitors assembled in the "Election Chamber" for the purpose of witnessing the presentation to Dr. Hornby, the Provost, of a portrait of himself, painted by the Hon. John Collier, which, as well as a replica intended for the College, has been subscribed for by many old Etonians. Both portraits represent the Provost attired in his academic robes, and are excellent likenesses. Lord Justice Chitty made the presentation on behalf of the subscribers, and alluded in felicitous terms to the distinguished and successful career of Dr. Hornby as Headmaster and Provost. He wished him long life and happiness, and hoped that for many years to come they would not only have the opportunity of seeing the portraits, but also the original.

DR. G. H. RENDALL, who has just resigned his position as Principal of Liverpool University College, to take the Headmastership of Charterhouse School, in succession to the Rev. Dr. Haig Brown, is a Harrow and Trinity man with an excellent record both as a scholar and disciplinarian. His appointment is remarkable for the fact that it breaks away from a tradition which makes all such posts an appanage of the Church, or, at all events, the exclusive preserve of men in Holy Orders. This is all the more notable as the Headmastership of Charterhouse School is, after Eton and Harrow, the most lucrative in England.

OCCASIONAL NOTES.

THE month of January has been a busy time for teachers, or, at any rate, for those who are members of associations. Winter meetings have now become as familiar to us as May meetings are in another quarter. In the first place there has been the fortnight's programme organized by the College of Preceptors. This, no doubt, attracted a large number to London; and deservedly. For variety and interest it would be hard to beat this list of lectures. The first lecture hour was given to Mr. Findlay, who dealt with a certain section of the science of education in his well-known lucid and convincing style. It is certainly a record triumph and a convincing proof that teachers are not blind to the needs of their own professional training, to find so large a number of men and women willing to give up a fortnight of their holiday to attend a purely pedagogic course of lectures. Besides this, there were lessons and demonstrations given by well-known teachers of science and of art in their respective subjects; and, in addition, afternoon and evening lectures of a more recreative character; and several visits to schools and institutions were arranged.

A FULL report of this meeting will, no doubt, appear in the organ of the College, and we have not space here to do more than hint at the varied programme. But we would add that the cordial thanks of many hundreds of teachers are due to the College of Preceptors, and in particular to Mr. Findlay, who, as we understand, was responsible for the initiation and the organization of the whole scheme. The College has done much of late years to rehabilitate itself in public estimation, and this last action is by no means the least in its public work. Perhaps the most important indirect result of Mr. Findlay's lectures will be to remove from many minds a suspicion of the word training. It is no hard-and-fast set of regulations that he would impose upon the candidate for a training diploma, but he would direct the

candidate's thoughts towards, and give him help in the solution of, the problems which he will be called upon to face in the class-room. Mr. Findlay entirely removed any idea that a teacher trained under his auspices would become a mere machine.

OF other meetings, perhaps that of the Incorporated Association of Headmasters first attracts the attention. Two days' discussion of a long agenda paper and bulky report cannot be condensed into a paragraph. But undoubtedly the most important item in this year's work is the joint memorandum that has been drawn up by representatives of this body and of the Association of Higher-Grade Schools and Schools of Science. For years the fight has been keen between the higher-grade school, supported by public funds, and the old grammar school, with its possibly dwindling endowment. The I.A.H.M. has said bitter things in the past about its rivals; but now its policy has been reversed, and this most auspicious *concordat* is the result. Unfortunately, we must praise it, like Cicero's schoolboy, in qualified terms, as *spes non res*. But it is something that members from these hitherto antagonistic bodies should meet and agree that their schools are mutually "complementary, and not antagonistic," and, therefore, that "differentiation is desirable." Very wisely, no attempt is made to define primary and secondary education, and it is recognized that "many subjects taught will be common" to both classes of schools.

SO the differentiation is to be based upon "the aim of the school, and economic and school-age conditions." This means, as we understand it, that children leaving school at the age of fourteen or fifteen should have an education more directly related to the pursuits by which they will earn their living; while children who remain at school to the age of seventeen or nineteen should have what is generally known as a liberal education, which aims at "the development of a broad and well-trained mind, rather than at the development of a certain aptitude in some specific direction." This is, in fact, Dr. Scott's pet theory of handicraft schools. But both primary and secondary schools are to aim at producing "good men and women, and good citizens." It is fully recognized that there is a social difference between the two classes of schools, though we might rather kick at the limitation of the word "culture" to the one class. Of course, the whole scheme depends upon a central authority, with power to enforce its provisions. And we are assured that the three Government Departments view the scheme with favour; so there may be a future for it, in spite of the cold reception given in the *Schoolmaster* and the *School Board Chronicle*.

PUT briefly, the scheme is somewhat similar to what we outlined last month—that higher-grade schools should become higher primary, in the sense in which Mr. Morant has familiarized us with the term, and that they should be a *terminus ad quem*, and not a link between the elementary and secondary schools. One other point we must allude to—the establishment of the Joint Professional Agency. One speaker said it was one of the best pieces of practical work the Association had done; But Dr. Scott gave honour where honour is due, by stating, at the dinner of the Assistant-Masters' Association, that it was this latter body to whom the initiative of the scheme was due, and that the Headmasters had most willingly co-operated. However, that may be, we are very glad to note that all preliminary difficulties have been surmounted.

and that it is hoped to put the scheme into force in the course of the present month.

THE Assistant-Masters devoted their annual meeting mainly to the subject of training, and listened to an address on that topic by Mr. Arthur Sidgwick, who, of course, described himself as an amateur. It shows a remarkable growth in the belief in training that the address was received with the greatest enthusiasm, and that, in the subsequent discussion, the need for training was assumed, and no opposition was raised to the resolutions. Many other meetings have been held. The Assistant-Mistresses discussed, we believe, the same subject of training, but we have received no particulars. The Froebel Society held a holiday course for kindergarten teachers, which deserved to be better supported. No doubt it suffered from the competition of other attractions. So, as we said before, January has been a busy month for societies of teachers, and we hope, and believe, it has not been altogether barren of result. The mere fact of meeting together—discussing and dining and talking—goes a long way towards the production of what has hitherto been our greatest need, a feeling of professional solidarity.

AT the risk of shouting before we are out of the wood, we may this month announce that the University for London, after fifteen weary years of travail, has come to the birth. The very fact that the Government have abandoned any big Bill dealing with secondary education will make them all the more anxious to pass the lesser measure to which they stand pledged. Our University of London correspondent chronicles in another column the last phases of the struggle, but, confining himself as he does to bare facts, he refrains from pointing out that the opposition has gradually dwindled down to Mr. Fletcher Moulton, Sir John Lubbock, and their respective "tails." It will be further observed that Sir J. Lubbock carefully avoids expressing any personal disapproval of the teaching University, and considers only what his constituents will say to it. It would, indeed, be too monstrous if a heterogeneous body, scattered up and down the country, whose only bond of union (as Sir Joshua Fitch well puts it) is having sat at some period of their lives for a few hours on the same benches in Burlington Gardens, should be allowed to sit in judgment on a scheme for the higher education of all London, and, if it does not please their fancy, to veto it by post-card.

FROM a communication of Mr. Gerrans to the Headmasters' Conference, we get a clear idea of how the work of training is being carried on at Oxford. Three secondary schools have consented to admit students. At these schools the candidates give consecutive lessons on a given subject for some hours weekly, and are supervised while so doing by the lecturer. Notes of lessons have been previously prepared and corrected and revised. The minimum number of lessons requisite for a diploma is sixteen, but a candidate who takes the full year's course will have given in that time more than a hundred. Special attention is paid to the maintenance of discipline with large classes. If a pupil fails in this respect, he is transferred to another school and given a chance of retrieving his failure, aided by the counsels of the lecturer. After repeated failures he would be advised to abandon the profession. In addition to the practical work there are three lectures weekly, and a *Seminar*.

THE summary report of the Joint Committee formed at the instigation of the I.A.H.M. by the various societies of secondary teachers is now public property, and

we can, therefore, deal with it in these columns. Speaking generally, it contains no doctrine and no principle that have not already been approved by this *Journal*. We welcome its appearance, because it is the first authoritative reply to the often asked question: "What is training?" The report proposes that every candidate should, after having received an education which would qualify for graduation at a University, spend at least one year in a course of specific professional training. It was important to make this point clear at the outset. We are told that training colleges exist where pupils of fourteen and fifteen may qualify for a teaching diploma. And this Committee state their opinion that training should not take the place of general education, but should be the technical finish to a University course. And, further, it was decided that the study of education should not be accepted for a University degree. Some criticism on this point may be expected; but it will generally be felt that the argument for including "education" as a degree subject is one of expediency only.

IT is difficult, perhaps, as things are, for a man to spend a further year, after graduation, in fitting himself for his profession. But no one would wish to lower the standard of general culture; and to substitute "education" would mean to dispense with some equivalent subject in science or the arts. Therefore, we consider that, as a counsel of perfection, no one will object to this first resolution, though from motives of expediency, we may deem it not at present practicable. The limit of age for admission to a course of professional training is fixed at nineteen, as being the lowest age at which a candidate may qualify for a degree. The Committee resolved that the "diploma certifying that the teacher has been trained to teach in secondary schools should certify": (1) that the candidate has studied the sciences that underlie the principles of education, the body of knowledge comprised under the term "Theory and Practice of Education," and some additional special subjects, such as hygiene, school administration, &c.; (2) that the candidate has pursued his work practically, has had opportunities of observing methods of class-teaching, and has himself had the continuous teaching of a school form under competent direction.

THE diploma is also to state, thirdly, that the candidate has spent a period of time in an approved secondary school. To put it briefly, these three stages comprise the lecture-room, the laboratory, and the workshop. No rule is laid down as to how far these stages should coincide or overlap, or in what order they should be taken; but it is recommended that at least a year should be given, and, in addition, that a candidate should serve on probation in a secondary school for twelve months before he receives his final diploma. The next resolution deals with institutions for professional training, and lays down the position that such institutions should be in organic connexion with some University, or College of University rank. The remaining resolutions deal with equipment and finance. The report is signed by all the representatives, but one or two prefer not to express their acceptance of certain explanatory notes that are added. It is clear that the desire for training is growing: the old arguments are now rarely brought forward. This report marks a distinct advance, and when the central authority is formed it will be a valuable expression of the wishes of the profession. At present, through want of funds, progress can only be very gradual.

A CIRCULAR we have received from the Science and Art Department explanatory of their recent circular on schools of science, which has filled the School Boards with panic, has been taken in some quarters to mean that South Kensington is withdrawing from the position taken up in the earlier circular. For ourselves, we see no signs of this, and we think it clear that Sir John Donnelly means to limit "schools of science" to those schools where a large proportion of the pupils will take the full course. As is explained in the circular, other schools are not debarred from earning South Kensington grants, although they may not qualify as "schools of science." The School Boards also seem to be in a panic in reference to the action of the South Kensington authorities in forming, and recognising, local authorities for the administration of grants. A long letter has been addressed to us by Dean Maclure, President of the Association of School Boards; but we are not convinced that there is any grave public danger. A new spirit has of late been infused into the Department, and, if it can bring about, by administrative order, some part of the organization we desiderate, we see no reason to object, so long as necessary precautions are taken.

AN experiment which will be watched with the greatest interest is about to be made in the neighbourhood of the Swiss Cottage. The King Alfred School Society intends to open, at Easter, a new school for boys and girls, beginning at the kindergarten stage, and continuing through school life. Mr. Findlay has undertaken the position of honorary adviser to the Council, and he has drawn up a scheme of work in which the principles he has advocated in the lecture-room will be put to the test of practice. It is a somewhat bold undertaking in these days of cheapening secondary education and of grants from public funds. The school will be self-supporting as soon as it is established; but in the interim a certain fund of money must be collected to meet preliminary expenses, and to give a feeling of security to the promoters. An appeal is therefore made to well-wishers who believe in the future of the "new education," based on a study of child nature, to subscribe their guineas or to donate larger sums. The King Alfred Society has, we see, arranged a course of lectures, to be given by Mr. Findlay, in which it may be assumed he will unfold the scheme of the school. We need hardly add that the scheme has our hearty approval.

AMONGST the unofficial lectures given at the College of Preceptors during the winter meeting, was one of special interest on "Circulating School Museums." Many a teacher of natural history, geology, and the like, is handicapped for want of suitable specimens and illustrations. This difficulty has been in great part overcome in Sheffield by the action of the branch of the Teachers' Guild, carried out with the advice and help of Mr. Howarth, Curator of the Weston Park Museum. Mr. Howarth, who is an enthusiast on this point, has, after consultation with teachers, arranged and packed, in suitable cabinets, collections in illustration of science lessons. These cabinets can be borrowed and exchanged by any school in the area of the Sheffield County Council. And this body has given most generous aid towards the expenses involved. The idea is most practical and useful, and, if one County Council can expend a part of its technical education money in this way, it does not seem hopeless to persuade others to follow suit. The museum in Gower Street would greatly increase its usefulness if it could get a grant of money sufficient to enable it to follow this example. Mr. Howarth has also arranged a number of art portfolios for a similar purpose.

MR. LYTTTELTON'S letter to the *Times* has called public attention to a very valuable piece of work that has now been done by the Teachers' Guild. After long discussions, in which the scheme has been thoroughly threshed out, and after consultation with Mr. Brabrook, Chief Registrar of Friendly Societies, the Teachers' Guild Friendly Society has been launched. "It is pretty certain," says Mr. Lyttelton, "that only a small proportion of the whole body of secondary school teachers are insured against sickness and accidents. . . . It is, therefore, a distinct duty for members of the profession, individually and collectively, to remedy this state of things. The proposed scale of payments," he adds, "is as low as is consistent with a sound scheme." Certainly, in our profession, we are not free from nervous wear and tear, which frequently ends in a temporary breakdown; and we are, perhaps, more than usually exposed to the danger of infection. We make no doubt that this scheme will be warmly welcomed by many hundreds of members.

TRULY they do things on a grand scale in America. The latest educational proposal is calculated to take away one's breath. It is nothing less than the building of an ideal home for the University of California. The discretion of the designer is to be unfettered. All he is asked to do is "to record his conception for an ideal home for a University, assuming time and resources to be unlimited." Existing buildings are to be swept away, and on a cleared space of ground he is to erect "at least twenty-eight buildings, all mutually related; and, at the same time, cut off, as a whole, from anything which might mar the effects of the picture." The grounds and the buildings are to be treated together, landscape gardening and architecture forming one composition. Five millions of dollars have already been pledged, and further sums will be forthcoming as the work proceeds. The Horsham scheme is not a patch upon it.

TOO many cooks spoil the broth, and, according to Miss Mary Davies in the last *Contemporary Review*, there are in England a vast number not of cooks, but of teachers of cookery, with little or no practical results, except the gaining of Government grants. Housewives who are unfortunate enough to be cookless will certainly bear out Miss Davies's contention. An advertisement for a governess will bring scores of answers; an advertisement for a cook will often fail to attract a single one. The causes of this failure, according to Miss Davies, are twofold. First and foremost, the teachers have no real grip of their subject. They have obtained certificates after a perfunctory training in schools of cookery managed by amateur committees, or under no official supervision. Secondly, the classes are too large, and the time allowed too short—about a fourth of that devoted to needlework. The remedy is obvious. There must be proper State supervision, both of training schools for cookery and of the classes.

TECHNICAL EDUCATION.

THE public, and more particularly the active friends of technical education, are under considerable obligations to the National Association for the Promotion of Technical and Secondary Education—obligations of which we are reminded by the publication of the tenth annual report of that organization. "By the establishment of the Association at a time when a great national movement was beginning to shape itself, the Executive Committee have been enabled to achieve results hardly equalled in any other sphere of voluntary effort." Although there is no longer any necessity for systematic propaganda, and "special inquiries" are now undertaken by the Education Department, the

Association continues, as the report proves, to effectively discharge several important functions.

NOT the least valuable of these functions is that of collecting reliable information and presenting it in readable form in "The Record," six volumes of which have now been issued. And the annual report itself is an excellent review of the progress of technical education throughout the United Kingdom. In England no less than £740,000 of the money available under the Local Taxation (Customs and Excise) Act, 1890, was spent during the year on education. London's share of the fund now reaches £185,000, of which sum £150,000 is utilized for educational purposes. It has been pointed out in this column that the determination to levy a rate will soon come to be regarded as the barometer of effective progress. During the year 160 local authorities levied rates, to the aggregate of £39,000. The number of technical schools in which local authorities in England are directly interested now reaches the total of 161, of which 146 involve a capital expenditure of £1,730,000.

In the Principality the whole of the Exchequer contribution, £38,000, £20,000 raised by rate under the Technical Instruction Acts, and £17,000 raised under the Welsh Intermediate Education Act (a sum which is met by a similar contribution from the Treasury), is devoted to intermediate and technical education. There are now 88 intermediate schools, in 63 districts, and attended by 5,563 pupils. The total annual income of 59 of these schools, including fees of pupils, is estimated to reach £65,000; and the amount hitherto absorbed in the erection or adaptation of 30 school buildings, half of which, in many cases, was defrayed by local subscriptions, is as much as £122,237.

THE recently issued report of the Central Welsh Board of Education shows that the total number of schools under inspection is 80—19 boys', 19 girls', 36 dual, and 6 mixed schools. These are in charge of 61 headmasters and 19 headmistresses, and there are 135 assistant-masters and 148 assistant-mistresses, in addition to 162 visiting teachers on the staff. A total of 1,364 scholarships and a large number of bursaries were awarded, the aggregate value being £8,450. It is interesting to note that 40 per cent. of the pupils are said to be drawn from the rural districts.

In Scotland, of £39,000 distributed to local authorities under the Local Taxation Act of 1890, £28,000 is applied to technical and secondary education. In addition there is an amount of £60,000 available under the Education and Local Taxation Account (Scotland) Act, 1892. For Ireland the year 1897 has been one of disappointment. The Bill to create a Board of Agriculture and Industries, and the provision made in the Budget for an endowment of technical education, failed to pass into law. Meanwhile there is, to quote the report of an inspector, "a continuous and alarming decrease in the amount of the grant earned from the Science and Art Department by Irish schools." In 1893, 236 schools, with 15,600 pupils, earned £7,323. In 1895, 182 schools, with 10,432 pupils, received £4,809 only. The year 1896 brought a further decrease.

AT the sixth annual general meeting of the Association of Directors and Organizing Secretaries for Technical and Secondary Education, held in London, on the 7th ultimo, some attention was devoted to the attitude of County Councils to prospective legislation on secondary education. Mr. C. H. Bothamley (Somerset) the Chairman for the year, while emphasising the desirability of "an efficient central authority," expressed the belief that this authority, "sufficient for all practical needs," could be brought into existence by the re-organization of the two Government Departments now dealing with different branches of education. The importance of the practical influence to be exercised by the Education Council was, he suggested, somewhat exaggerated by the teaching profession, the members of which were reminded that they already possess abundant opportunities for making their views known to those in authority.

As to the constitution of local authorities, assuming that, as recommended by the Royal Commission, its appointment rests, in the first place, with County and County Borough Councils, Mr. Bothamley indicated the differences of opinion as to the method of securing the adequate representation of "experts." The functions of the local authorities, he pointed out, should be, to a very large extent, "administrative" rather than educational—a duly constituted governing body being responsible for the management of each school. Mr. Bothamley concluded his well-considered review by repeating the resolution passed by the Association last year in favour of immediate legislation on the lines of the Report of the Royal Commission.

THE Association does not appear to be of one mind, however, on some of the questions to which their Chairman alluded. A few members

expressed the conviction that all those constituting the local authority should go through the ordeal of popular election, and others declined to subscribe to the proposal that the authority should not manage its own schools. Mr. Reynolds (Manchester) properly drew attention to the primary importance of the question of "area." "It was impossible," he said, "to organize any proper system of secondary education, unless they had regard not only to the county borough, but to urban districts which depend upon it."

THE Science and Art Department, with its usual aptitude for doing the right sort of thing in the wrong way, has again succeeded in stimulating strife in connexion with Clause VII. of their "Directory." Under this clause counties and county boroughs were assumed to possess organizations for secondary education, which might notify their willingness to "be responsible for the Science and Art Instruction within the area of their jurisdiction." The Department also explained that the only part of secondary education of which it was cognizant was defined in the Technical Instruction Acts. The residue grant administered by County Councils has, as every one knows, been heavily burdened by the Science and Art Department. The grants in the elementary stages of science subjects have been reduced, apparatus- and building-grants withdrawn, and it is no exaggeration to say that without the aid of the County Councils two-thirds of the Science and Art instruction throughout the counties would be immediately abandoned. For instance, a case has just been brought to the writer's notice in which nine classes—each consisting of thirty class meetings—in various science subjects, received from the Department the munificent aggregate grant of £22. 5s. South Kensington, therefore, has deliberately shifted the burden of its responsibilities to the technical education authorities. As a natural consequence these authorities have been led to exercise a considerable measure of control over nearly all the Department's classes within their districts. Clause VII., it was supposed, would tend to minimize the evils of the "dual control" now in existence—and the interpretations given both in Parliament and outside confirmed this supposition.

BUT it is not the way of the Department to unostentatiously give effect to a simple administrative expedient. A County Council consenting to be responsible is recommended to advertise its application, to invite objections, and to arrange for the Department to hold a public inquiry, and so on. The consequences are what anybody but a Department would anticipate. Those rightly jealous of further prejudicing "prospective legislation" naturally say: "Why all this fuss over a simple administrative expedient? This means more than we think: we must agitate." And so the alarm is sounded, appropriately enough, from Manchester, and the Department is accused of stealing the sheep, when it was only looking over the wall.

THE Education Committee of the Durham County Council—in view of the fact that modern languages are technical education according to the Acts—applied for sanction to teach the "English language." This was declined, although the Department did not venture to explain why French, German, Italian, and Spanish should enjoy the privilege of being regarded as "modern," if English was not. The Durham Committee have recently, however, obtained approval for the subjects of "Commercial Grammar, Literature, and Composition." This, the Committee assume, "can mean nothing more nor less than English grammar," and they can now boast of having succeeded in obtaining sanction "for every subject included in the curriculum of a modern secondary school, without waiting for the long-delayed Secondary Education Bill."

THE Registrar of the University College of Wales, Aberystwyth, sends the following "correction and explanation" of the note in our last number stating that "Aberystwyth, with five students, obtained £800" as a grant from the Board of Agriculture. "The writer of the paragraph makes no reference to the further remark in the report of the Board of Agriculture: 'There are, however, at the college two students who are taking their first year's B.Sc. course, preparatory to their entering upon that leading up to the degree.' With the addition of these two students of agriculture, who, as studying for a degree and not merely a diploma, are presumably the best, the number of full-course students last year was seven, not five. In addition, there were in the college twenty-four short-course students, twenty in the teachers' class, and thirty-two advanced dairy students. I may add that this year the number of full in-College students is eight, and that of the short-course students forty-four. The teachers' class numbers ten, and the advanced dairy school in the summer of 1897 had thirty-three students. The figures above given are for teaching work done in the College, and are apart from the Extension lectures, the elementary dairy instruction, and the work on the experimental stations carried on in the counties affiliated to the College."

TEACHER AND PUPIL.

FROM THE PARENT'S POINT OF VIEW.

I DO not think there is much difference of opinion as to what should be the right relationship between teacher and pupil in the abstract, for what can be clearer, or more conclusive, than that the one should be teacher and the other pupil—nothing more and nothing less? But, when it comes to the question of what is the point of view of the parent as to the right nature of this relationship, I am ready to admit that the diversity of opinion and the difficulty of decision are infinite, though it is well known that the positiveness of individual decision is in direct ratio to the absence of unanimity among those who take upon themselves to decide. And, indeed, that must be so, because the parent's point of view depends absolutely on the class of parent. Take, for example, the *indifferent* parent—a very common species. To him—I grieve to say it is oftener “him” than “her”—to him the right relationship of the teacher to the pupil is that of Annie, the nursemaid, to Master Tommy in the nursery. That is, in the opinion of this parent, the teacher should take his pupil away from home at 9 a.m. and deliver him back at 5 p.m., having cleaned, fed, taught, and whipped him into good behaviour during those eight hours without trouble or anxiety to his parent. Then there is the *ambitious* parent, who stands at the other pole, and believes that the right relationship between teacher and pupil is that between the driver of the Flying Scotchman and his engine. That is, in the opinion of this parent, the teacher's business is to divide his time between stuffing his pupil with such choice morsels of secondhand knowledge as will insure his racing into a scholarship in front of all other competitors, and convincing the parent several times a month that the pupil is really gaining a few yards at each lap of the scholarship course. Again, there is the merely *fussy* parent, and this, I fear, is generally she and not he, though I have known one father who could have given odds to any mother in the fine art of “fussing around.” This class of parent appears to regard the relationship between teacher and pupil as not dissimilar to that between a lunatic and his keeper. Instruction and education are of little moment. The main thing is to see that Tom changes his boots when he gets to school on wet days; that the big boys do not tease him, because he is so nervous; that he is not overworked, because his aunt died of consumption; that he does not play football, because his father broke his leg once at the game; and generally to stand between him and all the mischances of the rough-and-tumble conditions of the school, which form so excellent a discipline for life in the great world. Then we have the *firm* parent, who doesn't believe in standing any nonsense, and considers that the right relationship of the teacher to the pupil is that of the taskmaster to the galley slave—that is, to make him work by thrashing him early and often. Have I lapsed into mythology? Not at all. I have merely passed away from the rational school, which certain educational enthusiasts are trying to establish, into the dubious atmosphere of a certain class of boys' high school, where I have heard parents say that they believe in plenty of stick, and also heard an assistant-master add that he believed in laying it on thick. Yet another class—the *idolatrious* parent. This sort cannot be exorcised even by prayer and fasting, for it is the most tenacious of all. Nothing will persuade it—I use the sexless pronoun of set purpose, because I do not know that there is any difference in this matter of child-idolatry between father and mother—nothing will persuade it that its gosling is not a cygnet. This parent understands, by the relationship of teacher and pupil, that of the epitaph writer and the late lamented, and cannot imagine why the teacher does not see in its Tom, Dick, or Harry the budding genius which is so apparent to the fond eyes of father, mother, and auntie. This parent believes that the teacher's office is to exploit all the little strengths and look indulgently, not to say blindly, upon the great weaknesses of the domestic prodigy. One more class only I will cite, and, to my mind, it is the saddest and the most hopeless. Happily it is not so common as the others. I mean the *distorted* parent—the parent who has favourites among her offspring, and wilfully misunderstands and persecutes some one among them, till he grows to believe—I am now using words that I have myself heard—that his mother does not care what becomes of him. This parent resembles my first class, the indifferent parent, but she has passed from passive into active unkindness. This sort believes that the teacher's relationship with the pupil is that of

the jailor with the felon, that is, to keep him away from the possibility of doing injury to his parent in some form or other. But I will not multiply instances, for all of us are either parents or the friends of parents. In the latter case we know many examples of what we should *not* be, but are hardly in the position to pass judgment, because we know not what, under similar circumstances, we *should* be. In the former case, being no less human than other parents and having each our own little foibles, which of us shall cast the first stone? Perhaps some will think that I have been casting stones? Not at all; I have merely been collecting faulty diamonds for the reader's inspection. One class of parental jewel I have omitted—the perfect parent; and why? Because I do not know where to find him or her. But what we cannot find it is possible to imagine, and in the present case the task is easy. All these different parents, whom I have presumed to put in the pillory, have one common characteristic in that each has grasped one item of the truth, each has been dazzled by one little facet of that gem of human effort—scholastic duty, but no one of them has sufficient breadth of view to take in the full splendour of that great office, which is comprised in the right relationship of the teacher to the pupil. Imagine a parent—I know I am asking for the performance of a great feat—imagine a parent who is neither too indifferent, nor too ambitious, who is careful without being fussy, firm without being harsh, affectionate and interested without being idolatrous, and, in the treatment of a family, absolutely impartial and possessed of sanity and tact. In the ideals of this perfect parent will be found the ideal conception of the right relationship of the teacher to the pupil, for such a parent would at once recognize that the teacher's relationship to the pupil is a most complex one. The good teacher, in addition to being a good educator, must combine in his position the various attitudes of the watchfulness and resource of the nurse, the clear-headed industry of the engine driver, the tactful discrimination and ceaseless attention of the lunatic keeper, the energy and determination of the taskmaster, the power of the jailor, the generosity and (in a Pickwickian sense) the encouragement of the epitaph writer. But the grand characteristic of the perfect parent our imagination is trying to “body forth” is the ability to see that the right relationship of the teacher to the pupil is not comprised in any one of these attitudes, but centres in the combination of them all. It is the combination that illumines the paltriness of each with the grandeur of a perfect whole. But I have said enough to convey my conception of the ideal relationship between teacher and pupil. I will but add that it is the relationship of loving strength to erring weakness, of experience-nurtured wisdom to ignorant prejudice and untried imagination. It is among the most comprehensive of relations, for it includes that of mother to daughter, of father to son. Indeed, if the teacher should happen to be one of those who are the salt of the earth, the right relationship of the teacher to the pupil is that of Christ to man.

WILLIAM K. HILL.

PHONETICS AND THE COMIC PAPERS.

By P. SHAW JEFFREY.

IN a former paper on the teaching of French I endeavoured to show that phonetics may be of service to beginners by providing them with separate symbols for the open and closed vowels, and by encouraging them to correct their natural tendency, as unregenerate Englishmen, to pronounce all vowels as diphthongs. This is, however, only the first step in the primrose path of the phonetician, and the two initial advantages already alluded to, considerable though they undoubtedly are, as all who have earned them will testify, are merely preliminaries. The learner who would penetrate the whole art and mystery of phonetic systems, and of the success which must follow an intelligent application of their principles, must not be satisfied with a month's more or less desultory work and a half-condescending acceptance of a few of the least compromising innovations, to be followed by letters to the papers, offering at a fortnight's notice to correct and improve the systems of phonetic experts who have devoted the great part of their lives to patient scientific observation of sound phenomena and sound production. Haphazard methods in this, as in any other science, are insufficient, and the longer one studies phonetics the more modest does one

become, and the less inclined to lay down absolute rules or any very sweeping general statements.

One of the most real and tangible advantages that this system offers is this: *Phonetics teach the student to distinguish between strong and weak forms of particular words as they occur in the sentence*; which is, in my opinion, the biggest gun in the whole phonetic battery.

We read somewhere in "Trilby" of a Briton who talked "real French French"; history does not state whether he was a sheep of Passy's fold, but, judging by results, the case is probable, because it is this very French French which it is the aim of phonetics to teach by directing attention particularly to the fact that a word's sound value depends entirely upon its place in the sentence, and that the hard and fast rules for pronunciation hitherto inculcated in schools and places where they teach are in reality about as elastic as the teacher's conscience (or the pupil's—I do not wish to make invidious distinctions).

My work abroad for the past three years has thrown me very much among foreigners learning English, and I have had exhaustive and exhausting opportunities of comparing the teaching values of various systems in use as evidenced by results. I can say without any hesitation that the foreigner who learns English phonetically not only speaks better English, but speaks *more like an Englishman*, than the man who refuses to exchange new lamps for old.

This is, of course, the true test of a polygot—to speak the French of good society is for a Briton vastly well, but to speak like a French society person is vastly better, and far more difficult.

The academically (I use the word in a bad sense) taught foreigner, when he is not oblivious of the existence of unaccented or weak forms—which is very generally the case—is taught to regard *all* such forms as *vulgar*, good enough for the smoking-room perhaps, but not compatible with drawing-room manners.

His society small talk is therefore more or less accurately and painfully pronounced, and is about as inspiring to listen to as the rattle of peas in a tin, owing to his misplaced anxiety to give every word in the sentence its face value, apart from all influence of context. Almost any English phrase will provide an illustration of this phenomenon. I take the following sentence from an evening paper—I do not myself keep a diary:—

"She and I parted at the corner of Piccadilly, and as she crossed the street she turned and smiled good-bye."

Every one will, I suppose, admit on reading this over that there is a difference in the sound value of the three "she's" in this sentence. The first "she" is the strong form (shee), the other two will probably both be weak (pronounced like ship without the final *p*).

The reasons for this difference in pronunciation will certainly suggest themselves to the candid reader, but we are at present more immediately concerned with results than with their causes, and the result, as far as the foreigner's pronunciation of this sentence is concerned, is that all three "she's" are pronounced strong, so that, however good the speaker's English may be in detail, we recognise at once from this particular that he is no Englishman. The foreigner is by nature so averse to using weak forms that, even where such a form occurs regularly and invariably, he will generally substitute a strong form for it, so that, for instance, "Silly Billy" becomes in his mouth "Sillee Billee."

Take another illustration. The sentence "I should not think of it" sounds in ordinary conversation something like 'should'n think'v'it, because the words *I*, *not*, *of*, owing to their place in the sentence, must be weak, and by laying stress on any one of them we modify considerably the force of the phrase. The foreigner learning English academically is, however, still taught in this year of grace 1897, and in ninety-nine cases out of a hundred, that *any form of abbreviation is vulgar*; so that when he does not emphasise the rightfully unaccented words he gives every word in the phrase an equal value: "I—should—not—think—of—it," which produces the impression of a tennis ball patting down a flight of steps, and, though every word may be correctly pronounced, it is impossible to call the result, strictly speaking, an English sentence.

I do not attempt to account for the vagaries of the American tongue, where every rule of accent seems to have been turned topsy-turvy, and where the emphasis falls often on the most unimportant word in the sentence. The editors of the German "Polyglot Series" of conversation books have lately published, for the benefit of their countrymen, *separate* manuals of the

English and American languages, and the system of phonetic transcription therein adopted would form incidentally a powerful argument against the method of representation recently advocated by a correspondent in these columns.

I refer to the system of "phonetic representations in plain English," which must mean, if it means anything, that the experimenter tries to make the sounds of one language square with the sounds of another without taking into account the fact that apparently identical sounds may exhibit physiologically very considerable differences of formation and acoustic in the respective languages, and that it is impossible to produce *exactly* the sounds of a foreign language unless these minute differences of sound-production are observed and imitated.

Any system which endeavours to imitate foreign sounds by means of combinations of English letters must fail, because the sounds represented by the English letters are often produced in an entirely different way from the foreign sound which they are intended to represent. The physiology of phonetics is the most important and the most scientific branch of the subject, and one which amply repays investigation.

We must learn and teach French French—not the Frenchman's ideal of his own language as he imagines he speaks it, and, *a fortiori*, not the English ideal of what French ought to be—and the best way of accomplishing this object is to use simple phonetic transcripts to bolster up and complete *viva-voce* instruction. To talk like a drawing master, phonetic exercises are the *fixing* medium which prevents the impression from blurring or smudging, but the impression should be first produced by word of mouth, and confirmed afterwards by the transcript. How widely the foreign ideal may differ from the native we may learn from Germany, where the idea is still prevalent among the older schoolmasters that the English *th* is "vulgar," and that people of good education in England say always *zis* and *zat* in preference to the more commonplace *this* and *that* (in the polyglot Guides before mentioned, *th* is always figured as *z*). Vulgarity is a charge that is often levelled against phoneticians by infidels. One constantly hears it stated that Sweet's phonetic transcripts of English are little better than pure cockney, and that Passy's French cannot possibly be the language of *la bonne société*.

The more closely one examines phonetically, however, the various transcripts, and as the faculties for phonetic observation become by practice more acute, the more certainly is one driven to admit that, except in matters of unimportant detail (due to the idiosyncrasies of the transcriber, a factor which can never be completely eliminated), the pronunciation as figured is substantially accurate. The "vulgarity" idea is, I think, a very natural, though mistaken, one, and can be readily accounted for. It has always been the custom to consider that only the "common" people, to use a cant phrase, speak phonetically, and that the people that matter are entirely superior to such considerations. Our standard of phonetic English is mostly fixed by the comic papers and by scenes of low life in realistic novels. In *Punch*, for instance, if a parson is represented as talking with a farm-labourer, the latter's words are given with a variety of abbreviations which we have been taught to consider as accurate phonetic transcriptions of rustic speech; but it never seems to occur to any one that it would be just as possible to transcribe the parson's English phonetically as the rustic's. We are all far too much inclined to take the English of the public speaker as a fair sample of the idiom employed in polite conversation, and our experience of phonetics in print naturally leads us to brand all transcriptions (however accurate) of everyday conversation with the stigma of vulgarity.

A little consideration will show that this is only prejudice, and a little work will convince the sceptic of his error, or, failing that, a week or two in the society of a foreigner who speaks "academic" English will certainly effect a cure. It is little short of maddening to carry on a conversation with a foreigner who persistently ignores such forms as "wouldn't" and "can't," and who gives to all his pronouns the full value of the strong forms. In the following sentence: "I didn't approve of what 'e said, but I couldn't tell'im so," if I alter the spelling of "what" to "what," every one will recognise the result as a partially phonetic transcription of the English of the omnibus cad. But it is *not*! It is the English of nine out of ten educated Englishmen, as a comparison with the academic foreigner's version of the same sentence will show. "I did NOT approve of what HE said, but I could NOT tell HIM so."

From their position in the sentence the *he* and *him* are properly unaccented and become thus practically enclitics, and experience will show that the *h*'s of these two words cannot be sounded without an inconvenient and unnecessary struggle, and that, moreover, *nobody ever does sound them*. Perhaps this example may be taken to show how easily one may be mistaken as to the vulgarity of transcript English or French. The English gentleman will tell all comers with a bland and child-like smile that he never drops an *h*; but it is probable that he cannot speak for five minutes without doing so, unbeknown either to himself or his listener, unless the sly phonetiker is abroad.

I have made rather merry, I fear, at the expense of the outlander, but it is entirely without malice and merely to point a moral and adorn my simple tale, for what is ludicrous in a foreigner learning English is doubly ludicrous in an Englishman learning French, because the Briton has drawbacks which the Gaul is spared. I have endeavoured to show that a judicious persevering use of phonetics must draw the attention of students to a number of nice points in French pronunciation which would otherwise altogether escape them, and that it opens up possibilities of approximation to native French accent and intonation which are only limited by the intelligence of the pupil and his powers of observation. The quibbler will probably retort that this is the only limit whatever system be adopted; but how if the intelligence and its efforts be misdirected?

Phonetics can never be an exact science, but the variations which the student has the opportunity of remarking in the course of his work make the work itself more interesting, and render it as a means of general education very profitable.

JOTTINGS.

At the annual conference of the Friends' Teachers' Guild, held in Birmingham from the 12th to the 14th ult., some hundred members of the Guild were present, all of whom were very hospitably entertained by Birmingham Friends. By their invitation, a *soirée* was held on the first evening in the Priory Rooms, adjoining the Bull Street Meeting-house premises. The same evening, at the first sitting of the Guild, William S. Lean, M.A., the President for the present year, read an address, the main theme of which was the Flounders Institute, its origin and history up to the present time, the character of the studies, and the scholarship of the students who have passed through the Institute since its foundation. Mr. W. S. Lean laid much stress on the need of a high standard of scholarship among teachers, as he thought the tendency in the present day was to give too much prominence to the art of teaching. He would not have this latter subject as an essential in the final examination. At the business meeting on Fifth-day morning, the Secretary, Charles E. Stansfield, M.A., read his report. In reference to the pension scheme which has been under the consideration of the Executive during the past year, he said that of the larger number of papers with various questions concerning a scheme which had been sent to all the members, forty-one only had been returned, twenty-five of whom definitely wished for a pension scheme. One fact elicited from the answers was that a comparatively small proportion of teachers held an assurance policy, and the Executive wished to emphasise the advisability for most to become insured. As to the scheme in general, they felt that they had done all they could in the matter, and that it should be left for the present. School committees can now judge as to the opinion of teachers respecting the scheme. One of the committees is already making an attempt to come to an arrangement with the members of the school staff. In his report Charles E. Stansfield gave information as to his arrangement of affiliation with the Teachers' Guild, by which its literature would be sent to all members, who would also have the privilege of attending the Annual Conference. Hugh Richardson, M.A., the Treasurer, reported a balance in hand of £15. Considerable discussion took place upon a motion to allow the wives of teachers to become members of the Guild, but, as it was not easy in the time to come to a definite conclusion, the motion was withdrawn, that the matter might have the further consideration of the Executive during the coming year. After having acted as Secretary to the Guild for three years, including the first and most arduous, C. E. Stansfield retired from the post. After nomination by the Executive, the meeting elected Helen Bayes, B.A., as his successor. On the conclusion of the business meeting, an able paper was read by Frank E. Pollard, M.A., on "The Training of the Will." In the afternoon the majority of the members of the Guild visited either one or more of the Board schools, and on the following afternoon Mason College, the Girls' High School, the Art Gallery, and other places of interest were visited. The evening of Fifth-day was devoted to a discussion on the teaching of science, A. Pollard, B.A., Dr. B. Lean, and H. Richardson, M.A., reading

papers, which were supplemented by an address from Professor Miall, of Yorkshire College. The last sitting, on Sixth-day morning, was given up to an interesting discussion upon athletics in our schools. E. Spence Watson read a paper upon the physical training of girls. F. J. Edminson, M.A., and A. E. Binyon also read papers on compulsory athletics of boys. Both writers advocated a certain amount of compulsion, but it should not be brought to bear upon others than the loafers.

As the result of a meeting held last month, over which the Bishop of Salisbury presided, it was resolved that a hostel, affiliated, by consent of the Diocesan Board of Education, to the Salisbury Training College, should be opened in January next to receive into residence the daughters of clergy and professional men who desire to become teachers in elementary schools. A committee has been formed, under the presidency of the Bishop, with Rev. C. N. Wyld and Canon Steward as secretaries. Reports of H.M. Chief Inspectors have from time to time drawn attention to the desirability of encouraging persons of the highest qualifications and culture to undertake work in our elementary schools, and have stated that "the present system does not produce the breadth and variety of type desirable in a great national army of teachers." The dearth of mistresses for our smaller rural schools and as assistants for infant classes is widely felt throughout this and the neighbouring dioceses. In the face of the present depression in agriculture affecting landlords and farmers, as well as the tithes and glebes of the clergy, it is felt that there must be many parents who would welcome this opportunity for enabling their daughters to qualify themselves for so honourable a profession, of which this branch would seem to offer more scope for devoted zeal and effort, greater independence, and more adequate and assured remuneration than is usually offered to private governesses. In time to come exhibitions may be given to the daughters of such parents as cannot afford the full fee, either by the different charitable organizations, or by generous individual donors. It is hoped that the fee charged will eventually be sufficient to make the institution financially self-supporting, but the initial expenses of furnishing a house and of the working for the first two years must necessarily be heavy. To place the hostel at once on a satisfactory footing the committee ask for assistance to the amount of at least £300, and a guarantee fund of at least £100. The Wilts and Dorset Bank at its various branches will receive donations to "the Salisbury Hostel Account."

In the Conference-room of the London School Board, on January 22, her Royal Highness Princess Louise, Marchioness of Lorne, attended a lecture on "School Drawing" given by Mr. T. R. Ablett, honorary Director of the Royal Drawing Society, of which the Princess is herself President. Lord Reay, Chairman of the Board, acted as host of the occasion, and her Royal Highness was attended by Colonel Collins, C.B., and Miss Campbell. There was a crowded attendance of invited visitors, many of them being teachers in secondary schools, and not a few special students of art teaching. After a few opening words from Lord Reay, the lecturer (Mr. Ablett) referred to the teaching of drawing "from memory and objects." The Society was unfettered by the limitations known as payment by results. It embraced in its operations not less than two hundred and fifty schools and thirty thousand pupils all over the country. The ages of these pupils ranged from six to eighteen years. It should be the object of the teachers to encourage the language of delineation, to endeavour to interest the children in the objects round them, and to quicken their progress towards the higher study of art. Memory drawing excelled all others in developing power and tone. Drawing was the best means of cultivating the powers of observation. The Japanese learned to draw as they learned to write, and were more quick with the brush than with the pencil. Why should not English schools copy the Japanese in their enthusiasm for art education? The great object of the teacher should be to make his lesson attractive.

THE Technical Education Board of the London County Council announces 210 free scholarships in domestic economy, to be held in the Battersea, Borough, South-West London, and Woolwich Polytechnics, and in the institutes of Norwood, Wandsworth, Deptford House, Passmore Edwards' Settlement, and St. Mark's School, Violet Hill. Candidates must be either pupils about to leave school, not less than thirteen years of age, and having passed the fifth standard, or ex-pupils who have left school for a period of not more than one year, having been thirteen years of age at the time of their leaving, and having also passed the fifth standard. No candidate whose parents are in receipt of more than £2 a week, or £100 a year, will be eligible. Further scholarships will be offered at the end of the five months' course to girls whose parents desire them to remain for a further course of general instruction, or with a view to specializing in cookery, laundrywork, or dress-making; and the award of these scholarships will be made by the Board on the recommendation of the lady superintendent of the domestic economy school. These scholarships will entitle the holders to twenty-one weeks' instruction, together with dinner and tea on each school-day.

A MEETING of the Association of Principals and Lecturers of Training Colleges was held on Friday and Saturday, January 21 and 22, in the Day Room, at Whitelands College. Mr. Scott Coward gave a stirring and stimulating address on the great advance made recently in the colleges, and the points at which further advance was chiefly needed. Several other officials of the Department were present at the meeting, including Mr. Barnett, Mr. Pooley, and Mr. M. E. Sadler. Professor Miall, of Leeds, roused his audience to enthusiasm by a racy, humorous, and keen address on the Training of Teachers of Elementary Science, full of points and of practical sagacity. A long paper by Principal Withers, on the Certificate List and Syllabus, was ordered to be printed, so that members might consider and, if necessary, act upon its recommendations. The staff and students of Whitelands College provided an admirably prepared and appointed play for the evening's entertainment, and showed cordial hospitality to the friends from other colleges. Mr. Frere, of Hockerill, is the new President of the Association; Miss Dunlop and Mr. Oscar Browning, of Cambridge, Vice-Presidents. Mr. Griffiths, of Battersea, continues as Hon. Secretary.

At the annual general meeting of the Private Schools' Association, held last month in London, Mr. J. Bayley (Wellington, Salop), in his presidential address, expressed himself in favour of a central authority for secondary education, and against the revival of the clauses of the Education Bill of 1896 which invested county authorities with powers in that direction. Amongst the few honourable exceptions to the rule that County Councils had failed in prosecuting the work of secondary and technical education was that of Lancashire.

THE Battersea Polytechnic has just opened a technical school to give special instruction to young apprentices and to lads leaving the elementary schools who are desirous of entering the building, mechanical, or electrical engineering trades. A special feature will be the granting of certificates to students leaving the school, which it is hoped will prove of service to the holders in seeking employment, and the issuing of periodical lists to employers of labour, giving particulars of students who have passed through the school and are wanting to enter works and factories.

THE Council of Queen's College, Harley Street, the earliest institution for the higher education of women founded during the Queen's reign, are anxious to enlarge and improve their buildings, which, in their present condition, are not too well adapted for the purposes for which they are used. It is proposed to spend £7,000, of which £3,000 remains to be raised, and it is hoped that this sum may be collected during the present year, which is the jubilee of the College.

THE Association of Assistant-Mistresses in Public Secondary Schools held its annual general meeting (the first since its incorporation) on Saturday, January 15, in the hall of the North London Collegiate School. The main subjects of discussion were the proposal to form a joint register for women teachers by co-operation with other educational bodies of secondary teachers, and resolutions dealing with the professional training of teachers, drawn up by a joint committee. These last were in the main accepted by the Association. An interesting paper on "Science Teaching" was also read. The president for the present year is Miss Sullivan.

A LITTLE learning is a dangerous thing. The farewell address of the late Lord Mayor to the Court of Aldermen is thus reported in the *City Press*:—"My last words, therefore, to you are these: *Vale et benedicite.*"

FRESH HOWLERS (warranted genuine by the sender):—

1. What are tithes?—Things worn by ladies in circuses and pantomimes.
2. What do you know of the Pilgrimage of Grace?—It was written by John Bunyan.
3. What do you know of Lord Wolseley?—He was a Minister of Henry VIII, who exclaimed: "If I had served my God as I have served my King, I should not have been beheaded!"
4. Ecce super corpus communia damna gementes,
Obliiti decoris, virque paterque jacent.—
So the husband and father lie upon her body, forgetting all decorum, and uttering common . . . dashes.

THE Rev. W. E. Kemp, B.A., late assistant-priest at St. Thomas's, Stockport, has been appointed chaplain to the Woodard School, Taunton.

THE Rev. Archdall B. Wynne-Wilson, B.A., assistant-chaplain and master at Berkhamsted School, has been appointed Private Chaplain to the Bishop of Hereford.

COLLEGE OF PRECEPTORS.

LECTURES FOR TEACHERS

On the Science, Art, and History of Education.

THE CHARACTERISTICS AND DEVELOPMENT OF THE CHILD.

To be delivered by JAMES SULLY, M.A., LL.D.,

Grote Professor of the Philosophy of Mind and Logic at University College, London.

The First Course of Lectures (26th Annual Series) will commence on Thursday, February 10th, at 7 p.m.

This Course, consisting of Twelve Lectures, will deal with the Common Characteristics of Childhood and with the main features of Early Development. Attention will be paid to the more important differences of intelligence and disposition among children. The study of the natural history of children's minds will throughout be made subservient to the practical problem of the Educator, viz., the furtherance of a perfect and harmonious development.

Directions will be given as to reading, and care will be taken, by the setting of papers and by conversation, to give students a real grasp of the subjects of the Course.

SYLLABUS.

I.—How the Modern Interest in Child Study arose—Work of Rousseau and others—Beginnings of a more exact Investigation of Children's Powers—The Value of this Child-Study to the Teacher—How far such Methodical Observation can be carried out by the Teacher—Need of studying the Child's Mind in its Individual Variations.

II.—The Physical Basis of Mental Growth—Importance of Studying the Physical Characteristics of Infancy and Childhood—The Laws of Normal Bodily Growth—Methodical Testing of Children's Muscular Powers—Value of Spontaneous Bodily Activity—Play as a Means of Healthy Development—The Educator as Guardian of the Child's Bodily Welfare.

III.—The New Theory of Development—The Child's Instinctive Impulse towards Self-development—Meaning of Children's Imitation, Questioning, &c.—The Normal Course of Development of a Child's Mind—Development without and with Education—Importance of Studying Differences in the Development of Children.

IV.—The Function of the Senses in Early Life—Connexion between Activity of the Senses and Motor Organs—Play as a Field of Mental Activity—Bearing of these Characteristics on Early Education—The Fundamental Principle of the Kindergarten—Sense-Training as the beginning of Mind-Training—The Problem of Arousing Interest, Attention, and the Impulse to Examine Things.

V.—Sense-Activity and the Knowledge of Things—How a Child spontaneously Analyses and Synthesises its Sense Material—The Process of Learning to Distinguish and Recognize Objects—The true Relation of the Educator to the work of Observing Objects—Defects of Children's Spontaneous Observation as shown in their Drawing, &c.—The Importance of Testing the Progress of Observing Power.

VI.—The Development of Ideas out of Sense-Percepts—First Manifestation of Memory—Importance of Noting Directions of Children's Interest and Association of Ideas—Examination of the Contents of Children's Minds—Variations of Retentive Power among Children—How the Study of the Peculiarities of a Child's Memory assists the Teacher.

VII.—First Efforts to get beyond the Known—The Characteristics of the Early Activity of Imagination—Fanciful Modes of Apperceiving New and Strange Objects—The Freer Field of Childish Invention—Analogies between Ideas of Children and of Uncivilized Adults—The Instructor as Disciplining Childish Imagination to Orderly Activity.

VIII.—The Mental Image and the General Idea—Spontaneous Movement of Children's Minds towards Generalization—How a Child uses Names—Difference between Children's Spontaneous Generalizations and those required by the Educator—How the Work of Abstraction should be begun—Words as Aids to Thought and as taking the Place of Thought.

IX.—Thinking as Articulate in a Judgment—What the Process of Judgment Implies—Characteristics of Children's Spontaneous Assertions—The Growth of a Feeling for Truthful Assertion—Judgment as involving Inference—Some Characteristics of Children's Reasoning—Early Thoughts about Nature, History, and so forth—How the Educator should deal with the Child's Manners of Reasoning.

X.—The Study of the Feelings of Children—Under-estimation and Exaggeration of Children's Sensitiveness—Beginnings of a more Methodical Study of Children's Fears, &c.—The Problem of Education in relation to Children's Feelings—The Management of the Turbulent Passions—The Nourishing of the Germs of Sympathy, and the Higher Emotions.

XI.—Early Directions of Active Impulse—Play as a Field for the Free Expression of the Active Self—The Weakness of the Young Will—Education as Disciplining the Will in an orderly effort to realize some permanent good—Asking too much and too little of the Young Will—How much the Educator does towards forming a Child's Character.

XII.—The Unity of the Child's Mental Life—How Feeling, Intelligence, and Volition Interact in Early Life—Relation of Interest, Curiosity, and Concentration of Mind—Beginnings of Self-Control in Children—Various Directions of Educational Work and their Interconnexion—The Relation of the Educator to the Child's Individuality.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have Free Admission to the Course.

CAMBRIDGE LOCALS AND COLLEGE OF PRECEPTORS EXAMINATIONS, 1898.

SUITABLE BOOKS IN The University Tutorial and Preceptors' Series.

- CAESAR.—DE BELLO GALLICO I.** Edited by A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Lond. and Camb. 1s. 6d. Vocabulary and Test Papers. *Interleaved.* 1s.
- CAESAR.—DE BELLO GALLICO II.** Edited by A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Introduction, Text, and Notes. 1s. 6d. A Vocabulary (in order of the Text), with Test Papers. *Interleaved.* 1s.
- CAESAR.—DE BELLO GALLICO III.** Edited by the same Authors. (Uniform with the above in price and arrangement of parts.)
- CICERO.—DE SENECTUTE.** Edited by A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Introduction, Text, and Notes. 1s. 6d. Vocabulary with Test Papers. *Interleaved.* 1s.
- HORACE.—ODES, Book I.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Lond. and Camb. 1s. 6d. Vocabulary, with Test Papers. *Interleaved.* 1s.
- HORACE.—ODES, Book II.** Edited by the same Authors. Introduction, Text, and Notes. 1s. 6d. Vocabulary and Test Papers. 1s.
- HORACE.—ODES, Book IV.** Edited by A. H. ALLCROFT, M.A., and F. G. PLAISTOWE, M.A. Lond. and Camb. (Uniform with the above in price and arrangement of parts.)
- LIVY.—Book V.** Edited by W. F. MASOM, M.A. Lond., and A. H. ALLCROFT, M.A. Oxon. Introduction, Text, and Notes. 2s. 6d. A Vocabulary (in order of the Text), with Test Papers. *Interleaved.* 1s.
- OVID.—METAMORPHOSES XIII.** Edited by J. H. HAYDON, M.A. Lond. and Camb. Gold Medallist in Classics. Introduction, Text, and Notes. 1s. 6d. A Vocabulary (in order of the Text), with Test Papers. *Interleaved.* 1s.
- VERGIL.—ÆNEID, Book I.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. 1s. 6d. Vocabulary and Test Papers. *Interleaved.* 1s.
- VERGIL.—ÆNEID, Book V.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. 1s. 6d. Vocabulary, with Test Papers. *Interleaved.* 1s.
- TACITUS.—HISTORIES, Book I.** Edited by F. G. PLAISTOWE, M.A. Lond. and Camb., and H. J. MAIDMENT, M.A. Lond. and Oxon. Introduction, Text, and Notes. 3s. 6d. Vocabulary (in order of the Text), with Test Papers. *Interleaved.* 1s.
- XENOPHON.—ANABASIS, Book I.** By A. H. ALLCROFT, M.A. Oxon., and F. L. D. RICHARDSON, B.A. Lond. 1s. 6d. Vocabulary and Test Papers. *Interleaved.* 1s.
- SHAKESPEARE.—MERCHANT OF VENICE.** Edited, with Introduction and Notes, by Prof. W. J. ROLFE, D.Litt. 2s.
- ENGLAND UNDER THE STUARTS,** being a History of England and English Literature from 1603 to 1688. By C. S. FEARENSIDE, M.A. Oxon., and A. J. WYATT, M.A. Lond. and Camb. 3s. 6d. *net.*
- GREEK READER, THE TUTORIAL, or Proœmia Græca.** By A. WAUGH YOUNG, M.A. Lond. 2s. 6d.
- LATIN GRAMMAR, THE TUTORIAL.** By B. J. HAYES, M.A. Lond. and Camb. Gold Medallist in Classics, and W. F. MASOM, M.A. Lond. *Second Edition.* 3s. 6d.
- LATIN GRAMMAR, EXERCISES AND TEST QUESTIONS ON THE TUTORIAL.** By F. L. D. RICHARDSON, B.A. Lond., and A. E. W. HAZEL, LL.D., M.A., B.C.L. 1s. 6d. Key, by F. L. D. RICHARDSON, B.A. Lond., and W. F. MASOM, M.A. Lond. 2s. 6d. *net.*
- LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A. Lond. and Camb., and F. L. D. RICHARDSON, B.A. Lond. 2s. 6d. Key, 2s. 6d. *net.* [*In the press.*]
- LATIN COMPOSITION and Syntax.** With copious Exercises, and Vocabulary to each Exercise. By A. H. ALLCROFT, M.A. Oxon., and J. H. HAYDON, M.A. Camb. and Lond. *Fourth Edition.* 2s. 6d. Key, 2s. 6d. *net.*
- LATIN READER, THE TUTORIAL.** With Vocabulary and Appendix containing the Unseen set at London Matriculation and Inter. Arts, 1875-1896. 2s. 6d. Key to Parts I., II., V., 2s. 6d. *net.*
- FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. 2s. 6d.
- FRENCH PROSE READER.** Edited by S. BARLET, B. ès Sc., Examiner in French to the College of Preceptors, and W. F. MASOM, M.A. Lond. With Vocabulary. *Third Edition.* 2s. 6d.
- NOTES and KEY. By H. E. JUST, M.A. Lond., and H. C. A. TARRANT, B.A. Lond. 3s. 6d. *net.*
- FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. 1s. 6d.
- ALGEBRA, THE INTERMEDIATE.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Based on the *Algebra* of Radhakrishnan. 3s. 6d.
- EUCLID.—Books I-IV.** By RUPERT DEAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. 2s. 6d.
- TRIGONOMETRY, THE TUTORIAL.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.
- TRIGONOMETRY, SYNOPSIS OF ELEMENTARY.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S. *Interleaved.* 1s. 6d.
- MENSURATION OF THE SIMPLER FIGURES.** By WILLIAM BRIGGS, LL.B., M.A., F.C.S., and T. W. EDMONDSON, B.A. Lond. and Camb. *Second Edition.* 2s. 6d.
- HYDROSTATICS, AN ELEMENTARY TEXT-BOOK OF.** With Examples and Answers. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. *Second Edition.* 2s. Key, 2s. *net.*
- MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A., B.Sc. 2s. 6d.
- MECHANICS AND HYDROSTATICS, WORKED EXAMPLES IN:** A Graduated Course on the London Matriculation Syllabus. *Third Edition. Revised and Enlarged.* 1s. 6d.
- DYNAMICS, TEXT-BOOK OF.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 2s. 6d.
- ELEMENTARY QUALITATIVE ANALYSIS.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and R. W. STEWART, D.Sc. Lond. *Second Edition.* 1s. 6d.
- SOUND, LIGHT, AND HEAT, FIRST STAGE.** By JOHN DON, M.A., B.Sc. Lond. 2s.
- MAGNETISM AND ELECTRICITY, TEXT-BOOK OF.** By R. W. STEWART, D.Sc. *Third Edition.* 3s. 6d.
- CHEMISTRY, THE TUTORIAL.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg, Lecturer in Chemistry in the Victoria University. Edited by WILLIAM BRIGGS, M.A., F.C.S.
Part I. Non-Metals. 3s. 6d. Part II. Metals. 3s. 6d.
- CHEMISTRY, SYNOPSIS OF NON-METALLIC.** With an Appendix on Calculations. By WILLIAM BRIGGS, M.A., F.C.S. *Interleaved.* 1s. 6d.
- BIOLOGY, TEXT-BOOK OF.** With Plates and numerous Questions. By H. G. WELLS, B.Sc. Lond., F.C.P. With an Introduction by G. B. HOWES, F.L.S., F.Z.S. In Two Parts.
Part I. Vertebrates. *Second Edition.* 6s. 6d.
Part II. Invertebrates and Plants. 6s. 6d.

RECENTLY PUBLISHED.

The Decline and Fall of the Roman Empire. By EDWARD GIBBON. A New Edition. Edited, with Notes, Appendices, and Maps, by J. B. BURY, M.A., Fellow of Trinity College, Dublin. In Seven Volumes. Demy 8vo, gilt top, 8s. 6d. each; crown 8vo, 6s. each. Vol. IV.

"The time has certainly arrived for a new edition of Gibbon's great work. . . . Professor Bury is the right man to undertake this task. His learning is amazing, both in extent and accuracy. The book is issued in a handy form and at a moderate price, and it is admirably printed."—*Times*.

"Gibbon's immortal work has never been presented in so convenient a shape."—*Guardian*.

A Short History of Rome. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 4 Maps. Crown 8vo, 3s. 6d.

"An original work, written on an original plan, and with uncommon freshness and vigour."—*Speaker*.

A Primer of Wordsworth. By LAURIE MAGNUS. Crown 8vo, 2s. 6d.

"Thoughtful and informing."—*Manchester Guardian*.

"Mr. Magnus is both a careful student and an enthusiast."—*Times*.

"A valuable contribution to Wordsworthian literature. Simple and unaffected."—*Literature*.

A Primer of the Bible. By Prof. W. H. BENNETT. Crown 8vo, 2s. 6d.

"The work of an honest, fearless, and sound critic. An excellent guide."—*Manchester Guardian*.

"Scholarly, clear, and interesting."—*Scotsman*.

Voces Academicæ. By C. GRANT ROBERTSON, M.A., Fellow of All Souls, Oxford. With a Frontispiece. Fcap. 8vo, 2s. 6d.

This is a volume of light satirical dialogues, and should be read by all who are interested in the life of Oxford.

Demosthenes against Conon and Callicles. Edited, with Notes and Vocabulary, by F. DARWIN SWIFT, M.A., formerly Scholar of Queen's College, Oxford; Assistant-Master at Denstone College. Fcap. 8vo, 2s.

The Odyssey of Homer. A Translation by J. G. CORDERY. Crown 8vo, 7s. 6d.

"This new version of the Odyssey fairly deserves a place of honour among its many rivals. Perhaps there is none from which a more accurate knowledge of the original can be gathered with greater pleasure, at least of those that are in metre."—*Manchester Guardian*.

Plauti Bacchides. Edited, with Introduction, Commentary, and Critical Notes, by J. M'COSH, M.A. Fcap. 4to, 12s. 6d.

"The notes are copious, and contain a great deal of information that is good and useful."—*Classical Review*.

Taciti Agricola. With Introduction, Notes, Map, &c. By R. F. DAVIS, M.A., Assistant-Master at Weymouth College. Crown 8vo, 2s.

Taciti Germania. By the same Editor. Crown 8vo, 2s.

Ornamental Design for Woven Fabrics. By C. STEPHENSON, of the Technical College, Bradford, and F. SUDARDS, of the Yorkshire College, Leeds. With 65 full-page Plates, and numerous Designs and Diagrams in the text. Demy 8vo, 7s. 6d.

The aim of this book is to supply, in a systematic and practical form, information on the subject of Decorative Design as applied to Woven Fabrics, and is primarily intended to meet the requirements of students in Textile and Art Schools, or of designers actively engaged in the weaving industry. Its wealth of illustration is a marked feature of the book.

Passages for Unseen Translation. By E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and A. M. COOK, M.A., late Scholar of Wadham College, Oxford; Assistant-Masters at St. Paul's School. Crown 8vo, 3s. 6d.

This book contains two hundred Latin and two hundred Greek Passages, and has been very carefully compiled to meet the wants of V. and VI. Form boys at Public Schools. It is also well adapted for the use of Honourmen at the Universities.

Exercises in Latin Accidence. By S. E. WINBOLT, Assistant-Master in Christ's Hospital. Crown 8vo, 1s. 6d.

An elementary book adapted for Lower Forms, to accompany the Shorter Latin Primer.

"Accurate and well arranged."—*Athenæum*.

Notes on Greek and Latin Syntax. By G. BUCKLAND GREEN, M.A., Assistant-Master at the Edinburgh Academy, late Fellow of St. John's College, Oxon. Crown 8vo, 3s. 6d.

Notes and explanations on the chief difficulties of Greek and Latin Syntax, with numerous passages for exercises.

"Well arranged, clear, and extremely useful."—*School Guardian*.

"Supplies a gap in educational literature."—*Glasgow Herald*.

A Digest of Deductive Logic. By JOHNSON BARKER. Crown 8vo, 2s. 6d.

A short introduction to logic for students preparing for examinations.

How to Make a Dress. By J. A. E. WOOD. Illustrated. Crown 8vo, 1s. 6d. (*Handbooks of Technology*.)

"Though primarily intended for students, Miss Wood's dainty little manual may be consulted with advantage by any girls who want to make their own frocks. The directions are simple and clear, and the diagrams very helpful."—*Literature*.

"A splendid little book."—*Evening News*.

METHUEN & CO., 36 ESSEX STREET, STRAND.

LONDON UNIVERSITY EXAMINATIONS.

Special Subjects, 1898 and 1899.

All texts are annotated and contain full Introductions. The Vocabularies are in order of the Text, and are preceded by two series of Test Papers.

MATRICULATION.

For June, 1898.

- Vergil.—Aeneid, Book I.** TEXT, 1s. 6d. VOCABULARY, *Interleaved*, 1s. TRANSLATION, 1s. IN ONE VOL., 3s.
Vergil.—Aeneid, Book II. (Uniform with the above in price and arrangement of parts.)
Aeschylus.—Persae. TEXT (with Map), 3s. 6d. TRANSLATION, 1s. 6d. IN ONE VOL., 4s. 6d.

For January, 1899.

- Ovid.—Metamorphoses XIII.** INTRODUCTION, TEXT, and NOTES, 1s. 6d. A VOCABULARY (in order of the Text), with TEST PAPERS. *Interleaved*, 1s. A CLOSE TRANSLATION, 1s. THE THREE PARTS IN ONE VOL., 3s.
Ovid.—Metamorphoses XIV. (Uniform with the above in price and arrangement of parts.) [In the press.
Xenophon.—Anabasis, Book IV. INTRODUCTION, TEXT, and NOTES, 3s. 6d. A CLOSE TRANSLATION, 1s. 6d.

INTER. ARTS, 1898.

- Livy.—Book VI.** TEXT, 3s. 6d. VOCABULARY, *Interleaved*, 1s. TRANSLATION, 2s. IN ONE VOL., 5s. 6d.
Horace.—Epistles. TEXT, 3s. 6d. VOCABULARY, *Interleaved*, 1s. TRANSLATION, 1s. 6d. IN ONE VOL., 5s. 6d.
Herodotus.—Book III. TEXT, 4s. 6d. VOCABULARY, *Interleaved*, 1s. TRANSLATION, 2s. IN ONE VOL., 6s. 6d.
History of England, 1485-1603. (Vol. II. of the *Intermediate Text-Book of English History*.) 4s. 6d.
History of English Literature, 1558-1660. (Vol. II. of the *Intermediate Text-Book of English Literature*.) 3s. 6d.
Chaucer.—Man of Lawes Tale. With the PROLOGUE to the CANTERBURY TALES. INTRODUCTION, TEXT, NOTES, and GLOSSARY. 2s. 6d.
Spenser.—Faerie Queene, Book I. With INTRODUCTION, NOTES, and GLOSSARY. 2s. 6d.
Shakespeare.—King John. 2s.
Shakespeare.—The Tempest. 2s. (For Hons.)
Intermediate English Questions, 1898. 1s. 6d.

B.A., 1898.

- Tacitus.—Histories, Book III.** A TRANSLATION, with TEST PAPERS. 2s. 6d.
Juvenal.—Satires XI., XIII., XIV. 3s. 6d.
Juvenal.—Satires VIII., X.-XVI. A TRANSLATION, with TEST PAPERS. 2s. 6d.
History of Rome, 31 B.C. to 96 A.D.: The Early Principate. With TEST QUESTIONS. *Second Edition.* 2s. 6d.
Synopsis of Roman History, 14-96 A.D. *Interleaved.* 1s.
Plato.—Phaedo. 3s. 6d. A TRANSLATION, with TEST PAPERS. 2s. 6d.
Aeschylus.—Septem contra Thebas. 3s. 6d. A TRANSLATION, with TEST PAPERS. 2s. 6d.
History of Greece, 495 to 431 B.C.: The Making of Athens. With TEST QUESTIONS and Five Maps. 4s. 6d.
Synopsis of Grecian History, 495 to 404 B.C. With TEST QUESTIONS. *Interleaved.* 1s. 6d.
History of English Literature, 1558-1660. (Being Vol. II. of the *Intermediate Text-Book of English Literature*.) 3s. 6d.
Shakespeare.—King Lear. 2s.
History of England, 1603-1714. (Being Vol. III. of the *Intermediate Text-Book of English History*.) 4s. 6d.

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—		£. s. d.
Whole Page	...	5 10 0
Half Page	...	3 0 0
Quarter Page	...	1 15 0
Per Inch in Column	...	0 8 0
PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—		
Scholarships, Official Notices, &c.—	6d. per line; minimum charge, 5s.	
Situations Vacant and Engagements Wanted.—	30 words for 2s.; each 10 words after, 6d.	
Lectures, Classes, Non-Resident Engagements, &c.—	48 words for 3s. each 8 words after, 6d.	
[These minimum charges do not include a copy of paper.]		

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS. Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 86 FLEET STREET, LONDON, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "City Bank, Ludgate Branch." Postage Stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders should be "crossed."

American subscribers may conveniently remit through Mr. C. W. BARDEEN, 406 South Franklin Street, Syracuse, New York; or Messrs. E. L. KELLOGG & Co., 61 East 9th Street, New York.

LONDON: WILLIAM RICE, 86 FLEET STREET, E.C.

A ROMAN CATHOLIC UNIVERSITY FOR IRELAND.

VIEWS OF MONSIGNOR MOLLOY, D.D.

SINCE the "adjacent island of Great Britain," as the Manxman phrased it, is not so thoroughly versed in Irish affairs as is desirable, it is perhaps excusable to remind its inhabitants that Monsignor Gerald Molloy, a distinguished personality in Dublin society, is Rector of the Catholic University for Ireland. But this institution is unendowed by the State, and is, in consequence, so hampered for want of funds that it cannot adequately fulfil the functions of a University.

English readers will remember that practically there exist two Universities in Ireland: Dublin University, with its sole college of Trinity, founded in Elizabeth's reign, and the Royal University, chartered in 1880. Trinity College claims that its degrees, honours, prizes are open to all without distinction of religion (not, alas! of sex); it has one Catholic fellow, out of thirty-seven, and two Catholic members of Council, out of sixteen. The Royal University is merely an examining body; everything it can offer is open to all, regardless of sex or religion. It possesses an annual endowment of £20,000, charged on the Irish Church funds and paid yearly by the Land Commissioners.

Irish Catholics are not satisfied with these arrangements, and it was for the purpose of finding out what they really desire that I met Monsignor Molloy at the Catholic College, St. Stephen's Green. The question is very much in the air just now, and an idea generally prevails that the present Government is favourably disposed towards the Catholic claims. Dr. Molloy stated, without any circumlocution, that there were three different schemes which had been suggested, at various times, for the solution of the question.

"First," he said, "we might have a Catholic University, recognised and endowed by the State, with power to confer degrees. There might be two or more colleges connected with this University: say one in Dublin, one in Cork, and one in Belfast."

"Yes; and the second?"

"The second scheme would make the University of Dublin a national University, by establishing one or more Catholic Colleges in connexion with it, and by giving to Catholics a fair representation on the governing body. The third scheme

would establish one or more endowed Catholic Colleges, under the Royal University."

"And which of these schemes do you regard as the best?"

"From a strictly academical point of view, the second would seem to be the best. It would bring all the University Colleges of Ireland into healthy rivalry under one University, and would secure for all students the prestige of an established and recognised standard of University education."

"What objection do you see to the third scheme—a Catholic College under the Royal?"

"The Royal University is only an examining board, not a teaching body. It makes no provision for residence. Even Queen's College, Belfast, which is the most successful of the endowed colleges in connexion with the Royal University, has, I believe, no students residing within its walls. Now we attach great importance to residence; and we consider that mere courses of lectures, without collegiate residence, are only a poor form of University education."

"What do you suppose to be the chief advantages of collegiate residence?"

"The advantages to which I refer are of a subtle and impalpable character, not easy to define. They consist chiefly, I would say, in the contact of students with one another; in the action of mind on mind by means of academical associations, discussions, conflicts of opinion; and in the unconscious but powerful influence of sympathy and example."

"These are no doubt, very great advantages."

"I think it is not rating them too high to say that they constitute at least one half of the value of a University career. Now, if you wish, I will take up each of the three schemes, and point out what I consider may be objected against each, and what may be said in reply to such objections."

"Can there be any objection on your side to a Catholic University recognised and endowed by the State? I thought this was the great desideratum."

"Most things human have their drawbacks, and it is certain that a new creation would require some time to gain public confidence. This is well known to be the case in University affairs. No matter what the intrinsic merits of a new University might be, there is a risk that the public reputation of its degrees would at first be lower than is the case with an old University."

"I presume that the public consider the degrees of your new Royal University as of less value than Dublin University degrees."

"Yes, and in spite of the fact that the standard of degrees in the Royal is higher. I do not in the least mean this as a reproach to the University of Dublin; it arises from the fact that, like the London University, the Royal University is only an examining board, and as such, it must adopt a high standard of degrees in order to maintain a high reputation."

"Am I to understand that you object to the first scheme?"

"No; personally I think that the objection I have referred to is not fatal, nor even very serious. The new Catholic University would make its reputation more quickly than some persons appear to think. Of course, even among those favourably disposed to it, it would take some time to establish itself, but the numbers and distinction of its students would hasten the process."

"How does a Catholic College under the Royal University appear to you?"

"As the least satisfactory to Catholics. Indeed, I am not at all certain that the scheme would be accepted. The Royal University is on a lower level as an academic institution. Catholics have a right to a University of their own, or to association with the highest University, the one enjoying most prestige."

"Might there not be real loss to learning in the multiplication of Universities, especially in a poor country like Ireland?"

"I will answer that question in a moment," rejoined Monsignor Molloy. "I should first like to finish what I have to say about the third scheme. To put the Catholics off with a University enjoying no prestige, to refuse them one of their own, and leave the University of Dublin practically Protestant for all time, when the majority of the population is Catholic, would be highly unsatisfactory."

"I understand that view. And now, how will you justify another University to be founded despite Ireland's poverty?"

"I don't admit that Ireland is poor. A Royal Commission appointed by the English Government, to investigate the

financial relations between England and Ireland, has recently reported that Ireland is, every year, overtaxed to the extent of between two-and-a-half and three millions sterling. This enormous sum, annually expended in Ireland and wisely administered, would go far to make her a prosperous and wealthy country. Moreover, the excessive taxation has been going on, it appears, for nearly fifty years; and the accumulation of arrears now due to Ireland, amounts, even without interest, to somewhat like a hundred millions sterling.

"That would go a long way to found a University."

"We only want some £40,000 annually, that is, about the same endowment as Trinity College enjoys, and say about £200,000 for a site and buildings."

"It seems to me that the Catholic University population cannot be very large, for Catholics are the poorer portion of the population."

"True, the Irish are poor, if you put out of consideration what is due to them by England. But the Scotch are poor also, and yet they have four Universities; the bulk of their students are drawn from the middle and lower classes; no one urges that because of its poverty Scotland has done ill in encouraging higher education. And the Irish have a real love of learning, a natural desire for higher studies. If the opportunity of obtaining University education, for which we have been clamouring these fifty years, were given to the Irish people, I believe that Ireland would astonish the world with the number and distinction of the scholars it would produce."

"If the University of Dublin were made a national University, with a Mixed Board of Catholics and Protestants, in equal proportions, do you not think there would be a difficulty in securing equal treatment for Catholics and Protestants?"

"There would be a difficulty, but not an insurmountable difficulty. At present, the University of Dublin is under a governing board almost entirely Protestant; and we are constantly assured that Catholics and Protestants receive perfectly equal treatment. Now it seems to me that the difficulty of securing this desirable end would not be increased, but rather diminished, by giving to each denomination an equal representation on the governing board."

"To take a concrete example of the difficulty of securing absolutely equal treatment for Catholics and Protestants, may I voice some of the complaints of the latter, in connexion with the Royal University?"

Monsignor Molloy assented.

"Catholics and Protestants teach moral philosophy differently; there must be different papers for each religion, and when there is a neck to neck race, it is difficult to be fair where papers differ. Moreover, the attitude in moral philosophy is a very different one. Catholics say they have discovered absolute truth; Protestants are still seeking it. St. Thomas Aquinas, dating from the thirteenth century, is still the great philosopher for Catholics; hardly any one else counts. Now, Protestants have to get up Mill, Hamilton, Bain, Spencer, writers whose ideas are not easily seized, whose theories hang in the air, as it were, liable to constant modification by subsequent advance."

"True, but Catholic students must also get up the history of philosophy; and to do this, they must make themselves thoroughly acquainted with the ideas, the theories, and the arguments of the philosophers you have mentioned."

"But the proportions are altered. Students know that the Catholic course is easier. This very session two students left a Protestant for a Catholic College in Ireland, to get up Aquinas. The change consorted with the religion of the Catholic student, whilst the Protestant one openly avowed that Aquinas was far easier to get up."

"H'm. I cannot answer for the predilection of students. If I were an examiner, I think I could set papers of equal difficulty in both courses. But, whatever may be the weight of your argument, it tells entirely in favour of a denominational University; and this is what we have been always contending for. I may observe, too, that the scheme you are now arguing against has already wrecked one Government. Mr. Gladstone made a bold attempt in 1873 to convert the University of Dublin into a national University, under a mixed board, and he failed. The present Government is timid, and would probably be chary about taking up the same project again."

C. S. B.

HOW TO TRAIN HOUSEWIVES.

By MARY LOVETT CAMERON.

The groans of the housewives of England ascend to Heaven! . . . Thousands of young girls are said to starve, or worse, yearly in London, and at the same time thousands of mistresses of households are ready to pay high wages for a decent housemaid, or cook, or a fair workwoman; and can by no means get what they want. Surely, if the elementary schools are worth anything, they may put an end to a state of things which is demoralizing the poor while it is wasting the lives of those better off in small worries and annoyances.

WHEN Thomas Huxley wrote these words our present educational system was in its infancy; they occur in an article called "The School Boards, what they can do and what they may do," which appeared in the *Contemporary Review* in 1870, during the author's candidature for a seat on the first School Board for London. After twenty-five years of compulsory education, we find that, far from having put an end to the state of things deplored by Professor Huxley, our Board schools are even accused by thoughtless persons of having created it.

The difficulty of getting well-trained servants has increased rather than diminished, while the influx of women into already overcrowded trades has gone on unchecked, and it has become evident to practical minds that something beyond the teaching given in the elementary schools is necessary in order to revive knowledge of the household arts among the mass of the people. For household work cannot be taught by means of books and diagrams, supplemented by the teacher's explanations, as other school subjects are taught; it requires a number of special appliances and constant practice in their use, taking up much time and requiring exceedingly careful training. Though of late years the domestic economy classes of the elementary schools have been well equipped for their work, another difficulty arises which it will be wise to face as soon as possible, for it lies at the root of the problem. Girls leave school too young for it to be possible to send them out into the world with a complete knowledge of housewifery. The mind of a girl under thirteen is incapable of grasping and retaining the mass of detail which goes to the proper fulfilment of even simple household duties, and when we consider that, in addition to her housewifery classes, she has to pass in the ordinary school subjects required by the Code, we see that we are in danger of laying burdens on young shoulders too heavy for them to bear. The teaching of housewifery in elementary schools ought not to aim at being anything but elementary, and will do no good work if too much is attempted; a smattering of confused detail is an absolute obstacle to systematic training later on. There is no more hopeless pupil than one who has acquired a little surface knowledge and fancies she knows a great deal. In addition to the danger of overtraining the mind in the effort to acquire too much at too early an age and in too short a time, there is another objection to any serious attempt to turn thoroughly instructed housewives out of our elementary schools. Much of the course is, of necessity, practical manual labour of a kind for which the growing bodies of children under thirteen are unfitted.

The injuries sustained by women and girls who work in factories are often brought before the public, but the curved spines and internal injuries, the stunted forms and lowered vitality, caused by excessive fatigue in the performance of ordinary household work are hardly mentioned. To assert, as is sometimes done, that poor children would suffer in this way at home does not excuse it; the ill-health of our working women is deplored by all doctors. We force children to school to save them from mental and physical deterioration, not to add to it, and any attempt to give a thorough training in housewifery in an elementary school is as dangerous to the real interests of the girls as certain to be futile in its results.

To what then must we look to fill this gap in the education of the women of this country? Obviously it is on special technical classes that the future of the household arts among us depends. Such classes have been started by the Technical Education Board, but before we congratulate ourselves on the probable results of their labours we must inquire whether they are getting hold, in sufficient numbers to appreciably affect the labour market, of the class of girls for whose instruction large sums of public money have been set aside. It is no doubt desirable that middle-class girls should be better instructed in household economy than they often are, but it is not for their sake alone, or even chiefly, that the housewifery

classes of the Technical Education Board are designed. The fact is that when a working man's daughter leaves school she must either begin to earn her own living, or, at any rate, to learn to earn it. According to present arrangements there is no sufficiently obvious advantage to be gained by attendance at a housewifery class to counterbalance the loss of the weekly half-crown which the child can earn as a household drudge, errand girl, or beginner in factory or workshop.

What is really urgently needed is some link between the elementary school and the housewifery class, for without it the Technical Education Board may pipe, but the stern necessities of the life of the working classes will prevent their daughters from dancing to the tune.

This link would be supplied if a year's preliminary training in housewifery were given free of all payment to girls who should pass straight from the elementary schools to the housewifery classes. To achieve this the schools would have to be grouped round training centres, to which their pupils would have the privilege of passing on leaving school. One great point thus gained would be continuous training, for the girl who leaves school with sharpened wits and habits of order and attention soon falls into slovenly ways and gets her intellect dulled by overwork and want of intelligent supervision. Once this process of deterioration has set in, the teacher's task is rendered a hundredfold more difficult; but, could she obtain her human material unspoiled, there would be a chance of developing amongst us a body of skilled housewives, who, whether in their own homes as wives and mothers or in those of others as certificated domestic servants, would add to the health and well-being of the nation, to an inestimable degree.

At the end of a year's free training those girls who did not intend to adopt housewifery as a profession would leave the training class with a certificate of general efficiency in domestic work; but the education of the class of trained housewives who would be able to raise household work to the rank of a skilled industry should begin at this point.

The succeeding classes which would develop the girl, well grounded in general knowledge of her profession, into the skilled cook, housemaid, nurse, laundry-maid, or needlewoman, would be open to all comers on payment of the usual fees, but those children of richer parents who desired to obtain certificates as skilled housewives should be obliged to go through the preliminary year's training as paying pupils. The advantage of thus linking the paying and free classes together is manifold—the paying pupils help to pay for the "plant" of the training centres, and both middle and working classes share in the benefits of the scheme.

We must always remember, however, that, though one man may bring a horse to the well, twenty cannot make him drink, and, before we can hope to see housewifery take its place as a desired and honourable profession among women, the foolish prejudice which makes people regard housework as "menial" and degrading must be removed.

The theory that modern girls and women are averse to domestic service, solely on account of the confinement and restrictions imposed on servants, is negated by the eagerness they show to embrace sick-nursing as a profession. When women take a pride in their work, neither long hours, hard work, strict rules, nor small pay, deter them from entering a profession, and I feel convinced that when we succeed in getting housewifery recognized as an honourable profession women will again flock into it. No woman should feel any loss of personal dignity in undertaking household work, but she will do so as long as it is regarded as unskilled drudgery and practised by rule of thumb.

Girls leaving the housewifery class after the first year's training would be better fitted to conduct their home life, and might even be taken as servants by those unwilling or unable to engage skilled help in their household work, but they could not claim to be members of the skilled profession, which I hope will transform the home life of the richer classes and empty the labour market of superfluous women. On entering the regular housewifery class, girls might choose which special branch they would take up, and be trained either in cookery, care of children, fine laundry-work, or such refinements of household work as a first-class house- and parlour-maid ought to know. Separate certificates would be given for efficiency in any one of these arts, but girls able and willing to remain long enough at the training centre to gain certificates in all should have the

special certificate of a trained *housekeeper*, which would represent the summit of the profession. A point to be insisted on is that no girl should be allowed to gain a certificate for less than a year's training. The physique of our girls is so important to preserve, and the danger of scamping in household work so great, that any attempt by duplicating classes to gain two certificates in the same year should be made impossible.

No snobbish divisions should be made between rich and poor, paying and unpaying, pupils; rather should the attempt be made to revive the wholesome spirit which allowed the mistress to work with her maids, personally directing their labour, instead of railing at their inefficiency from the drawing-room sofa. The "genteel" family in which mistress and daughters pride themselves on knowing nothing of housework, and never set foot in the kitchen, is happily becoming a thing of the past.

The great difficulty in the way of getting working-class girls the full benefit of these classes is that they are obliged to begin to support themselves at such an early age.

The only plan that suggests itself is that of a carefully-arranged system of half-time, by which girls qualifying for their certificates as trained housewives shall at the same time earn the necessary wage. Mistresses desiring the services of a girl for a few hours daily should, on application at a training centre, be supplied with a pupil who, having gained her preliminary certificate, desires to continue her course of training in housewifery. It would be absolutely necessary that these engagements should be made directly through the directress of the training centre, for many reasons; but the small fee charged to mistresses would make the department self-supporting.

The places thus found for girls would have none of the disadvantages of those to which poor children are often sent straight from school. A better class of mistress will compete for the services of these better-equipped girls. Ladies and childless couples living in small flats, the bane of whose life at present is the frowsy charwoman who comes and goes according to her own loose ideas of time, and stays away altogether when she is most wanted, would be thankful to know where to get a girl trained in orderly and cleanly habits, who would be adding to her acquirements at the training centre during the rest of the day.

The engagements would only be for two hours or so daily, but there are thousands of persons who engage help of this sort in London, and many more would do so if they could get it. A condition of engagement at a training centre should be that the girls' duties be clearly specified, and, if they appear so heavy as to be likely to unfit her for profitably attending her classes, the place should be relentlessly refused.

The objections to half-time as it now obtains in factories and workshops do not apply to housewifery classes. In the first place, as no girl would be placed till after her preliminary year was out, she would be older than the little factory half-timers; and, secondly, while the monotonous work and din of the factory unfit the children for intellectual effort at school, the hour or two of household work of the pupil in housewifery would be the carrying out of the lessons learnt during the rest of the day.

The regulation of this class of work would be a great boon to the girl worker; at present people engage a girl for an hour or two daily, and pay her for that, though they often keep her for the greater part of the day.

In raising housewifery to the rank of a skilled profession, several minor points present themselves. One of these is the question of adopting a suitable dress. The uniform of the trained sick-nurse has not been without its value in rescuing that profession from the hands of the Sairey Gamps and Betsey Prigs of fifty years ago. The starched cap and apron and print dress now *de rigueur* for women servants in upper-class households have come to be looked on as a badge of servitude, and, even could that prejudice be removed, the dress is not an ideal one by any means. It would not be difficult to invent one more hygienic, more comfortable, and at the same time conferring more womanly dignity on the wearer.

These details are not unimportant; the trained housewife in her uniform would come to her work with an *esprit de corps* very different from that which now animates Mary Jane the general servant, and would be regarded by her employers with correspondingly increased respect. Her station in life would be honourably established, and, in a country like our own, where social distinctions are hard and fast, it is essential for members

of any trade or profession to feel a pride in belonging to it. At present, though domestic servants cannot be exactly ranged among the unclassed members of society, they have not that healthy bond of union which a common standard of efficiency and a common uniform give to our trained nurses.

The benefit that some such scheme as I have here outlined would be to all classes of women cannot be doubted. Ignorance of the household arts in wives and mothers means unwholesome food and unhealthy dwellings for their families, and this is as true of rich as of poor women, for "like mistress, like maid" holds good in most instances, and even skilled and certificated housewives will work all the better for having an intelligent head over them, though of course they will greatly ease her present arduous task. With regard to poorer women, we have only to look into the lives now led by working-class girls in large towns to be convinced that the administration that did something to improve their condition would be one to earn the highest gratitude of women. Whether it is the little maid of all work, slaving for sixteen or eighteen hours a day, sleeping in a cupboard or under the kitchen dresser, carrying heavy pails and scuttles up and down steep staircases and living out the rest of her life underground, or the factory-girl earning five shillings or six shillings a week for ten hours' work a day and keeping herself on that liberal sum, or, worst of all, the girl untrained to any paying work, who, after tramping the town from door to door of factory and workshop, at last takes to the one trade which is always open to the destitute of her sex, and falls never to rise again, their state is one that should rouse us to every effort to better it, before the health and stamina of the nation are hopelessly undermined. Under present conditions, it is hardly surprising that these women are worn out at thirty, and that hospitals for women overflow with patients.

The demand that training in housewifery shall be thorough and complete cannot be too emphatic. There is no more harmful delusion than the too widespread idea that household work is of a quality that any fool can do by the light of nature. Household work, far from requiring the exercise of a low order of faculties, needs high intelligence and a most carefully trained understanding for its due performance. To grasp the principles and rightly apply the numerous details which go to serving really wholesome meals and to keeping houses full of human beings in a thoroughly sanitary state is not the easy task some folk seem to believe. We train hospital nurses; if we did the same by housewives, the labours of the doctor and the nurse would be lessened, and the health and happiness of the whole community correspondingly increased.

A due ordering of the home life of a nation is the chief factor in all civilization worthy of the name, and not the best sanitary system in the world will insure health to the community without a body of trained housewives to carry out its provisions.

Realizing this, we see what a tremendous responsibility rests on our women, and wonder at the folly that leaves the mass of them absolutely untrained to grapple with such all-important issues. Let us admit, without delay, that the directing of our home life needs the most highly trained faculties of the cleverest women in the kingdom, and act accordingly.

The industrial slavery of women can only be ended by means such as I have outlined. Among the richer classes, women with no talent for housewifery will pursue occupations more congenial to them, unshackled by the attempt to do two things at once; the skilled housewife will be at hand to relieve them of their burdens. As for our poorer sisters, the depletion of the market of unskilled labour will revolutionize their lives, with knowledge will come power to resist oppression, they will no longer flock into unhealthy trades and undersell their male competitors, as cruel necessity too often forces them to do at present. If men would only realize that women must be the blacklegs of the labour market so long as they are obliged to fight their way in the world unequipped with proper training, our rulers would take more pains to put technical instruction within their reach.

The champions of the higher education of women need not fear that advanced instruction in the household arts will make for their subjection or condemn them to the position of household drudges. On the contrary, the woman who is a thorough mistress of housewifery will reign over her household by the best of titles, while those who enter other trades and professions will do so from free choice, and not, as is so often the case at present, from stress of circumstances, which force the self-

supporting woman into grooves often the furthest from her real wishes and tastes.

Our surplus female population ought to allow us to regulate our home life by a competent staff of trained assistants, while leaving the fullest liberty to other women to follow the professions congenial to them. It is to our shame that we so waste our material that our homes are often neglected while crowds of women are clamouring for work.

REVIEWS AND MINOR NOTICES.

The Herbartian Psychology applied to Education. Being a series of essays applying the Psychology of Johann Friedrich Herbart. By JOHN ADAMS, M.A., B.Sc., F.C.P., President of the Educational Institute of Scotland, 1896-7, Rector of the Free Church Training College, Aberdeen. (Isbister.)

Nothing could be more significant of the desire to place education on a scientific as distinguished from an empirical basis than the number of books and monographs that are being issued in the United States and in Germany on Herbart. Even in Finland, we hear, at the University of Helsingfors, the Professor of Pedagogy, Professor Waldemar Ruin, has written on Herbart. Herbart is, we may conclude, the one modern writer on education who is able to attract the exponents of educational principles. Herbartianism, indeed, is a cult, and has its devotees, some of whom hold to the letter and others to the spirit. But, devotee or not, no one can deny that, whether for purposes of attack or defence, Herbart occupies a unique position in educational theory, and any writer who can offer a lucid exposition or a helpful criticism is sure of a hearty reception amongst educationists.

Mr. Adams, we think, has supplied both an exposition and a criticism which will be of excellent service, particularly to those who have already gone through an elementary course. His book is much more lively and breezy than educational books usually are. The style is often colloquial and confidential, and for those who are on good terms with philosophy it is often an amusing and humorous piece of writing. The following example will show the unmistakable power which Mr. Adams has in making a pointed exposition of his subject:—

"Verbs of teaching govern two accusatives, one of the person, another of the thing; as *magister Johannem Latinam docuit*—the master taught John Latin." Thus far the Latin rudiments. When the master seeks to apply the principle in real life, he finds he can manage his double accusative only by the possession of a double knowledge: he must know Latin; and he must know John. Not so long ago it was considered enough to know Latin . . . as John was either taken for granted or held to be not worth knowing. Popular belief and practice are changing, and John is entering upon a period in which he is likely to have a somewhat uncomfortable share of the master's attention. The person is for the first time coming to his proper place before his fellow-accusative, the thing.

It will be seen that the book is entertaining in style and matter. But this very fact may make it slighter in value to the severe psychologist, and one fears whether all schoolmasters have the necessary knowledge of psychology to see *how* entertaining it is.

Perhaps the two most original ideas in the book are contained in the two chapters entitled "A Neglected Educational Organon" and "Graphic Hypothesis." The new organon which Mr. Adams proposes is the use of the riddle as a subject of instruction or at least of mental discipline. What is wanted, Mr. Adams declares, in school-work, is a more scientific and intelligent guess-work. His ideal appears to be that of "Every man his own Sherlock Holmes." No doubt the "riddling out" of problems is necessary in school-work, but it is ludicrous to think that the mere smartness of the conundrum-solver is necessarily a mind-discipline of so irresistible a nature that it should be advocated for universal adoption. With the second suggestion, that expression by means of drawing is of great educational value, we cordially agree. It may, as Mr. Adams points out, save a great deal of writing and not a little confusion. Mr. Adams tried an experiment on the youthful readers of the *Boys' Own Paper*, the interesting results of which he gives in this book. He asked readers of that paper to draw a map of

Robinson Crusoe's Island, to indicate its size and position, the location of the creek, the castle, the harbour, the grotto, the foot-print. They were also to make clear the general nature of the surface of the island—hills, valleys, rocks, and so on. All that was asked for was that details put on the map should be founded upon what is said in the story, or, at least, not be inconsistent with it. In examining the results of this competition, Mr. Adams tells us that the first thing that struck him was the unlikeness among the maps. No two are alike. By the graphic representation some idea is given of the way in which the description of Crusoe's Island appears to each boy. From that you see something of the creation of ideas in general of the outer world. From this variety of interpretations much can be gathered as to individual characteristics of pupils.

Mr. Adams's book is decidedly clever, and deserves to be read for its suggestiveness, but we are bound to say we anticipate a readier appreciation of its merits in the United States than in England. In the last chapter, for example, Mr. Adams attempts to reconcile the Herbartians, in their doctrine of many-sided interest as an educational aim, with the Hegelians in their doctrine of self-realization. In America there is a meaning in the contest amongst educationists between Hegelianism and Herbartians. In England all this sounds like dreamland. At any rate, Mr. Adams has provided the means for every educationist to take a glance at these things.

"The Warwick Library."—*English Masques.* With an Introduction by HERBERT ARTHUR EVANS. (7¼ × 5 in., pp. lxiii., 245; price 3s. 6d. Blackie.)

Mr. Evans has done students of English literature good service by placing within their reach a good selection of English Masques, and adding thereto a helpful and readable introduction. Of course there has been the inevitable German scholar before him—in this case Dr. O. A. Soergel. But, though Mr. Evans owes much to Dr. Soergel, the work which he has given us is in the main his own; and careful scholarly work it is. Out of fifty printed masques still accessible he has reprinted sixteen, with such annotations as were needed. From the point of view of variety in manner, method, and excellence, it is, perhaps, a pity that as many as ten of the sixteen should be by Ben Jonson—the others being by Daniel, Campion, Beaumont, Shirley, and Davenant, with one anonymous. But from the point of view of skill, and of literature—if we may use the word in this connexion—there can be no doubt that Jonson fully deserves the lion's share of space given him.

A masque, in Mr. Evans' definition, is "a combination, in variable proportions, of speech, dance, and song; but its essential and invariable feature is the presence of a group of dancers, varying in number, but commonly eight, twelve, or sixteen, called masquers. These masquers never take any part in the speaking or in the singing; all they have to do is to make an imposing show and to dance." The dances are of two kinds—stately figure dances by the masquers alone, and the revels, or livelier dances, in which some of the audience take part. This—confessedly only a rough definition—seems to us quite sufficient for our purpose. Taking it as his criterion, Mr. Evans is right in refusing to recognize "Comus" as a true masque; but we do not understand why he ignores "Arcades." It is quite evident from the words towards the end that there was a dance of shepherds; and there may also have been revels, for what we know. But we are in too grateful a mood to be anxious to find fault. We wish, however, that he had found space to explain to us more clearly the difference between a *masque* (which he claims to be an English production) and a French *ballet* when speeches and songs were introduced. No doubt, as he says, the latter was more formal and longer; but, from the descriptions which he quotes from Menestrier, both the "Ballet de la Cour du Soleil" and the "Ballet Moral" seem to us as much masques as any in his selection.

We have hinted that we think that the masques can hardly be described as literature in the strictest sense. And naturally from reading stage directions and a few scraps of dialogue we can but feebly form a mental picture of what a really well-managed Masque must have been. But we must remember that songs were included; and, at the end of the sixteenth and in the early part of the seventeenth century, English songs attained to, or simply were inspired with, a lightness, spontaneity, and sweetness which they never possessed before and never have possessed since. In the masques of this volume there are

many exquisite snatches of song ; and "Anon." in his "Masque of Flowers" (revived at Gray's Inn in 1887) gives us a fine rollicking catch, which Silenus opens with "Ahey for and a ho." We are sorely tempted to quote, but must refrain. The annotations, which are properly kept within bounds, are either selected from those provided by the authors themselves or are Mr. Evans's own. In both cases they are of the right kind and quite adequate to their purpose. In short the book is a highly creditable piece of work.

"The Warwick Library."—*English Lyric Poetry*, 1500 A.D. to 1700 A.D. With an Introduction by FREDERIC IVES CARPENTER. (7½ × 5 in., pp. lxx., 276 ; price 3s. 6d. Blackie.)

Dr. Carpenter is, we are told, a distinguished Lecturer on English Literature at the University of Chicago. He is known, Dr. Herford, the general editor, adds, to American readers, and to the students of English literature in general, by a very subtle and comprehensive investigation of the poetic speech of the Elizabethans—"Metaphor and Simile in the Minor-Elizabethan Drama." We must confess that we have not read anything of Dr. Carpenter's before ; and certainly we have not found anything subtle in the introduction to the volume whose title stands above. What he gives us is a straightforward workmanlike essay on the forms and themes and motives of lyric poetry in England during two centuries. Here is a fair specimen of what he has to tell us :—

The lyrical poetry of the seventeenth century from the very beginning rapidly becomes more subjective, more reflective, and more weighted with conscious meaning. The old manner of lyrical writing is still attempted ; there are still pastoral and song ; but even pastoral and song are affected by the new something in the moral atmosphere ; they become more literary and less spontaneous, less amateurish and more deliberate ; there is a growth of manner and of self-consciousness, until in the end art begins to supersede nature and native inspiration, and by the time of Charles the golden cadence of Breton and Lyly and Peele is heard no more.

And he goes on to point out that pastorals and songs, being immediate in their attachment to the actual forms of life, have to give place more and more to weightier lyric forms, odes and elegies and reflective monodies. Capital, too, are the accounts given of Donne and of Donne's influence. Dr. Carpenter has evidently read closely and thought carefully. Whether every one will agree with what he has taken "lyric" to mean for the purposes of the present volume we are not prepared to assert. Roughly it is made to mean here any poetry not dramatic, epic, or satiric. For ourselves we are quite willing to leave the definition alone rather than risk the exclusion of any piece from the peculiarly good selection which we are given. Not only are the pieces in themselves good specimens of their respective authors, but there is also preserved throughout a right proportion in the amounts given from the authors selected. So that in every way the volume is a very satisfactory addition to a good series. It goes without saying that the book is well printed and neatly bound.

Old Harrow Days. By J. G. COTTON MINCHIN. (Methuen.)

A pleasantly written rambling, gossipy, book of Harrow reminiscences by an enthusiastic old Harrovian, who entered the school in 1864. It is full of racy stories, told with the utmost frankness ; some, we hope, apocryphal. Thus of the Rev. William Oxenham, who died in 1863 : "He was jealous of his chief. The boys, knowing this, used mischievously to say : 'Dr. Vaughan likes this, sir,' a remark which merely drew from the second master, 'D—n the fool, d—n the fool.'" Again, another master, overhearing in his form room the scarcely classical expression, "You're a d—d fool !" at once put the cap on his head, and asked each of the boys in turn, beginning at the top and ending at the bottom : "Am I a d—d fool?" One honest boy was at last found, who replied in the affirmative, and he was, of course sent to—where truth is so often to be found—the bottom. This is almost incredible, yet, as we used to say at school, "It's Bible truth." Another story, dating from the same era, about the simulated earthquake, is quite true, though it is tacked on to the wrong master, and we much misdoubt the pendant to it in which Mr. Kenelm Digby is made to advance into the same master's class-room at the head of the form with umbrellas fixed like bayonets and a shout of : "Sir, you are dangerous." In those days umbrellas and great coats were taboo at Harrow. There

is a touching story told of Smith O'Brien on the authority of Dr. Butler. Lord Dungannon had twice refused to sign a petition for the remission of the death sentence, when he received the following letter from Smith O'Brien's brother, Sir Lucius :— "My dear Dungannon, you won't let your old schoolfellow, my poor brother, be hung like a dog." His principles went by the board and he signed. Sometimes Mr. Minchin fails to see the point of his stories. Thus he tells us that Harrow masters once appointed a committee to investigate their butchers' charges, and discovered that the Harrow butchers had invented a sliding scale, and at the top, as least likely to find them out, had placed the future Bishop of Durham. This reminds him of a story of Dr. Whewell, who consulted an undergraduate about the best way of keeping down the long grass at the Backs, and was advised to let the butchers graze their sheep there, to which the Master replied : "But that would be very expensive. Just think what the butchers would charge me for allowing their sheep to eat my grass!" Mr. Minchin actually mistakes a shrewd gibe for *sancta simplicitas*.

In politics, we gather, Mr. Minchin is an out-and-out Conservative, and so in literature he considers Byron the poet of the century. But in school matters he is a thorough Radical. "Gregory's time," we read, "was wasted, like hundreds of other boys' in writing silly Latin verses." As it was in '34 so it must have been in '64, else Mr. Minchin would never have written such a sentence, or dozens like it. We feel, however, that such criticism is quite out of place in reviewing a pleasant book of gossip, and will quote against ourselves a final *mot* : Mr. Gladstone, in an article quoting Bottom and Titania, had referred "in an asterisk" (*sic*) to "Midsummer Night's Dream," "I fear," said Mr. Watson (*Vanity*), "our Prime Minister is becoming a pedant in his old age."

A History of England, from the landing of Julius Caesar to the present day. By H. O. ARNOLD-FORSTER. (7½ × 5½ in., pp. xvi., 816 ; price 5s., illustrated. Cassell.)

Mr. Arnold-Forster's style of writing is already well known to most of our readers ; and in the seven small books entitled "Things New and Old" he has shown us how, in his opinion, history should be used so as to cultivate a feeling of patriotism and citizenship. The greater part of the contents of these small books has been included in the portly volume before us, with modifications and additions. The aim is not to give a mere summary or skeleton outline, but by selecting events and persons suitable for the purpose, and treating these somewhat fully and picturesquely, to produce an animated narrative, and one really likely to interest boys and girls. In this aim the author has been very successful. The episodes and characters given chief prominence have certainly been chosen with good judgment ; and, if here and there the manner of writing errs from over-emphasis, the story, nevertheless, is brightly and connectedly told, and, as far as we have noticed, quite up to date in all important particulars. If fault there be to find, we should say that, to our mind, the book is somewhat too profusely illustrated. Pictures are not always an aid to a narrative ; they are sometimes rather an interruption and distraction. And, though, from the general care taken that the pictures and the text shall relate to one another, this is not often the case in the book with which we are dealing, there are times when we would gladly do without the pictures.

In speaking of the prominence given to episodes and persons, we do not mean to imply that the book is a mere patchwork of anecdotes. This is not so. Everything is not treated with the same fulness, but the story is connected ; and each chapter is supplied with useful summaries, and headed with an interesting quotation from a chronicle or speech or poem ; while the matters treated of include literature, science, art, trade, &c., and are not restricted to what is merely political. Those of the school of Professor Seeley may shake their heads at this ; but boys and girls will be duly grateful. Altogether we can heartily recommend this new History of England.

A Manual of French Prose Composition. By J. G. ANDERSON, (Blackie.)

An original and most suggestive contribution to the most difficult department of modern language teaching. The book consists of two nearly equal portions, the theory and the practice of composition, and, excellent as each is by itself, the two parts are not very closely correlated. After a general introduction on accent and

quantity, which bristles with disputatious points and, as the author admits, will appeal to the teacher alone, we are set to work with an excellent chapter on vocabulary, in which special stress is laid on the difference of French and English metaphor. The rest of Part I. may be described as a French syntax rewritten from the composer's point of view. Due attention is paid to the order of words, especially in interrogative sentences—a point which is strangely neglected in our popular school grammars. Incidentally a number of grammatical problems are raised and several of the traditional rules are riddled by examples from modern standard authors—e.g., those on the position of the adjective, the plurals of proper nouns, the use of *ce* and *il*. The second part consists mainly of translations from modern French authors to be turned back into French. The notes give just the sort of aid required, though we should have liked them rather fuller at the beginning. It was a happy inspiration to give the "*Auguste en Angleterre*" which recently appeared in *Punch*, as an exercise for word-for-word translation.

We give a few *errata et corrigenda*. Page 2: something has gone wrong with the translations of Horace, both identical. Page 10: "He is to be a doctor, *Il veut se faire médecin*." Not an equivalent. "He is about, *Il va et vient*." Ditto. Page 11: "Your terms are finer than the common sort of men." Not English. Page 68: rules 3 and 4 contradict one another. Page 75: "Thou and I am one" is something worse than "awkward" English. Page 84: Mr. Anderson should read Dr. Molloy's "Shall and Will." Page 85: (last line) for *a eu* read *avait*. Page 88: "Contrary to Latin, which is very illogical in its use of the subjunctive." We protest. In conditional sentences, where French deviates most widely from Latin it is French that is illogical. Page 97: "To be. This verb is not used in French to form tenses." A strange assertion. Page 115: "When used with men's names the article expresses contempt." But *Le Corrège, le Tasse*. Page 155: "A rapid rise in *consuls*." Page 178: *Eschylus*.

"Bell's English Classics."—*Thomas Carlyle: The Hero as Man of Letters*. With Introduction and Notes by MARK HUNTER, M.A. (7¼ × 4¾ in., pp. lxx., 110; price 2s. Bell & Sons.)

The plan of this edition may be best understood by the fact that we are given seventy pages of introduction and sixty-six pages of notes, appendix, and index to forty-four pages of text. Indeed, we might describe the book as an essay on Carlyle with a long illustrative passage from "Hero Worship." Not that in saying this we desire to condemn the book. The notes, though to our mind too many and too full, are really excellent. They show care, considerable information, and abound in suggestive comment; and the appendix, which gives outlines of the lives of Johnson, Boswell, Rousseau, and Burns, is very well written. But we feel that the text is somewhat drowned in all this. The introduction is very readable, the part dealing with Carlyle's life and work being particularly well done; but it seems to us too little critical for an edition of this kind. It is true that comments both favourable and adverse to Carlyle's opinions and style are quoted; but somehow we are left with the impression that the adverse comments are in the main merely ill-natured. Nor, to our mind, does Mr. Hunter bring out with sufficient clearness that, however careful Carlyle was to get his facts accurate and so to speak at first hand, these facts for the most part appealed to his imagination and his emotions rather than to his reasoning powers; with the result that they produce strikingly vivid scenes and dramatic touches and plentiful denunciation and exhortation, from which we pass with the feeling that certainly things might have been as they are related, but seldom with the conviction that they must have been so. Undoubtedly this method of dealing with facts is exciting and stimulating; but we are convinced that the more they are so dealt with the less is the chance that the treatment of them will have any permanent value. Mr. Hunter seems to us also to miss the comic aspect of Carlyle's marvellous proposal for the reform of our Constitution by allowing the Queen to select her Ministers and secretaries from amongst the wisest men outside Parliament—men ostensibly of no experience in affairs. What a task for her! Carlyle himself as Foreign Minister, or as Prime Minister, would have been a sight to make the angels weep. Nor is it an advantage to Carlyle's fame and permanent influence, as Mr. Hunter appears to think, that he should have left his opinions vague and unformulated; for this must inevitably give the impression that he did not himself always quite know what he wanted. For Carlyle as a prophet and poet of great moral force and splendid imagination we have the utmost respect and gratitude; but it cannot be wise to ignore his defects, or to try to treat them as matters for praise. Mr. Hunter does not quite do either; but he goes very near it now and again. However, it is a fault on the right side for an editor to have a thorough-going belief in his author; and Mr.

Hunter has produced an edition which is a good one of its kind and which gives very clear evidence of his knowledge of the subject.

The Golden Treasury of Songs and Lyrics.—Second Series. Selected and arranged with notes by FRANCIS T. PALGRAVE. (Macmillan.)

Sequels are a proverbially dangerous experiment. Mr. Palgrave's "Golden Treasury" has always seemed to us an ideal anthology, and an aftermath culled from the poetry of the last half-century could hardly fail to seem in comparison scant and partial. Mr. Palgrave frankly acknowledges that the Second Series is not only on a different plane, but on a different plan. He has been forced to abandon the endeavour to give us all the best lyrics of the age, and to be content to make his specimens characteristic of the chosen poet's genius. The total number of poems is something under two hundred; of them 39 are by the three Tennyson brothers, 27 by the two Rossettis, 23 by the two Brownings, 17 by A. O'Shaughnessy, 13 by Matthew Arnold, 12 by W. Barnes, and 10 by Coventry Patmore. We do not need the preface to tell us that Mr. Palgrave has given the rein to his personal likes, that the volume cannot pretend to be in the true sense of the word a Victorian anthology. For Mr. Swinburne's absence he or his publishers are responsible, but no excuse is offered for including Sir Lewis Morris and excluding William Morris, for including the Duke of Argyll and excluding William Watson. A. Domett's "Christmas Hymn" is a faint and far-off echo of the "Ode on the Nativity," very faulty, but not without a charm of its own, but we are convinced that what gained it admission was the interest that attached to Mr. Domett as the original of Browning's "Waring." John Clare touches Mr. Palgrave as a pathetic figure, but, had Clare been an Elizabethan, would he have admitted a poem in which "worm" is made to rhyme to "born"? Can Clare be named in the same day as Emily Brontë, for whom no niche is found! It is easy to pick holes; it would be easy to name a score of poets whose claims seem to us higher than those of several who have found admission; but we can pardon much, nay all, to the editor who has garnered in one sheaf "Thyrsis," "The Blessed Damozel," "Rabbi Ben Ezra," "Hervé Riel," and "The Revenge."

"The University Tutorial Series."—*The Faerie Queene, Book I*. Edited, with Notes and Glossary, by W. K. HILL, M.A. (7 × 4¾ in., pp. xxiii., 212; price 2s. 6d. W. B. Clive.)

The special characteristic of this edition is that there is no surplusage. The introduction is brief and business-like, though, perhaps, here and there a little too brief and bare in its manner of presenting its information. The notes stick carefully to explaining just what they want to explain, and then stop. They do not flower out into any superfluous ornament or extraneous learning. All obsolete and difficult words are relegated to the glossary, which is carefully compiled. It would have been better, perhaps, to give references to every instance in which the particular word is used in Book I. instead of only one in each case; for, by comparing the instances with one another, the student gets a better idea of the true force of the word than in any other way. Still, the edition is mainly intended for those who are preparing for examination, and is certainly very well fitted for its purpose.

"Arnold's British Classics for Schools."—*Macaulay's Lays of Ancient Rome, and other Poems*. Edited by R. L. A. DU PONTET, B.A. (7 × 4½ in., pp. xxii., 171; price 1s. 6d. Edward Arnold.)

This is a very satisfactory edition. The notes are excellently to the point, not too numerous nor too long, while the type in which they are printed is commendably large and clear. Points which have to be dealt with at somewhat greater length than the rest are given capital little appendices to themselves. The introduction is adequate, and, in many respects, good; but we cannot but think it a mistake to set up a normal or pure form for the metre and then to have to confess that Macaulay rarely used it. It is tolerably clear that Macaulay wrote by ear, and did not trouble to scan the lines, except so far as to see that they had the right number of beats in them. Not much good, it seems to us, is to be got from trying to divide the lines into feet, some of which are nearly always truncated. However, this is a small matter. Mr. Du Pontet shows a due amount of delight in his author, and has done his work well.

"Macmillan's English Classics."—(1) *Selections from Wordsworth*. Edited, with Introduction and Notes, by W. T. WEBB, M.A. (6¾ × 4½ in., pp. xlix., 215; price 2s. 6d. Macmillan.) (2) *Bunyan's Pilgrim's Progress in Modern English*. Edited, with Introduction and Notes, by JOHN MORRISON, M.A., B.D. (6¼ × 4½ in., pp. xxvii., 168; price 1s. 9d. Macmillan.)

(1) Mr. Webb has given a satisfactory "general introduction" to his volume of selections, the latter part of which—that dealing with the merits and defects of Wordsworth's poetry—seems to us decidedly good. If we do not always agree with the opinions set forth, we do at least feel that they are worth considering. The selection of poems seems to us excellent—a quality, by the way, shared by that capital little volume of annotated "Selections from Wordsworth," by Mr. Hawes Turner. The notes are interesting and well written; but, as is the case in all the volumes of this scholarly series, they explain more than is necessary, even, we should think, for Indian students. The brief introductions to the several poems are particularly good. We have

observed that in the notes the illustrative quotations are nearly all from Wordsworth himself. This we think a mistake, except where the idea, word, or phrase dealt with is distinctively Wordsworthian. This, however, is our only grumble. Mr. Webb has given us a very satisfactory little book.

(2) It is rather likely to mislead students to find Mr. Morrison's edition of "Pilgrim's Progress" in this series. It is not an edition for students, but a modernized version, with a few notes and a brief introduction, for the use of young people, especially in India. It being for use in India, it seems to us both uncritical and in bad taste to state that the story of Sakyanuni (or Buddha) is an allegory of the same class. The modernizing seems to us to be carried here and there to unnecessary extremes, but otherwise to be well done. The introduction is fairly adequate, and the notes are all that can be needed—short, accurate, and to the point. In the former there are one or two small matters with which we do not quite agree. For instance, the reasons given for the book's popularity, though very well put, are not in every respect the same as we ourselves should give. And we might have something to say on Bunyan's supposed wickedness in early life. But we will refrain, and conclude by expressing the hope that we may some day have added to the series a student's edition of the book, on the same lines as those of the series' other volumes.

Heine's Lieder und Gedichte. Selected and arranged, with Notes and a literary Introduction, by C. A. BUCHHEIM, Ph.D., &c. (Macmillan.)

The centenary of Heine's birth has evoked a whole crop of magazine articles (they filled half a number of *Cosmopolis*) and given us three or four more permanent memorials, of which not the least acceptable is this volume of lyrical selections, which gives in dainty form the best of Heine's muse. Dr. Buchheim is a *Heine-schwärmer*, and in a volume like this there was no need to dwell on the *Schatten-seite*. And yet, it seems to us, we cannot fully appreciate the poems, merely as poems, unless we catch that spirit of mockery which Matthew Arnold, with true critical intuition, pronounced the basis of his genius. According to Dr. Buchheim, Arnold's view of Heine was distorted, as seen through the medium of hostile German critics, and Heine was, what he claimed to be, a true *Ritter von dem heiligen Geist*. It would be just as reasonable to maintain that Heine was a sincere believer in the Athanasian Creed.

The Preceptors' French Course. By ERNEST WEEKLEY.
(W. B. Clive.)

This is a grammar, with accompanying exercises (English-French and French-English), adapted for the standard of the Junior Locals. There is nothing original in the plan, but the execution is distinctly an advance on similar courses, as far as they have come under our notice. Particularly commendable is the treatment of verbs in tabular form. Here a good presentment to the eye is half the battle.

French Whys and Wherefores. Edited by LÉO MILLIET.
(Edinburgh: Pillans & Co.)

We are delighted to see that this useful little magazine has reached its second year of publication. The monthly passage of French prose, with the editor's comments, is most instructive, and queries are answered fully and clearly. The reviews leave something to be desired. The yearly subscription, including postage, is 3s.

Glimpses into Plant-Life: an Easy Guide to the Study of Botany.
By Mrs. BRIGHTWEN. (7¼ × 4¼ in., pp. 351; price 3s. 6d., illustrated. T. Fisher Unwin.)

This is a brightly written little book, well informed, well expressed, and well illustrated. The main topic, kept steadily in view throughout, is the *life* of plants rather than their anatomy; and this is just what should be the case in a book for beginners. For it is a knowledge of the life which makes the anatomy of interest, and not the anatomy which makes us want to know about the life. We have noticed a slight confusion on page 180 in the description given of the pollination of the primrose. If the insect is to get its *head* dusted with pollen it should visit a flower with a *short* pistil first. In the case described it would get the pollen on or near the end of its proboscis, not on its head. We notice, too, that *coco-nut* is invariably misspelt *cocoo-nut*—though, of course, the tree which gives us our "grateful and comforting" breakfast drink is not really confused with the coco-palm. The misspelling, however, might confuse a beginner. For the rest, the subject-matter is well plotted out and arranged, and the illustrations are very satisfactory. On the whole this "easy guide" is excellently suited for those who are beginning to take a general interest in plants, and who wish to make that interest broader and more intelligent. The greater portion of it first appeared in serial form in the pages of *The Girls' Own Paper*.

The Jubilee Book of Cricket. By PRINCE RANJITSINGHI. (Blackwood.)
A splendid book for boys, dealing thoroughly with every detail of cricket and the cricket-field; ranging from the history of the game to minute directions for every point of batting and fielding. It will prove especially useful to young cricketers at public schools. There is additional interest for members of the sixteen great schools mentioned, and for old Oxford and Cambridge men, to whom chapters vii. and viii. are devoted. The illustrations are prints from photographs, showing the points to be copied from first-class players. It is not a book to read straight through, but rather a *vade mecum* for reference.

We have received from Messrs. Macmillan *Northanger Abbey* and *Persuasion*, by JANE AUSTEN, illustrated by Hugh Thomson, whose style lends itself particularly well to Miss Austen's heroines and heroines. Every suggestion of humour or absurdity is caught and fixed, and Mr. Thomson has been especially happy in his presentment of the pretty delicate features and figure of Anne Elliot.

ANOTHER EXPERIMENT IN LATIN VERSE.

RECESSIONAL.

God of our fathers, known of old,
Lord of the far-flung battle line,
Beneath whose awful hand we hold
Dominion over palm and pine—
Lord God of hosts, be with us yet,
Lest we forget! lest we forget!
The tumult and the shouting dies,
The captains and the kings depart;
Still stands Thine ancient sacrifice,
An humble and a contrite heart.
Lord God of hosts, be with us yet,
Lest we forget! lest we forget!
Far-called our navies melt away;
On dune and headland sinks the fire;
Lo! all our pomp of yesterday
Is one with Nineveh and Tyre.
Judge of the nations, spare us yet,
Lest we forget! lest we forget!
If drunk with sight of power we loose
Wild tongues that have not Thee in awe,
Such boasting as the Gentiles use,
Or lesser breeds without the law—
Lord God of hosts, be with us yet,
Lest we forget! lest we forget!
For heathen heart that puts her trust
In reeking tube and iron shard—
All valiant dust that builds on dust,
And guarding calls not Thee to guard;
For frantic boast and foolish word—
Thy mercy on Thy people, Lord.

RUDYARD KIPLING.

SUPPLICATIO.

Armipotens, acies campo qui fundis aperto,
Jamdudum patribus cognite rite Deus,
Auspice te victrix mundum regit Anglia utrumque,
Pinus ubi horrescit, palma ubi laeta viret;
O faveas, hodie numen praesentius adsis,
Ne cadat ex animis, pro pudor, illa fides.
Acta est festa dies, strepitus plaususque faventum
Conticuit, redeunt dux proceresque domum.
Transit pompa, manet tamen aeternumque manebit
Laus tua; supplicibus tu modo parce tuis.
O faveas, hodie numen praesentius adsis,
Ne cadat ex animis intemerata fides.
Evolat huc illuc diversa per aequora classis,
In cineres lapsa est taeda corusca jugis.
Gloria ubi est quae fulsit heri? jacet obruta eodem
Quo Ninos et Sidon deperiere rogo.
Parce tamen scelorum vindex, O parce parumper,
Ne pereat memori corde reposta fides.
Quod si se nimio jactaverit Anglia fastu,
Immodicaque audax ambitione tumet,
Barbarici quo more solent se efferre tyranni,
Aut nomades vivunt qui sine lege Getae,
Ignoscas tamen et numen praesentius adsis,
Ne fluat immemori pectore lapsa fides.
Si struimus telorum armamentaria, fisi
Artibus humanis immemoresque tui,
Si terrae domini terram molimur, et ausa
Auspicious nullis credimus esse rata,
Ne, Pater, obfuerit vesana superbia linguac;
Parce, precor, suboli da veniamque tuae.

F. S.

CALENDAR FOR FEBRUARY.

[Items for this Calendar should be sent in before the 24th of the month.]

- 1.—Passmore Edwards Settlement, Tavistock Place, W.C., 7 p.m. Continuation of Lectures on "Elementary Ethics," by W. H. Fairbrother.
- 1, 8, 15, 22.—Royal Institution, 3 p.m. Course of Lectures on "The Simplest Living Things," by Professor E. Ray Lankester.
- 3.—University College, Gower Street, 4 p.m. Ten Lectures (commenced January 27) on "The History, Civilization, and Religion of the Ancient Hindus," by K. C. Dutt, Esq., C.I.E. Passmore Edwards Settlement, Tavistock Place, W.C., 8 p.m. Continuation of Lectures on "Institutions as Ethical Ideas," by B. Bosanquet.
- 4.—Royal Institution of Great Britain, Albemarle Street, 9 p.m. Lecture on "Some New Studies in Cathode and Röntgen Radiations," by A. A. C. Swinton, Esq., M.R.I.
- 7.—University College, Gower Street, 4 p.m. Lectures on "Greek Antiquities," by Professor E. A. Gardner, M.A. (First Lecture, January 31.) At 29 Dover Street, W. (Sesame Club). Lecture on "Vanity, Vulgarity, and Sentimentality," by Mr. Birrell, Q.C., M.P.
- 8.—Bedford College, York Place, W., 8.30 p.m. Lecture on "Writers and Readers," by Professor W. Hall Griffin. St. Jude's Parish Room, South Kensington. Lecture on "History Costumes," with Lantern Illustrations, by Miss A. J. Cooper. (Teachers' Guild.)
- 9, 10, 16, 17, 23, 24.—University College, 3 p.m. Twelve Lectures on "Dante's Purgatorio," beginning with Canto VIII., by the Rev. E. Moore, D.D.
- 10, 17, 24.—Royal Institution, 3 p.m. Lectures on "Some Italian Pictures at the National Gallery," by Dr. J. P. Richter.
- 11.—University College, Gower Street, W.C., 8.30 p.m. Lecture on "Le Duc d'Aumale et l'Institut," by Professor H. Lallemand, B. ès L., B. ès Sc. (Free.) Royal Institution, 9 p.m. Lecture on "The Metals used by the Great Nations of Antiquity," by Dr. J. H. Gladstone.
- 12, 19, 26.—Royal Institution, 3 p.m. Lectures on "The Structure of Instrumental Music," by W. H. Hadow.
- 14.—At 29 Dover Street, W. (Sesame Club). Lecture on "A Proposal to Establish a School of English Literature and Composition," by Sir Walter Besant.
- 15.—Post Translations for Competition. King's College, Strand, W.C., 8.15 p.m. Lecture on "Cornwall," with Lantern Illustrations by Dr. Curnow.
- 16.—Passmore Edwards Settlement, Tavistock Place, W.C., 4.30 p.m. First of Six Lectures on "The English Utilitarians," by Leslie Stephen.
- 18.—Royal Institution, 9 p.m. Lecture on "A Yorkshire Moor," by Professor L. C. Miall.
- 12 Upper Phillimore Gardens, Campden Hill, 3.30 p.m. Parents' National Education Union. Lecture on "The Art of Breathing, with reference to Voice Production," &c., by Miss Metzke.
- 21.—At 29 Dover Street, W. (Sesame Club). Lecture on "Should People Recite?" by Mrs. Henry Norman.
- 22.—Post all School News, &c., and all Advertisements for March issue.
- 23.—University College, London, 6 p.m. Annual General Meeting of the Members of the College, to be followed by a Dinner (Chairman, the Rt. Hon. Lord Reay, President of the College).
- 24.—(First Post.) Latest time for receiving urgent Teachers' Advertisements (prepaid) for March.
- 25.—University College, Gower Street, 8.30 p.m. Lecture on "Meilhac et Halévy," by Professor Lallemand. (Free.) Royal Institution, 9 p.m. Lecture on "The Scientific Principles of Modern Colour Photography," by Capt. Abney.
- 28.—At 29 Dover Street, W. (Sesame Club). Lecture on "The Celtic Movement in Literature," by Mr. W. B. Yeats.

The March issue ready on Monday, February 28.

UNIVERSITIES AND SCHOOLS.

CAMBRIDGE.

THE term has so far proceeded without incident of a notable kind. However, a memorial to the Council of the Senate, asking for an opportunity of discussing the abolition of the "Additional Subjects" in the Previous Examination, promises to furnish some excitement by-and-by. The resignation of the newly-elected President of the Union, about whose return so much pother was raised last term, throws that redoubtable society into a fresh state of agitation. And another undergraduate journal, the *Cantab*, seeks to win our suffrages by

claiming to combine the staidness of the *Review* with the sprightliness of the *Granta*.

The Teachers' Training Syndicate publish a list of successful candidates for certificates of proficiency in the Theory, History, and Practice of Education, containing the names of two men and forty women. One of the men is a student of the Day Training College.

The Secondary Training scheme has been started with three students, two of whom have already taken Honours degrees.

The essay prize competitions seem to offer little attraction for able men, no awards being made this year for either the Hulsean Prize or the Burney Prize. For next year the Burney electors have selected a more popular subject than usual, namely, "Tennyson as a Religious Teacher."

Mr. W. Ridgeway has been re-elected Disney Professor of Archaeology. Mr. Osbert Salvin, F.R.S., and the Rev. Alfred Ainger, Master of the Temple, have been elected to Honorary Fellowships at Trinity Hall. Honorary degrees have been conferred on Dr. H. A. Giles, Professor of Chinese, and Dr. W. H. R. Rivers, University Lecturer in Experimental Psychology. Mr. A. C. Headlam, Birkbeck Lecturer, is giving a course on "The Credibility of Early Church History." Mr. Hall, Lecturer on Palaeography, is lecturing on "Latin, French, and English Records" (thirteenth to fifteenth centuries); Mr. Courthope Bowen on the "History of Education in England"; Sir Ernest Clarke, Gilby Lecturer, on "Agriculture in the Sixteenth and Seventeenth Centuries"; and Mr. Montagu Barlow, at Ridley Hall, on "The English Clergyman and English Law." Mr. N. C. M. Home and Mr. H. H. Joy have gained Law Studentships at Trinity Hall. Mr. R. C. Maclaurin, Smith's prizeman, and J. E. R. de Villiers, Chancellor's Medallist, have been elected to Macmahon Law Studentships of £150 a year, for four years, at St. John's College; and Mr. G. W. Harding, First Class Moral Sciences Tripos, 1897, to a Naden Divinity Studentship at the same college. Mr. Biffen and Mr. Kempson, of Caius, have been appointed Demonstrators in Botany and Anatomy respectively; and Mr. H. W. Pearson, of Christ's, Assistant Curator of the Herbarium.

LONDON.

THE London University question, like the poor, we have always with us. There are signs, however, that this may not be always so. Several events, of more or less importance (mostly less, perhaps) have recently taken place which may be considered by optimists to tend in this direction. Thus, not to speak of comparatively ancient history, such as the meeting of delegates summoned by the Senate of the University on December 14, and which passed a nearly unanimous approval of the late Bill, and the conference of delegates from the women's colleges, which came to a similar conclusion, I have to report that we have had another vote in Convocation, and a deputation this very day (January 24) to the Government.

Your readers may or may not remember that on May 12, 1896, a Special Committee of thirteen members was appointed by Convocation practically to decide on any amendments they might deem necessary to any Bill appointing a Statutory Commission. This Committee, having had since last June to decide as to the points in which the late Bill needed such revision, reported that, "owing to a technical difficulty and the shortness of time before the withdrawal of the Bill, this was found to be impossible." Will it be credited that a motion expressing regret at this inaction found no seconder? The Committee, however, although technically dead, having reported, and although the Bill also was technically non-existent, recommended the House to approve the scheme embodied in the late lamented, and also, in effect, to re-elect themselves, in order that they might use the same sleepless energy in "carefully watching the progress and developments of the new Bill." These motions were voted, the first, in approval of the "compromise" embodied in the Bill of 1897, by the imposing majority of seventy-six, as against forty-two votes in favour of an amendment to postpone legislation until the individual opinions of all the four thousand members had been taken.

This motion was moved and seconded by two eminent Q.C.'s—Mr. Littler and Mr. J. Fletcher Moulton. The motion was identical with that moved by Dr. Napier in January, 1896, and he naturally found himself in a "tight place" in attempting to explain why he could not now support such a motion—in fact he had to disown his offspring. Dr. J. B. Benson gave a temperate and elaborate apology for his changed attitude in now joining with the advocates of the Cowper scheme, and sought to show, though without enthusiasm, how the "compromise" met, with as little loss as might be, the essential demands of both parties. His speech appears in full in the *Times* of January 24 as a letter. Its only fault, perhaps, is that he fails to show any real guarantee for the permanence or reality of the securities supposed to be conceded. These points were indicated in the *Journal* of August last, and have been brought out in a letter to the *Standard* of January 20, which has hitherto been unanswered. That journal had a leading article expressing the opinion that the meeting would not improve the prospects of a "teaching University" in London, and that there was fairness in the contention that seventy-six votes could hardly bind four thousand, and, moreover, that the fighting spirit displayed might very possibly suffice to again defeat the Bill.

Mr. Moulton had a long letter in the same journal on the 24th, and also in the *Times*, in which he took up the more moderate position that all opposition should cease if the same examinations were conceded for all students and conducted by independent examiners. As the opposite of this is the *sine qua non* of the London colleges, as Dr. Benson reminds us, the really persuasive eloquence and studied moderation of his long letter are hardly likely to lead to an understanding. Whether he will devote his acute mind and undoubted influence toward securing the concessions of the "compromise" remains to be seen.

I now send you a few notes on the deputation to the Duke of Devonshire this afternoon (January 24). Sir H. Roscoe (Vice-Chancellor) said the Senate and the other bodies represented were anxious for the reintroduction of the Bill of last session, and that among gentlemen not present, who had signified approval of this object, were Professors Jebb, Bryce, Ramsay, and Sedgwick, and Lord Lister. Professor M. Foster, Sir S. Wilks, Dr. Fred Taylor, Lord Reay, and Principal Rendall all blessed the scheme, as did also Mr. Warren, President of Magdalen. Dr. Crosby and Mr. Sidney Webb, to whom we owe the provisions for including among University teachers those of any recognized institution within a radius of thirty miles of the University, spoke with very great favour of the project. Mr. Ralph Palmer urged the sympathy of the City Companies, and Sir Wolfe Barry of the Civil Engineers.

The Duke said that the assistance rendered him by the deputation in coming was very great, through the support it would give him in urging on his colleagues the importance attached to the question by the teaching institutions, and the necessity of appropriating such moderate amount of Parliamentary time as might be required in removing opposition. The delay had had the compensating advantage of bringing about a compromise that had removed almost the whole of the serious opposition to the Bill. The Duke then paid a generous tribute to those graduates who had sought to defend the character and reputation of the University, and who undertook the defence of the interests of external students, of independent teaching, and the rights of Convocation. He was glad to believe that there was nothing in the constitution now proposed which ought to incapacitate the University from continuing that work. So far had the process of conciliation been carried out that it was likely to be urged on him that procedure might now be made by Charter without requiring the appointment of a Statutory Commission, and the Senate might itself frame such a Charter. If this were considered impracticable by those present, his hands would be strengthened in meeting any such suggestion. His Grace then practically invited Sir H. Roscoe to say that a Statutory Commission was necessary. This the Vice-Chancellor, Mr. Anstie, Sir J. Fitch, and Mr. Haldane declared to be imperative, and after thanking his Grace the deputation withdrew.

This pronouncement in favour of procedure by Charter is, doubtless, largely due to the jealous care of the Member for the University for the constitutional rights of his constituents. On January 15, Sir John Lubbock made a somewhat notable speech at the Working Men's College, Bloomsbury, in which he expressed the opinion that the Cowper scheme, though it would give the schools more power over the examinations, would not create any more facilities for teaching than at present, and would be no more a teaching University than the present one. He also pointed out the small proportion of candidates sent by the London colleges, and went on to say that his constituents asked that they should have the opportunity of considering the proposed Charter (assuming that method of procedure), and that he was confident any well-considered scheme would receive their hearty support.

I will now only say, in conclusion, that, as a graduate who for years has urged a settlement of this question by conciliation, which has, to a considerable extent, been now done, I hope that the further steps essential to the consolidation of the securities intended by the "compromise" will shortly be taken, so that all London *alumni* may join in creating a "Great University for London."

UNIVERSITY COLLEGE, LONDON.

THE Winter Term has not been an uneventful one. At the opening of the session in the Faculties of Arts and Laws, and of Science, the Dean of the Faculty of Science referred to the very favourable report of the College issued by the Commissioners appointed by the Treasury. The most significant sentence in it is—"Indeed, in no college has the advancement of knowledge for its own sake, as the ideal of University work, been more distinctly kept in view." The outcome of this report is that the annual Government grant has been increased from £1,700 to the maximum of £3,000.

The College has recently received the following trust funds:—(a) The Pender Memorial Fund, to commemorate the late Sir John Pender, is to serve as an endowment to the Chair and Laboratory of Electrical Engineering, which will be known henceforth as the Pender Professorship and the Pender Laboratory. (b) The Chadwick Trust fund, left by Sir Edwin Chadwick, the eminent sanitarian, is to endow a new Chair of Municipal Engineering, the first occupant of which, Osbert Chadwick, C.M.G., has just been appointed by the Council. The Chadwick Trustees are also making valuable grants to the Chairs of Engineering and Hygiene.

The Chair of German, vacant by the death of Professor Althaus, has

not yet been filled; Mr. F. de Baudiss has been appointed Lecturer for the present session. Messrs. J. Romilly Allen and A. L. Bowley have been appointed, respectively, Yates Lecturer in Archaeology and Newmarch Lecturer in Economics. The Quain Chair of Physics will become vacant at the end of the session, owing to the resignation of Professor Carey Foster, who has held the post since 1867, and has been very instrumental in developing the laboratories to their present efficient state.

In the Calendar for the session 1897-98, just issued, there is a list of the original papers and other publications from the scientific departments of the College; the list fills eighteen pages, and gives a striking testimony to the activity of the College laboratories.

The new Psychological Laboratory has been opened, but Professor Sully's illness has prevented the completion of the arrangements. Dr. W. H. R. Rivers has been appointed Professor Sully's assistant in the new laboratory.

At the opening of the Faculty of Medicine the Dean stated that the new Hospital, to be built at the expense of Sir Blundell Maple, had been begun, and that, as the new building will occupy a site twice as large as that of the present one, no interruption in the work of the Medical School or of the Hospital will be caused. It is to be hoped that the public will see to it that an adequate maintenance fund may be supplied for the new Hospital, both on the score of the work of charity done by it, and because the work of the Medical School is closely dependent on it. Mr. Percy Flemming has been appointed assistant ophthalmic surgeon, and Mr. H. Batty Shaw demonstrator in anatomy.

The whole of the Anatomical Department has been fitted with electric light, so that now nearly the whole of the College buildings have been so lighted. The Slade School of Fine Art is as full as ever, and is doing excellent work. The various students' societies have shown great activity.

The Students' Union presented a very satisfactory balance-sheet and an excellent report of last year's work, which included the institution of Foundation Week, and the acquisition of an athletic ground at Acton. The football clubs have been using the ground this term, and have much improved in form owing to the regular practices. The cricket and tennis pitches have just been laid, and the committee hope to be able to at once begin the erection of the pavilion, the cost of which is being subscribed by members of the College Corporation, and by past and present students. The annual Union Christmas Concert was held on Tuesday, December 14; the Botanical Theatre was crowded with an appreciative audience. Of the non-athletic institutions of the Union, the Debating and Literary Societies have shown great activity. The Union dance will be held at the King's Hall on January 31. The Medical Society, and the Chemical and Physical Society, have held very successful annual meetings. The women students have formed a Women's Union, which, like the men's, is to have an athletic side.

At the October and November B.A. Examination of the University of London, eight students were successful. Miss Isabel Jenkins has obtained Second Class Honours in English. At B.Sc. thirteen students were successful. Mr. S. Smiles has obtained the University Scholarship in Chemistry, and Mr. C. F. Günther Third Class Honours in the same subject. Miss Agnes Kelly has obtained the University Scholarship in Zoology. Mr. J. H. Howell, B.A., has obtained First Class Honours in Experimental Physics, and Messrs. R. E. Ellis and J. L. Capes Second and Third Class Honours respectively in the same subject. Mr. H. S. Jevons has obtained Second Class Honours in Geology and Physical Geography. At M.B. twelve students were successful. Mr. Montague Dixon, B.Sc., has obtained the Gold Medal in Medicine, and Messrs. C. Dykes and F. H. Thiele, B.Sc., Third Class Honours in the same subject. Mr. Dixon has obtained the University Scholarship and Gold Medal in Forensic Medicine, also Second Class Honours in Obstetric Medicine, and Mr. Thiele Third Class Honours in Forensic Medicine. At B.Sc. six students were successful, Mr. J. D. Russell obtaining Second Class Honours. Mr. J. H. Cook has obtained the degree of M.S. At M.D. thirteen students were successful, M. J. R. W. Bucknall was Gold Medallist.

Entrance Scholarships.—Three Andrews Entrance Scholarships, of £30 each, will be awarded, irrespective of sex, upon an examination beginning on May 10, viz., one for classics; one for any two of the following subjects, mathematics, physics, chemistry; one for two languages and a science, to be chosen from the following, (a) English, French, German, Italian; (b) physics, chemistry, elementary physiology, botany. Candidates must not be more than 19 years of age on October 1, 1898, and must send in their entry forms on or before April 30, addressed to the Secretary. Andrews and other scholarships are open to students of one or more years' standing. **Public Lectures.**—Full details of these will be found in the Calendar.

SCOTLAND.

Aberdeen Town Council has not quite risen to the height of the argument proposed to it by the University; but it has agreed to give another £5,000 to the University Extension Scheme, on condition that the rest of the £30,000 necessary is raised; the sum suggested by the University was £10,000. Meantime the University is making vigorous efforts to help itself. On the one hand, it is economizing in the matter of prizes and the salaries of assistants and examiners; the immortal utterance of Micawber, the distinguished political economist,

"that bliss rewards an expenditure of nineteen nineteen six out of an annual income of twenty pounds," has evidently carried weight. On the other hand, the Aberdeen University Endowment Association has issued a powerful statement in behalf of its movement to develop the teaching resources of the University. The wants of the University may be arranged summarily as follows: (1) Additional library, laboratory, and museum accommodation, and funds for the administration thereof, and for the purchase of books, specimens, and apparatus; (2) A botanic garden, and funds for its maintenance; (3) Residential halls for male and for female students; (4) Four new chairs, viz., History and Archaeology, Education, Zoology or Geology, Conveyancing; (5) Twenty-four Lectureships; (6) The foundation of bursaries in the Faculty of Science, of additional bursaries in the Faculties of Law and Medicine, and of additional scholarships in all the Faculties.

Of these wants those represented as most urgent are the History Chair, the Botanic Garden, the expansion of the Library, and a Lectureship in German. Of these, again, the most pressing is the first, since without such a chair or lectureship the degree of M.A. with Honours in English cannot be taken under the existing ordinances. Edinburgh and Glasgow have each a Professor of History; St. Andrews has a Lecturer on the subject. For this purpose £5,000 is already available from the Bennett Trust if a chair (not a lectureship) is established. £5,000 additional must therefore be raised. Some £4,000 would provide and maintain a Botanic Garden.

The concentration of all the classes at Marischal College, in the New Town of Aberdeen, seems to be regarded as an ultimate necessity. In such an event the fine old building of King's College would be available, it is suggested, as a place of residence for professors and bursars.

Professor Johnston is waging another war. A local lawyer is anxious to be paid for sundry sage advices in connexion with the famous case, but the Professor maintains that all letters and conversation were of a friendly, not a business, nature. He records in his diary certain "pleasant interviews" with the legal gentleman, but he scouts the idea of their costing him ten shillings apiece. Meantime the Professor turns up with unflinching regularity to deliver his lectures. Nobody attends, but he reckons not.

The usual statistics have been published with regard to Edinburgh University. Most of the matters referred to have already been treated in these columns. The following figures, however, may be given:—During the past year the total number of matriculated students (including 206 women) was 2,813. Of this number, 777 (including 191 women) were enrolled in the Faculty of Arts, 153 (including 4 women) in the Faculty of Science, 60 in the Faculty of Divinity, 390 in the Faculty of Law, 1,423 (including 6 women) in the Faculty of Medicine, and 10 (including 5 women) in the Faculty of Music. Of the students of Medicine, 603, or over 42 per cent., belonged to Scotland; 405, or about 28½ per cent., were from England and Wales, 90 from Ireland, 72 from India; 215, or over 15 per cent., from British Colonies; and 38 from foreign countries. Besides these matriculated students, 88 non-matriculated students have paid the 5s. entrance fee, 43 of whom were women, chiefly attending Music classes. The number of women attending extra-academical lectures, with a view to graduation in Medicine in the University, was 74.

We understand that Professor Wenley, of Michigan, is a candidate for the Chair of Moral Philosophy in Edinburgh University.

The Senate of Glasgow University, with the sanction of the University Court, have again arranged a series of lectures, open to the public, without fee, to be given in the University. The lectures take place on Monday evenings from 5 to 6 p.m. Whenever possible, they are given in the lecturer's own lecture-room, so that he is able to use his own apparatus or illustrations. Ladies are admitted to the lectures.

The Inter-University Conference of the Students' Representative Councils of Scotland was held this session in Glasgow. A conversation and dance in the University Buildings marked the occasion in quite a pleasing way.

The interim interdict in favour of Professor Lawson, of St. Andrews, has now been made perpetual, which means, we presume, that his claim to hold the Chair has been declared sound. The Privy Council of course, may yet interfere in this and other matters in St. Andrews University, where, in the meantime, a bitter partizan strife is being carried on.

Scotland has some reason to be satisfied with the last list of honours. Dr. Batty Tuke and Dr. Struthers, of Edinburgh, and Professor Gairdner, of Glasgow, thoroughly deserve the distinctions conferred upon them, and their recognition has gratified us all.

The centre in Scotland for the recent Matriculation Examination of London University was the Glasgow Established Church Training College. The number of candidates present was twenty-four, of whom two were women.

Considerable interest was excited by the correspondence between the Education Department and the Educational Institute on the subject of the dismissal of teachers. It will be remembered that in January, 1897, Lord Balfour asked the Institute to submit a statement of cases. On October 21 the Institute submitted a list of twenty-one cases that had occurred during the period 1886-1897, and asked that these should be regarded only as specimen ones, on the

ground of the unwillingness of many teachers to have public notice specially brought to bear upon themselves. The Department's reply was conceived in a fighting tone. Five cases were at once struck off the list; three on the ground that the teachers concerned were only assistants—a portion of the reply that has given deep offence to the assistants throughout the country. In ten of the remaining cases Lord Balfour considered the dismissal justifiable, and with regard to the six left "his Lordship admits there is *prima facie* reason to think that the grounds of dismissal were not altogether adequate, but on the information available it would not be safe to go further or to say that in none of them reasons did exist which would have negatived the view that the action of the respective School Boards was groundless or capricious."

The conclusion Lord Balfour comes to is that "he does not feel that the evidence now before him would justify him in proposing to Parliament that the powers of School Boards should be restricted by legislation." The Educational Institute made a belated but spirited reply to Lord Balfour. Public opinion, however, as represented by the leading newspapers, is dead against the Institute, which is considered to have presented a very weak case. That there are real grievances: undoubted; that they admit of convincing statement is not so clear. In these circumstances, the Institute should do its utmost to secure the extension of School Board areas *on grounds of public policy*. Such extension would provide all reasonable security of tenure.

The Institute Commission on Higher Education continues to collect evidence. Some of the secondary schoolmen are scornful and antagonistic, but others freely offer information, and there is no reason to doubt that the Commission will be able to draw up a valuable report. The lines of the investigation were laid down with considerable skill, and the good effects of this preliminary work have been felt throughout the course of the proceedings.

The Scottish Assistant Teachers' Association continues its agitation in favour of a more satisfactory scheme of salaries. The following is a specimen of the demands made by the assistants; it is the scheme approved by the Glasgow district of the Association:—Assistant-mistresses should rise from £60 to £120 by £5 annually; assistant-masters should rise from £80 to £150 by £5 annually; infant mistresses should rise from £100 to £150 by £5 annually; third masters should rise from £150 to £200 by £10 annually; second masters should rise from £150 to £250 by £10 annually. In this connexion it may be mentioned that the supply of male teachers is increasing.

Sir Robert Pullar has increased to £6,000 his subscription towards the cost of the recent extensions and equipment of Sharp's Institution, Perth, which is being adapted to meet the increasing demands of science and art.

In the Aberdeen School Board the rival parties have buried the hatchet and smoked the pipe of peace, and vowed to co-operate harmoniously in conducting public business. At the last monthly meeting of the Glasgow School Board one or two interesting statements were made. While the number of scholars has increased, the average attendance has not increased correspondingly. Epidemics, no doubt, count for something, but the fact has to be faced that large classes of the community do not place a high value on the benefits of education. Attention was drawn to the complaints about the unmannerly conduct of young Glasgow, and the Board was assured that in school and playground no fault could be found with the children's conduct. The fault lies in the laxity of parental discipline; the result is rudeness, disrespect, and insolence on the part of children. In Glasgow, as elsewhere, children are in haste to leave school and get to work. Thousands of children pass the fifth standard at eleven years or earlier, and, as the Factory Act forbids the regular employment of children under thirteen, there is plenty of time for much to be forgotten. Either the sixth standard must be made compulsory, or else an age limit must be fixed. At present, the desire of children and parents seems limited to the educational minimum; of 99,000 children on the rolls of the different schools within the Glasgow School Board area, only 2,875 are receiving secondary education. At the annual meeting of the Association for Aiding School Boards in the Inspection of Religious Instruction, Lord Balfour was frank enough to draw attention to the denominational character of the religious instruction given in Scottish public schools. "We cannot teach Christianity—the most elementary doctrines of Christianity—in any way without dogma." The logical inference will not satisfy everybody.

The death of Mr. McLaren, the parish minister of Larbert, removes one deeply interested in education. He was president of the Educational Institute in 1887.

The Educational Congress, at Stirling, on Tuesday and Wednesday, January 4 and 5, was well attended, and caused quite a stir in the ancient city. The municipal authorities and others in the locality did all they could to make things pleasant for those attending the Congress, and the various social functions were highly successful. The President's address was partly historical and partly critical; after glancing at educational progress since 1872, Dr. Campbell asked for greater simplicity of control, and better conditions of employment for teachers, longer and more regular attendance at school, and more money and better organization for secondary education. Professor Wallace, Edinburgh University, urged the claims of agriculture to adequate

support. Its importance entitles it to great attention, but technical work must not be allowed to monopolise the educational field. Sir Henry Craik may be trusted to stand by liberal culture. Mr. McCallom read a paper on large schools and assistants, but failed to persuade the meeting to condemn the method of organizing such schools. The Congress disapproved of excessively large schools (as goes without saying), but would not commit itself to the departmental system. The presentation of the Institute Diploma to Sir Henry Campbell-Bannerman elicited a speech on our national shortcomings in pushing our goods abroad, and on our need to learn the virtue of adaptability.

The examination system was considered by the Congress, but nothing new was said on the subject; nor was there novelty in the demand for the establishment in each district of one educational authority. We question whether this particular uniformity is favoured in high places.

In his paper on the training of teachers, Dr. Ross produced some startling figures. From 1885 to 1896 the number of certificated male teachers has risen from 3,300 to 4,100, an increase of nearly 22 per cent.; while the proportion of trained men has increased only $3\frac{1}{2}$ per cent. The number of certificated women has risen from 2,900 to 5,347, an increase of nearly 80 per cent., while the proportion of trained women has decreased more than 5 per cent. In 1879 four-fifths of the female teachers in Scotland were trained; now fully one-third are not trained. In 1885 the proportion of trained teachers of both sexes was over 73 per cent.; it is now barely 71 per cent. The untrained female teacher is supplanting the trained one, and the female teacher is supplanting the male one. The approaches to the training colleges are now five instead of one; pupil teachers are being turned out in numbers far beyond the capacity of the training colleges, and the Department is doing nothing to meet the difficulties of the situation. Such are the chief points in a paper that will, no doubt, form the basis of action by the Institute.

Mr. Todd (Stirling) initiated an interesting discussion on child study. Professor Lodge, of Glasgow, advocated the claims of history to a place in schools. A paper was read on behalf of Dr. Munro on health conditions in schools; and Mr. Lowson (Stirling) discussed the place of mathematics in schools.

Resolutions on capricious dismissal and superannuation, and votes of thanks, closed the Congress.

IRELAND.

The public meeting of the Catholic laity in favour of the establishment of a Catholic University took place in the Mansion House, Dublin, on January 11. The Round Room was filled, and the principal speakers were The O'Connor Don, Viscount Powerscourt, Mr. Dillon, M.P., Mr. Harrington, M.P., Mr. J. Clancy, M.P., and Lord Emly, while letters were read from many eminent men, including an admirable one from Mr. Lecky. With the exception of a small Orange section, who maintain that Irish Roman Catholics have everything they can really want, because they have everything that Protestants have, the general feeling in Ireland is that, if the large majority of *educated* Catholics desire a University conducted on Catholic lines, they should have it. There is no possible justification in withholding it. Once admit the rule: "You must have what *we* think is best for you, not what you want and ask for," and there is an end, not only of democratic, but even of constitutional, principles, as they are understood in English-speaking countries.

A doubt has existed up to the present, as to whether the laity did desire a Catholic University, as until now they have taken no active part in trying to obtain it. The meeting last month is important from the number of delegates from all parts of the country who attended, and because it was accompanied by public meetings all over Ireland, and resolutions passed by numerous boards and corporations, in support of the same object. There can be no doubt of the fact of a widespread demand now, so far as public action goes. We must, of course, remember that the large mass of the laity thus taking action are not educated men, and know little or nothing of what kind of education they are asking for, and how different and inferior it is compared to that which they are rejecting. Educated and thoughtful Catholics form a very small class in Ireland, and, from the power exercised by the Church, are undoubtedly afraid to speak out. In private society an absolute dread of the new University is commonly expressed by this class, since they know that when it is established it will be almost impossible not to resort to it. But such private utterances have rightly not the slightest weight with any Government. Those who are afraid to speak must accept the consequences of the silence that gives consent.

No particulars as to the constitution of the new University were naturally gone into at the meeting. Whatever proportion of laymen, however, take part in the governing body, it will not alter the inevitable tone of Catholic teaching. No book in any literature, however valuable as literature, will be allowed which is thought dangerous to faith and morals; established scientific truths will no doubt be taught, but they will be specially interpreted; the philosophy taught will be the scholastic, with the unobjectionable parts of Greek philosophy, and second-hand accounts of the modern thinkers; while the constant surveillance of the students, which gives a peculiar tone to Catholic collegiate life, will be maintained.

If those who are asking for this kind of University think it will turn out men of the stamp that wholly dissimilar Universities produce—with the one difference, that their religious beliefs have been preserved—they are mistaken. But this they must find out for themselves. The Government is bound to grant what has been asked for by the majority of Irish Catholics. Whether it will be possible to do so this session remains to be seen.

It is expected that the Royal University will be abolished, the Queen's Colleges of Cork and Galway being affiliated to the new Catholic University; and Queen's College, Belfast, either affiliated to Trinity College, or raised to the rank of a Presbyterian University. It is certain that the new Catholic University will be open to women, but this will be of no use to Protestant women, who, unless Trinity opens her teaching and degrees to them, will apparently be left without any University, after having one for nineteen years. It is improbable, however, that, under such circumstances, Trinity would continue to refuse to help women's education, or that Mr. Balfour would not make provision for it in his scheme.

University College, St. Stephen's Green, the Catholic College of the Royal University, has up to the present refused to admit women. It has now opened its medical school to them, which is a great advantage, as it contains a large proportion of the examiners in the very difficult medical courses of the Royal University. It is said that the teaching for the Arts courses would also now be opened to ladies applying for it.

The recently formed Assistant-Masters' Association held a Conference in January in Dublin. The Association already numbers over two hundred members. At the Conference several distinguished men spoke, including Professor Fitzgerald and Dr. Purser, Fellows of Trinity, Mr. Preston, F.R.U., and Professor Johnston, of the Royal College of Science. Many subjects of interest were discussed, and some valuable suggestions for the improvement of the Intermediate system, and for making the scientific and practical side of education more dominant, were brought forward.

The Association is working actively to have the Bill for the Registration of Teachers extended to Ireland, and has already applied to the Irish members for their support. Whether the fact that Catholic teaching is so much in the hands of religious orders will make a difficulty remains to be seen. The extension of the Bill to Ireland would necessitate the educational equipment and registration of Jesuits, and Christian Brothers, and the Dominican and Loretto nuns. This would be a great good to education, but it is possible they themselves may object to it.

The question of the new rules for pensions is being much agitated among National school teachers at present. By these rules the premiums paid by the teachers are largely raised, and this is said to be necessary because the fund is deeply in debt. At a meeting held in Dublin recently, the following account of the matter was given:—"According to the Act of 1879, the Church Temporalities Commissioners handed over £1,000,000 sterling to the fund, and with this the authorities purchased £1,300,000 Three per Cent. Consols, the income from which was £39,000 a year; the teachers contributed one-fourth of the annual expenditure, making a total income at the disposal of the fund of about £49,000. The yearly surplus invested in Government Stock, capitalized, amounted at the end of 1896 to £406,527. 12s. 3d., the original capital being increased accordingly. The report of the Commissioners stated that the total income of the fund for the year 1896 was £61,093. 2s. 10d. and the expenditure £46,007, showing a surplus of nearly £16,000. From these figures it was impossible to conceive how the fund was bankrupt. The committee appointed to investigate the financial state of the fund stated that on December 31, 1895, it was in debt to the extent of £1,200,000, and other estimates were made of the deficit, two valuations from the same hand showing a difference of no less than £1,000,000. Acting on the report of the actuaries, the Lord Lieutenant, with the consent of the Treasury, sanctioned the new rules for the management of the fund, by which the premiums paid by the teachers have been increased fully 150 per cent. It was a debatable point whether his Excellency had power or not. Mr. Carson, Q.C., M.P., the Member for the Dublin University, speaking in the House of Commons, said that there was nothing in the Act to justify such a rule. The Act of 1879 provided that before a change was made in the rules it should be submitted to Parliament; and, therefore, the teachers would do well to appeal to their Parliamentary friends to induce Parliament to refuse its sanction, or to institute an inquiry into the whole matter.

Dr. L. C. Purser, F.T.C., has just been appointed to the Professorship of Latin, vacant by the death of Dr. Palmer. The appointment will be a most popular one. Dr. Purser is universally beloved for his singularly unselfish, sincere, and benevolent character. His whole life consists in helping others, and his great scholarship and many gifts are spent in such service. He was Classical Scholar in 1873; senior moderator (with first place) in classics and metaphysics in 1875, and became fellow in 1881. He has done much valuable original work, among which is the superb edition of the "Correspondence of Cicero," carried out in conjunction with Professor Tyrrell.

Important to Heads of Colleges and Schools!

The Artist

AN ILLUSTRATED
MONTHLY RECORD
OF ARTS, CRAFTS,
AND INDUSTRIES

The Official Organ

OF THE

Society of Art Masters.

ELECTED AT THEIR ANNUAL MEETING, 1897 (see Report).

The Society of Art Masters includes all those who prepare for the Examinations under the Science and Art Department, and therefore has a direct relationship to the Government requirements.

Under the auspices of this Society a Section devoted to "Art Masters and Art Students" was opened in "**The Artist**" of January, and will be continued from month to month. It includes

(i.) A series of Authoritative Articles upon the usual subjects set for Examination by the South Kensington Department, beginning with "Decorative Design."

(ii.) A "Notes and Queries" column, open for discussion of all legitimate points affecting the interests of Art Students. Typical or test Examination Papers will be set in this column, and information will be gratuitously given upon such matters as Subjects for Study, Difficulties met with in Examination Papers, &c.

Prize Competitions for Drawings are frequently offered. These have proved a great encouragement to young artists.

"**The Artist's**" "Notes and Queries" column is under the conduct of a gentleman whose remarkable success as an Art "Coach" is due to his exact and expert knowledge of the requirements demanded by the South Kensington Department. No more need be said to emphasize the value of this to every one studying Art Subjects.

N.B.—Please mark all communications for the above "Schools Section," and address—

THE EDITOR, "**The Artist**,"

2 Whitehall Gardens, London, S.W.

POST FREE, 1s. 3d. ANNUAL SUBSCRIPTION, 15s.

CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.—Sixteen students from this College were presented in December for the examination of the Teachers' Training Syndicate of the University of Cambridge. All sixteen passed. In the theoretical examination one passed in the first class, thirteen in the second, and two in the third. In the practical part of the examination seven passed in the first class, seven in the second, and two in the third.

SCHOOLS.

CHELTEMHAM LADIES' COLLEGE.—At the London B.A. Honours Examination in English, Miss Jeffries-Davies gained the Derby Prize of £50—coming out alone in First Class Honours.

NEWPORT (MON.) INTERMEDIATE SCHOOL FOR GIRLS.—The first annual distribution of prizes was held in the School Hall on Friday, December 3rd. The prizes were distributed by Lady Llangatock, and addresses were given by Miss Constance Jones, resident lecturer, Girtton College, and Mrs. Viriamu Jones. The Headmistress, in her report on school work, stated that the school was opened in April, 1896, with sixty-eight girls, a number which had increased to a hundred and three.

ST. STEPHEN'S HIGH SCHOOL, CLEWER.—In the last Cambridge Higher Local Examination, Francis Bell, Ruth Hewetson, Agnes Gedge, and Helen Mosley were awarded First Class Honours.

PRIZE COMPETITIONS.

THE Translation Prize for January is awarded to "The Causative Vacuum."

The winner of the Translation Prize for December is Lieut.-Colonel J. W. Buxton, St. Mark's Road, Jersey.

The winners of the Extra Prize for December are Miss Mary Lister Gandy, 14 Lawn Crescent, Kew Gardens; and Miss C. Sophia Fry, Upton, Didcot, Berks.

For January Extra Prize see page 122.

Immer und immer wieder trat mir das Bild der schönen Godiva entgegen—vornehmlich im verflossenen Jänner, da der Rheinstrom mit Eis ging und silberlichte Flocken vor meinem Fenster auf und nieder tanzten, und mir war's, als ob ihre tiefblauen Augen eine stumme Bitte enthielten.—Ich verstand sie!—Feder, Tintenfass und blütenweiss Papier standen bereit und waren mir Helfer. In wenigen Monden lag der stumme, seelenvolle Blick verkörpert auf Mappe und Schreibtisch.

Wer aber war Godiva, wo ihre Heimat, wo ihre Sippe, ihr Leiden und Lieben?—

An den stillen Ufern des Avon, über Heiden und Moor der Grafschaft Warwick geht ein Raunen und Flüstern, das von der schönen Godiva verkündet. Es klingt so heimlich, so traut und mutet an wie Harfengeiton in laulicher Mainacht.—Aber auch in sonstigen Grafschaften und Baronien und in deutschen Gauen singt und sagt man von der herrlichen Frau, von dem Weib ohnegleichen. Jedem sein Recht!—Und dennoch sind die guten Bürger von Antwerpen, die das treffliche Bild ihres Malers Frans van Lierus täglich vor Augen haben, besser beraten, und sie erzählten mir, dass sie lebte und lichte, als der spanische Marsch durch die Provinzen ging und Alexander Farnese, Herzog von Parma, in den Niederlanden gebot.—

Wie spiegeln sich die Zinnen der grossen Stadt so wunderlich und abgrundtief in den Wassern der Schelde!—Mir kam ein Klingen vom hohen Getümmel!—Regina coeli, Clinsa und Anne-Susanne, Roland und Türk wurden redewaltig und raunten mir die Mär von der schönen Godiva, wie sie nunmehr gebucht steht.—

Und wenn ich mich gezwungen sah, geschichtliche Personen und Daten ein wenig zu schachteln, der Historiker mag mir's zu gute halten. Wenn nicht, wenn er diese Freiheit dem Dichter nimmer gestattet und sie als Fehler bezeichnet—nun wohl! ich fehlte mit Absicht.—

Du aber, meine Geschichte, ziehe hinaus und grüsse mir alle, die guten Willens sind.

By "THE CAUSATIVE VACUUM."

The picture of the beautiful Godiva has risen before my mind again and again; but it did so with special vividness last January. Ice was then drifting down the current of the Rhine, and silvery snowflakes were dancing up and down outside my window, and I felt as if in those deep-blue eyes of hers there lingered a mute entreaty—I knew its meaning. Pen, inkstand, and clean white paper were lying ready at hand to assist my thoughts. In a few months that look—silent,* yet eloquent of the soul within—lay embodied in the portfolio on my writing-table.

But who was Godiva? Where her home and kindred? Where did she love and suffer?

On the quiet banks of the Avon, over moor and fen of Warwickshire, there steal the murmurs of a whispered tale about the beautiful Godiva. It all sounds so homely and simple, and touches one like the music of a

* Cf. Pope, "Lely on animated canvas stole
The sleepy eye which spoke the melting soul."

WHITTAKER'S LIST.

CATALOGUE POST FREE ON APPLICATION.

A NEW GRAMMATICAL FRENCH COURSE. By Prof. ALBERT BARRÈRE, R.M.A.

Parts I. and II., in One Volume, **Elementary.** 1s. } [Just published.
Part III., **Intermediate.** 2s.

The above volumes form preliminary parts to the "*Précis of Comparative French Grammar*," by the same Author, which is extensively used in many large Public Schools.

"The whole course is clear and well arranged: it is above all simple."—*Education.*

FRENCH COMPOSITION: Select Passages for. With Vocabulary. By ALBERT BARRÈRE, Professor, R.M.A., Woolwich, and LÉON SORNET, Officier d'Académie, French Master, King Edward's High School, Birmingham. Second Edition, Revised. Crown 8vo, 2s. 6d.
(In use at Eton College.)

DAUDET'S (ALPHONSE) LA BELLE NIVERNAISE.

Histoire d'un vieux bateau et de son équipage. Edited by J. BOILLÉ, B.A., Senior French Master at Dulwich College. With Introduction, Notes, and Vocabulary, and Six Illustrations. Fifth Edition, Revised. 2s.

"The notes are apposite and well expressed."—*Journal of Education.*

CLARETIE'S (JULES) PIERRILLE. Sole Authorised

Edition. Edited by J. BOILLÉ, B.A., Senior French Master at Dulwich College. With Introduction, Notes, and 27 Illustrations. 2s.

Set for the Oxford Local Examinations (Junior), 1898.

A COMPLETE GERMAN COURSE FOR USE IN PUBLIC SCHOOLS.

Edited by F. LANGE, Ph.D., late Professor R.M.A., Woolwich; Examiner in German Language and Literature in the Victoria University, Manchester; and to the College of Preceptors.

GERMAN GRAMMAR. With especial reference to Phonology, Comparative Philology, English and German Correspondences, and Idioms. In Three Parts.

Part I.—**ELEMENTARY ACCIDENCE AND SYNTAX.** With Exercises. By A. WEISS, Ph.D., Professor R.M.A. 1s. 6d.

Part II.—**ACCIDENCE SUPPLEMENTED AND SYNTAX CONTINUED.** With Exercises. By A. WEISS, Ph.D., Professor R.M.A. 1s. 6d.

Part III.—**A CONCISE BUT COMPLETE SURVEY OF GERMAN GRAMMAR.** 3s. 6d.

ELEMENTARY GERMAN READER. A Graduated Collection of Readings in Prose and Poetry. By F. LANGE, Ph.D. With English Notes and a Vocabulary. Fourth Edition. 1s. 6d.

ADVANCED GERMAN READER. A Graduated Collection of Readings in Prose and Poetry. With English Notes. By F. LANGE, Ph.D., and J. F. DAVIS, M.A., D.Lit. Second Edition. 3s.

DER BIBLIOTHEKAR. Lustspiel von G. VON MOSER. Edited, with English Notes, &c., by Prof. F. LANGE, Ph.D. Authorized Edition. Fifth Revised Edition. 2s.

MEISTER MARTIN, DER KÜFNER. Erzählung von E. T. A. HOFFMANN. Edited, with English Notes, &c., by Prof. F. LANGE, Ph.D. Second Edition. 1s. 6d.

GEOGRAPHY, A TEXT-BOOK OF. By CHARLES BIRD, M.A., the Mathematical School, Rochester. [In the press.]

ORGANIC CHEMICAL MANIPULATION. By J. T. HEWITT, M.A., D.Sc., Ph.D., Fellow of the Chemical Societies of London and Berlin, Professor of Chemistry in the East London Technical College. With 63 Illustrations. Crown 8vo, 7s. 6d. net.

"A work which will be of great service to many teachers of practical chemistry."—*Engineer.*

FIRST BOOK OF ELECTRICITY AND MAGNETISM. By W. PIERRE MAYCOCK, M.Inst.E.E. Second Edition, Revised and Enlarged. 107 Illustrations. 2s. 6d.

"Students who purchase a copy, and carefully study it, will obtain an excellent groundwork of the science."—*Electrical Review.*

PRACTICAL ELECTRICAL MEASUREMENT. An Introductory Course in Practical Physics for Students and Engineers. By E. H. CRAIGIE, A.I.E.E., Lecturer in Physics and Electrical Engineering, Sheffield Technical School. Crown 8vo, 2s. 6d.

DRAWING AND DESIGNING. In a Series of 29 Lessons. By C. G. LELAND. With 42 Illustrations. Third Edition, Enlarged. Fcap. 4to, cloth, 2s.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

harp on a warm evening in May. But other counties, too, and baronies and districts of Germany, have their songs and legends about that noble lady, that matchless woman. Let us be fair to all.

And yet the good burghers of Antwerp, having daily before their eyes that fine picture by their painter, Frans van Lierius, are furnished with better evidence, and they told me that she lived and loved at the time when the Spanish were marching through the Provinces, and when Alexander Farnese, Duke of Parma, was commanding in the Netherlands.

How strangely, and to what a depth, are the spires of that great town mirrored in the waters of the Scheldt! A chiming from the steep belfry struck my ears. Regina Coeli, Clinsa and Anna-Susanna, Roland and Turk acquired the power of speech, and whispered to me the story of beautiful Godiva, as now set forth in my book.

And, if I have found myself obliged slightly to modify historical dates and personages, the historian will kindly grant me some indulgence. If, however, he never allows a poet this liberty, and dubs it a mistake—very well! my mistake was intentional.

Now, my story, go thou forth, and convey my greetings to all sympathetic readers.

We classify the 173 versions received as follows:—

First Class.—L.M.M., Anchor, Kittifornia, N.M.C., The Causative Vacuum, The Bright Inn, Chingleput, West Central, Volavit, L.L., W.W.W., L.M.P., Acta non Verba, Gentian, G.E.D., Stylograph, Rockite.

Second Class.—Calendar, Nazianzen, H.M.S., Eicarg, Nerthus, Gory, Iona, Auntie Mi, Old Sojers, M.M., Cheltenham, E.W.L., Feldafing, Au bord du Leiman, Southern Cross, *χρυσέων χάλκεια*, Zigeunerin, Borealis, A.W.G.B., C.W.M. Bychan, J.H.N 51, O. Mimosa San, E.W.P., Mers-les-Bains, Mrs. Prickard, Stedeghe, Faciebat, Durham, Chiaroscuro, W.S.M., Unterberg, Abt Vogler, Martin, Sally Brown, Nectarine, O.A.P.O., Kurz, Vetter aus Bremen, Silly Suffolk, Arod, Mrs. Discobolus, Apathy, Deback, D., Agnes, Butomus, B.J., Jan Chinn, Kotiek, A.F.H., H.M.S., B.N., Diamond, Freitag, Menevia, Frank van Levius, Pro-pero, Mamma's Queen, Smilax, Isis, E.H.O., M.M.M., Einnim, Anvers, Peeping Tom, Teinal, Mars, Swallow-tail, Society Sister, A Speckled Bird.

Third Class.—H.K., M.L., Mayde Marianne, Roland und Turk, Progress, Teja, Adelheid v. Hatten, Random Shot, Hamburg, Pick-me-up, Yougai, Mern, Veuvette, Freude, Rustic, I., Agnes Bernauer, Pilteken, Suska Konitzka, Dodo, Caviare, Franzeska Luigi, Rough Copy, Phenny, K.A.M.D., The Doctor, Annesley, Zeus, Judex, M.L.A., Mere Fossette, G.M.C., E.M.S., Kololo, Dahomey, A.L., E.I.D., Tabbie, R.A.F.B., Alderman Pud Pud, Charcoal, Ekkehard, Eln, Gretchen, Escualduna, F.M.C.C., Catchecleam, Fry, Diotrephes.

Fourth Class.—Dum Spiro Spero, A.F.R., Fantome, Rosalind, Bat, Grischda, Mischief, Lumlago, Vlaamsche Meisje, Miranda, Finetta, Thorn, Fritters, Lucius, O.P., Rad, Faveo, Coutts, Lubin, C.L.C.

Fifth Class.—Crosbeia, Scottish Thistle, Dane, Maltravers, Ortho, R.S., F.E.T., Maskil, Thorpe, Fasta, Mole, Infant, D.U., Lush, Rep.

The preface to Lauff's "Regina Coeli" was easy enough to construe, but it was not so easy to transfer the *schwärmerei*, the sentiment and poetry of the original. "Ink-pot," "blotting-pad," "rhetorical," are samples of the flat prose which account for a good many of the second and third classes. *Im verflorenen Jänner*, simply "last January." *Mit Eis ging*, "was thick with ice-floes," not "was frozen over." *Blütenweiss Papier*, "virgin paper" is a near enough equivalent; "white as flowers in May" is *de trop*; so "were at hand to aid me" is better than "were ready and were my assistants." "Embodied in (or on) portfolio and writing-table" will hardly stand; we must turn "embodied in the manuscript on my desk." *Geht ein Raunen und Flüstern*, "the whispered legend runs." *Heimlich*, "mysterious," "weird," was constantly mistaken, as in the prize version, for *heimisch*, "homely." So *wunderlicht*, "light," "delicate," was confused with *wunderlich*. *Regina coeli*, &c., are, of course, the names of the bells, and *Turk* = *Turke*, "the Turk." *Schachteln*, properly "to polish wood with spear-grass," so "to embellish," applies more particularly to the historical personages. *Dichter*, the composer of any work of the imagination; here rather "novelist" than "poet." *Jedem sein Recht* is, literally, "To each man his due," but, as the proverb is applied to the various localities, it is better to turn it "Gives each its due," or, "Each may claim a hearing." "Acquired the power of speech," in the prize version, is somewhat flat; read "became articulate," or, "grew eloquent of speech."

EXTRA PRIZE.

For the Extra Prize there were 171 competitors, and of these 72 solved correctly the three puzzles. We give below the correct solutions and the names of the solvers. The share of each winner we reckon would be 3½d., which sum shall be duly forwarded to any claimant, but we fancy that competitors will prefer to work off the tie. We therefore offer this month two Extra Prizes of a guinea each, one

unrestricted and the other confined to successful solvers, for

THE BEST ORIGINAL PUZZLE MODELLED ON

"There sits a pale-eyed phantom at thy feast."

To prevent confusion successful competitors are requested to keep the same initials or pseudonym. The puzzle may be in Latin, French, or German, as well as English.

There sits a pale-eyed phantom at thy feast,
No art to tear it thence avails the least,
They see thee stare at what they cannot see
While fast and faster whirls thy hollow glee.
Thou fearest not on thy false head to wear
The feathers that of right my brow should bear;
And all thy faults thou fatest on me,
Iniquitous step-father, woe is thee!

Can I forget it? Nay, not I;
I sit and weep for this all day;
My sight all glad things passeth by;
The sweet bird singeth;
But one thought stingeth—
My broken tea-things, where are they?
The shattering of a kitten's play.

O, no one note can make me yet
Thy tones, O honest friend, forget.
The stinging hornets of regret
Would pierce me were my hide the horniest.
Aye, though I walked through ways the thorniest,
No thorn, thou threnodist, could bring
To my seared conscience such a sting.

The following is a list of the successful solvers:—H. Carr Smith, M.W., Pikelet, N.M.T., W.E.T., Hukat, Mayde Marianne, Reata, Sartor, TIEITI, Menevia, θηῖνος, Y.C., C.McE., Virtus post nummos, Skinny herring, Sutton, Rizzio, A.C.S., Asterisk, Rolobo, Lorna, Flo B., Morganwg, Armorel, Thorngumbala, E.H.O., E.M.M., Mow, Pomegranate, Dockra, Verlegen, L.P., Leaf, Isea, Amber, Threnodist, Guavi, D., Sussex, Bobus, G.E.D., Brick-bat, Southfield, Mag., Plain Percival, Sixpence, Yram, Ben Trovato, Polemarchus, Jeanne, Quarens, Bodkin, Monk, T., Blackstead, W.E.T., Cwm-Bychan, Martreb, Anchor, R.F.D.S., Jerboa, Hector, G.D.R., Cowley, Speranza, Poker, 100,000, Mad, Sigma, Cypher, Ginger Bloo, H.V.J.P.T.

A Prize of Two Guineas is offered for the best translation of the following passage from De Retz's Memoirs.

Afin qu'il ne manquât aucun personnage au théâtre, le maréchal de la Meilleraye, qui jusque-là était demeuré très ferme avec moi à représenter la conséquence du tumulte, prit celui du capitaine. Il changea tout d'un coup de ton et de sentiment sur ce que le bonhomme Vennes, lieutenant-colonel des gardes, vint dire à la Reine que les bourgeois menaçaient de forcer les gardes. Comme il était tout pétri de bile et de contre-temps, il se mit en colère jusqu'à l'emportement et même jusqu'à la fureur. Il s'écria qu'il fallait périr plutôt que de souffrir cette insolence, et il pressa qu'on lui permit de prendre les gardes, les officiers de la maison et tous les courtisans qui étaient dans les anti-chambres, en assurant qu'il terrasserait toute la canaille. La Reine donna même avec ardeur dans son sens; mais ce sens ne fut appuyé de personne; et vous verrez par l'événement qu'il n'y en a jamais eu de plus réprouvé. Le Chancelier entra dans le cabinet à ce moment. Il était si faible de son naturel qu'il n'y avait jamais dit, jusqu'à cette occasion, aucune parole de vérité; mais en celle-ci la complaisance céda à la peur. Il parla et il parla selon ce que lui dictait ce qu'il avait vu dans les rues. J'observai que le Cardinal parut fort touché de la liberté d'un homme en qui il n'en avait jamais vu. Mais Senneterre, qui entra presque en même temps, effaça en moins d'un rien ces premières idées, en assurant que la chaleur du peuple commençait à se ralentir, que l'on ne prenait point les armes, et que, avec un peu de patience, tout irait bien.

Il n'y a rien de si dangereux que la flatterie dans les conjonctures où celui que l'on flatte peut avoir peur. L'envie qu'il a de ne la pas prendre fait qu'il croit à tout ce qui l'empêche d'y remédier. Ces avis, qui arrivaient de moment à autre, faisaient perdre inutilement ceux dans lesquels on peut dire que le salut de l'État était enfermé.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled, on application, to a copy of "Essays in Translation."

All Competitions must reach the Office by February 16th, addressed "Prize Editor," JOURNAL OF EDUCATION, 86 Fleet Street, E.C.

Entirely New Edition. Now ready.

THE HOWARD VINCENT MAP OF BRITISH EMPIRE.
For Schools. Size 72 by 63 inches. With Handbook gratis.
Adopted by the London School Board. 21s.

ILLUSTRATIONS OF GEOMETRY

On an entirely New Principle, the Problems being given in different Colours on a Black Ground. By THOMAS J. MENZIES, M.A., B.Sc., &c., Hutcheson Grammar School, Glasgow. SHEET I. (ready), size 50 by 42 inches, price 7s. 6d., on cloth and rollers.

W. & A. K. JOHNSTON'S

ILLUSTRATIONS OF PLANTS OF COMMERCE.

Six in Series. Price 3s. 6d. each, on cloth and rollers, varnished; or 18s. for the complete set. Others in active preparation.

W. & A. K. JOHNSTON'S

BOTANY SHEETS FOR BEGINNERS.

By ALEXANDER JOHNSTONE, F.G.S., Lecturer on Botany, Edinburgh School of Medicine. Six in Series. Price 3s. 6d. each, on cloth, rollers and varnished, or on cloth, to fold up, with cloth sides; or 18s. for the complete set.

W. & A. K. JOHNSTON'S

ILLUSTRATIONS OF HISTORICAL AND FAMOUS SCENES.

Six in Series. Price 3s. 6d. each, on cloth and rollers, varnished; or 18s. for the complete set.

W. & A. K. JOHNSTON'S

HISTORICAL ATLAS.

Containing 35 Maps, printed in colours, with index, &c. Crown 8vo, full-bound cloth, gilt, price 2s. 6d.

W. & A. K. JOHNSTON'S

PHYSICAL ATLAS.

Containing 24 Maps, in colours, with descriptive letterpress by Sir ARCHIBALD GEIKIE, LL.D. Imperial 4to, half-bound, 8vo, price 12s. 6d.

OUR EMPIRE ATLAS, showing all British Possessions. Containing 59 Coloured Maps and complete Index. With Introduction by C. P. LUCAS, B.A. Royal 4to, cloth, price 6s.

Fourth Edition, carefully revised to date.

MULTUM IN PARVO ATLAS.

Containing 96 full-coloured Maps—Political, Physical, &c. Useful Statistics and Index. The best and cheapest of Miniature Atlases. Crown 16mo, full-bound cloth, price 2s. 6d.

Catalogue of Maps, Atlases, Globes, and List of Object-Lesson Pictures post free to any address.

21 ARGYLE CRESCENT, JOPPA, EDINBURGH;
or at 20 Highbury Place, LONDON, N.
(Close to Highbury Station and Trams).

This Company supplies Pianos, American Organs, Harmoniums, &c., at prices unequalled by any other Firm, Dealer, or Maker, for Cash or Instalments, with a month's free trial, a 10 years' warranty, carriage paid, and free exchange or return at our risk and cost if not fully satisfactory. Iron-Framed School Pianos, new and guaranteed, from 14 Guineas Cash.

N.B.—All our Pianos are fitted with a special action to the Soft Pedal that fully subdues the tone, and effectually preserves the Instruments during practice.

Mr. W. PARKS, Clerk to the St. George School Board, Gloucester, writes:—"Please deliver six more Pianos according to your tender as early as possible." (We have sent fourteen instruments of the same class to this Board).

Mrs. GRAVES (wife of A. P. Graves, Esq., Her Majesty's Inspector of Schools, Southwark District, London, S.E.) writes:—"The Piano has stood very hard wear extremely well during the year, and we all admire the fine full tone of the instrument and its handsome exterior."

Show Rooms open Daily. Call and see our Stock, or write for our List of Instruments for Home or School use, specifying class preferred, and you will find

WE CAN SAVE YOU MANY POUNDS.

PENSIONS.

THE question of pensions is so very essential to the well-being of the profession—and is sure to be reopened when the management of existing schools is relegated to local authorities or new schools are founded by them—that we gladly print a valuable contribution to the subject as a basis of future discussion. This is a paper read by Mr. W. J. Russell, the Headmaster of the Wrexham County School, before the Association of Welsh County Headmasters and Mistresses and referred to a Committee to report upon. It is true that the problem in Wales is much simpler than it is in England. Welsh Intermediate masters are a homogeneous and organized body, while English secondary teachers are unorganized, not to say disorganized, and heterogeneous. Yet for that very reason Wales may give us a lead, and by solving the problem in its simpler form enable us to tackle it in its more complex aspect.

Who enjoy Pensions, and why?

I address myself first to the question: Why should we secondary teachers receive a pension? And perhaps this question will be best treated by asking what classes of persons now enjoy pensions and why? Almost every body of public servants except ourselves, and, besides these, the *employés* of a very large number of semi-public and private companies and individuals. Among these I may mention the officers and men in the Army and Navy; the members of the Civil Service in all its various ramifications; the members of the police force, the officials of the Poor Law Boards, *i.e.*, clerks to Boards of Guardians, registrars of births, marriages, and deaths, masters of workhouses, collectors of rates, &c.; the officials of the London School Board; the *employés* of all the leading railway companies; the clerks in nearly all the best banks and insurance offices. Custom and precedent—which carry so much weight in our country—are clearly in our favour. If, as we have just shown, nearly every other class of public officials enjoys a pension, and, if this system works so well that it has been imitated by a vast number of the best private companies, which have conferred similar privileges on their *employés*, then it is clear that we too, since we are recognized as an organized branch of the public service, are justified in seeking a similar provision for our old age.

The Raison d'être of Pensions generally.

Perhaps it would be well to pause a moment and ask: What are the general arguments adduced in support of this system of pensions, which seems to rest on such a consensus of authority and to be so widely prevalent; and how far do they apply to our case? I presume that pensions are given mainly in the interest of the State, and only secondarily in the interests of the individuals employed. By this means the State (1) attracts to its service a better class of men than it would otherwise obtain, and (2) secures better work from them, partly because all anxiety as to the future is removed, and partly because the risk of forfeiting such a pension acts as a powerful incentive to good conduct and steady industry. (3) The authorities can call on those who have become inefficient owing to age to retire and give place to men who are younger and more capable of service: this prevents weakness and incompetence in high places, and obviates a block of promotion, with the discontent that arises from it; nor would the public conscience tolerate compulsory retirement without some provision for old age. (4) The salaries given in the public service are insufficient to allow of an adequate provision for retiring. (5) The State, in cases where an annual contribution to the Pension Fund is made from the salary of the officials, affords a security which the individual investor would look for in vain; while the union of a large number of contributors allows of results otherwise unattainable.

Of Pensions to Secondary Masters in particular.

There is no doubt that we can, without any presumption, claim that all these arguments are at least as applicable to secondary masters as to any other class now receiving a pension. The fourth reason is certainly very weighty in our case, as I believe the average salary received by the headmaster of an Intermediate school in Wales is about the same as that of a head teacher under the London School Board.

Pensions in Charity Commission Schemes.

I might linger here and ask another question. In foreign countries—where education is better organized than among us—is not a pensioned schoolmaster universal? I think, however, that you will agree with me that our case is irresistible if we argue on grounds of equity and general analogy alone, but I will waive such considerations, and push on to still firmer ground—that of positive and admitted right arising from expectations raised by the schemes under which we were appointed to our schools. I believe it is a fact that for a large number of years no scheme has been issued by the Charity Commissioners which has not contained a clause recognizing the claim of secondary schoolmasters to a provision for their old age. All the Welsh schemes (in imitation of those of much older date) contain such a clause, one paragraph of which authorizes the governing body of any county to join with a headmaster or an assistant master in the establishment of a joint pension

fund; while a second paragraph enables the same body to co-operate with any other county in Wales for the like end.

A Deal Letter that may be vivified.

Now I fear that there is a general ignorance abroad about the matter we are discussing, and that the idea of a pension for secondary teachers is quite a novelty to many minds. I would, therefore, call your earnest attention to this clause—which is a sort of formula that has been used for many years by the Charity Commissioners—as there is no point of greater importance in my paper. Bad as the first paragraph of the clause is, and I cannot conceive of any one defending it as a good and practical method of providing pensions for masters—though no doubt it relieves the tension on the consciences of the central authorities who know that they ought to be provided—bad as it is, it undoubtedly acknowledges, fully and unreservedly, the equity of our claim to a pension on retirement. Though it has almost always remained a dead letter—the governors alleging lack of funds—yet, to their honour be it said, they have frequently admitted the force of the claim for a pension by making some kind of provision for head masters retiring after many years' service. But this sort of provision is quite uncertain and altogether inadequate, and it is now full time that the spirit of the clause should be carried into effect. In imitation therefore of the police officers, who secured in 1890 the passing of a Superannuation Act, in accordance with which a police official can, under favourable circumstances, retire after twenty-six years' service on two-thirds of his pay; and of the Poor Law officials, whose Pension Bill became law in 1896, after an agitation extending over a great number of years, we must bring this question to an issue, and agitate for such a provision as will place us in a position of equality with other public servants. I therefore now proceed to ask what kind of a scheme is suitable to our case, and how can the claims of equity—as between us and the public—be evenly adjusted; and this leads me to a review of one or two of the leading systems in operation.

Civil Service Scheme.

Passing over Army and Navy pensions, I come to the scheme which is universally prevalent in all branches of the Civil Service, the two main provisions of which are:—

1. After ten years' service any official, who is incapacitated for work, may retire on a pension of ten-sixtieths of his salary; after eleven years on eleven-sixtieths and so on, till after forty years he may retire on forty-sixtieths, *i.e.*, two-thirds of his salary, which is the maximum pension.

2. An official may retire at the age of sixty on the ground of age, but he must retire at sixty-five.

It may be roughly said that the pension schemes of all railways, banks, and insurance offices—as well as that of the Poor Law Board—show a general agreement with the Civil Service scheme in these two features, but many of them contain another provision which is absent from the Civil Service scheme, *viz.*:—an annual contribution from all officials.

This amounts to 2 per cent. on the year's salary under the London School Board, varies from 2 to 3 per cent. under the Poor Law Board, is 2½ per cent. in the police force, and averages about that amount in very many other schemes.

Now applying these facts and figures to the elucidation of our own case, I notice that the two bodies of officials who have recently obtained Pension Acts from Parliament, *viz.*, the Police and Poor Law Officers, pay an annual contribution, though the Army and Navy and Civil Service, who have enjoyed pensions from time immemorial, are exempt from such payment. We must, in my opinion, in the same way, do something to show that we are in earnest and anxious to help ourselves, and we ought to be willing to make an annual contribution of 2½ per cent. from our salaries.

Age of Retirement, and Ways and Means.

I now come to the more difficult questions of the age of retirement and the amount of the pension, and here most of the schemes do not give us much direct help. A clerk often enters the Civil Service or a bank at the age of sixteen to eighteen, and is well under sixty when he has put in forty years of service and has earned the maximum pension. But the average age when a man becomes a Headmaster is probably a little over thirty, and the best expert opinion that can be obtained—that of the Associated Headmasters of England—a body which expresses the views of the great mass of secondary teachers in England—is in favour of fixing the age of retirement for Headmasters at fifty-five. The London School Board scheme fixes the retiring age at sixty. A Headmaster beginning at thirty should not put in forty years' service. A well-educated assistant-master commences work at twenty-three or twenty-four years of age. Thirty-six years' service as either a Headmaster or an assistant, or both, might therefore be rendered before the age of sixty.

Perhaps the following recommendations would, on the whole, most fairly meet our case:

(1) All teachers—male or female—under the Central Board, whether heads of schools or assistants—shall retire at the age of sixty years, but they may retire at fifty-five, or stay on till sixty-five, with the consent of their Local Governing Body.

(2) Any teacher, who is incapacitated for work, may retire after ten years' service on a pension of ten fifty-fourths of his salary; after eleven years on eleven fifty-fourths and so on, till after thirty-six years' service he is entitled to thirty-six fifty-fourths, or two-thirds of his salary, which is the maximum pension. The salary here referred to is the average salary of the last five years.

(3) Every teacher shall contribute annually $2\frac{1}{2}$ per cent. of his salary towards the Pension Fund.

(4) All teachers already appointed may retire at the alternative ages indicated above, on the maximum pension; but those over a certain age at the time of the initiation of the scheme may be called on to make a higher annual contribution.

(5) All other officials of the Central Board and clerks to Governing Bodies shall receive similar pensions on payment of the same contribution, with special attention to special cases.

Retirement under Age.

There are of course many and important questions needing discussion with which I have not dealt, and perhaps I had better refer to one or two of them.

In what cases should contributions be returned to those leaving the profession? I would make no return to an assistant master who gave up teaching before the lapse of five years. Such masters get employment in a school while preparing for some other profession, and their competition forces down the salaries of those who intend to remain teachers. On the other hand, I would deal generously with lady teachers withdrawing upon marriage. Should a teacher retire under any other circumstances after serving five years, but before he was entitled to the minimum pension, perhaps his contributions might be returned, without interest, and less 5 per cent. for the expenses of management. No return is made in case of voluntary resignation or death under the Poor Law system, though a limited gratuity may be given; and it must be remembered that the stability of the fund is greatly increased by such windfalls as I have just referred to—but I feel that it is unnecessary at present to enter into further details; no doubt a considerable amount of discretion in these cases might be left in the hands of the Central Board or other managers of the fund.

How to form a Pension Fund.

I now come to a difficult consideration: How is such a Pension fund to be formed? We are all aware how hard it is in our country to secure adhesion to anything new; every judge grounds his decision on some case already decided, and every charter of our liberty is supposed to be merely stating customs which have always existed. I have therefore studiously avoided anything like a dangerous originality; every proposal I have made is founded on some provision in public regulations already in force, and on this point, I venture to fall back on the second part of a provision which is contained in all our schemes, and to which I have referred before (Section No. 58 in the Denbighshire scheme). I have previously discussed the first paragraph of this clause, which I do not think is likely to be of any use to us. The second paragraph reads as follows:—

"The county governing body may contribute in common with any other county in Wales towards the formation of a joint pension fund." Such a fund might be formed by: (1) the contributions of the teachers, clerks, &c., arising from the assessments on their salaries; (2) a grant from the county governing bodies; (3) a Treasury grant.

Statistics.

What proportion the teachers could contribute is difficult to determine. I have consulted an experienced actuary, but it is almost impossible at present to get exact data, and the question is complicated by our ignorance as to what proportions of contributions would have to be re-imbursed to those leaving the profession. He has worked out the details in the case of the Poor Law Board, and he tells me that the state bears one-half of the expense, and the officials (who, however, are very numerous), the other half. The directors of the Great Western Railway Company bear the same proportion of the cost of their Pension Fund.

I have collected a number of interesting details which may be useful at a later stage, but I will not trouble you with them at present, especially as I have already occupied so much of your time. Perhaps a good working scheme might be framed on the following lines: (1) The county governing bodies to jointly contribute such a sum annually as will, together with the teachers' contributions, meet half the demands of the superannuation fund. This would never involve a large contribution from these bodies, and only a very small one for the next twenty years, as the average age of even the headmasters is probably not more than thirty-three years. (2) The Treasury to make an annual grant sufficient to cover the other half of the cost of the fund, just as it now contributes to the expenses of our schools an amount equal to that paid out of the county rate. I have already stated that the State contributes one-half to the Poor Law Pension Fund, and bears the entire expense of the pensions received by the Army, Navy, and Civil Service.

How is such a Pension Scheme to be carried?

I have pointed out before that we have at least two cases in which public officials have secured from Parliament a recognition of their claim to a pension. These two precedents are the Police Pension Act of 1890,

and the Poor Law Superannuation Act, which was passed, after many years of agitation, in 1896. After full enquiry and discussion, we should, in my opinion, pass a series of resolutions embodying a scheme which, while doing full justice to our claims, will at the same time be likely to prove acceptable to the county governing bodies, because our demands on their funds will be strictly moderate.

Our next object will be to secure the sympathy and assistance of the Central Board. A bill should then be introduced into Parliament, under the auspices of the Welsh educational authorities, and it would be our duty in our several localities to use every influence we could bring to bear to support it and secure its success. We shall probably have an opportunity during the agitation for the exercise of all the tact and patience and courage we possess, but I have no fear as to the result, and no doubt that in the long run we shall be successful. I do not believe that the hopes raised by our schemes can be entirely belied, or that the warm-hearted Welsh people will be wanting in a great and generous sympathy with our legitimate aspirations.

A PLEA FOR GENERAL SECONDARY EDUCATION IN 1678.

CHRISTOPHER WASE, SCHOOLMASTER AND UNIVERSITY BEADLE (c. 1630-1690).

By Professor FOSTER WATSON.

THE unsettled state of England during and after the Great Civil War must have had many effects on education. Such men as Jeremy Taylor became "schoolmasters by necessity"—driven away from their livings. During the time of Cromwell, we learn, in Scobell's "Collection of Acts and Ordinances" (1640-1656), that Parliament interfered on a number of occasions. In 1644 Sir William Brereton was given power, in Cheshire, to eject scandalous or malignant ministers or schoolmasters. In 1649 and 1650 it was enacted that tithes belonging to the Catholic hierarchy should be appropriated and vested in trustees and devoted to the payment of famishing ministers and schoolmasters, and in the same year an Act was passed to eject scandalous ministers and schoolmasters in Wales. In 1654 commissioners were named for ejecting scandalous ministers and schoolmasters, and in 1656 their appointments were confirmed for three years. It was enacted further that no minister ejected should keep a school in the place from which he had been ejected. It would be very interesting to discover how far the war affected both Churchmen and Dissenters. These Acts show that there were difficulties which were felt by the State. How much more keenly must the difficulties have pressed on the teachers themselves?

But there appears to have been a suspicion amongst some people that the grammar or free schools which had come into existence during the reigns of the Tudors, together with James I. and Charles I., had helped to produce a race of men prone to discontent. Much learning, it was argued, had made men ready to question the most settled convictions with regard to the foundations of the State. Men were political sceptics. The analogy in our time would be if men were to argue against the acquisition of knowledge on the ground that it leads to agnosticism.

It is curious that writers of our age look upon the Puritanic patriots, who came from the old free schools, as the justification for these schools. It is urged that, even if the whole of the Tudor school foundations just succeeded in producing a few of the patriots, and had helped on their development, they were more than worth their outlay. But in the age immediately following the Civil War we find the suggestion that, since the free schools had on their lists those who rebelled against their King, this in itself was *prima facie* evidence against the utility of education and definitely fatal against the promulgation of free schools.

It is to protest against speakers and writers of these views that Christopher Wase wrote his "Considerations concerning Free Schools" as settled in England in 1678. On this point, he says that it is unfair to charge the schools with the trouble of the late "civil commotions." "It is precarious," he goes on, "to fix it upon this education. Grand authors of the troubles were politicians of a higher form; and noted officers that executed their designs were many men illiterate, pure instruments, beneath such ingenuous breeding. Besides, if some bred up under this discipline have failed of their duty through a deceived or depraved judgment, notwithstanding all engage-

ments to the public and long habit of private obedience, must the master be censured?"

With these sentences before us, we seem taken back at once to Wase's own age. But the indomitable persistency of the writer in making good his position that, so far from there being too many free schools there was need for still further foundations, and above all for a strengthening of those already existing, brings to the front arguments which are fresh and vigorous for us at the present day, in our pleadings for the suggestions of the Secondary Education Commission to be carried out.

It was the complaint of Wase's age that there was already a superfluity of learned people, that scholarly youths could not find adequate employment—in other words, the Church, the law, medicine are all full. What is the good of pouring into the filled cup? Granted, says Wase. "But whither should we turn over these supernumerary scholars? To the more profitable plough? Alas! corn is a drug. Farmers throw up their leases, they are so undone with plenty. To grazing? Wool bears no price in the market. But yet to other more beneficial manufactures, the tailor, the hatter, the weaver, others; these abound with men, but want work. *All trades think themselves overstocked. Some have fancied the world to be so, that if men did not in wars kill one another they must eat one another.*" But the truth was that boys from the free schools not only went into learned professions, but also helped to lighten up some of the dark hours of tradesmen's lives with thoughts shaped and moulded to the memories of more or less liberal studies. To prove that even for the professions there were not too many scholars, Wase computes the number of inceptors at the Universities at about three hundred, and points out that there are from 10,000 to 15,000 incumbencies. For the succession of ministers to be maintained by University men, it is clear that this number is grossly insufficient. But over and above this presumptive evidence, Wase shows that "so many" private schools are "judged allowable." Parishes made "voluntary contribution" to keep masters in the towns. "No specious reasoning," says Wase, "can conclude against experience." In addition to the private teachers, there was the semi-private provision of the Church, which by the canons of 1604 gave liberty to all vicars and curates to take out a licence to teach grammar. Now all these indications of a demand and a supply placed Wase's position above that of a mere theorizer. He was not reduced to arguing for the toleration of secondary education. His position was that of educationists to-day. Secondary education is necessary for a certain percentage of the population. Is the supply of schools adequate? The only further question is: Is it to be done well or ill?

The methods by which he wishes existing free schools to be improved are: (1) Augmentation of the masters' wages; (2) further exhibitions to scholars; (3) that children of all classes, the poor and the gentry, should be taught together. As to augmentation of the masters' wages, a portion of the passage is worthy of quotation: "Nothing, might seem a more effectual motive to the well disposed to enlarge their beneficence, than the weighing the assiduous labours of teachers against their incompetent maintenance. Be it the condition ordinarily does not require those large expenses which higher stations exact; yet, to be abridged in necessities must needs discourage labour; and the mind under daily distractions can less intend its more desirable charge." Epigrammatically, he adds: "Nothing is of its own nature more expensive than want."

As to scholarships, Wase points out that to give scholarships of short length certainly multiplies scholars, but it does not necessarily advance learning. The existence of adequate scholarships not merely attracts those who win them, but also those who are prepared to compete. They make a school's reputation. They do not "burthen the land with a multitude of unnecessary scholars, but furnish the functions both of Church and State after their several capacities with apt instruments without impeachment to the rich and the noble."

More fresh and suggestive is the plea that the gentry should send their children to the free schools instead of employing a private tutor.* They would thus augment the stipend of the master, whilst they diminished their own expenses. And, as to the gentleman's child, Wase acutely puts it: "Having escaped

from the indulgence of parents and flattery of servants, he is not translated into a select society, being unacquainted with emulations and formalities, unwary of friendships, only durable till by respective interests divided; but betimes engages in a mixed conversation, the true image of life. He strips himself to severe labour, takes the place due to his industry, not his birth, and begins to see somewhat in persons of lower fortunes worthy to be honoured. . . . The room for study is but a sojourning, not an habitation. Its meanness the more endears the parent's house."

One of the difficulties of the time was the government of the schools. The governors themselves were often inexperienced, unacademic, if not illiterate persons. It is, therefore, not surprising that Wase recommends that, at any rate, country schools should seek to ally themselves with some hall or college in the Universities. It was the custom, when vacancies occurred in headmasterships, for governors at such schools as were thus connected to send letters under their common seal to the Masters and Fellows of the college to ask them to nominate two or three Masters of Arts, of whom the governors then chose one for their headmaster. In some cases, indeed, the college actually nominated and elected the head themselves. Amongst schools named by Wase as connected with colleges are Shrewsbury, with St. John's, Cambridge. With the same college was Sedburgh, in Yorkshire; Pocklington, in Yorkshire; Rivington, in Lancashire; Stamford, in Lincolnshire; Spalding, in the same county; Aldenham, in Herts. In connexion with Sidney Sussex College, Cambridge, was Houghton Conquest; with Emmanuel College, Cambridge, Godmanchester; with Trinity College, Cambridge, Stevenage, Herts, and Uttoxeter, Staffordshire. So at Oxford, New College directed Thame and "Adderbury"; Corpus Christi College, Cheltenham; and Queen's College, Childrey, in Berkshire, Northleach, in Gloucestershire, and Appleby, in Westmoreland; Brazenose College, Charterbury, Steeple Ashton, in Oxfordshire, and Middleton, in Lancashire. Wase thinks that such corporations as collegiate churches, ecclesiastical patrons, noblemen, and the greater companies of London may be left to manage their own schools.

Wase insists upon a need of close understanding between the town and the master. If they have a good master, the town must respect him. "That a fair esteem may be acquired from abroad, it must be maintained at home." What are the marks of a good master? He must be of sound principles and good example. He must be diligent in laying the foundation of religion, arts, and sciences. Dexterity in teaching and sagacity in discerning the temperaments of his scholars are, he says, "felicities of nature," yet they can be cultivated. Even if townsmen do not themselves understand Latin and Greek, they can, if they will, easily understand the "deportment and industry" of their master. They must esteem his work. He is a fellow-labourer with the minister of religion. This thought should lead to a true valuing of the schoolmaster. An instance of respect of the town to the master is given in the case of Shrewsbury. At this time the mayor of the town and the head schoolmaster joined by a legal settlement in letting out the school-lands. "An honest constitution," remarks Wase, "since, by that means, neither will the townsmen lie under a temptation to misconvert the pious use, nor shall the master be able to impair the revenue." Such a partaking in authority and responsibility is termed an *enfocement*, and is strongly advocated by Wase.

Virtually, then, Wase's remedies amount to an increase in benefactions to schools from the rich—whether from the gentry or those in trade—and to the improvement of the status of the teacher by giving him more income and more power and responsibility. Compared with present-day demands, we see that we have advanced to the position that education is so important a national concern that the State must provide the necessary funds, as benefactions do not arrive when and where they are wanted, and that the status of the teacher is not improved by merely giving him power, but by giving him such a preparation and training as make him an authority on his subject.

Wase disclaims the intention of treating thoroughly on school method, but he finds room to trenchantly remark that "our modern Januists of the Latin and Greek tongue seem in great measure to leave grammar and build upon dictionary." He is no advocate of abnormally quick methods. "Due length of time and depth of culture withheld rather palliate ignorance than produce scholarship. Errors in the ground-work first laid are rarely corrected by the scholars' after-diligence." Amongst

* The poet Cowper wrote his "Tyrocinium" to urge the exact opposite.

"master builders" in didactics he names Ascham, Charles Hoole,* and Mr. William Walker. One point Wase makes should be mentioned. He advises that Latin and Greek scholars would use their spare hours "to no small advantage if they were to converse with the poets of our own language." This recalls the fact that Charles Hoole had advocated the teaching of English in schools, especially mentioning Quarles' "Emblems" and George Herbert. As to religious education, catechizing was the current mode. Moreover, in many schools, the statutes enjoin that the schoolmaster should accompany the boys to church, and Charles Hoole relates how he always required an account of the sermon under its proper heads to be given by his boys. Wase makes an interesting reference to St. Chrysostom's "Golden Book of Education," translated into English by John Evelyn in 1659.

There is one other problem of the school dealt with by Wase which modern times can hardly be said to have yet worked out—the establishment of a good library in a school. Parents may buy for their sons (Wase says nothing of girls all his book through) books absolutely required as text-books, but there are "voluminous authors, pillars of a library, which would highly advance study, yet are not the purchase of every one that is most studious, and therefore best able to use them."

The school library, Wase suggests, should not consist of promiscuous, but only of "proper and organical," books. Best editions,† usually the latest, are to be desired, but even earlier editions of a good book are not to be despised. He points out the various classes of books required for a school, by a consideration of the scholar as a grammarian, linguist, and critic, in both Greek and Latin, and the various books required for each of these relations. Amongst the books are: Dictionaries and grammars, small, middling and large; locks and keys and doors of language; select orators, poets, historians (in editions accommodated to the narrow capacity of unripe judgments), especially when illustrated by tables genealogical, chronological, geographical; books of apophthegms, adages, and proverbs; rhetorics, small, middling, and large; poetic institutions, small, middling, and large; flowers of poetry, fables, mythology; epigrams, epistles. There should further be books for comparison in higher observations on common life, morals, policy; help in antiquities, precedents of solemn acts, erudition as to measures, weights, coins, habits, &c., of the ancients; exercise in critical reading of texts; geographical institutions, together with maps and globes; modern writers who have imitated writers in Greek and Latin.

Such a collection "cannot everywhere be made in one day." Recurring to a previous suggestion, Wase says that, if gentlemen would only send their sons to the grammar school, they could easily be induced at the entering of their son to bestow some book *such as the master should propose*. It will not, however, be enough to have books; there must also be a proper "repository." "In divers late foundations a room for books hath been annexed to that of the school." After provision of books has been secured, the next care is to preserve them. Wase would have a librarian chosen from the boys, one who is "studious, faithful, and discreet." He should be paid, so as "to acquaint him with the just and advantageous connexion of work and wages."

So far I have described Wase's views on secondary education. The whole object of his writing is to prove that higher education is a good thing, and that the facilities for it were not sufficient. But he goes further. He is of opinion that "education is absolutely due to man,‡ either as in his imperfect or corrupt estate.§ Every one agrees that there is occasion for some that are learned in all places. But Wase maintains that schools and masters should be in "every parish, every township for *petty scholars*." In learning the first rudiments it will be discovered whether the temper and inclination of children (be they of *rich or poor*) are such as "give hopes of being to good use advanced to

further studies." Writing, he says, in another part of his book, is a *universal* advantage. "To write in common life is necessary, and to write well commendable. The truth is in petty schools (and such are the most in every county) no small regard is to be had to it." Again, he says that none in his age are of opinion that the skill and practice of enumeration "can be too *universally* propagated. Some may with reason fear it is by many prevented from its noblest end, when employed to the discouragement of other more excellent arts and sciences, or restrained in a manner wholly to the service of secular advantage."

It would be going too far to conclude that Christopher Wase advocated universal elementary education in the sense we mean by it. But it will be observed he uses the term *universal*, and it is perhaps a justifiable inference that he meant by it that amount of universality which was obtainable, under the circumstances of his age, on a voluntary basis, by inducing various corporations and individual rich men to become benefactors to educational institutions to the greatest possible extent. There is a similar appeal by Charles Hoole in his "New Discovery of the Old Art of Teaching School." He makes a special appeal for the petty schools, as Wase particularly appeals for secondary schools.

Wase's book might be called a gentle dissuasive from thinking that there are too many schools at present. The objector is made to say: "But have we not free schools in almost every market town?" In substance, Wase's reply is: "Thank Heaven, we have a fair supply, and observe what a benefit they are to the country. But the good results which have come from the schools in existence are an argument for further foundations 'wheresoever they shall be found wanting.'" With regard to the old schools, however, their efficiency will be found to decline whilst the masters' salaries remain, as they usually are, "below envy." What was adequate enough in the time of the founder has become incompetent of itself for his reasonable maintenance. It would be equally to the honour and advantage of towns "that he be so far encouraged at least as to be enabled to attend his calling without distraction."

The details of Wase's life are most fully given in Wm. Cole's MSS. collection, Vol. XV., page 183, *et seq.* (British Museum). From this it appears that Christopher Wase was born at Hackney. He entered King's College, Cambridge,* in 1645. He translated Hugo Grotius's "Baptizatorum Puerorum Institutio" into Greek in 1647, and in 1650 published a translation of the "Electra." For some reason or other he was turned out of his Fellowship on account of this translation. It is supposed that in his preface or dedication he must have "reflected upon the proceedings of those times." He was accused in 1650 of leaving papers about for the raising of men, money, and horses for the King. He fled the college, and was captured whilst going from Holland to France, with letters on him. He escaped and served the King of Spain against the French. Eventually he came to England again and became tutor to William, Lord Herbert, eldest son of the Earl of Pembroke. In 1655 he proceeded Master of Arts and became Head of Dedham School, in Essex. About 1660 he became Head of Tonbridge School. In 1662 he published "Dictionarium Minus: a Compendious Dictionary English-Latin and Latin-English. Wherein the classical words of both languages are aptly rendered. By Chr. Wase, M.A., Master of the Free School in Tonbridge."

In 1671 Wase became Superior Beadle of Law in the University of Oxford, and Printer or Archtypographer to the same University. The method of election has been fully described by Anthony à Wood. "At that time were candidates Mr. Bennet, Noah Perkinson, and Gower Knight. But before the election was to be made, Perkinson desisted, and Knight by the persuasions (some say threatenings) of Dr. Fell, desisted also; so that then the masters were left to Hobson's choice, to choose Bennet and nobody else. Whereupon they, perceiving full well that Dr. Fell was resolved to get his man in, merely and by his authority, without any application to them, and Bennet's little striving for it (only for form's sake) without applying himself, according to the manner, with cap in hand to gain votes, they were resolved to cross the matter. So that when the election was to be on the 10th of the same month, a majority of the masters joined together (headed and encouraged chiefly by a clownish factious person) did, in despite of Dr. Fell, his mandamus and authority,

* In his "Methodi Practicum Specimen" (1660) Wase says that, though personally Hoole was unknown to him, "yet, from his translations seen by me and the preface to Cato's 'Distiches,' I have honoured him not only as candid and industrious, but also acutely judicious in didactics."

† His opinion is: "To be skilled in the *choice of editions*, and withal so nice as to nauseate what is not most elegant in print and binding is not discretion in a poor student, but luxury."

‡ Cf. Comenius. § Cf. Milton.

* From Eton.

of the heads of houses, seniors, and the sober party, set up and choose a mere stranger, who lived remotely from Oxford, named Christopher Wase (sometime Fellow and Bachelor of Arts of King's College in Cambridge, and afterwards a schoolmaster in several places) to the very great discomposure of Dr. Fell and something to the discredit of the University, as if not able to afford a man to execute the said office. Afterwards Wase came to Oxford, was sworn, and took possession of his place; but Dr. Fell, who had received a character of him, would never let him enter the Architypographer's place, because, as he usually said: 'He was not a fit person for it, as being not a person of sobriety,' &c. So that, from the death of Mr. Clarke to this time, the Superior Beadleship of the Civil Law and the Architypographer's place has been disjoined" (*Athenae Oxonienses*, Vol. II., Col. 457-8).

Cole, in his MS. account of Wase, quotes from a letter of Dr. Worthington to Samuel Hartlib, written in 1661:—

Herewith I send a little essay of Mr. Wase; pray send it from me to Mr. Beal. I wish it had been better bound. I had it thus from London. I the rather send it to him because it was the composure of one that had his education at Eton and King's College. . . . This Mr. Wase came from Eton about twelve years (or more) since. He now lives in Essex. He was one of the rarest youths in the school, when he was there. Many years since he turned Grotius's Catechism into Greek verse; and another schoolfellow did it into English. Mr. Wase published that ancient poet Grattius Faliscus, his "Cynegeticon" or poem of Hunting, and translated it into English verse, and added notes. . . . He hath of late years employed himself about a shorter (and cheaper) Dictionary* for young scholars. He began with the English, of which there was need, there being very improper and impertinent Latin for some English words, to the great discouragement of young scholars, and for some words no Latin at all. . . . I hear that the dictionary will be a cheap one, as I wish all things of general use might be made to be.

Later on, Worthington adds:—

Mr. Wase, whose little book I sent, is now removed from Dedham, and chosen to the School at Tonbridge. He was nominated for Merchant Taylors' School in London. It was carried by one voice against him, for one who was son to one of that Company. He is fitted for other (and more splendid) employments than the composing of a Dictionary, but I look upon it as a great piece of humility and also of charity to undertake this work. Tonbridge School is not so obscure as Dedham. Indeed, that more public schools in London (or any such) would have been happy in him, whose worth, when he was at Eton, did so shine out, that Dr. Whichcote, at his first coming to the Eton election, about fifteen years since, took notice of it, and made choice of Wase for King's College, who had no friends to recommend him, nor anything but personal worth.

That Christopher Wase was well looked upon is evident from the fact that Edward Waller wrote some laudatory verses to Wase's translation of the "Cynegeticon." Waller trusts that Wase will "court the eye" with more works:—

Since none does more to Phebus owe,
Or in more languages can show
Those arts which you so early know.

In his turn, Wase writes hexameter and pentameter Latin verses on John Evelyn's translation (1656) of the first book of Lucretius, "De Rerum Natura." In 1657 he wrote a long Latin ode to precede Oughtred's "Trigonometria." Cole quotes from a MS. that Wase "was a man of parts, almost to a miracle, and all say that he put out many books for the help of young beginners." To those already mentioned may be added a translation of "Cicero against Catiline" (1671); but Wase's other books in the British Museum Catalogue, and the subjects of others in Cole's MSS., could be of no help or interest to young beginners, if to any one else. In the discourse prefixed to the eighth edition of Leland's "Itinerary," Hearne speaks of Wase as "that eminent philologist," and in Nichols's "Literary Anecdotes," III. 469, John Loveday says: "Chr. Wase was one of the most eminent philologists which England could boast of in the last age." On the other hand, as we have seen, Anthony à Wood clearly, with good reason or without, did not like Wase. I have given Wood's account of Wase's election. There is another reference to Wase. In the "Life of Wood" prefixed to the "Athenae Oxonienses," an account is given of the reception of King James II. at Oxford in 1678. After the Vice-Chancellor had spoken a short Latin speech, there was a pause

till all got on horseback, "but Chr. Wase, the Superior Beadle of Law, being a mere scholar, and troubled with shaking hands, could not get on horseback, but was helped up, and when he was, he could not hold his staff upright, but crossways, because he would hold the bridle, which caused laughter in some and anger in others."

Christopher Wase died in 1690. Granger speaks of an engraving of Wase as being extant. I note that in the "Dictionarium Minus"* there is an order of Charles II. protecting Wase in all privileges for a book so painful and advantageous, for a space of fourteen years.

Whatever estimate may be made of Wase—and there is a *via media* between Waller's praise and Wood's contempt—as an educationist he is constant. His book, "Considerations concerning Free Schools in England," written as a Law Beadle at Oxford, is as strenuous, as loyal, and as tactical as it could possibly have been if it had been written by him as Master of Tonbridge. It comes from him with a better grace. He has a conviction with regard to education: he thinks, if it is to be good, it cannot be cheap; further, that, of all kinds of cheapness, cutting down the master's salary is the most pernicious. He thinks that, if the free schools are good for the poor, they would be good for the rich. He wishes to see them multiplied up to the need for them. The elementary education of writing and arithmetic he wishes to see within the reach of all. He has the courage of his convictions; he says as Law Beadle what he thought as schoolmaster.

ANNUAL MEETING OF THE ASSISTANT-MASTERS' ASSOCIATION.

THE general meeting of members was held in the Theatre of King's College on Saturday, January 22. The chair was taken by Mr. J. W. Longsdon, the President of the year.

Mr. LONGSDON, in presenting the seventh annual report, apologised for its apparent meagreness. This was due, not to the lack of method, but to the Treasurer's dislike of long printers' bills. The past year had been distinguished by the establishment of Sub-Committees. The most active of these had been that for dinners and smoking concerts. The Parliamentary Committee had had to sit with folded hands and watch for the moving of the waters. The Executive Committee had issued no detailed report; but they had been by no means inactive, and devoted many long afternoons to getting through yard-long agenda papers. Their professional Agency had grown till it had become too large for the Association to undertake, and now, thanks to the tact and energy of the Honorary Secretary, it was merged in the Joint Agency, which in a few months' time would be a working concern. The membership of the Association had risen in six years from 72 to 1,133, and these figures hardly represented the real increase, as all whose subscriptions were in arrear had been ruthlessly eliminated. It had been found that the Association could not be satisfactorily worked solely from the centre, and in 1897 six new branches had been added. To turn from history to prophecy, their work in the immediate future would be to set in motion the Joint Agency scheme, to draw up a provident scheme for members, and to keep an eye on educational legislation, or, possibly, on the absence of it. The Duke of Devonshire, in his speech at Giggleswick, had seemed to promise an immediate Bill on Secondary Education, but his language was very carefully guarded, and for the next session they could not hope for more than some small Bill dealing with County Councils and making their educational work permanent. They would have, further, to consider the question of a press organ. Their present organ represented primarily the interests of the Associated Headmasters, and many members complained that it was dull, and carried no weight. It was time for the Association to consider whether they should not have an organ of their own. Lastly, he asked whether they should not endeavour to make membership of their Association equivalent to a Government association. They were not a trade union, and never aspired to be one. Though the salaries of assistant-masters were wholly inadequate, yet they could not agitate for a rise on trade-union principles, because they put their work before their wages. In the words of their first Treasurer, the main object of the Association was to increase professional feeling.

Mr. ARTHUR SIDGWICK gave a full and lucid account of the Oxford scheme for the training of teachers. He did not profess to be more than an amateur, as were most of the supporters of the scheme. They were still groping their way. Certain resident members of the University,

* This is spoken of by Francis Gouldman in his preface to his Dictionary (1678) as a "compound of Calepin, a book of good use."

* Which was not only praised by Francis Gouldman, but also by the better-known Dr. Littleton in his preface to his Dictionary. This compendium of Calepin, he says, "is done with so much judgment, that one can hardly find anything which savoureth of barbarism."

finding little encouragement in the University itself, had decided to try whether they could not run a training scheme by themselves, when one of their members was elected to the Council, and found so much support that they determined to press the matter with the authorities. Fortunately one of the Delegacies happened to have a considerable balance in hand, and offered to bear the expenses. The main objection was thus removed, and after an obstinate fight, with the details of which he would not trouble them, the present scheme was passed. The special feature of the scheme was that, while the University conferred the diplomas, the organization was largely left to the Delegacy of Local Examinations. They paid the piper and called the tune. In framing regulations they had carefully studied the system of primary training colleges, but the conditions differed in one essential respect. In the case of secondary teachers they might assume general culture, and consider only professional training. To carry out the scheme they had appointed two teachers, one for men and one for women. The functions of these teachers were various, but fell mainly under three heads: (1) To suggest books and expound the more difficult parts; (2) to see students in private and act generally as college tutors; (3) to organize and carry out the practical course. "Practical training" was an ambiguous phrase which had caused some confusion to outsiders. It embraced two wholly distinct sections: the work of the candidate on paper, and the test of practical efficiency in the classroom. In spite of strong opposition they had stuck to this double test as essential. It was possible to do good paper work and yet be a "crank" when you came to school. They had so far had two classes of students, novices and men and women actually engaged in teaching who still desired their diploma. For both classes the training was on the same general lines; but for the latter holiday courses were provided in which the work was more compressed and necessarily harder for the time. Besides the practical test and the written examination, candidates had to pass an apprenticeship, that is to say, they had to satisfy the Delegacy that they had spent a certain time under supervision in a school approved by the Delegacy, and gained the *testamur* of the Principal. Passing to the more general question, Mr. Sidgwick reviewed some of the difficulties and objections that have been raised against training. There were some of the best masters in the best schools (though these were a decreasing number) who did not believe in training at all—in particular, Mr. E. E. Bowen, of Harrow. There were urged the practical difficulties, the time and expense involved, the danger that it would deter the best men from entering the profession, the unnatural conditions under which training took place—it did not follow because a student succeeded with a class in the presence of the training master that he would be able to face the undiluted British boy—the encouragement of conceit and narrowness, the fear that those who had no natural aptitude would put themselves in training, and so disturb the present process of natural selection. Instead of answering categorically all these objections, which would be tedious, he would appeal to two facts which no competent authority could dispute. Though English public schools had so far got on without training, and done good work, and though in the last twenty-five years there had been a vast improvement, yet in most public schools there were two or three utterly incompetent masters; and, short of that, if you asked any candid teacher whether, in his early years, he had not made many and serious mistakes, and wasted valuable time, he would not deny it. Secondly, he would appeal to the results of training in primary education. The masters there were drawn from a very different class; the material in the first instance was distinctly worse; yet, in spite of the inferior material, the inadequate and by no means ideal training, in spite of the fact that a good many elementary masters think more highly of themselves than they ought to think, and are uncultured, yet as a class they know their business better than secondary masters. If any one doubted the fact, let him go into a Board School and see how a big class of rude unlettered boys was tackled. The great obstruction lay with headmasters. They said they could not afford to put an extra screw on teachers, and so limit their market. Yet their attitude towards training was rapidly changing, and he had met many headmasters who took the other line. Training was an extra expense, and every effort ought to be made to meet it, yet a man cannot expect to be trained for nothing. Every other learned profession required special training. They must look first to the interests, not of the teacher, but of the children.

Mr. RICHARDSON, of Winchester College, proposed, and Mr. MARSH, of Bedford Modern School, seconded, a vote of thanks to Mr. Sidgwick for his address, which was carried by acclamation.

The first resolution: "That this meeting hopes that an annual Government grant will be made for the professional training of those who wish to become qualified as teachers in secondary schools," was proposed by Mr. F. STORR.

Mr. Storr said there was no need to labour the principle involved in the resolution. All were now agreed that State aid in some form or other was needed for secondary no less than for primary education. The only question was what form it should take. The report of the Secondary Education Commission on this point was faltering, and not quite consistent. On the one hand, they seemingly endorsed the plea for a special scholarship fund for training students, pressed upon

them by evidence again and again repeated. On the other hand, they accepted the general view that, apart from buildings, a training college should be self-supporting, and added a significant rider of their own: "There is no good object to be gained by bribing ordinary persons to enter into any one, rather than another, of the learned professions." He ventured to think that this apparently harmless platitude could not be applied without reservation to existing conditions. The other learned professions, such as law and medicine, were provided with all the plant and apparatus for training by the accumulated wealth of centuries. Teaching was hardly yet differentiated as a profession, and had to provide the whole equipment. In the report of the Training of Teachers Joint Committee there was no such hesitation. Not only was the necessity for scholarships urged, but it was resolved that "public grants (from State and local sources), as well as private benefactions, may properly be solicited for the foundation of lectureships and scholarships and for material equipment and building." He had signed that report and heartily agreed with it, yet he should have preferred the omission of the last words of the resolution. He hoped to see springing up all over the country training schools on the lines so admirably sketched by Mr. Sidgwick, but he thought that, at least in the first instance, these schools should be in close connexion either with a University or a University local college, and the best form State aid could take would be a capitation grant, which might be applied at the discretion of the University authorities either to lectureships or to scholarships. He strongly deprecated a national competition for secondary masters like the Queen's Scholarships. Assistant-masters, as a class, were miserably underpaid, and there was little inducement to enter the profession. But wages could not rise till their status was raised, that is, till they became a profession in the true sense of the word. Private efforts, as in the case of the Cowper Street Training College, and that of the College of Preceptors, had failed, or proved wholly inadequate, and the State was bound to lend its aid, and, having provided the machinery for training, to clinch the matter by a Registration Bill.

The resolution was seconded by Mr. J. S. THORNTON, who contrasted the millions spent by the Government on the Army and Navy with the pittance doled out to education.

The resolution was carried unanimously.

Resolution II., "That this meeting desires to again impress upon the Government the urgent need of a Bill for the registration of persons qualified to teach in secondary schools," was proposed by Mr. W. C. MASSEY, of Bedford Grammar School, and seconded by Mr. A. G. MUNRO, of the City of London School.

The resolution was carried unanimously. After votes of thanks to the out-going President and the Hon. Secretary, the company adjourned to the Holborn Restaurant, where some eighty guests sat down to dinner.

CORRESPONDENCE.

MORE PHONETICS.

To the Editor of The Journal of Education.

SIR,—I addressed a few remarks to you last month on the subject of teaching the pronunciation of foreign languages by phonetics, discussed at the recent meeting of the Modern Language Association, which I am desirous of supplementing.

Considering the very inefficient pronunciation of these languages by Englishmen in particular and their defective ear for linguistic sounds, I would gladly welcome any method calculated to bring about a better state of things, but I cannot, to my regret, acknowledge that this object can be effected by any system of phonetics which can be conceived. That part of the pronunciation which alone could be taught, and possibly somewhat more easily, by phonetic signs is not the part which is most difficult of attainment, and defects in which betray even the foreigner who has an extensive acquaintance with the language. What a stranger really wants and really finds difficult to acquire is the reproduction of certain sounds peculiar to the language he is learning, and which his organs of speech are at first incapable of framing—such, for example, as the German *ö* (French *eu*) which many teachers are satisfied with telling us is "somewhat like the sound of *ur* in *cur*."

What the advocates of phonetics are endeavouring to introduce is a method by which either the same sound will always be represented by the same letter, or, where the alphabet is defective, certain signs or symbols to supply the gap, and in order to effect this they will, in many cases, have utterly to disguise the word in question, or place the new form side by side with it. In either case the student will have to familiarize himself with two forms, the accepted written and the phonetic, one of which it will

subsequently be necessary to forget, but which, especially in the case of a younger student, will be liable to cling to him in after life and much impair his correct orthography. Then, again, the phoneticians will, in order to be consistent (and it is this very consistency which spoils their system), be compelled to alter the outward form of many words where such an alteration is quite unnecessary and teaches nothing. Take, for instance, their own watchword "phonetic," which they must, of course, write "fonetik," unnecessarily altering a double and a single consonant, which could only be pronounced one way by an educated person in any European country, and even then they would not succeed in getting the word pronounced exactly alike by natives of the different countries. The Frenchman would probably say "fonetek" and the German "fonaytik" (using English symbols).

To me it seems that a much better plan, though even this would not insure an absolutely correct pronunciation of, say, the various vowel and diphthongic sounds, such as German *ö* and *au*, French *l*, short English *a*, &c., would be to adopt a system somewhat similar to that employed in foreign dictionaries and grammars to assist the private student in mastering the difficulties of English pronunciation—that is to say, the use of different type or signs, above or below the letters, to indicate the various sounds. Such signs could easily be drawn up by an international convention, and educational printers in all countries would find it worth their while to procure the necessary founts. I cannot, of course, give full examples to illustrate my meaning, but the use of the long and short marks as in Latin (*-*), cedillas, circles, &c., would effect the object; the accented syllable could be indicated, and mute letters be printed in italics, as, for example, *croir*, *wa/k*, *played*. Thus no word would be mutilated or disguised, always appearing to the eye as it would be found in after-experience.

Of course such a system would be far from perfect. It would not differentiate, for example, the short German, French, and English *a*, the English *oy* and the German *eu*, and the various Continental simple vowel sounds, which are only occasionally identical in any two languages. All I wish to maintain is if any system that can be devised will facilitate the acquirement of a correct pronunciation, and save the time both of teacher and learner, this one, at any rate, is preferable to phonetics—valuable as they are in their right place.

I am pleading chiefly on behalf of our English students. My experience abroad of their efforts to pronounce even a language so comparatively devoid of alien sounds as the German, and in *viva-voce*-ing candidates who have had the advantage of listening to a native teacher, convinces me that we are in this regard far behind other Continental nations, and that it is quite time something was done to remedy the defect.—I am, Sir, yours faithfully,
H. S. BERESFORD WEBB.

THE DATIVE IN MODERN GREEK.

To the Editor of *The Journal of Education*.

SIR,—Having read with much interest your review of Dr. Jannaris's excellent work, "An Historical Greek Grammar," I wish to draw attention to one statement in it which, whether a direct inference or not from the work itself, conveys a false impression as to actual contemporary practice. It is this, with regard to the *dative*, that "the dative has disappeared"; and, further on, "this carried with it another consequence—the attachment of a preposition like *ἐπί*, *περί*, *ὑπό*, which could be joined to three cases, gradually became limited to the accusative." To refute the correctness of this statement I will not quote from any books of contemporary Greek authors, lest it might be said that the style was due to the individual preference of the writers, but I take up any chance number of a newspaper to hand on my table, and, glancing down the columns, find instances such as the following; and, as we note them, let us bear in mind that the Greeks, as is well known, are a newspaper-loving people, that the literature we are thus quoting from is that read by the people every day, also that the instances are taken not from carefully written articles, but from chance paragraphs and the ordinary advertisements. Thus, to begin with the dative directly governed by the verb: we note in the "Ἄστυ of December 24 (O.S.), *passim* in the paragraphs: "*ἔπεμψεν αὐτῷ*"; "*εὐχόμενος ὑμῖν*"; "*ἀνεκοίνωσεν ἡμῖν*"; "*τῇ ἐγκρίσει τῶν ἀρμοδίων ἀρχῶν*." Again, in another part of the paper, we come across such sentences as the following:—"Τοῦτο ἐγένετο τῇ παρακλήσει τῆς Πύλης"; "*ὑποδείξωσιν αὐτῷ τὴν ἀνάγκην* . . ." As for the dative with

prepositions, it is most frequent. To quote from the advertisements:—"Πωλοῦντων παρὰ τῷ Κυρίῳ," κ.τ.λ.; "*παραγγελία ἐξ Εὐρώπης ἐπὶ ἀπλῇ προμηθείᾳ* . . ."; "*κατηγορία ἐπὶ δειλίᾳ*." And even in the advertisements the use of the dative is not limited to that with the prepositions, but we have as a common expression: "*Γνωστοποιούμεν τῷ φιλανθεῖ κοινῷ*," κ.τ.λ.

Moreover, lest I should be told that my examples are taken only from one of the first-class Athenian organs of the press, I submit others from provincial papers—in this case, the local papers of Corfu, the Greek of which island no one can accuse of being pedantic. In these we find such sentences as: "*Αἰτήσῃ τῆς Κυβερνήσεως* . . ."; "*βασάνοις σκληροῖς πεισθεῖσα* . . ."; and again, "*τὰ καταδικάζῃ ἐπὶ συνωμοσίᾳ* . . ."

A common phrase is "*ἐπὶ τῇ εὐκαιρίᾳ ταύτῃ*," "on this occasion"; as also "*παρ' ἡμῖν*," κ.τ.λ., *chez nous*, &c. As for the use of the preposition *ἐν*, it is no exaggeration to say that, if not in every line of a newspaper column, we are likely to meet it in at least every other; whereas, according to the statement that the dative has disappeared, it might well be inferred that the use of this preposition, which only governs the dative, had dropped out altogether. Thus, quoting still from the papers indiscriminately: "*Ὁ ἐν Ἀθῆναις ἀναποκριτής*," "*ἱπερίωσεν ἐν Παρισίοις*," "*ἐν τῷ καταστήματί μοι*," "*τὸ ἀρχαιότερον τοῦτο ἐν τῇ ὁδῷ Σταδίου ἀνθοπωλείον*."

In writing letters, also, it is a common thing to put, *e.g.*, *ἐν Κερκύρῳ*, &c., and always the dative for the date, as *e.g.*, *Τῇ 3ῇ Δεκεμβρίου*, &c. Finally, phrases such as *ἐν τούτοις*, "however"; *ἐν γένει*, "generally"; *ἐν τέλει*, at last, are in common use, as they were in antiquity.

These illustrations will, I think, suffice to convince English scholars and students that the dative is by no means lost to contemporary Greeks.

Corfu, January, 1898.

MARY C. DAWES.

WINTER MEETING FOR TEACHERS AT THE COLLEGE OF PRECEPTORS.

To the Editor of *The Journal of Education*.

DEAR SIR,—The impressions of a public schoolmaster at a course of lectures on the "Theory of Education" may, perhaps, be of interest to some of your readers. The frame of mind in which the average man approaches educational lectures is, I suspect, distinctly that of the Philistine. In all professions, no doubt, the "old hands" are inclined to regard with suspicion new-fangled methods; theory often appears so far removed from the world of practice. But, if some of us went to Mr. Findlay's course of lectures on "The Principles of Class-Teaching" in the spirit of Balaam, we stayed to bless. We may be surprised to learn that we have been breathing argon all our lives, but it is none the less true. Where we have been successful as teachers, we must have followed the main lines of the methods now set before many of us in black and white for the first time. What, then, one of the old school may ask, do we gain by such lectures? In the first place, and above all, I should reply: They stimulate the self-consciousness of the teacher. The great danger of the teacher is routine; the crust of habit must not be allowed to form. We want to reflect from time to time on our methods, to adapt ourselves readily to the changing needs of the individual minds we are called upon to develop. No one can be without method in his work, but some of us have bad methods, and the danger is that we may remain blind to this fact. Directly our methods become conscious, we can apply tests, we know on what lines to aim at self-improvement. This is half the secret of success. In the second place, we learnt, from these lectures—indirectly, but no less surely—if we did not know it before, that the chief factor in education is the personal element—the character of the teacher. It was the moral earnestness of the lecturer that carried away and convinced his hearers. With all he said we may not agree—possibly we should agree more as we study our theory more—his illustrations may not always have seemed adequate; we must remember that these lectures were little more than a sketch, but all will agree that Mr. Findlay was himself deeply convinced of the necessity and nobility of his work, and that he threw himself heart and soul into it. The child—and it was the child and his standpoint that was kept constantly before us—was no mere abstraction of pedagogy, but a real flesh-and-blood child, who had been, and was being, studied first-hand.

Details of the lecture space does not permit me to discuss,

had I the wish; but those to whom "training" and "pedagogics" have hitherto been a bugbear would have been surprised to find that there was no rigid system, no wish to turn out "trained teachers" on German-made patterns, but rather suggestion, encouragement, and stimulus. Lectures were preceded by discussions; difficulties could be threshed out; the *theses* of the lecturer might be, and were, freely criticized; and the pertinent questions of practical teachers, with the discussions that followed, were not the least fruitful part of the work. In all cases the lecturer endeavoured to take the stand-point of his listeners; progress was from the known to the unknown, "from the cow to the rhinoceros." Such methods must be profitable to all. Whether we accept this or that analysis of mental processes is of little consequence, provided we approach our educational problems in the right spirit and realize that "education is not information ladled out in a hurry."—Yours truly,

Tonbridge School.

H. J. J. WATSON.

HOURS IN GIRLS' HIGH SCHOOLS.

To the Editor of the Journal of Education.

SIR,—The most excellent and valuable article on girls' high schools, in your last number, with which I agree in every point but one, emboldens me to ask a question or two that may find a satisfactory answer in your *Journal*. When the girls' schools of to-day are contrasted with those of thirty years ago, it requires some courage to attack even one point in institutions to which so many noble women devote their highest energies, their exceptional endowments and attainments, and to which they sacrifice all their leisure, and, in many cases, their health. It is quite as much from sympathy with them and their work, as from care for young girls and children, that I venture to ask: Is the contentment of the parents a guarantee that all is well? The parents were contented thirty years ago when all was wrong. Are the parents contented? Naturally those whose girls attend Mrs. Sandford's school must be, or she would not say so. Now, I go much among parents, and I am one myself, and everywhere I hear complaints of the long morning hours, viz., from nine to one. I dared not send my daughter to a high school for that very reason. At least half-a-dozen young girls known to me have had to be removed because of this long strain. Many more have suffered severely, and I know some sad cases of actual breakdown.

Is my experience exceptional, or does every woman of my age and opportunities know as many cases as I do? If so, *i.e.*, if I am no exception, the strain of the four hours' brain work must be felt *severely* by thousands of growing girls.

Is it reasonable to assume that, if a girl works vigorously from nine till twelve, she is then tired and in want of rest? Are not most men and women tired and in want of rest after three hours of mental work? The curtailment of the morning would benefit both teachers and taught. The woman who *really* teaches for four consecutive hours is not likely to retain her freshness, the vigour of her mind and voice for many years, and perhaps there are other reasons for the rejection of women teachers of thirty-five than their inability to play games.

It has been my luck to try experiments in teaching. My most successful pupil only worked from two to three hours a day, everything included, for eight years. She passed the Junior Cambridge and took her B.A. at twenty-one, all the same. To gratify an unreasonable passion for teaching, I help a lady twice a week who has a school hard by. I was not satisfied with my pupils or my work. Their morning hours were from nine till half-past twelve. We dropped half an hour. The children were brighter, and knew quite as much. If another half-hour could be dropped they would be brighter still, and know quite as much. For there is a point beyond which the more you teach the less is known, and that point is reached very much sooner than most people think. That is the explanation of the fact that the results of high-school work are so disappointingly small and short-lived. After a year's absence from school, ask, and you will be astonished at what you will not find.—Yours very truly,

EMILY MIALI.

Crag Foot, Ben Rhydding, January 5, 1898.

MR. RENDALL AND UNIVERSITY COLLEGE, LIVERPOOL.

To the Editor of The Journal of Education.

SIR,—May I correct the statement in your "note," that Mr. G. H. Rendall "succeeded Mr. Selwyn, of Uppingham, in 1887, as Principal of University College, Liverpool"?

Mr. Rendall had no predecessor. Mr. Selwyn was head of the Liverpool College, an important boys' school, founded in the middle of this century (when it was the fashion to entitle all new schools "colleges"), and flourishing still. It is a pity the names are so easily confused. Even the recent "blue book" on the University Colleges slips into calling University College, Liverpool, "the Liverpool

College." On the other hand, the local policemen call it the University," which is equally wrong, for it is one college of the Victoria University.

But what I want to point out is that it is entirely during the Principalship of Mr. Rendall that University College, Liverpool, has risen to the first rank, being awarded on the report of the Special Committee of Inquiry into the University Colleges last year, along with Owens College, Manchester, and the London University College, the maximum treasury grant of £3,000 (to which a few odd hundreds were added in the case of Owens).

Mr. Warren and Professor Liveing reported (page 26) as follows, on University College, Liverpool:—"It has grown very rapidly, and stands to-day in a position of much strength. . . . One note of its modern character is that the women students at Liverpool enjoy, more than anywhere else, a position of complete and equal recognition with the men, which is the more happy because it has never had to be fought or struggled for, but has existed from the first. The College further seems pervaded with the enthusiasm of youth, and to be full of confidence, energy, and aspiration. It has been able to attract the services of an excellent staff, and it follows that it is doing all-round good and vigorous work."

Some of us, who know the cordiality and confidence with which Mr. Rendall has worked a joint college, feel regret that he should in future tread the more beaten track of teaching boys alone.

But no one who has followed his speeches in Convocation, for instance, and at a Students' Missionary Conference held two or three years ago, can be surprised at his taking a post where he will have more scope for expressing, and impressing, his religious convictions than he can have as head of a college, open to all on week-days, and on Sundays to none.

January 22, 1898.

E. C. WILSON.

GEOGRAPHY OF THE COUNTIES.

To the Editor of The Journal of Education.

SIR,—Is there any interesting collected and well-arranged description of the separate counties of England, giving sketches or anecdotes of the chief historical and literary characters connected with each county; in short, exactly that information which is *not* given in a guide book, but which, if it were to be found, would give English children an intelligent and connected interest in the history and geography of their own county? The children are eager for information, but my experience in teaching a class, varying in ages from eight to twelve, has been unsatisfactory, owing to the difficulty of getting hold of anything but dull facts. For example, in teaching the county of Dorsetshire, one must read long histories before finding the stories that will invest the different places with living interest. I can easily teach them that pottery is made at Poole, &c., and that the Tilly Whim Caves at Swanage are supposed to have been the haunts of smugglers; but nowhere can I find authentic anecdotes about real smugglers, or about the interesting old town of Poole. All my available facts lack colour and life, and yet I can see how interesting it could be made if, without giving a lifetime to the subject, I could get what I want.

Could you tell me, also, if any good outline maps of the separate counties are to be had, so that each child may make her own map as she learns?

I shall be greatly obliged for any help you, or any reader of your *Journal*, can give me.—Believe me, faithfully yours,

ANABEL DOUGLAS.

"SI VIS PACEM."

To the Editor of The Journal of Education.

SIR,—In the review of my "Dictionary of Classical Quotations," in your January issue, you ask whether I, or any of your readers, can give you the origin of "*Si vis pacem para bellum*." In this form I have been unable to find it, and very much question whether it is in classical literature at all. But Vegetius ("*De Re Militare*," Lib. III., Prologue), says: "*Qui desiderat pacem præparet bellum*"; and the same idea is found in Seneca ("*De Vita Beata*," xxvi. 2): "*Numquam imperator ita paci credit ut non se præparet bellum*." Both these quotations are to be found in my book, on page 185.—I am, Sir, yours faithfully,

Walton-on-Thames.

January 17, 1898.

THOMAS B. HARBOTTLE.

COLONIAL AND FOREIGN NOTES.

FRANCE.

It will be remembered that in the summer of 1896 the institutions of higher education formerly known as *Facultés* became, by a stroke of the law, Universities. The change of name entailed, or, rather, was itself entailed by, other changes, one of which—an important financial modification—first came into operation on January 1 of the present

year. Hitherto students' fees of every kind have gone, not to the University, but the State; in future each University is to have control of a certain portion of its own fees, with the limitation that they may only be applied to the provision of material and apparatus. Salaries will continue to be paid by the State, and other expenses will be met as heretofore by subsidies from the State departments and municipalities, and by such donations and bequests as may from time to time be made. The amount of the fees no longer to be paid to the State is not inconsiderable. In 1896 they reached nearly two million francs, and for some years have averaged as much as a million and a quarter. The change will doubtless make a certain difference to the appearance of the educational budget, but the net result will be about as broad as it is long, and will, as we understand it, have very little effect upon the taxpayer, however much freedom and independence it may bring to the Universities.

Another important step in connexion with the reconstitution of the Universities is the proposal to give the new University Councils the power to confer—under conditions to be approved by the Minister of Education—special degrees of their own, in addition to those already conferred by the State. All existing degrees may, in fact, be said to be State degrees: they are conferred, that is, on the result of examinations conducted in accordance with regulations imposed by the State, and as a consequence are accepted by the State as guarantees of fitness for certain professional and other employments. In a word, degrees in France confer not only titles, but rights. As long ago as 1890, at the time of the first Bill for University Reform, it was clearly seen that though it may be an important part of the work of a University to prepare and examine for such professional degrees, it is by no means the whole; that much good work, perhaps the best, may be done upon quite other lines, especially by men who, for one reason or another, have not passed through the qualifying preliminary stages; and that, to say the least, it may provide valuable encouragement to independent workers to offer to confer upon them a special academic degree, which should carry no rights, but which would, at the same time, be a mark of intellectual distinction.

In the last year's process of transformation, the point was, of course, again raised, and became the subject of much animated discussion, both in the University Commission and the Conseil Supérieur, in both of which, however, the proposal was finally adopted. The conditions upon which the new degrees are to be obtained are left deliberately vague, as will be seen from the following passage from the report of the University Commission:—"The question of the conditions is left to the Universities, which, it must be understood, are free to institute these degrees or not as they please, and much more, therefore, to determine the courses of study and forms of examination, which will certainly vary, not only in the different Universities, but in the different branches of study in the same University." This is decentralization in earnest; but, after all, what our neighbours are proposing to do with seventeen Universities we have long done with eight—the entrance to such of our so-called learned professions as we think fit to safeguard being more or less efficiently safeguarded from within, the entrance to the profession upon which, perhaps, more than upon any other, the welfare of the State depends being thrown invitingly wide to the first casual out-of-work. But what will Oxford and Cambridge say to the following passage of the report?—"To sum up, the Universities of the State, inheritors of the *Facultés* of the State, continue to prepare students for State and professional employments, and to grant, as in the past, State degrees which give access to those employments. But, as institutions existing for the encouragement of study in every branch of human knowledge—a purpose that can take no account either of programme or examination—they offer an initiation into the higher intellectual life to all who wish to study for study's sake, without distinction of age or nationality—*Docet omnia*; and in this all, every one, master or student, plays his little part. Moreover, it must be possible for all who are capable of research, criticism, invention, and perceiving truth to become University students and participate in the honours that the University confers." This is the democratic idea, including even women, though the Commissioners do not deem it necessary to say so.

Will not the Cambridge Committee, who are considering the possibility of instituting a special diploma for external students, take note of this reasonable step forward—for which, as Englishmen, we may here express our gratitude, inasmuch as the reform is designed no less in the interest of the foreign than of the native student. For every American student in Paris, to take an example, seven or eight are to be found in Berlin. And why? Because in Germany the foreign student can matriculate upon presentation of his home diplomas, can choose his own course of study, and is exempt from all examination till the day when he chooses to present himself for his degree; whereas in France he has hitherto been obliged to choose between going through the examination mill from beginning to end, or pursuing a course of independent study and giving up the hope of a degree. The Commissioners quote an American professor to show that this flocking of students to Germany is already beginning to exercise an influence upon intellectual life in America, and come to the very sound conclusion that the removal of University barriers ultimately means the removal of international barriers also. It is interesting in this connexion to note that

France is beginning to realize the importance, not only of attracting the foreigner to herself, but of sending herself to the foreigner, and has decreed that in future the time spent by a student at a foreign University shall, within certain limitations, have its full time-value at home. Hitherto this has not been the case.

The following revised scheme of graduated penalties will give some idea of how the State deals with indiscipline in its Universities:—(1) Reprimand before the University Council; (2) Exclusion from examination in a particular branch of study in a particular University for a period not exceeding one year; (3) Exclusion from lectures in a particular branch of study in a particular University for a period not exceeding one year; (4) Exclusion from a particular University for a period not exceeding two years; (5) Permanent exclusion from a particular University; (6) Exclusion from certain defined examinations in any University for a period not exceeding two years; (7) Exclusion from all institutions of higher education, whether public or private, for a period not exceeding two years; (8) Permanent exclusion from all such institutions. In the cases in which the action of the penalty is limited to the particular University of the offender, there is no right of appeal; in the others, appeal may be made to the Conseil Supérieur.

A propos of Universities, the following extract from the inaugural professorial address to the students of the *Faculté des Lettres* of the University of Paris at the beginning of the academic year strikes us as containing a piece of information that will surprise many besides ourselves.

"The *Faculté* is not only a place of research, where scientific methods are taught; it is also a professional normal school for such as wish to teach in secondary schools. *This statement will surprise nobody* (italics ours). There does not exist a special normal school for preparing teachers for secondary schools; but, even if all the students of this school took up teaching as a profession (which is by no means the case), too few are admitted each year to supply the demand. Historically, the first students of the *Facultés des Lettres* were candidates for posts in secondary schools, who, being either unwilling or unable to enter the normal school, sought to study elsewhere what was studied there, in order to be able to offer themselves for the *Agrégation* examination. The influx of students of this kind led the *Facultés* to organize a course of study preparatory to the *Agrégation*, such as existed in the normal school; so that between the school and the *Facultés* there was established, I will not say a rivalry, but a certain emulation which has done much good. Since, therefore, the *Facultés* undertake to prepare a part of their students—a part which was at the outset and still is very considerable—for the *Agrégation* examination for the duties of teachers in secondary schools, they also accept the responsibility of teaching them their business. From this point of view, they may be said to be so many normal schools, differing only from the great normal school properly so-called by having no entrance examination. Now, to teach people to teach, you must first teach them how to teach. Hence the necessity of general courses of pedagogy, of practical pedagogic exercises." It is especially the "practical exercises" that surprise us.

The orator's further remarks throw no light upon the point; nor, writing at a distance from books of reference, can we. We had always believed that—save for the existence of the solitary *école normale supérieure*—France shared with us, and certain other great nations, the distinction of supposing that the secondary teacher needs no training. It seems we were wrong. For our sins we will work up the details for our next French notes.

Will it be news to any that in France vaccination is not compulsory? And will everybody at once see the pedagogic consequences—that it falls to the part of elementary teachers to preach vaccination to pupils and parents, to go in search now and again of vaccine, and even, in case of urgent need, to themselves wield the lancet? We do not mean that the law thrusts these functions upon them. It is rather in response to urgent appeals from the authorities, backed up by promises of medals—gilt, silver, and base bronze—that vaccination, in company with temperance, agriculture, and adult education, makes its way. Two medals of the first class, twenty-three of the second, and a hundred and seventy-five of the third rewarded the most zealous of last year's fourteen thousand competitors, who succeeded between them in bringing about as many as two hundred and eighty thousand operations. As, however, there are at least eighty thousand primary schools in France, the Permanent Vaccination Commission of the Academy of Medicine, though pleased with an increase of two thousand competitors over 1896, is urgent with the Minister to stir up the laggards, especially in the private schools, who contributed less than 5 per cent. of the total number.

THE Secretary of the Home-Reading Union desires to inform teachers that specially-prepared sets of slides, taken from negatives kindly lent by the High Commissioner for Canada, can now be hired from the central office. These slides are completely illustrative of "Through Canada with a Kodak." The full set of fifty slides may be hired for 2s. 6d.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council, of June 19, 1884, the "Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but the "Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

TENTH GENERAL CONFERENCE AT ABERYSTWYTH,
APRIL 18-22, 1898.

The Programme of the Conference is now nearly settled, and a copy will be sent to every member of the Guild, with an invitation from the President and Council of the Branch, as soon as possible.

Every effort will be made to obtain for those attending the Conference a substantial reduction in the return railway fare from London and other parts of England, and it is hoped that as many members as possible will attend. There are great facilities for spending the Easter Vacation at and near Aberystwyth, as there is a large number of good lodging-houses, with charges lower than those of the summer and autumn months.

The President-Elect of the Guild, Isambard Owen, Esq., M.A., M.D., Senior Deputy Chancellor of the University of Wales, will give his Presidential Address at the opening of the business of the Conference, on the morning of April 19. The Principal of Lampeter (the Rev. G. W. Gent, M.A., Miss E. P. Hughes, Miss Alice Woods, Bernard Macdonald, Esq., M.A., Mrs. G. R. Scott, Mrs. Emil Behnke, and Miss Penstone have consented to take part in opening the different discussions. Other openers of discussions are under invitation. The subjects for discussion are set out in full in the Teachers' Guild Report in the *Journal of Education*, January, page 26.

The leading educational publishers will be invited to take part in the Educational Exhibition, which, as well as the Conference, will be held in the Pier Pavilion, on the foreshore. The discussions will take place on April 19 and 21. The 20th will be wholly given up to excursions to places of interest.

Early notification of intention to be present is requested.

TEACHERS' GUILD LECTURE.—Members are reminded that Mr. F. W. H. Myers, M.A., H.M.I., a Vice-President of the Guild, will give the next Teachers' Guild Lecture at 8 p.m. Tuesday, March 8. Subject:—"Wordsworth." The place for the lecture is not yet chosen, but it will probably be in the West Central district. Heads of schools who would like to bring some of their senior pupils to the lecture are invited to apply to the General Secretary of the Guild, 74 Gower Street, stating the number for whom they would like seats, and the application will receive consideration.

CONJOINT MEETING.—On Tuesday, February 15, there will be a conjoint meeting for all the London sections of the Central Guild, at King's College, Strand, W.C. (by kind permission of the Principal). Tea and coffee will be served at 7.45 p.m., and, at 8.15 p.m. Dr. Curnow, Professor of Clinical Medicine at King's College, will give a lecture on "Cornwall," with lantern illustrations. Members of all sections, and their friends, are cordially invited. R.S.V.P., to Professor Hudson, King's College, Strand, W.C.

The Executive Committee of the Council will meet on the 3rd inst. The application of candidates for membership of the Guild should be received before 3 p.m. on that day.

The Thrift and Benefits Committee met on January 25, and drafted the circular on the subject of the Teachers' Guild Benevolent Fund, which is now being sent to all members. It was reported to the Committee that a letter was being sent to the Branches of the Guild, urging on them an individual canvass of their members for the Teachers' Guild Friendly Society (Sickness and Accident Fund). At present there are only seventy-three names of ordinary members and a few of honorary members in hand. To enable the Society to be founded on a proper basis, it is considered necessary to start with at least a hundred ordinary members. On that number being attained, the fund will be thrown open to the profession.

The Joint Professional Agency for Assistant-Masters and Tutors will open in the spring of the present year. All the associations which have been invited to co-operate in the Agency have consented. The negotiations for the establishment of a Joint Professional Agency for Assistant-Mistresses and Governesses are still proceeding.

CENTRAL GUILD. LONDON SECTIONS. CALENDAR FOR FEBRUARY.

Friday, 4th, 7.30 p.m.—Section G. Symposium on "The Teaching of Composition," Miss Tuck, Miss Bone, Miss Clifford, the Rev. F. Aveling, M.A., B.Sc., at the Datchelor School, Camberwell Grove, S.E. Tea and Coffee at 7.30. Symposium afterwards.

Monday, 7th, 7.30 p.m.—Section A. Annual General Meeting, at the Skinners' School, Stamford Hill, N.—At 8.15. Discussion on "The Teaching of Geography," to be opened by H. Holman, Esq., H.M.I. The discussion is open to all members of the Guild.

Tuesday, 8th, 8 p.m.—Section C. Annual General Meeting at Bedford College, York Place, Baker Street, W.—At 8.30. Lecture on

"Writers and Readers," by Professor W. Hall Griffin. The lecture is open to all members of the Guild.

Tuesday, 8th, 8 p.m.—Section E. Lecture on "History Costumes," with lantern illustrations, by Miss A. J. Cooper, at St. Jude's Parish Room, South Kensington. Open to all members of the Guild.

Friday, 11th, 7.30 p.m.—Section D. Annual General Meeting, at 24 Cleveland Gardens, Hyde Park, W.—At 8.10. Social meeting. Music and recitations.

Saturday, 12th, 3.30 p.m.—Section F. Musical meeting, at the High School for Girls, Church Row, Richmond (near Richmond Station), by kind invitation of Miss Johnson. There will be vocal and instrumental music and a short operetta.

Monday, 14th, 8 p.m.—Section B. Annual General Meeting, at the Offices of the Guild, 74 Gower Street, W.C. After the business meeting there will be tea, and the various sections of the Educational Museum will be open for inspection.

Tuesday, 15th, 8 p.m.—Section E. Annual General Meeting, at 4 Lennox Gardens, S.W. Conversazione.

Tuesday, 15th, 7.45 p.m.—Section F. Conjoint meeting for all Sections, organized by Section F. (See above for details.)

Saturday, 19th, 3 p.m.—Section D. Description of the Elgin Marbles, in the Elgin Room of the British Museum, by Miss Margaret Alford.

Tuesday, March 1st, 8 p.m.—Section F. Musical meeting, at Mrs. Christa's, 4 Rectory Grove, Larkhall Rise, Clapham, S.W.

Section E.—A discussion was held on December 7, 1897, at 13 Thurlow Square, on "Text-Books for use in Schools." Mr. Churton Collins, in introducing the discussion, suggested that school-books should be divided into those adapted for the three grades of pupils—the junior, the intermediary and the senior—and subdivided according to the subjects of which they treated, grammar, geography, elementary science, books employed in the teaching of languages, history, literature, &c. No doubt those who would take part in the discussion would confine their remarks to the subjects and books which related to those branches of teaching in which they were individually engaged. His own work happened to be concerned for the most part with senior pupils, the subjects being classics, English history, and English literature. With classics they were not at that meeting concerned, and so he would confine himself to a few remarks on school-books dealing with English history and literature. He thought it was a great pity that more trouble was not taken to distinguish between books proper for the grades of pupils to which he had referred; that very often the same books were employed for instructing juniors and seniors, and that the sort of instruction proper for each was not always sufficiently considered. It was a great pity that school-books were not written by those who had practical experience in teaching, for it was only teachers who could clearly understand how a subject should be presented to the learner. One of the most difficult things to determine in education was what constituted, and what ought to constitute, pure drudgery, and what could be presented attractively, and in a manner almost necessarily interesting to an intelligent pupil. Under the latter heading would certainly come history and literature, for, if these subjects were properly presented, drudgery could be reduced to a minimum. In history, the retention of facts and dates represented the drudgery, and, though that might be minimized by judicious system, it could not be avoided. He ventured to think that it was a great mistake to proceed, as certain series of history books did, on the assumption that as few facts as possible should be given, and that dates should be practically eliminated, for the purpose of making the study interesting. He then sketched what he thought would be one of the most fruitful methods for the school study of history, noting certain books which seemed to him satisfactory, certain that might be modified, and certain that might with advantage be written. He thought that a good skeleton history for teachers was a *desideratum*, that is, a book which would afford a teacher notes, as it were, for an extemporary lecture, for much more could be done in the teaching of this subject by a teacher giving, as it were, free play to his own genius, than by the stereotyped reproduction of any text-book. He then went on to speak of the teaching of literature, subdividing it into its two branches—the study of its historical development, and the study of particular works and authors—showing how the two must, however, be blended. He then made a few remarks on some of the school-books on these subjects now much in vogue.

Miss Wolsley-Lewis said that she thought Mr. Churton Collins' division of the subject most helpful, and was glad to follow it. Advanced students and teachers should refer at first hand to the best authorities on the subject, and do the work of selection and arrangement for themselves. But for elementary work text-books were essential, and it was most necessary they should be clear and well arranged. What she was chiefly interested in urging was the desirability of bringing teachers and examiners into touch with the publishers. The people who knew best what was required in text-books for elementary work—namely, the teachers engaged in it—were too busy to write such books, and publishers were obliged to fall back on writers inexperienced in teaching. Moreover, however anxious they might be to provide for such cases, publishers were often necessarily ignorant of the need of text-books in special subjects. Was it too much to hope that a committee might be

GEOMETRY FOR BEGINNERS.

AN EASY INTRODUCTION TO GEOMETRY FOR YOUNG LEARNERS.

By **GEORGE M. MINCHIN, M.A., F.R.S.**

Professor of Applied Mechanics in the Royal Indian Engineering College, Cooper's Hill, late President of the Association for the Improvement of Geometrical Teaching.

EXTRACT FROM THE PREFACE.

"It seems to me that the practice of this country in beginning the teaching of Geometry to young boys from Euclid's book results merely in a waste of very precious time. The ability to appreciate Euclid's style and logic should be cultivated by a study of Geometry proceeding in much more homely fashion; and in this fashion book, I hope, proceeds. The main thought that has guided me in departing from Euclid's method is this: a child can easily learn to construct various geometrical figures with his

hands, and in this process he can learn many of their properties with very little tax on the brain; whereas Euclid requires him to reason in the most exact manner of syllogism from the very beginning, quoting authority for the minutest detail, and putting into a multitude of words many things which the quick intuitive reasoning of the child sees clearly without this process. The work will, I hope, be found to be so simple that many mothers will be able to use it in teaching their children—girls as well as boys."

LONDON: HENRY FROWDE, CLARENDON PRESS WAREHOUSE, AMEN CORNER, E.C.

formed, with authority to suggest to the leading firms new text-books required, and the general lines on which they should be written to make them really useful?

Mademoiselle Ninet agreed with the principal points brought forward by Miss Wolseley-Lewis; her remarks concerning the teaching of modern languages may be summed up as follows:—That good text-books, whether grammatical hand-books or reading books, are few, and, on the whole, unsatisfactory. The former require to be much more condensed, simple, and practical, and should be used principally by the teacher, who should adopt the rules &c., to the particular standard of the class which has to be dealt with. Too much is left to the pupil to work out alone; the rules are scamped, imperfectly understood, and the results naturally unsatisfactory in the end. As regards reading books, and those set for examinations, there is a certain amount of dulness and sameness in them, which needs a radical change; classics must be studied to a certain degree, but, as the learning of French, &c., is considered a drudgery by many, it would be much wiser to make some attempt to vary the number of reading books, and especially to introduce modern elements, which should, of course, be duly expurgated and annotated to suit the purpose for which they are required. The best persons for editing school-books seem to be teachers, who, having a perfect grasp of English, and of the language under consideration, are the best judges of the difficulties experienced by English students in their study of the language in question. Some publishers seem willing to make the necessary innovations, and to introduce fresh elements, but they are debarred from accepting the suggestions made by experienced teachers in favour of this or that modern author, because examiners who set books to be prepared keep entirely to such volumes as have been studied for years past: for example, "L'Avare," by Molière; "Les Fourberies de Scapin," "Picciola," &c., works all good in themselves, and by no means to be abandoned, though newer works would be of the greatest possible advantage. It is also strongly to be urged that such works as "Le Malade Imaginaire" should not be selected, especially when unexpurgated, as is the case with one well-known so-called "edition for use in schools." Stories of adventure, works by Hugo, Daudet, Theuriet, and others would serve the purpose required far more satisfactorily. Another disadvantage, arising from the fact that people inexperienced in teaching and in the difficulties of teachers, edit schoolbooks, lies in the fact that the notes given on Molière, Corneille, &c., are either woefully incomplete or of so learned a nature that the help which might be derived from the now obsolete French used in many of the classics becomes an additional difficulty, instead of proving (as it might do), with careful annotation, a help to the study of modern French.

The Rev. J. O. Bevan, agreeing cordially with many of the remarks made, read from a paper, kindly supplied by a member of the Guild, many striking inaccuracies, and even contradictory statements, in text-books otherwise excellent. He concluded by suggesting that a committee should be formed to receive and consider information supplied concerning faulty school-books, and to communicate, at their discretion, with the publishers, and to send the results of the correspondence to educational papers, so that teachers might be kept informed as to what books would be correctly revised.

The discussion then became general, and the following resolutions were carried unanimously:—(1) "That this Section (E) suggests to the Council of the Teachers' Guild the desirability of forming a Committee to consider school text-books, and to exercise its influence with publishers as to the production of properly revised editions, and also of new books in the form most acceptable to teachers." (2) "That this Section desires to bring before the Council the desirability of calling upon members of the Guild to submit notices of errors in text-books in general circulation; such notices to be preserved and tabulated for reference in the Library, or to be otherwise dealt with as the Council may appoint."

LIBRARY.

The Hon. Librarian reports the following additions to the Library:—Presented by Messrs. Geo. Bell & Sons:—The Age of Tennyson, by Hugh Walker; Book-Keeping by Double Entry, by J. T. Medhurst. Presented by Messrs. Blackie & Son, Limited:—The Newton Science Reader (Infant Reader, Book I.; Book II.); The Palmerston Reader, Book V.

Presented by the Syndics of the Cambridge University Press:—La Fortune de D'Artagnan, by Alexander Dumas, edited by A. R. Ropes; Remi et ses Amis, by Hector Malot, edited by M. De G. Verrall; the Fairy Tales of Master Perrault, edited by W. Rippmann; Eight Stories from Andersen, edited by W. Rippmann; Minna von Barnhelm, oder Das Soldatenglück, by G. E. Lessing, edited by H. J. Wolstenholme; Plautus, Trinummus, edited by J. H. Gray; Cornelius Nepos: Timotheus, Phocion, Agesilaus, Epaminondas, Pelopidas, Timoleon, Eumenes, Datames, Hamilcar, edited by E. S. Shuckburgh; Cæsar: The War with the Belge, De Bello Gallico II., edited by E. S. Shuckburgh; The Medea of Euripides, edited by C. E. S. Headlam; Shakespeare's Merchant of Venice, edited by A. W. Verity; Two Essays on Wm. Pitt, by T. B. Macaulay, edited by A. D. Innes; a Selection of Lamb's Tales from Shakespeare, edited by J. H. Flather (two copies of each).

Delbos' French Reader.

The Student's Graduated French Reader.

For the use of Public Schools. By LÉON DELBOS, M.A., late of King's College, London. I. First Year:—Anecdotes, Tales, Historical Pieces. Edited with Notes and a complete Vocabulary. Eleventh Edition. Crown 8vo, 2s.

II. Second Year:—Historical Pieces and Tales. 180 pages. Sixth Edition. Crown 8vo, 2s.

"It would be no easy matter to find a French Reader more completely satisfactory in every respect than that of M. Delbos. . . . The arrangement of the materials is no less happy than their selection, the shorter extracts being often grouped under general heads, and carefully graduated in difficulty."—*Athenæum*.

"A better book will always supplant those that are inferior. . . . The intrinsic merits of these Readers justify their appearance."—*Educational Times*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes."—*Journal of Education*.

Eugène's French Grammar.

Eugène's Student's Comparative Grammar of the French Language.

With an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises. By EUGÈNE FASNACHT, late French Master in Westminster School. Eighteenth Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, Grammar, 3s.; Exercises, 2s. 6d.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen. . . . The book is likely to be useful to all who wish either to learn or to teach the French language."—*Athenæum*.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern languages. . . . The rules and observations are all scientifically classified and explained. . . . It is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

Weisse's Complete Practical Grammar of the German Language.

With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Re-written. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German Grammar yet published in England."—*Journal of Education*.

Weisse's Short Guide to German Idioms.

Being a Collection of the Idioms most in use. With Examination Papers. Second Edition. 8vo, cloth, 2s.

Eugène's French Method.

Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." Fifteenth Edition. Crown 8vo, cloth, 1s. 6d.

French History and Literature.

First Steps in French History, Literature, and Philology.

By F. F. ROGET, of Geneva University. For Candidates for the Scotch Leaving-Certificate Examination, the various Universities Local Examinations, and the Army Examinations. Third Edition. Crown 8vo, cloth, 5s.

"This manual will be a boon to many who have neither time nor inclination to work through a large volume on the history of French literature, but who yet desire to obtain a knowledge sufficient to enable them to pigeon-hole their reading of French prose and poetry."—*Educational Times*.

"He has displayed qualities which are rarer and more praiseworthy than mere erudition."—*Saturday Review*.

BY THE SAME AUTHOR.

An Introduction to Old French.

History, Grammar, Chrestomathy, and Glossary. Third Edition, with Map of French Dialects. Crown 8vo, cloth, 6s.

OCCASIONAL NOTES.

MANY and varied are the rumours as to the intentions of the Government with regard to secondary education. The Queen's Speech on the subject is exactly what was expected: "In case the time at your disposal should permit, . . . proposals for dealing *in part* with the subject of secondary education will be laid before you." In spite of the words we have italicized, it is freely said that a Bill dealing with the whole subject has been drafted and widely circulated in confidence. Likely enough this is true. But there is a wide gulf between the Education Department and the table of the House. Mr. Macan in another column gives a masterly analysis of the political situation. It would be hard to gainsay the probability of his argument. If a large Bill is introduced, there can scarcely be time this Session to discuss it, and we can hardly expect the Government to court another fiasco after that of 1896. If, on the other hand, a short Bill dealing with the interests of one section only is introduced, the other sections will probably combine in opposition. So we conclude that a big Bill, which would pass, will not be brought forward for lack of time, and that a small Bill will not succeed. Yet we cannot forget the urgent plea of the Royal Commission that the longer legislation is delayed the more difficult it will become.

BUT it is now beginning to be felt that the Royal Commission, in spite of its careful inquiries and full report, has in reality not carried its investigations far enough. More information is yet needed. And this brings us to the more important part of Mr. Macan's article, to which we have already referred. "The one thing needful at the present juncture," says Mr. Macan, "is a High Court of Education." This seems to us both a valuable and feasible proposal. An Order in Council could re-establish the late Royal Commission. Additional members could be nominated, giving Universities and education societies their

proper representation. The body thus formed could be authorized to collect information, give advice, and offer arbitration. Its power would rest on public opinion alone. But its influence in the profession would assuredly be very great. The findings of the Royal Commission are quoted among us almost as if they had statutory authority, and several of them are in part carried out. The same weight would be given to the deliberations of the proposed High Court. Its value in continuing inquiries already started would be equally great. In spite of all that has been done, secondary education is still in the main an unexplored field.

MR. MACAN does not explicitly face the question whether the administrative bodies should have places assigned on this permanent Commission. Much could be said on both sides. Some would prefer a purely professional body to deal with purely professional questions. But when we attempt to separate professional questions from questions of administration we very soon get into difficulties. In inquiries and investigations the local authorities would undoubtedly be very useful. The closer the professional and administrative bodies are drawn to one another the better for education. But such a permanent Commission, whether including or excluding the administrative authorities, would be of very great service. There would be little difficulty in getting capable men to serve. The absence of statutory authority would disarm all opposition. The High Court of Education would depend for its influence upon its own attitude and its own actions. But it would soon, we believe, if composed according to Mr. Macan's suggestion, gain a very large share of public confidence. The proposal we consider a valuable one, and its realization would go far to make up for the want of legislation. Mr. Macan's article deserves careful reading.

IN the Queen's Speech a measure for the constitution of a teaching University for London is put into the same conditional time clause as the measure for secondary education, and to find a Bill introduced by the Lord President, and already printed, just as we are going to press, is at once a relief and a surprise. It is in the main a reprint of last year's Bill, with some not unimportant variations, the consideration of which we must leave to another month. For the present we will only note that one essential point, without which the teaching University would have been a mockery, is apparently secured. "Unless the Senate otherwise determine," there are to be separate examinations for internal and external students, and the kind of examination passed will be stated on each certificate or diploma. To the proviso that, if practicable, one examiner at least in each subject shall be a non-University teacher we see no objection. The definition of "Teachers of the University" is sufficiently catholic. They may include "members of the teaching staffs of public educational institutions situate within a radius of thirty miles from the University buildings." The task of determining who shall be recognized as teachers is entrusted, in the first instance, to the Statutory Commissioners. It is to be hoped that they will err on the side of exclusiveness.

IF Mr. Fletcher Moulton's attitude towards the London University Commission Bill is misunderstood, it will not be for lack of explanation. His latest exposition occupies a column of small print in the *Times*, but the substance of it can be compressed into a short sentence. If the *status quo* of examinations is maintained in its integrity, he will withdraw his opposition to a dual University, though he still

fails to see what good can come of it. He cannot understand why he should be called an obscurantist, and is therefore as indignant as the Billingsgate fishwife when Douglas Jerrold called her a parallelopiped. There is no arguing with an opponent who holds that teaching and examination should be kept distinct in water-tight compartments, but we may join issue on two plain matters of fact. Mr. Moulton asserts that London degrees "are esteemed at least as highly as the corresponding degrees of our residential Universities." Let him consult Messrs. Askin & Gabbitas, or Griffiths, Smith, & Powell, as to the respective values of a London and Oxford or Cambridge degree in the scholastic world, or let him look at the list of the Headmasters' Conference and see how many of its members hold London degrees. Again we read: "There are many Universities for residents. There is only one for those who cannot afford residence." Mr. Moulton has forgotten, or finds it convenient to ignore, the Royal University of Ireland.

IT is a matter for congratulation that the Chambers of Commerce are at last preparing to take a really useful step towards the improvement of commercial education. The Associated Chambers at the meeting on March 16 will be asked to assist in providing "facilities for training youths destined for a commercial career." This obviously means improvements in the teaching on the commercial sides of secondary schools, and possibly the presence of higher or tertiary schools of trade and commerce on the Belgian or Japanese pattern. That such proposals should be made, none too soon, is a tacit admission that the present examination scheme has failed. In 1891 Mr. Findlay, reporting on German commercial education to the Sheffield Chamber, characterized the examination scheme (adopted in 1888) as a "measure for which the example of France or Germany offers no warrant." "The scheme of examination," he pointed out, "has done great harm in practice, because it was supposed to satisfy the requirements of the case." These words have been fully justified. Any one who has studied the list of prize winners at the annual prize distribution of the Chamber of Commerce will have noticed that the prizes and certificates are taken (with a few noteworthy exceptions) by pupils crammed up in book knowledge in institutes, seminaries, &c., where there are absolutely no facilities in the way of teachers or apparatus for acquiring a practical commercial training. French, German, or elementary science, properly taught in a good secondary school, is the best preparation for a commercial education—at any rate up to the age of sixteen or seventeen; afterwards, but not earlier, the pupil can go with advantage to the school of practical commerce. The Chambers of Commerce, we note, are going to ask for assistance from County Councils and County Borough Councils. We have no doubt this will be freely given. If any of them want an active spur, they may find it in the fact that the chief prophet of the old and discredited examination system has been Sir A. Rollit, who said of it in 1888: "The machinery of commercial education was not only ready, but in action."

AN important educational movement has just been initiated by the Navy League. This body has had under its consideration the very limited opportunities there are for respectable lads, fresh from the elementary schools, to undergo a training in seamanship and navigation which will fit them, while pursuing a career in the merchant marine service, for a place in the First Class Naval Reserve. As a *ballon d'essai*, a circular was sent out to the County Councils urging the provision of joint training ships fed with pupils by means of county scholarships, to be followed by apprentice-

ship in merchantmen, these advantages being coupled with an obligation to qualify for the Reserve. This was obviously too large an order for the County Councils, especially as their legal powers did not extend to the latter part of the scheme; however, several of them agreed to the scholarships. Fortunately it has been found possible to start the necessary ship by the co-operation of the Admiralty and the Shipping Chambers, and it is expected that county scholarships will now be readily forthcoming. The Charity Commissioners are to be requested to amend schemes for apprenticeship charities so that the apprentice can go to sea under suitable conditions, and it is probable that the City Companies may assist in the same direction. A powerful committee—the educational element in which is supplied by Mr. Yoxall and Mr. Macan—have the matter now in hand, and a vigorous agitation will be started.

THE demonstration in force, directed ostensibly against the Science and Art Department and Clause VII. of the new "Directory," but in reality against the recognition of the County Council Technical Education Committees as having any rights in the secondary sphere, has conspicuously failed. Led by the Dean of Manchester in a letter to the *Times*, and ably seconded by the Associations of School Boards and of Headmasters of Higher Grade Schools, an attempt was made to induce the Duke of Devonshire to suspend the operation of the clause until the production in Parliament of the promised Bill, when, of course, the two questions could be conveniently fought together. The effect upon the Lord President was scarcely that anticipated. Although the County and County Borough Councils applying for recognition had been warned by the Department's inspectors not to expect an answer under about three months, the consent of My Lords came upon them in the first week in February, before Parliament met, and while the ink in the School Board petition was scarcely dry. Poetic justice was satisfied by the fact that the very powerful attack upon the county of Surrey in the *School Board Chronicle* was met by the Duke's issuing his first minute recognising that county as possessing the necessary qualification under the clause of the "Directory."

IN reference to the concordat we discussed last month, which has been issued by the Incorporated Headmasters and the Headmasters of Higher-Grade Schools, and which we welcomed as a sign that the bitterness of rivalry was past, the National Union of Teachers has caused to be widely circulated the following resolution: "That the N. U. T. is not involved in the opinions and conclusions expressed in the joint memorandum on the relations of Higher-Grade and Secondary Schools, which owes its existence alone to the Association of Head Masters in Higher Grade and Schools of Science, and to the Incorporated Association of Head Masters." It is worth quoting in full. At first sight it raises a smile. It implies pique at not being consulted. But there is more than this. It is part and parcel of the irreconcilable attitude taken up by this body. This is most regrettable; and the N. U. T. over-estimates its strength. Its success has been great in the past, and its usefulness undeniable; but pride goes before a fall. The Union is taking up an impossible attitude that can lead to no goal, though it may prevent the attainment on the part of others. It says in effect: "There are no secondary teachers, no secondary schools. There is one national system of education; there is one body of national teachers. Some busybodies are trying to prevent the natural development of this national system. These we will resist tooth and nail in behalf of the nation."

THIS destructive attitude is regrettable, and it may turn out in the end that the N.U.T. has over-reached itself; but much harm can be done by it before then. Mr. Findlay has addressed a long letter to the organ of the N. U. T. He desires, if possible, "to convert the *Schoolmaster* to a more conciliatory attitude." The letter is serious and dignified, but it is discussed in a flippant editorial note which insinuates that a secondary teacher is *ipso facto* out of court. But we recollect that not long ago (early in 1896) the President for the year was compelled to explain that the opinions of Mr. Macnamara the President were not necessarily the opinions of Mr. Macnamara the man. It may be in this case there is a similar discrepancy between the views of the editor and the man. Of one thing we are sure, that if the *Schoolmaster* maintains its present *non possumus* attitude, it will most certainly lose such political influence as it possesses. The editor would do well to take to heart the dispassionate description of the elementary teacher—his virtues and his failings (especially the latter)—that Mr. Arthur Sidgwick gave to the Assistant Masters' Association.

THE School Boards are still on the war path about Clause VII. Sir John Gorst gives them small encouragement, even though he condescends to a quibble. "What about applications from County Councils to become local authorities for secondary education?" asked Mr. McLaren. "I have heard of none," replied Sir John, "but several County Councils have notified their willingness to be responsible—under Clause VII. of the 'Directory'—for the distribution of Science and Art grants." And he spoke at Cambridge in approval of such applications. Burnley is indignant, and, on the face of things, seems to have cause. But the quarrel is really only one of vested interests. The town gets its School of Science, and the Departmental inspectors will see that the education given is satisfactory, whether the governing body be the School Board or the Grammar School. The Association of School Boards has decided to take further action, but it is not quite clear what it can do. The pity of it is that there should be this hostility between two bodies each of whom, it may be assumed, has the interests of education at heart, and not its own personal aggrandizement. If the Charity Commission or the Department can bring about co-operation between the existing educational authorities in municipalities a great step forward will have been taken. It seems as if the School Boards would hear of no compromise.

SIR JOHN GORST has no objection to the removal of the 17s. 6d. limit for continuation schools. It is, he says, merely a question of finance, and needs the approval of the Chancellor of the Exchequer. But he promised that he and the Lord President would do their best to get the inequality removed. Then Sir John seized the opportunity of the presence of an influential deputation from the great School Boards of the country to develop one of his favourite themes, and one which cannot too often be dwelt upon. There is, he said, a hiatus between the work of an elementary and of a continuation school. This is true, and militates greatly against the success of the evening work. Students have forgotten much, and have lost the habit of book study. So instead of continuing their education, they are only too often doing over again what they have done or ought to have done in the day school. The same difficulty occurs in much of the County Council work, and much money is wasted in re-teaching the elements of a subject to adult students who ought to come to such classes to receive instruction beyond what is given in the schools. There

must continue to be great waste until there is co-ordination between the schools and technical instruction classes of each locality.

THE recent debates on a Catholic University for Ireland suggest that a "No Popery" cry could be as easily raised now as it was in the days of Barnaby Rudge, though it would not now be backed by men of light and leading. It is clear that Mr. Balfour will have to deliver more "missionary speeches" before he converts the Cabinet. A number of Unionists, says the *Times*, are not yet convinced by Mr. Balfour's "ingenious reasoning and impassioned appeals." The Catholics who owe allegiance to Rome have always claimed to have their own schools and colleges. But their students are now permitted to go to Oxford and Cambridge; their religious interests may be safeguarded by a Catholic house of residence. From the point of view of education, it is unwise to have sectarian Universities. There is an inevitable tendency to narrowness. Witness the lack of broadness in our elementary training colleges, and in schools limited to one class—officers' sons, for instance. It seems reasonable that the Catholic student should get his education at Trinity College, and should live in a Catholic hostel. But, if the Catholics of Ireland cannot accept this compromise, we see no reason why they should not be aided by public money to establish their own teaching University. Still, in the nature of things, if such a University is established, and remains thoroughly exclusive, it will not, in our opinion, win any great reputation for learning.

WE have spoken before of the interesting attempt that is being made in some quarters to establish schools for the co-education of boys and girls in towns too small to support separate schools, and we have mentioned the success that has met this endeavour at Bakewell. But we confess to certain qualms when we learn that Mr. W. T. Stead has "taken up" this school. Mr. Mansford, the headmaster, is no doubt glad of an opportunity of giving his views, and relating the story of his success in the *Review of Reviews*; but we have seen other educational experiments ventilated in this paper, and have watched the subsequent story with dismay. Few of us can withstand the temptations of such publicity. It is, however, interesting to hear of the present success of the Lady Manners School. The presence of girls makes the boys behave well, we are told, and removes the necessity for corporal punishment. Certainly the girls stimulate the intellectual efforts of the boys, who do not like being beaten by their friends' sisters. We do not wish to encourage undue vanity, but it must be admitted that in this school the first places are occupied by girls—even under a School of Science syllabus.

THE Archbishop of Canterbury has gained his point over the Berriew School. The Charity Commission had, after due inquiry and investigation, drawn up a scheme for the management of this school. It may fairly be presumed that the scheme was the result of knowledge of the circumstances, and would have brought this school into harmony with the general trend of Welsh education. The scene in the House of Lords must have been impressive. The Archbishop said: This is a Church school, and we mean to keep it—though he admitted there were no express words in the foundation deed assigning the school to the Church of England. The Duke of Devonshire washed his hands of the matter. The scheme had been drawn up by his predecessor; it did not concern him. Lord Salisbury viewed the scheme as an attempt at plunder, and so opposed it. So in a short hour the House of Lords, without

adducing any arguments, demolished a scheme that had been approved by the Charity Commission and by the Privy Council in 1894, and the Berriew School is "saved" to the Church. It is for the Archbishop and his friends to see that the educational efficiency does not at least fall below the general average in Wales.

MR. ERIC PARKER, writing in *Longmans' Magazine*, draws a woful picture of the position of a preparatory-school assistant master. He says, as has often been said before, that the young graduate with no capital inevitably drifts into the scholastic profession, because he does not know what else to do. Often also he likes boys and likes the short hours and long games and general bright life of a school for young boys. But what is he to do in ten years' time, when his tastes have changed. He may grow tomatoes, dig for gold, become a book-maker, or shoot himself, as Mr. Parker suggests; or he may remain an assistant master with a daily increasing dislike to his work of supervision in the playground or preparation room, and a daily increasing sense of the inadequacy of his fixed salary to his growing wants. The remedy suggested is probably the only sound one. Insist upon training, and you will cut out those who drift into the profession because they do not know what else to do; and you will ensure that the master has deliberately chosen his career. Mr. Parker's other remedy is, as he confesses, fraught with difficulties. He would greatly lower initial salaries in order to provide money for a steady increase. Certainly the present position of the assistant master is a serious menace to the efficiency of secondary schools.

THE condition of "half-timers" in Lancashire seems to be very terrible, judging from the reports in the newspapers. No one accepting these reports as true can help condemning the system. But in London schools and in reference to full-time scholars there is a growing complaint of the same sort. In one school an Inspector noticed a want of alertness, and the Headmaster made subsequent inquiries to account for this. He found that a third of the boys in his school went to work in the early mornings, and he gives a list of the numbers of boots cleaned, the quantity of milk delivered, and so on. It is not to be supposed that this custom is a new one. The explanation of the trouble is different. The fact is that every year more and more is required from scholars. The standard of work is steadily rising, and it becomes more and more necessary that the boys should come fresh to school and not already wearied with work. To some extent the manual work is a rest; but not if it is overdone, as seems only too often to be the case. Two things are needed. First, that parents must be taught not to expect to make money out of their young children; secondly—and here comes in the moral for those who control education—parents must realize that the children are gaining something at school which will be of real value to them later. At present they cannot always feel this. The school curriculum is sometimes too widely divorced from the facts of life.

"FROM the known to the unknown" is a pedagogic maxim as old as Socrates. Like many maxims, it tends to become an empty form. The average teacher probably takes about ten years to understand its significance, if he has not become fossilized before this. The average trained teacher might perhaps take five years to gain the same end. The so-called "born teacher" realizes it at once. Hence his power. The difficulty, of course, is to find out what is "known" to a particular class at a

particular stage. It is interesting to note that so long ago as 1845 My Lords of the Committee of Council ordered—in their then peremptory style—all teachers to teach from the known to the unknown. Teachers were also told to adopt the Socratic method. We take these facts from an amusing address delivered last week to the Richmond Teachers' Association by the Rev. T. W. Sharpe, late H.M. Senior Inspector. The genesis of play-yards is peculiar, according to the same authority. Apparently they were insisted upon about the same date, not from any desire to encourage games, but to keep the children from contact with "vicious men and women" and from the companionship of boys bred to thieving. Fagin would seem not to be an over-drawn character.

MR. SHARPE had an amusing anecdote about Lancashire clogs. At one time My Lords insisted upon wooden floors. The managers of a school in Lancashire sent up to London a sack of clogs to prove that the children brought their own wooden floors with them. A barn was recommended as the model of a school-room, and all desks were to be turned to the walls. The teacher was not to have a seat, "lest he should lounge." Mr. Sharpe also grew serious in warning teachers against trying to do too much. No man, he said, can give more than three oral lessons a day. This is a wise caution. There is a great tendency nowadays to overdo the teaching and leave the child's mind no time to work on its own account. Continued oral teaching or lectures are not only fatiguing to the teacher but harmful to the taught. We want to hit the happy mean between the present system and the old order of things under which the master came into the room and said: "Prepare the next hundred lines, and any boy who does not know them in half an hour shall be kept in." This as a preliminary to the quiet perusal of the morning paper.

TECHNICAL EDUCATION.

REFERRING to the notorious Clause VII. of the "Directory of the Science and Art Department," the Leicestershire Technical Education Committee, reporting to the Council intimating their willingness to be responsible for the Science and Art instruction within the administrative county, stated that a public inquiry would be held on the 12th ult., and notice of that fact was sent to every known Local Committee managing Science and Art classes, governing bodies of secondary schools, School Boards, voluntary schools associations, the Diocesan Board of Education, and the Urban and District Councils. The proceedings at the inquiry are interesting reading, and afford a striking illustration of certain reflections in this column last month.

"THAT the application had excited both surprise and lively interest among the local authorities of the shire," says the *Leicester Daily Post*, "was evident at the outset from the representative character of the attendance. But the proceedings had not made much progress before it became most strikingly apparent that the proposal had aroused considerable alarm and opposition as well."

AND so the "reactionary innovation," as it is termed, was magnified, misunderstood, explained, discussed, and denounced. "Few can recognize the real meaning of the disclosures of Saturday," continues the critic quoted above, "without being driven to one conviction. It is that the present Government has evidently again resolved upon effecting an educational revolution, and has employed the Department to 'drive in the thin end of the wedge.'" As was pointed out last month, the Department, in suggesting these "public inquiries," has given colour to the suggestion that there is "something behind" the simple terms of Clause VII.: consequently there is "much ado about nothing." But, as the Department has carefully explained, it is cognisant only of that part of secondary education defined in the Technical Instruction Act of 1889. County and County Borough Councils are the authorities appointed to administer that Act, and in doing so they have been obliged by compulsion, if not compulsion, to subsidize Science and Art Classes. . . . In England, according to the official returns for 1894-5,

of £660,506 expended by County Councils, no less than £111,451 was applied to schools and classes in receipt of aid from the Science and Art Department.

NEARLY one-fifth of the money at the disposal of local authorities is thus finding its way to make up deficiencies in South Kensington grants. Put in another way, in 1894-5 the Department aided Science and Art classes throughout Great Britain and Ireland to the total of £203,066, and for England alone, had there not been willing County Councils to rely upon, those classes would have been deficient of the "means of subsistence" to the amount of £111,451. It is clear, therefore—local committees, voluntary associations, Diocesan Boards and School Boards notwithstanding—County Councils, finding at least one-third of the necessary money, must have a very real and effective interest in the Department's classes. Moreover, in several administrative areas, the Councils are already "responsible" for such classes, the South Kensington grants, whatever they may amount to, being "made up" to a reasonable rate of remuneration by the local body.

FOR the Department to recognize in the Technical Education Committees of Counties and County Boroughs suitable "organizations" for the delegation of certain administrative functions is the obvious sequel to Form ³⁴⁹_S of 1891, and the letter to the County Councils which accom-

panied it. Instead, however, of concerning themselves with "public inquiries" and with the prophetic objections of those who, if they desire to do so, can decline to act in unison with the county organization, it would be well for County Councils to ascertain the measure of the "responsibility" which they are accepting. The growing disposition on the part of central authorities to shift burdens to the localities must not be forgotten. The figures given above are sufficiently striking to justify apprehension; the apprehension that, unless local authorities proceed with caution, this responsibility—which they are freely abused for accepting—will consist of maintaining, out of the rates, a vigorous bantling for which the Government, its wealthy parent, should provide.

IN a report on "The Existing Facilities for Technical and Scientific Instruction in England and Wales," prepared by Mr. A. N. D. Acland and Mr. Llewellyn Smith in 1889, there is an interesting comment upon "the extremely unsatisfactory way" in which the statistics and publications giving information respecting the work of the Science and Art Department were edited. Similarly with regard to the reports issued by the Technical Education Committees of County Councils, occasion has been made in this column, from time to time, to direct the attention of those concerned to the extreme importance of preparing detailed annual reports on a more or less uniform plan. It is satisfactory to note, therefore, that the Association of Directors and Organizing Secretaries have adopted a series of recommendations dealing with this matter. In a "prefatory note" to the Sixth Annual Report of the Cumberland Technical Education Committee this useful observation is made: "It is hardly necessary to advert to the great value, at the present early stage of the technical education movement, of an accurate record of the experiences of the authorities engaged in the work. Unfortunately the full benefit of that experience has not hitherto been easily attainable, owing to the lack of any sort of uniformity in the time and manner in which each authority published the reports of its proceedings."

THE Cumberland Committee's Report, to which further reference will be made next month, is, as a contemporary remarks, "eminently worthy of the careful attention of the administrative officers of other County Committees, since its structure and arrangement are such as to enable one to readily comprehend the entire scheme of technical education in the county." Unfortunately for the present-day inquirers and the future historian, the reports now issued, reasonably complete or readily comprehensible—including those of the county boroughs, which are frequently admirable—might be counted on the fingers of one hand. And several counties have not apparently achieved the preliminary merit of printing an annual report of any description. In time, it may be hoped, all local authorities will come to realize the value of an intelligently designed annual review of their educational enterprises, both as a permanent record for reference and comparison and as a contribution to the knowledge of the nation.

THE TEACHING OF ELEMENTARY MATHEMATICS AND PHYSICS.

By Professor STEGGALL.

IN dealing with school work in mathematics and physics, as with any subject of instruction, the two main questions that educators have to answer are: What, or rather how much, is to

be taught? What are the methods to be used? The first question is generally dealt with, to some extent, from the point of view of those not actually engaged in teaching; the second is usually left entirely to the teacher; assistant-teachers being expected to follow, within certain limits, the methods of their chief. I propose to take each of these questions separately. First, then, how much is to be taught? It is unnecessary here either to discuss the relative importance of different subjects, or even to hint at some more or less arbitrary division of the school week, or day, in order to meet the demands of conflicting studies. We may at once assume that in all rationally conducted schools a reasonable share of the available working week is assigned to mathematics, and to some physical science; our enquiring is limited to the range that ought to be covered during the prescribed period.

In almost every case the demands of examinations inspire those instructions from outside the teaching profession that regulate this range. It might thus appear that the responsibility of teachers is, on this point, almost entirely removed. But this is not really the case, for with them, I believe, ultimately rests the decision as to which pupils shall be prepared, and at what ages they shall be presented, for examination. If my view is right, I am emboldened on the ground of long experience to say that the range of work in elementary classes can hardly be too restricted so long as mere iteration is avoided.

While there is an intrinsic reason for this restriction in dealing with elementary arithmetic and mathematics, there is a great external temptation to depart from it. The ideas of number and form are, except in their most obvious application, highly abstract, and not readily associated in the beginner's mind with the facts and incidents of daily life. Thus the average school-boy finds it far from easy to recognize the strict logical sequence of geometry and algebra that gives these studies so great a part of their value. It is only after careful illustration has been drawn from experience, and after well constructed examples have been presented in the form of easy problems, varied in appearance, but single in principle, that a reasonable hope of sound work may be indulged.

On the other hand, this close logical sequence is to a large extent the occasion of, and opportunity for, the temptation referred to. Apart from mere "sums" it is not easy to frame written questions which, while fairly short, easily grasped, and free from ambiguity, shall at the same time require for their answer a clear hold on a definite principle. Anything like a "bookwork" question in an arithmetic paper requires very careful wording, and, even then, often results in most varied answers, all unsatisfactory—alike to the examiner, who feels that he might have expressed the question better, to the pupil, who has not been taught to write out his thoughts, often sensible enough, in good grammatical and logical form, and to the teacher.

Nor need the teacher be to blame, for, despite the pressure often put upon him to obtain "results," his work may have been conscientious and eminently rational. The slight differences that will always be found between the forms in which educated men may give the same instruction or frame the same question involve this special danger, that in the excitement of the examination room the young candidate may get flurried and frightened by a single unfamiliar word in even a familiar question.

Imagine him—or, worse, imagine her—forbidden to ask questions, the familiar friend the master, if permitted to be present at all, scrupulously maintaining an impassive demeanour, inscrutable as night, in place of the genial manner of the daily lesson; possibly a stranger stationed for the avowed purpose of watching the candidates. A single word from teacher or examiner would explain the point in the meaning of the question that vexes the small mind, but that word must not be said. As a result, the question is neglected, even by the best pupils, in case it is misunderstood, or at best a speculative shot is fired at the end of the paper just before "Time up" is scrawled on the last page.

It thus almost necessarily happens, as things are, that examination papers mainly deal with results rather than processes, and here the temptation derives the main strength. Results are easy of recollection and usually simple in form, so plenty of practice in "sums" of special types (as opposed to problems) will be the best preparation for an examination. In resisting this temptation the teacher should be strenuously supported;

and one way to help him is to defer written examinations to a later period than that at which they are usually taken.

It may perhaps be properly remarked here that an oral examination, such as is prescribed by the Scotch Education Department in connexion with their Leaving Certificate Examination, but which is practically found in England (as far as arithmetic and mathematics go) only in Government-inspected schools, is of the greatest value for testing knowledge of principles. The elastic give-and-take manner in which an examiner ought, I think, to propose such questions allows him to see at once whether they are understood, and to modify them if they are not.

Besides this, the oral examiner is able to receive suggestions from the actual teacher on the best form for his questions, and he can with perfect ease discuss points of principle with which it would be useless, and perhaps unfair, to hamper a printed paper.

With regard to physics, the argument in favour of restriction seems somewhat different. Many of the ideas (*e.g.*, the laws of motion) are akin to abstractions, and in such cases all that has hitherto been said applies; but others are of a more familiar kind, and can be tested by experience at first hand. At the same time, the subject is so vast that there is a real danger of its reduction to a catalogue of facts. It is advisable to surround each sub-division of the subject, as indeed is largely done in good text-books, with great range of illustration. In any case to crowd into a school year more than, say, a course on heat, or on general physics, is to run serious risk of wasting all the time thus spent.

Having so far considered the range of instruction, we may next examine, without attempting exhaustive or even logical definition, some of the points in method that seem to deserve attention: and, beginning with arithmetic, we are at once struck with a curious anomaly. While, in many schools, the youngest children are successfully taught by an appeal to some sort of general principles, the older pupils often appear to have lost sight of such principles altogether. To these a method is only satisfactory if its expression can be reduced to a short and simple "rule"; the logical steps involved being too often ignored.

As far as I know, this state of affairs is being steadily improved, and a greater degree of intelligence is being brought into play on all sides. The success that has attended the adoption of broad lines in the instruction of young children in the rudiments of arithmetic encourages the hope that a similar reward will fall to any teacher bold enough or free enough to apply these methods to the case of older pupils. But, while few may be ready to differ from me as to the ultimate advantage to the pupil of the methods for which I have somewhat vaguely indicated a preference, there are several points of practical detail as to which the expression of the opinions of others would be helpful; and there are a few on which I venture to make definite suggestions.

In the first place, then, is it not practicable, in teaching numeration and notation, to illustrate the principle of "groups," not, of course, using the word, by an appeal to pounds, shillings, and pence, or yards, feet, and inches, where the grouping proceeds by various multiples, not all alike? This would lead, I think, to a better conception of the real utility of our system of numeration; and utility is one of the best recommendations to a child.

Again, consider proportion—when I was at school I remember well how the method of "reduction to the unit," introduced by a new master, not only illuminated a previous obscurity, but led up, as soon as a few examples had been worked, to a clear *idea* of proportionality, a *word* that I probably did not know. I believe there is much divergence of view on this point, but I think that the certainty of the unitary method, and the practical guide to the idea of proportion that it affords, far outweigh the only objection, its length, of which I am aware. Besides, in a very short time, the pupil makes the mental statement of the sum as short in one way as in the other, the difference in favour of the first being that in the case of beginners, and especially in compound proportion, the exhibition of the method almost infallibly secures accuracy in reasoning.

Arising from this is another point of some importance. In most books proportion is followed by many "rules," or "cases," all simply variations on itself. To this class belong interest, discount, profit and loss, stocks, percentages, proportional parts, &c. It is a constant surprise that such similar subjects

are so carefully separated. Is there any reason for this, other than a survival of the idea that these "rules," being of daily use, were to be treated with as much dignity as if a separate method were attached to each?

In an advertisement by a local draper there is mention of 20 per cent. reduction during a sale; and a large part of a column is occupied by the addition, to "20 per cent.," of "that is, 1s. in a purchase of 5s., 1s. 6d. in 7s. 6d., 2s. in 10s.," &c. At first I thought this an advertising trick to catch the eye; but the glorious uncertainty in which the discount-working schoolboy lives has shown me that the draper is an educator as well.

It is no exaggeration to say that many boys who have done "percentage" could neither tell, mentally, what 15, or even 5, per cent. amounts to in a sovereign, nor could they properly work out the number of people that form, say, 24½ per cent. of a population of 2143.

I am led to interject the suggestion that mental arithmetic should be carried much further up the school than generally seems to be the case.

The question on percentage leads to another point, namely, the expediency of setting some sums to be done approximately. This usually involves the retention of a definite number of decimal places in the various stages of the work. The *general* theory is only suited to older boys; the simple processes that involve the same number of decimal places all through are all that I suggest for ordinary boys who only do arithmetic. The point is one of great *practical* value, and sums that are interesting, but tedious without contraction, and therefore unsuitable for school work, become reasonable when worked by a contracted method. My own experience shows that students of physics and engineering have sadly neglected this kind of work. One asks for a result which the data assure one can only be found correctly, say, to two decimal places, and a tediously evolved fraction (often wrong) is found and reduced to a decimal with nine or ten figures after the point.

In some cases, the assurance that only so many decimal places are needed will set the pupil on the right track. Thus, to find the value of 2413 per cent. of 24675 people, many boys will reduce the result to a vulgar fraction in its lowest terms ($2381631 \div 4000$), and then divide out, with, of course, an accumulated chance of error. The well-instructed boy will multiply straight out, keeping one decimal place ($02413 \times 24675 = 5954$), and then take the nearest integer (595, which is right).

Interest sums afford, *par excellence*, good practice in this kind of work. I do not wish to magnify the mere practical use of our method for commercial purposes; but, in view of the harmless Philistinism of the healthy schoolboy, we must use every legitimate means for making his work interesting. One way is to convince him that it serves genuinely useful purposes, and is not all, as he may sometimes think it, "humbug."

Three more suggestions, and I have done with arithmetic. How often is the process for "square root," meaningless to many boys who have passed far beyond arithmetic, taught before even the simple measurement of rectangular area is explained? The case of "cube root" is even worse.

I think, without pressing for an algebraic proof, that instruction on the square-root method should follow questions on elementary mensuration, and should be also preceded by a lucid statement to the effect that the method is essentially, like division, *tentative*, consisting (i.) in finding squares nearer and nearer in defect to the given number; (ii.) in judging what are the proper squares to successively try; (iii.) in forming and subtracting them with the least labour; and similarly for the cube-root process. Until the pupil can comprehend these *points* (not necessarily their algebraic basis) it seems a pure waste of time to take up the subject at all.

Circulating decimals, again, are of purely academic interest: in no practical case need they be considered. It would be perfectly excusable to mention them in elementary text-books, and not discuss them in detail; but the usual habit of book-makers is to give the dullest of rules with the minimum of explanation. As a matter of fact, not one pupil in ten among those who do "decimals" can give a good reason for a decimally expressed vulgar fraction ever recurring at all, and not one in twenty can prove that, for example, $1/41$ cannot have more than 40 figures in its period. Still fewer even know that, if (as is the case) it has less, their number must be a factor of 40, or that the same

cycle of figures always gives *some* fraction with the same denominator. These and similar theorems, capable of direct arithmetical proof, are the valuable part of recurring decimals, and this work should therefore be deferred until such theorems can be advantageously discussed.

In the third place I think that a good deal of interest can be imported into ordinary computation by the proposal of some of the series formulæ of higher algebra for calculation to a given accuracy. By choosing suitable examples the curiosity of some pupils will certainly be excited, and they may be led to carry their algebra to a point where such series are discussed. For example, the verifications—

$$1 + \frac{2}{3} + \frac{4}{9} + \frac{8}{27} + \dots = 3,$$

$$\frac{1}{2} - \frac{1}{3 \cdot 2^3} + \frac{1}{5 \cdot 2^5} - \dots = \frac{1}{3} - \frac{1}{3 \cdot 3^3} + \frac{1}{5 \cdot 3^5} - \dots + \frac{1}{7} - \frac{1}{3 \cdot 7^3} + \frac{1}{5 \cdot 7^5} - \dots$$

afford good practice in (1) methods of computation, (2) verification of results.

Algebra is more complex and less familiar in its forms and operations. The mere negative quantity is a stumbling-block, and many theorems are hard to justify, much more to explain, to the beginner. If concrete illustration be expedient in arithmetic, it is essential in algebra. Without the greatest care the learner will suppose that algebraic operations are much at the will of the teacher, who, if he chose, could, like a conjurer, produce all kinds of conflicting results with equally specious reasons. I therefore think that easy problems should be taken at once, with the ordinary rules. How often does one hear that such a class has worked, say, simultaneous equations, "but not problems," and in consequence could not solve the question: "What number exceeds three-fifths of itself by 12?" Equations are only the expression of problems, and their mere manipulation is useless to the beginner. The general solution of equations might be prepared for by a series of easy graduated problems, beginning with such as might be solved by simple and direct arithmetical methods, and proceeding to cases still capable of fairly simple but less immediate arithmetical solution. This may be the usual method, but, if so, there are exceptions.

In the curious identities of algebra numerical examples are admittedly valuable, both for elucidating the real meaning of these results and for fixing them in the memory. No great progress in mathematics can be made unless many standard forms are not only understood, but retained at call in the memory; for intellectual assent to a new theorem can frequently be only given on a simultaneous survey of several converging results. In fact, progress in algebra is not, in its conditions, very different from idiomatic translation from a foreign language.

As the pupils go on, ground may have been broken for further algebraic work by such numerical examples as have been desiderated, and as they approach the intricacies of progressions, series, &c., there is much room for interesting arithmetical methods. Some of the results that are generally treated by artifices will be found to yield to obvious and simple concrete treatment. For example, the theorem

$$1 + 3 + 5 + \dots + 2n - 1 = n^2$$

may be proved graphically with the greatest ease; while that

$$1^3 + 2^3 + 3^3 + \dots + n^3 = (1 + 2 + 3 + \dots + n)^2$$

can be graphically shown with little difficulty. Some of the mysterious relations between binomial coefficients and figurate numbers may be beautifully shown by a simple table that derives these relations from first principles.

The binomial theorem for fractional indices is one of the hardest things in algebra. I should prefer to take the whole subject of fractional indices much later than usual, since the simplest discussion of these theories involves subtleties usually missed by boys of even high general intelligence; and apart from apprehension of these subtleties the proofs are valueless. On the other hand, combinations, permutations, and recurring series are much more interesting and easier to illustrate.

In geometry, I would plead for the early introduction of general ideas, and for apt numerical examples, e.g., in the second book of Euclid. The conceptions of a closed curve, the cutting of a line and such a curve in an even number of points, the test for inside and outside a circle, the single centre of a circle, can be treated without any of Euclid's propositions, and

seem more relevant to his assumptions than some of the formal theorems that have crystallized as "Euclid."

Numerical examples impart to many theorems a reality otherwise unattainable. The measurement of rectangles, construction of right-angled triangles, and approximate division in medial section are cases in point. The fact that the three sides of any right-angled triangle can be expressed in the forms $x^2 + y^2$, $x^2 - y^2$, $2xy$ is one of great interest. Again, the series 1, 1, 2, 3, 5, 8, 13, 21, ... is such that any consecutive three terms give very closely the length of a line and its segments in medial section: thus

$$8^2 = 5 \times 13 \text{ nearly, } 13 = 5 + 8,$$

$$13^2 = 8 \times 21 \text{ nearly, } 21 = 8 + 13.$$

Dr. J. S. Mackay gives some attention to this result in his Euclid; it is clear that such an illustration throws light on the actual conditions of the problem, and helps the study of series as well.

Such proofs as are called "dissections" will also be found stimulating to the curiosity of a class. The Pythagorean theorem gives many excellent examples, the actual constructions being obvious, but the proofs not very short in their Euclidean form.

A great deal might be said about modern geometry, a subject that in any English text-books that I know is treated more or less discontinuously. This is due not to any fault in the writers, but to the many branches of the subject that, being of nearly equal difficulty and importance, have to be dealt with in a book of reasonable size. It is not, however, necessary to discuss it here at all, partly because the boys who take it are usually sufficiently interested to dispense with the stimulus required earlier, partly because its limited application places it somewhat beyond the list of subjects of general interest.

In a future paper I hope to give a few further suggestions with respect to the teaching of elementary physics.

FROM THE PRIVATE DIARY OF A DEPARTMENTAL OFFICIAL.

By ONE WHO HAS NOT SEEN IT.

MONDAY.—Bother these Democrats, with their deputations.

There was a time . . . But that was before we were to be "reformed," before we countenanced smoking concerts of the Teachers' Amalgamated Society; before the "Directory" was anybody's chickens. Pff! "Interests of education" indeed! I'd court-martial the whole gang. Give 'em a stone, they'll demand bread. Alter Regulation MCCCXLVIII. to conciliate Incorporated Agency for putting New Wine into Old Bottles, and up comes Amalgamated Society. "Payment by Results" to be abolished, is it! Seems to me we'd better shut up shop at once. Best of it is, grants on "examination" or on "attendance" both amount to same thing in the end. Got to cut coat of expenditure to limited cloth supplied by Treasury. Only difference—way of cutting it.

Wednesday.—Just sanctioned three hundred and forty-fifth technical-instruction subject. Queer things "required by circumstances" of some districts—"Hedging," "Ditching," "Bacon-curing," "Distillation of Oils and Fats," "Condensed-Milk making." What shall it profit a nation to hedge and ditch if it trains not the intelligence of its people? Suppose they'll want to teach oakum-picking, stone-breaking, and undertaking presently! Application for Minute to authorize "Principles of Boot-blackening." Pointed out special authority superfluous—Leather-work already recognized.

Don't quite know what to do about "English." Act specifically includes "Modern Languages." Have approved French, German, Spanish, Italian, Portuguese, Norwegian, Swedish, Danish, Russian, Irish. Then why not English, they say. Our business to manufacture decisions, not reasons! Besides Department has no authority to interpret Act of Parliament. . . Still, it don't seem quite consistent. Might say, "English" can't be required by circumstances of English-speaking district. Must think it over.

Thursday.—Wonder what this Special Committee thinks it's going to do. More reform, I suppose. Talks about transferring elementary school drawing to Whitehall. Looks like coming off. Will end the only men who know how to obey orders. Some-

body calls them Kensington's Commissionaires! Then they want to give grants to these ubiquitous University Extensionists. But I think we can cook that goose. . . . Something to be said for recognizing local authorities. Won't do *us* any harm. We've done rather well out of this County Council "Whiskey" money. Councils seem willing enough to be burdened. Last year spent over a hundred thousand pounds—half as much as we did—on our schools and classes. Not a bad arrangement. They pay the piper, we call the tune.

Friday.—"The Department," I read, in the *Technical Teacher's Trumpet*, "like the Stuarts, never learns and never forgets. Unfortunately it is an administrative hydra, and even a Cromwell could not settle it with one blow." Coming it rather strong this! Talk about a many-headed hydra, indeed! What of this precious teaching profession and its trades unions? The Amalgamated Society, largest and noisiest of the lot, the Incorporated Agency, for ever pulling strings and printing schemes, the Professors of Polytechnics, the Higher Gradients, all with claims and counter-claims. Well enough if you know they're only grinding their own axes. Some people seem to imagine they're disinterested "educational experts." Wonder they don't want to be "adequately co-opted" by the Cabinet.

Saturday.—Another deputation. Third this week. Why don't they pension, or something, some of these wild Manchester folk. One or other of 'em's always slating the "Directory" or "Department." Bothered to-day about getting "Directory" before beginning of the Session. All moonshine. Doesn't make any sort of difference. Moreover, as I whispered to the Major, "He won't be happy when he gets it." Rather on the spot that—for me.

THE EDUCATIONAL OUTLOOK.

CHAOS reigns in education, as in most other fields of intellectual inquiry. This is the one indisputable fact: the rest is controversy. The old dead war-cries are still being shouted by diverse parties: unification of methods, enlargement of curriculum, registration of teachers, and all the familiar litany. Organizations increase—Headmasters' conferences in decorous conclave, headmasters' associations in moderated enthusiasm, assistant-masters banded together on orthodox trade-union principles, clamouring for betterment or pension. There is movement in the air, and a sound of many discordant voices. But the result, so far, is practically nothing. The mountain, it is true, labours heavily; yet even the ridiculous but desirable mouse appears far distant.

Nearly three years ago sanguine reformers were gladdened by the perusal of a Government Report on Secondary Education, which was a model of its kind. Grave, scholarly, packed with information, bristling with statistics, happy in phraseology, moderate in criticism, it tempered its well-weighted conclusions with a quiet enthusiasm beyond all praise. And it was accompanied by endless memoranda from members with high names in the scholastic world, copious examination of distinguished witnesses, and careful investigation of selected districts by veracious but (as it subsequently sadly became evident) not infallible critics. Hope, like a morning star, had risen on the educational horizon; at length the long warfare was to give place to peace; at length this country was to possess an organization not inferior to that of smaller States of Europe. Gladly we hailed the light moving over chaos, the calm birth of the new era.

The intervening period has been one long history of disenchantment and disillusion. A Conservative Government, too strong to be troubled with the necessity of simulating enthusiasm on uninteresting subjects, having placed their cleverest member at the Educational Department without Cabinet rank, and pleasantly occupied the remaining time in thwarting all his well-meant efforts at progress, have sufficiently demonstrated to an indifferent world that the very last thing they desire is the stirring up of the muddy waters of educational controversy. The play, indeed, continues to be played, to the satisfaction of all: petitions, deputations wait on various members, to be received with attractive courtesy, addressed in heavy platitude, bowed to the door with well-disguised rejoicings. Occasional and harmless speeches are made by prominent members of the Govern-

ment, extolling the advantages, commercial and otherwise, of education. But nothing is done, and nothing will be done. And so during the "slump" in politics the sorry farce will continue; until a renewed depression in trade or a spasmodic revival in altruistic fervour causes another outburst of popular feeling like that of 1870.

What, then, is the present condition of educational organization in England? Why are we unpleasant busybodies not content to let well alone, and leave things to continue in the future as in the past? Let us glance for a minute over the educational field.

At the top of the scale, the glory of England, exquisite and apart, stand the great public schools, haughtily aloof from the weltering chaos below, secure in the mystic secret for the production of that flower of modern civilization—the English gentleman. Hither come the children of old families, consecrated to this service from immemorial days. Hither also comes the wealthy linendraper, solicitous for his offspring of entrance into that region of the blessed for ever denied to himself. Adequate criticism of these institutions is but rarely found. Those engaged in their work are either too busy or too timid, or loftily shun the dust and heat of controversy. Attacks on the great schools, mainly bitter and ill-informed, often impetuous, are fomented by members of the intellectual proletariat smarting under the sense of their own social inferiority. The products of the system, who alone could criticize with adequate knowledge, rest for the most part content with the certainty that the methods of education which have produced themselves must of necessity be the best in the best of possible worlds. So occasional and intermittent rumblings alone disturb their serenity. Here a boy, fiercely asserting ill-treatment from his comrades, rushes speedily on death. There a voice crying in the wilderness attests bitterly moral degradation or shameless vice. But these storms ruffle but for a moment the calm of the surface; and they are always effectually quieted by that ceaseless chorus of praise rising ever from foreign critics, who, after hasty inspection and hospitality, are caught by the glamour and the glory, and tearfully testify to the inferiority of their own State-crushed systems.

In these last few months a more serious onslaught shows signs of gathering strength. Irresponsible scribblers, seeking material for copy in the silly season, and finding the great heart of the British public unmoved by Volunteer conscription and gloomily indifferent to controversy on feminine immodesty, at length have discovered a more rousing topic in the devotion to athletics at our public schools. The subject has proved fruitful; articles appear in reviews ordinarily closed to educational discussions: there are evidences of a growing agitation. The average parent, often insufferable in individual cases, but in the main patiently meek and enduring, has here perhaps a genuine ground for grievance. After expenditure of many hundreds of pounds, how often does he find his hopeful offspring summarily discarded from his school by inexorable laws of superannuation from which there is no appeal; possessing, at perhaps the age of nineteen, a body well trained to manly sport, a mind in the condition of unbaked dough, and for sole asset to fight the battle of life an ardent and unfeigned devotion to those popular heroes who are successfully demonstrating the triumph of matter over mind! And, as one after the other entrance into the Army, Medicine, Bar, and legitimate business becomes closed, and at length the pride of the family, after enormous outlay on special teachers, is reluctantly dragged into the hospitable bosom of the Established Church, there to seek respectability and peace, the poor father becomes dimly conscious that there is something wrong somewhere: though exactly where he is unable to ascertain. Anyhow, here, at least, the fat appears to be in the fire. And even some of the official heads of the great schools are commencing to cry Halt! and laboriously devising methods of control for this Frankenstein monster of their own creation.

Passing from public-school to middle-class education, we fairly enter into the region of contention and chaos. Recently panic has arisen concerning increase of foreign, especially of German, trade. Panaceas eagerly demanded are speedily manufactured. But, while competent authorities like Mr. Ernest Williams bemoan free trade or anticipate salvation in the branding of good red meat with indelible violet ink, the plaintive mob seek shelter in less drastic remedies, and here, as always in times of terror, gloomily mutter that blessed word Education. "We must educate or perish," cries the Duke of

Devonshire to the hardy workers of the North ; and, confronted with these two dismal alternatives, they perforce choose the less distasteful. So there is bustle and preparation. Peripatetic lecturers discourse to occasional and aged females concerning butter-making, and other melancholy and useful topics. Technical schools are founded with flourish of trumpets in which boys assiduously carve screws and mix colours, while their parents gleefully cherish the misapprehension that their children are receiving education. Accompanying the encouragement of manual skill, we find the old grammar schools falling into hopeless decay, and higher-grade schools, teaching truculent science, everywhere established in their places. Only here and there a quavering voice whispers that it is perhaps possible to pay too dear a price for mechanical superiority, and that, after all, knowledge of the nauseous composition of vegetable dyes will not permanently satisfy the soul of man. But these voices pass unheeded : panic now, as always, triumphs ; and the middle-class boy who is not mercifully consigned to an office before his mind has commenced to mature, seems destined in the future to be delivered over beyond release to the study of appliance, vaingloriously entitled education.

Below these middle-class institutions stretch the great masses of the common people, gratuitously receiving from a beneficent Government just that modicum of knowledge necessary for the due appreciation of the humour of *Ally Sloper*, while their betters are angrily wrangling whether this secular skill is or is not to be flavoured with extract of theologic dogma.

What conclusions can we finally draw from this brief survey of the educational field ? Amidst all the confusion and uncertainty, we would plead for the consideration of two not unimportant subjects hitherto uniformly neglected. First, apart from party catch-words and long-mouthed phrases, what exactly do we mean by "Education" ? And, secondly, having obtained this knowledge and determined also its desirability, how best, apart from fear or favour, can we contrive to impart this education to the community at large ?

FRANCES E. WILLARD.

BY ONE WHO KNEW HER.

MISS FRANCES E. WILLARD, President of the National Women's Christian Temperance Union, and, until last November, of the World's Women's Christian Temperance Union, died at New York on February 17. She was the first woman who ever held the post of president of a women's University, a fact which of itself entitles her to a notice in this Journal. Miss Willard was born in 1839, her father moving out west as a farmer when she was a child. Here she picked up a miscellaneous education, profiting as much as possible by opportunities which were somewhat limited. Doubtless her best opportunity was in her parentage, for both father and mother were of that sturdy Puritan stock which has made the United States what it is. She had every liberty except on the Sabbath, which was pretty rigidly kept, never knowing unwise and unnecessary sex distinction between herself and her brother Oliver. About the only thing that she did not do was to vote. On one occasion when we had a long talk, she called to mind how "Father, Oliver, and the hired men all went off to vote, dressed in their Sunday clothes, she and Mary watching them climb into a wagon from the window. 'Wouldn't you like to vote as well as Oliver? Don't you and I love the country just as well as he does, and doesn't the country need our ballots?'"

Miss Willard was a teacher from 1858 to 1874. She said herself that she had thirteen separate seasons of teaching in eleven institutions and six towns, her pupils numbering in all about two thousand. Nor did she ever relinquish any of these situations save of her own free will, with a warm invitation to return in every case but one.

It is curious to find in her first school, at Harlem, Cook County, what were the duties of the woman who has well been named "the uncrowned Queen of the United States": "I had to walk more than half a mile to my den—in the most comfortable house I ever saw . . . I had to help sweep out the school-house—which is dirty beyond description, with broken windows, baked floor, and cobwebs mingled." Teaching was primitive in those days ; there was remarkably little thought or said

about child psychology. Fathers would come to the school-house door with a stick, asking Miss Willard to beat their children with that particular one. She records that she only once responded to the invitation. "He was a boy almost as tall as myself, and I had no small addo to hold him by the collar, while he did his utmost to show he was more of a force than his young teacher, but without success."

Miss Willard was indeed one of the gentlest of women ; the most pronounced feature of her strong character was love, and her magnetic force showed itself in the number and devotion of her friends, both men and women. Another record informs us : "My pupils have troubled me greatly. Have been obliged to box the ears of two reprobates, ferule the brown palms of four, and lay violent hands on another, to coerce him into measures that did not meet his views. All this I have done. I am sorry it became necessary, for I feel kindly towards them all, and never speak a harsh word, only as they force me to do so by the total depravity they manifest."

Still, hidden away in Cook County or Kankakee, Miss Willard "thought she would one day see the world." Gradually she climbed the ladder educational. In 1862 she was head teacher of the Evanston Public School, and later Preceptress of Natural Sciences at the North-Western Female College, big strides forward from the primitive schools of the backwoods. She said of herself, "I have a natural love for girls," and this love was reciprocated. It was the day of universal knowledge *versus* the specialization we now enjoy, and in one day she notes that she taught "arithmetic, geometry, elementary algebra, universal history, elocution, zoology, geology, physiology, mineralogy. Then came upstairs, and sat down in my rocking-chair as one who would prefer to rise no more. Now I have to-morrow's lessons to go over."

Yet she observed with her own eyes. Probably Froebel and Herbert Spencer were little but names to her ; yet she notes the evil effects of competition, especially in a country where it is keen, and states her ardent belief in co-operation as a principle destined to overthrow selfish competition. She became also a firm believer in co-education, and had a larger experience of teaching both sexes than falls to most. "Girls are ten times as quick as boys," she notes, though she could probably have admitted countervailing advantages.

At this time she was much interested in what she styled "room-keeping," on which she had long talks with her girls. Her tastes were naturally æsthetic. Dress worried her, but yet she wished "to express in toilet, manners, and the room (some day, I hope, the house) I live in, that I am civilized of soul."

Miss Willard travelled in Egypt and the Holy Land between two of her teaching posts, and, on her return home, had spoken on her travels before Chicago audiences. It was early in 1871 that a Mr. Albro Bishop called on her, and begged her to lecture in the Centenary Church, of which he was trustee. She was to be paid, and the gentleman would "see that she was well represented by the press of Chicago." The gentleman undertook the business part of the lecture, observing to her : "Turn the crank skilfully at your end of the church, and I will do so here." And they both did their best. The subject was "The New Chivalry." The whole lecture was written out, but never once did she glance at her modest portfolio. Next morning the press was enthusiastic, and this lecture really marks the beginning of Miss Willard's career as a public speaker.

Only the month before it took place, she had been appointed President of the Evanston Women's College—the first time a woman had ever occupied such a post. Miss Willard said of it herself quite recently to the writer : "My best valentine was the one brought me on February 14th, 1871, in which I was notified of my election as President of the Evanston College." Mount Holyoke, at that time the pioneer institution for women, had men for all its officials.

It is amusing to the slow-moving Briton to observe how things are done in America. Mrs. Mary F. Haskin was a progressive woman of Evanston, who "believed that to have men only as professors and trustees was to shut up one of humanity's eyes, and that, in the effort to see all around the mighty subject of education with the other, a squint had been contracted that was doing irreparable damage to the physiognomy of the body politic." Mrs. Haskin ordered out her handsome carriage and notable white horses and called on half a score of the most

thoughtful women in Evanston, proposing to them to found a women's college in which women should constitute the board of trustees, a woman should be President and confer diplomas, and women should be the administrators. "Evanston is the paradise of women," said Miss Willard. Mrs. Haskin found "preparation of heart and ready answer of tongue among those earnest Christian matrons," and forthwith the thing was done.

However, honour to whom it is due. The Rev. Dr. E. O. Haven had become President of the North-Western University, and made it a condition of taking office that the door should be flung wide to women. It was he who affiliated the Women's College to the University, using his position to overcome every difficulty, especially the prejudices and objections of his colleagues.

Miss Willard said of her acceptance of the office of President of the Women's College: "It was a case of sink or swim, and I took my lessons in the middle of the stream. . . . Men and women rallied to my help as if I were their very own." The sects laid aside sectarianism and co-operated heartily. To our ideas it is strange to learn that she went about lecturing in churches and elsewhere about the new Women's College, speaking in many towns of the North-west, and spending much time in planning the course of study.

The story of Miss Willard's presidentship will hardly be understood if we fail to remember the great freedom in the relations of the sexes which exists in America. Dr. Haven was of opinion that the college girls must be trusted in their goings and comings to the University classes, even to such a point as their going and coming at night to the debating classes and social entertainments by themselves. Miss Willard fully concurred. She recognized that the first college officered by women must walk without reproach, and obtained her ends by gaining a great personal hold of the women students. It must be remembered that numbers of them were very young, fifteen for example, and this will explain why one might justifiably have recourse to measures which might seem puerile if applied to grown women.

Miss Willard deeply impressed the students with a sense of their responsibility, and formed a Roll of Honour in which they undertook to govern themselves. Amongst other things, they were to go and return to the College unaccompanied by gentlemen; to sit together, choosing certain seats and retaining them; to observe a quiet deportment in the streets, and many other things. Every girl in the school was a candidate for the Roll of Honour, which distinction could only be reached by one month of faultless deportment and punctuality. The town had its eyes on the Women's College, and pronounced Miss Willard's method a success. One professor said: "The trouble is, these girls are quite too loyal." This happy state of affairs lasted just one year, when a new President was appointed in Dr. Haven's place. Dr. Haven's plan, endorsed by the University, was to place all the women students under the President of the Women's College. Dr. Fowler held that the University faculty of men was the final authority in all things, and grave friction resulted. The new executive did not consider Miss Willard's system of self-government compatible with University dignity; it was exchanged for a system of "self-report," which did not answer. The President of the Women's College had to note a "stronger tendency towards sociability than towards study on the part of many, and a lightness of bearing, a pertness of speech and manner, and tendency to disorder, such as her long experience had never witnessed." This was a result of the faculty of men making new rules by which the young women could go to and fro to all meetings pertaining to church and school in the company of young men, and even receive calls daily from the men students.

Miss Willard swiftly resolved that she could not waste her life in friction when it could be turned into momentum; she resigned in 1874. This step she called long afterwards "the greatest sacrifice my life had known or ever can know"; she was overwhelmed by a sense of bitter injustice. It was her great gift never to see any but the best side of human nature, and here was an evil side. She at once took up temperance work, with which she had long been connected.

In reference to her consecration to this work a friend quoted the text, "If thou bring thy gifts to the altar and there rememberest that thy brother hath aught against thee, leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift," laying special

stress on the words *thy brother hath aught against thee*. All the bad, harsh behaviour had been on the other side, and some of Miss Willard's relatives and friends were anxious that she should make no undignified and hypocritical admission that the case stood otherwise.

Next morning she took the train to Evanston, inducing her brother to accompany her. She went to the President, extended her hand and said: "I beg your pardon for everything I have ever done and said that was not right." He was equal to the occasion: "To one who comes to me as magnanimously as you have done, I surely cannot say less than that I beg your pardon," and from that hour they were friends.

Thenceforward she worked untiringly in the service of the W.C.T.U. She visited every State of the Union, every town of 10,000 inhabitants, and many that were smaller, making friends in every one. Her secretary reckoned that she had travelled 250,000 miles in the cause. She was elected President of the W.C.T.U. in 1879, a post which she retained to her death. Miss Willard persistently overworked. She came to England on a long visit in 1892 to Reigate Priory, when Lady Henry Somerset persuaded her to take rest. There is no doubt that this prolonged her life by a few years.

Miss Willard often said that many a woman had joined the Temperance movement possessing it as her sole connecting link with the world outside her home. By its means she attained to a broader view of her relationship to the world. Labour, its conditions, reward, length of hours, the need of education, relations of capital and labour, have gradually been absorbed into the current of women's interests. Miss Willard was, of course, a great adherent of woman suffrage. When men paid a subscription to the W.C.T.U., and said they would like to vote at business meetings, Miss Willard took the money and then said: "Don't you trouble about voting, brothers; we will look after your interests. We will protect you from worry and thinking."

C. S. B.

CORRESPONDENCE.

HOURS IN HIGH SCHOOLS.

To the Editor of The Journal of Education.

SIR,—It is somewhat of a surprise to me to find that the arrangement of hours which has been so many years in use in high schools, and which I know has long ago been adopted in such a celebrated school as Cheltenham College, is still at the stage when it can be attacked—and misunderstood—as a questionable novelty. To some extent such differences of opinion have to be committed to the test of time; but I think neither our genuine well-wishers nor our candid friends ought to be left to tilt at windmills; so it is just as well to say that, as careful attention to health is one of the main principles of the high-school system, anything of the nature of "a long strain" would never be permitted, and the vision of a school where five lessons, of three-quarters of an hour each, are given straight on end between the hours of nine and one is a vision that has no counterpart in the realm of reality.

To begin with, there is *always* a break in the middle of the morning of ten minutes or a quarter of an hour. In my own school this lasts from a quarter to half past eleven. Most of the pupils take a glass of milk with a piece of bread and butter or a bun during this interval. In the summer they go into the garden; in winter or in bad weather they spend the time in our large hall, in very active play, sometimes in dancing. Besides this, the more serious lessons are always relieved by the presence on the time-table of such things as drill, recitation, and class-singing, and also by a careful alternation of subjects. In the higher forms a change of lesson almost always means a change of teacher, and this, too, has a refreshing effect.

When I was a girl I went to a school where the hours were from nine to twelve in the morning, and from two to four, or from three to five, according to the time of year, in the afternoon. After this music practice and preparation had to be got in somehow, and I can even now remember the strain and worry of it. It is surprising to remember how little we learnt in comparison with what is learnt in high schools, and yet our work seemed never done, and we felt as if we never had any time to ourselves. I have been reminded of this occasionally in

seeing the piles of preparation that boys sometimes bring home, and in watching them working on by candle-light or gaslight long after, as it seems to me, all young growing creatures should be in bed. I am far from thinking our high-school plan is perfect, but it does mitigate this evil, at any rate, in the lower and middle forms. In the case of older girls, who are preparing for the Universities, or for some important examination, longer hours must be tolerated, and special classes for such girls are constantly arranged in the afternoon. We regret the too great multiplicity of the subjects which are often required, but we have to accept the appointed standards. I will not lengthen this letter by showing how the elasticity of our afternoon framework helps us even here; nor need I touch on the special difficulty of always having in girls' schools to arrange for music lessons and practice, but will merely say that I do not myself know any school out of London in which provision for *play* is not attended to. In my own school we have hockey or cricket twice a week, according to the season, besides endless lawn tennis in the summer. Saturday, too, is a great day for expeditions, and many of my girls row, and many more bicycle. Nor do I suppose that my school is exceptional amongst high schools in this respect.

What is certainly exceptional is the extraordinary experience of Mrs. Miall, in meeting with "at least half-a-dozen young ladies" who have had to be removed from school on account of the "long strain" of a morning of four hours, with a break for play in the middle, besides further relief in the shape of drill, singing, and other devices for avoiding any too-prolonged demand upon the attention! Nay, Mrs. Miall has even known "sad cases of actual breakdown" from this seemingly innocent *régime*, whence one cannot help concluding that there must have been other circumstances, not taken into account, which were peculiar to the particular school or children that she has in mind. In every high school worthy of the name the care taken to guard against overwork is great and continual, and the general time-table is, besides, constantly modified to suit delicate or backward pupils who need special consideration.

I have read the address given at the annual meeting of the Winchester High School and published in the January number of the *Journal of Education* with so much interest and pleasure that I have been reluctant to seem to complain of anything that was said, but when I saw Mrs. Miall's letter I came to the conclusion that I must, at any rate, make some endeavour to arrest the progress of what appear to me to be misapprehensions in matters of fact. If our time-tables are to be stigmatized as irrational, let the judgment at least be based on our real time-tables such as they are, and not such as they are imagined to be.

I may add that it never occurred to me that the feeling with which I gratefully recognize the remarkable advance that has actually been achieved could possibly be mistaken for a self-contented dream that nothing more remains to be done. But I do think that the foundations of high-school education have been well laid—it is no self-praise to say so, for the credit of laying them does not belong to me; and, with such foundations to build upon, I have both confidence in the present and faith in the future.—I am, Sir, yours faithfully,

Chester, February 14, 1898.

M. E. SANDFORD.

ENGLISH "MADE IN GERMANY" A VERY GOOD ARTICLE.—MEDITATIONS ON THE SPOT.

To the Editor of The Journal of Education.

SIR,—The functions of a *Reader* of (or in) English at a German University are very simple. Being subordinated to the *Professor*, who lectures on Old English and Anglo-Saxon, the *Reader* has to take his orders from his "boss," who is responsible to the University authorities for his "sub's" teaching and discipline. So it came to pass that the writer of these meditations was directed to give, for four hours a week, instruction in the "Seminar" to classes of students, grouped according to their acquirements, and to lecture twice a week on Keats' poems.

What struck me from the beginning, and has continued to amaze me ever since, is the amount of accurate knowledge of our language which these young men have acquired within the limits of the "Reich." The advanced class, some seven in number, translate Heine's "Harzreise," with little or no preparation

and without first reading the passage aloud, into good idiomatic English, and are ready to discuss, in English, the various nuances of meaning of any word or phrase or idiom to their first rendering of which I demur. They can also follow me when I lecture, generally from notes and speaking with deliberation, but all in English, on Keats. To have learnt to do this, at school first, and here at the University subsequently, implies great teaching power in their masters and professors, chiefly natives of Germany, and great receptivity in the pupils themselves, backed by the industry and thoroughness for which the German is so favourably known. I tried their power of written translation with an easy passage. The renderings were most satisfactory; their accuracy and knowledge of idiom were remarkable. All the while, their attention and demeanour in class were beyond all praise.

But—a very big but—it is not a case of "omnes omnia bona dicere." The pronunciation of the very best is "nowhere." At lecture I let them read out a sonnet or other piece before I interpreted and commented it. "Ça vous écorche l'oreille." The moral of which is that the pronunciation is the difficulty with which the English teacher has to contend, which he is hardly likely ever to surmount. Being well instructed in phonetics, the students ask on what principles the pronunciation of our language is based. I can only, in despair, reply, mainly on the Law of Anomaly, compared with which the French Revolution is a trifle. When we come to "enough," "through," "though," "cough," "plough," &c., I feel what I am going to get by way of comment on the idiosyncrasies of our tongue, and I bow my head before the storm—"je plie et ne romps pas." But I marvel also at the patient uncomplaining student, who in two consecutive lines finds one pronunciation flatly contradicting another, and defying all phonetic formulæ. If they do sometimes whisper something about the "Inconsequenz" of the thing, I can console them only by the suggestion that a short residence in our country will, amongst other amenities that it will afford them, surely apply a healing balm to their outraged phonetic instincts.

February 2, 1898.

LECTOR FRIBURGENSIS.

P.S.—Some benevolent hearer of my first lectures on Keats wrote to a local paper that I spoke the "massgebende Londoner Englisch." May I open the question how far the London English of educated people—of course, not "Cockney"—is the "jus et norma loquendi" for the foreigner, and invite the comments of your readers? I have already received the protest of a friend, who from his thorough knowledge of both languages is entitled to his doubts as to the existence of a "classical London English," as he puts it.

THE DATIVE IN MODERN GREEK.

To the Editor of The Journal of Education.

SIR,—Commenting upon my "Historical Greek Grammar" in your issue of December last, your reviewer stated on my authority that "the dative has disappeared" in modern Greek. This statement is now called in question by Miss Mary C. Dawes, who, writing from Corfu, in your current number, evidently without having seen my book, adduces from Greek newspapers numerous instances of the dative case purporting to show its preservation in modern Greek. I can repeat with your reviewer that modern Greek, as spoken by the uneducated masses, that is, as preserved in popular speech, affords not one instance of the dative case, unless we count as such a few crystallized adverbial expressions perpetuated through the Church (e.g., *δοῦναι σοι ὁ θεός, τῷ καιρῷ ἐκείνῳ*; see sections 233 and 1247 in my "Historical Greek Grammar"). However numerous, all other instances of the dative case met with in modern Greek books and journals are due to scholastic influence; they are either conscious archaisms or formations of recent coinage, and as such form, in either case, a distinct element, artificial and foreign to the popular language, the direct and lineal descendant of ancient Greek. Of course I do not deny that the literary and journalistic style adopted by the Greek nation at large has been, and is, dictated by practical considerations of vital importance, but I do mean that this artificial and recent element of the language possesses little interest for the student of the history of Greek.

I therefore conclude by emphasizing once more that Greek has dropped the dative case long ago, and venture to hold, with all deference to Miss Dawes' scholarship, that had she read my book, or had she made herself thoroughly acquainted with

modern Greek, she would have spared herself the trouble of writing the letter in question.—I am, Sir, your obedient servant,
The University, St. Andrews, N.B. A. N. JANNARIS.

ANDERSON'S "FRENCH PROSE."

To the Editor of The Journal of Education.

SIR,—While expressing my gratitude to your reviewer for his criticism of my "French Prose Construction," may I make a few remarks on his list of *errata* and *corrigenda*? I fail to see the identity of the translations from Horace, unless it be in the first sentence, where, to be absolutely consistent, I should have written "unalloyed happiness," instead of "happiness without alloy." I maintain that my renderings of "He is to be a doctor" and "He is about" are correct. It was not my intention to give every possible rendering. "Your terms are finer than the common sort of men," and "Thou and I am one," are taken from well-known authors—the former from Greene's "Friar Bacon," and the latter from Shakespeare's "As You Like It," and, if you wish a more modern author for the same sort of thing, I can quote: "Or I or he have easily overthrown," from Tennyson's "Idylls of the King." I admit, however, a mistranslation of "terms" (= language) through not having the context before me. I am surprised to find that there is something amiss with the paragraph on "Shall and Will." Being a fellow-countryman of Dr. Molloy, I was careful to look up the chief *English* authorities before I dared to write on the subject. "Il est sorti dès qu'il a eu fini" is quite correct French. Conditional sentences do not, I think, invalidate my statement with regard to the subjunctive. These belong to the conjunctive mood, which can scarcely be said to exist in French, its place being supplied by a new form—namely, the conditional. The forms *Le Corrigé, le Tilién, &c.*, are not used in *modern* French. The unfortunate omission of the phrase "with the present participle" produces the "strange assertion" referred to in page 97.—I remain, Sir, yours faithfully,
Merchant Taylors' School, E.C. J. G. ANDERSON.

[We confess we had forgotten that "Thou and I am one" was Shakespeare's, but for all that, it is no more correct English than "His steeds that lies," or "There let him lay." "Dès qu'il a eu fini" is colloquial French, but we have searched in vain for any such construction in a standard author. Of forms like *Le Corrigé* there are dozens of instances in G. Sand and Victor Hugo, authors hardly out of date.—Ed.]

TRAINING OF CATHOLIC TEACHERS.

To the Editor of The Journal of Education.

SIR,—In your Irish Notes in the February number of the *Journal of Education*, your correspondent seems to imply that religious orders desire neither qualification nor training for their work of teaching. He names a few orders, but he evidently intends them as a type of all. I am in a position to throw somewhat of truer light on the matter, as I happen to be in possession of first-hand information thereon.

The desire to keep pace with the spirit and progress of the day in everything that regards education is keenly felt by the members of one of the oldest of the teaching orders—the Ursulines. They have given practical effect to this desire by requiring the Sisters engaged in their schools to "go in for" and obtain the Cambridge certificates of theoretical and practical efficiency as teachers in secondary schools. And these religious, instead of *possibly objecting* to what was asked of them, aimed, not at a pass certificate merely, but at distinction as practical teachers, and—won it! Further, the Ursulines of Waterford are now organizing a training college for secondary teachers in connexion with Cambridge—to be for nuns and seculars. It is to open at their convent in Waterford in September next, and it will be the first of the kind in Ireland.—I am, Sir, yours, &c.,

A READER OF THE "JOURNAL OF EDUCATION."

February 16, 1898.

GEOGRAPHY OF THE COUNTIES.

To the Editor of The Journal of Education.

SIR,—One of your correspondents, "Anabel Douglas," has asked for help in finding interesting descriptions of the counties of England. May I, through your paper, suggest the following books, which she will, I am sure, find useful?

1. The London Geographical Series. Geographical Readers, by Charlotte M. Mason, Book III., "The Counties of England," with thirty-six maps. (Ed. Stanford, 55 Charing Cross, London, S.W.)
2. By the same Author. "The Forty Shires, their History, Scenery, Arts, and Legends."
3. "Great Britain for Little Britons." By Eleanor Bulley. 3s. 6d. (Wells Gardner, Darton, & Co., 2 Paternoster Buildings, E.C.)
4. "Around and About Old England." By Clara L. Mateaux. Illustrated. (Cassell & Co.)

—Yours truly,

The High School, Alderley Edge.

ADA L. RANDALL.

February 4, 1898.

A GERMAN VERSION OF KIPLING'S RECESSIONAL.

BEICHTGEBET.

Gott uns'rer Vater, aus Urzeit bekannt —
Herr uns'rer weitgegriffenen Schlachtenrichte —
Du, unter Dessen ehrfurchtvoller Hand
Wir üben Herrschaft über Palm' und Fichte. —
Herr Gott der Scharen, sei uns noch zu Seite ;
Falls wir vergessen, Herr, uns noch geleite !

Es sterben das Geräusch und das Geschrei —
Die Kämpfer und die Könige verschwinden —
Doch steht Dein altes Opfer fest dabei,
Des Herzens Reu', und Demut des Gelinden.
Herr Gott der Scharen, sei uns noch zu Seite ;
Falls wir vergessen, Herr, uns noch geleite !

Ins Fern' gerufen schmelzen uns're Flotten —
Auf Dü'n' und Vorgebirge sinkt das Feuer —
Die Zier, die galt uns gestern auszustatten
Ist eins mit Ninevez und Tyrus heuer !
Richter der Völker, leide noch und meide ;
Falls wir vergessen, Herr, uns noch geleite !

Im Schein der Macht betrunken, wenn wir regen
Verächtlich wilde Stimmen Dir zum Trotz —
Mit solchem Dunkel, wie's die Heiden pflegen
Und Bruten, welche mangeln Wortes Gotts. —
Herr Gott der Scharen, sei uns noch zu Seite ;
Falls wir vergessen, Herr, uns noch geleite !

Gen rohes Herz, das unverwundet vertraut
Dem düst'gen Rohre und dem eisernen Schwert —
Gen braven Staub, der mit dem Staube baut,
Und sein Gebäude schützend, Dein entbehrt —
Gen wirren Dunkel, und gen irren Sport,
Erbarne Du Dich deines Volks, o Gott !

ASSOCIATION OF ASSISTANT-MISTRESSES IN PUBLIC SECONDARY SCHOOLS.

THE Association of Assistant-Mistresses held its fourteenth annual meeting last month at the North London Collegiate School for Girls, by the kind invitation of Mrs. Bryant. The meeting was memorable as the first which has been held since the incorporation of the Association.

A number of by-laws, drawn up by the Sub-Committee for revising the constitution, were presented to the meeting and passed. An invitation to co-operate with other bodies in forming a Joint Professional Agency for Women Teachers was discussed, and two delegates were appointed to attend a conference called to consider the joint scheme. The morning meeting concluded with a most interesting paper "On the Practical Teaching of Science," by Miss Aitken, of the N.L.C.S., which, we are glad to say, will be printed and supplied to all members.

The afternoon meeting opened with Mrs. Withiel's (President) address on "School Curriculum"—a very helpful paper, interesting to all teachers, and one which those who heard it will welcome the opportunity of reading.

The resolutions of the Joint Training Committee were then brought before the meeting by Miss Lumby, who had represented the A.A.M. on that Committee. These were generally approved by the meeting, though several omissions and amendments were made.

The officers of the Association for the current year, are : President, Miss Sullivan, of King Edward's Grammar School, Camp Hill, Birmingham ; Hon. Treasurer, Miss K. Andrews, of the High School, Notting Hill ; and Secretary, Miss C. McCroben, of the High School, Clifton, Bristol.

COLONIAL AND FOREIGN NOTES.

FRA CE.

A NOTICE from *Université Hall*, 95 Boulevard St. Michel, Paris, as to elementary language courses for the Christmas and Easter holidays, reached us too late for mention in the February *Journal*, but may still be useful in March. They are organized by the authorities of *Université Hall* (an imitation, we believe, of *Université Hall*, Edinburgh), and are intended primarily for the benefit of students wishing to prepare for the more advanced holiday courses held in the summer by the *Alliance Française*. A fee of 25 francs per week entitles to six morning classes of three hours each, two afternoon lectures, and three "per-

sonally conducted" walks in Paris. Tutorial service at theatres, University lectures, and elsewhere, is an extra. Though the Hall itself does not receive boarders, it undertakes to find suitable lodgings either in families or hotels at suitable prices. An early application is advisable.

GERMANY.

In the month of November, 1895, the Prussian Minister of Education published among other official papers a memorandum by a professor of the Faculty of Law in Berlin on the legal position of *Privat-dozenten* in German Universities. This paper seemed to contain a number of novel propositions, and created a deep impression and called forth a large amount of opposition in German University circles. With regard to the Professors themselves the case was clear: they were State servants and subject to the law of 1852 which regulates the disciplinary procedure in the case of non-judicial officials. But the *Privat-dozenten* are not "*Beamte*," though they have a "*Beamten-ähnlich*" position; they come into no direct relationship with the Government, since the privilege of lecturing, the *venia legendi*, is granted by the Faculty, and it was generally assumed that the duty of maintaining proper discipline among its subordinate members was left to each Faculty. But there were a certain number of cases of independent action on the part of the Minister which seemed to justify Prof. Hinschius in attributing to the Minister a disciplinary power concurrent with that of the Faculty; he seemed to think it absurd that the latter should have any judicial functions at all, for a Faculty might prove refractory and have the indecency to disregard the Minister's wishes. He sought to prove his point by citing the statutes of three Universities (Greifswald, Halle, and Königsberg) in which a clause was inserted securing to the Minister the right of removing a *Privat-doцент*; but he did not add that these statutes were granted in the fifties—while the memories of '48 were still fresh.

Whatever the legal aspect of the question might be, it is certain that the view expressed by Professor Hinschius found little favour amongst his colleagues. A vigorous protest was drawn up and signed by fifty-three Berlin professors. In reply it was stated that the *Kultus Ministerium* had not accepted the findings of the memorandum, nor was there any intention as yet of acting upon them.

For two years the matter has been in suspense. On the 21st of last January the Minister introduced a Bill on this subject into the Lower House of the Prussian Diet. It secures both to the Minister and the University the power of punishing offending *Privat-dozenten* (1) by warning and reprimand; (2) by cancelling of the licence to lecture. In the latter case the governing body of the University forms a court of first instance—while the whole Prussian Ministry forms the court of appeal.

The Government claims that their measure is directed towards furthering the interests of the *Privat-dozenten* by more clearly defining their position. But this is not the general view of the nature of the Bill; it is regarded as an attempt on the part of the Government to limit the traditional *Lehrfreiheit*. The leaders in German Universities maintain that the true interests of intellectual progress require that the young teacher should be left as unfettered as possible, and the University can be safely trusted to maintain its own dignity by expelling its unworthy members. There are many things, says Professor Paulsen, which it were better did not exist—but it is often wiser to endure them than try to suppress them. In the meantime the Berlin professors have again protested, and the Bill has been referred to a committee.

In many parts of Germany a demand has been made for the establishment of a chair of pedagogy, with a practising school at each German University. Hitherto it has been customary for one of the professors of philosophy to deliver a subsidiary course of lectures on pedagogy or the history of education, lectures which produce but little fruit, being perfunctorily attended, because the same professor is a member of the commission conducting the "*Staatsexamen*," and examines in the science of education. The real training is left to be gained in the small *Seminars* attached to certain schools. This condition has been so far altered that the Prussian Government has established two new professorships of education at Berlin and Halle. Dr. Fries, the Head of the Franksche Stiftung, has been appointed to Halle; while Dr. Münch, Schulrat in Coblenz, has been called to Berlin. In his introductory lecture he sketched the scope of his new mission. This, it appears, is to preach the gospel of contentment. It is incontestable that among teachers there is a considerable amount of dissatisfaction with their profession. The main cause, the professor finds, lies within the teacher and not in the profession. At the University the young man learns to worship scientific knowledge and its methods of research. This is the ideal he brings with him to the school, which offers but little scope for its realization. But if he would give up his desire to be reckoned to the "*Gelehrten*" (however low in the scale his place might be) and become a *teacher*, with an interest in his pupils, he would find compensation. To create this "*moral disposition*" for the office of teacher is the duty of the new professor.

The results of the last census of trades and callings have brought into prominence again the question of the employment of children under

fourteen years of age in industrial occupations. The growing intensity of industrial competition is accompanied by a desire for cheap labour, which is to be obtained by the larger employment of women and children. According to the latest statistics the increase during the last thirteen years in the case of men engaged in industrial occupations was 37 per cent, while for women the figure was 49 per cent. The same return gave for the first time the number of children so employed in June, 1895; this was 214,954 for the whole of Germany—that is children whose chief occupation is wage-earning and not school attendance. Even this number is admitted to be far too small, and it has been estimated that the actual number is not far short of 800,000. Accordingly the Chancellor has addressed a communication to the states of the Empire, pointing out that such occupations make the compulsory school attendance a farce, as the children are too tired to profit by the instruction, and asking for a return of the number of children engaged in industrial occupations but not in factories or in agriculture. (The number engaged in factories is comparatively small, owing to the restrictive legislation that already exists.) The different occupations are to be classified, and the nature of the work performed by the children specified.

A conference was lately held at Berlin, under the presidency of the Minister of Trade, to consider the question of commercial education. No formal resolutions were adopted or definite proposals made. But it was generally agreed that a larger measure of support should be given to commercial subjects in continuation schools, and to commercial institutions generally, but it was not advisable to establish commercial High Schools of University rank.

The zeal for outdoor exercises continues to increase. In Königsberg the head teachers are offering a strenuous opposition to the re-introduction of afternoon school. They maintain that free afternoons are a hygienic necessity for the children. (It may also be noted that this arrangement allows the continuation school to be held in the afternoon instead of the evening.) In Berlin the Kaiser has just settled the conditions under which the pupils of the public schools may practise rowing, and has made a grant of 35,000 *m.* towards furthering this form of sport.

UNITED STATES.

The following communication reaches us from New York:—

"The final incorporation of the Teachers' College of New York in Columbia University last month (January) must be considered one of the most important advances in pedagogy taken for many years. By the terms of the incorporation the two institutions have become more closely connected, the Teachers' College taking rank as a professional school, together with the schools of Law, Medicine, Mining and Engineering, already incorporated in the University, while the University throws open all of its varied educational facilities to those studying at the Teachers' College. Thus the students of teaching and education at the neighbouring college, who have hitherto been enabled to take advantage of the courses of instruction offered at the adjoining University by courtesy only, become full members of Columbia University by right, like those studying for degrees in the learned professions recognized by the University. In this way it is hoped that teaching may be put on the same scientific plane as regards both theory and practice as the other professions. The incorporation is the natural result of the relations hitherto existing between the two schools. They have been in alliance for educational purposes during the last five years, and the present action supersedes that alliance. By the terms of the new agreement, President Low has become *ex-officio* President of Teachers' College, and the occupants of the chair of Philosophy and Education and of Psychology in the University have become members of the College Faculty, while the Dean of the College, who holds the chair of Education, and the Professor of Literature represent their Faculty in the Council of Columbia University. The Teachers' College was founded in 1887, and is an outgrowth of the old Industrial Education Association. Its first President was Professor Nicholas Murray Butler, of Columbia University, and several of its original trustees were also members of the Columbia Faculty. In 1893, the College moved to its present site, immediately adjoining the grounds of the University. It is considered to be one of the best housed and equipped institutions in the world for the training of teachers, and its facilities have been utilized to the greatest advantage by Columbia. The most striking effect of the new union is to put under the control of Columbia the most complete opportunities for the education of teachers enjoyed by any university either in this country or abroad; for coupled with the theoretical work in pedagogy is a school of observation and practice, in which each successive step in teaching, from the kindergarten to the high school, can be practically demonstrated. A feature not to be overlooked is that all these opportunities are offered to both men and women on exactly the same footing, and that the opportunities for observation likewise embrace the teaching and management of both boys and girls. The importance of this elevation of the profession of teaching to university rank is bound to be speedily recognized by all educationists, and has indeed already been realized

by the most advanced authorities on pedagogy, who have long striven to place the professional study of education on the same high plane as the study of law, medicine, theology, and engineering."

JAPAN.

It was with very high hopes that we sat down to the leisurely perusal of the "Twenty-third Annual Report of the Minister of State for Education, translated and published by the Department of Education, Tokyo, in November, 1897"—an imposing volume of some 350 pages. Here at least we should find a respite from rates and taxes, salaries, subsidies, School Boards, county councils, compromises, scholarships, and be enthralled for a moment by the magic of a mystic philosophy, and dazzled by the splendours of a glorious imagery. But we were soon disillusioned. Committees for the investigation of religious difficulties had, it is true, given place to committees for the investigation of earthquakes, and exposition there was none of the most successful modern methods of galvanizing dead languages; but in other respects statistics and statistics and statistics crept in their petty pace from cover to cover, and left us as far off as ever from any real vital knowledge of education as practised in Japan. From a chapter on normal schools, for instance, we learned that there were forty-seven such schools in existence in 1895 (the year to which the Report refers), containing over six thousand students and nearly seven hundred teachers, but, beyond the fact that the normal course lasts four years, we could not find the least indication of the nature of the training. We then tried a chapter on the "Testing of the qualifications of teachers for licences," but, instead of the information we sought, this is what we found: "The qualifications of elementary school-teachers for licences are decided by local authorities according to two methods: firstly, by possessed qualifications; and secondly, by examination." It is, of course, interesting to know that as many as 12,728 persons (being nearly two thousand less than in 1894) applied in 1895 to local authorities to be tested by the first method, and 15,982 (about two hundred less) to be tested by the second; but anybody outside Japan would, we fancy, gladly sacrifice all these figures for the sake of a plain word or two as to the nature of the tests. In addition to kindergarten and University, this fortunate country possesses no fewer than fifteen different varieties of schools: ordinary elementary, private elementary, higher elementary, apprentices', supplementary, blind and dumb, normal, higher normal, ordinary middle, higher, higher female, special, technical, miscellaneous, and *gun* (?; not = military). You can, of course, in Japan obtain degrees (*Hakushi* or *Daihakushi*), qualify for pensions, and join educational societies, but, unless we are mistaken, you can neither teach school without a licence, occupy yourself with University Extension, nor become a Doctor, Master, or Bachelor of Pedagogics. Advocates of the higher education of women, whether in East or West, will not be ungrateful for the following paragraph. The selection is ours, the words the translator's:

"In 1895 new regulations were established for higher female schools. Among the chief points of these regulations may be mentioned the subjects of morals, the Japanese language, a foreign language, history, geography, mathematics, science, household management, sewing, writing, drawing, music, and gymnastics, to which may be added one or more subjects, such as pedagogy, Chinese literature, and handiworks, as optional subjects. The study of a foreign language, drawing, and music, may be omitted, or may not be imposed, according to the desire of the pupils. The course of study covers six years, but may be extended or curtailed by one year, according to local conditions. Candidates for admission to the first-year class must have attainments at least equivalent to those who have completed the ordinary elementary-school course of four years. The course of study may be reduced to three years, as higher qualifications are required of the candidates for admission. The number of weeks of instruction is fixed at about forty per annum, and of hours of instruction at about thirty per week. The standard of each subject of study was also prescribed. It was further prescribed that supplementary courses of not more than two years may be provided for the benefit of those who completed the prescribed course of study, to give them further training in the subjects which they have already studied, and that in cases where special technical courses are provided, one, or more than one, subject above prescribed should be omitted, and some special subjects bearing on industry be added; but morals, the Japanese language, and sewing, should in no case be omitted. Up to the present time, higher female schools having been left to their own course of development, no special regulations had yet been made, but now as the number of those desiring to be admitted to a higher education is increasing, and the demand for higher female schools becoming more urgent, the necessity for a definite system for such institutions has been duly recognized by the Department of Education, resulting in the issue of the regulations above mentioned."

The Report itself may be seen at the Library of the Teachers' Guild, 74 Gower-street, W.C. Unsatisfying as it is, it is the outward sign of a vast amount of educational effort, and though we would fain know more of Japan's inward spiritual graces, we have no less respect for her as a nation because her Minister of Education chooses to express his activities in figures and charts

Charles Griffin & Company's List.

CRAIK'S ENGLISH LITERATURE.

New Edition. Now Ready.

In Two Vols. Royal 8vo, handsomely bound in cloth, 25s.

A COMPENDIOUS HISTORY OF ENGLISH LITERATURE AND OF THE ENGLISH LANGUAGE FROM THE NORMAN CONQUEST. With numerous specimens. By GEORGE LILLIE CRAIK, LL.D., Late Professor of History and English Literature, Queen's College, Belfast.

"Professor Craik has succeeded in making a book more than usually agreeable."—*The Times*.

Tenth Edition, Revised and Enlarged. Crown 8vo, cloth, 7s. 6d.

A MANUAL OF ENGLISH LITERATURE, for the use of Colleges, Schools, and Civil Service Examinations. Selected from the larger work, by DR. CRAIK. With an Additional Section on Recent Literature, by HENRY CRAIK, M.A., C.B., LL.D., Secretary to the Scotch Education Department, Author of "A Life of Swift."

"A Manual of English Literature from so experienced a scholar as Professor Craik needs no other recommendation than the mention of its existence."—*Spectator*.

A HISTORY OF ROMAN LITERATURE. By REV. C. T. CRUTTWELL, M.A., Hon. Canon of Peterborough Cathedral. From the Earliest Period to the Times of the Antonines. Fifth Edition. 8s. 6d.

"Full of good scholarship and good criticism."—*Athenaeum*.

A HISTORY OF GREEK LITERATURE. From the Earliest Period to the Death of Demosthenes. By FRANK B. JEVONS, M.A., D.Litt., Principal of Bishop Hatfield's Hall, in the University of Durham. Second Edition. Cloth, 2s. 6d.

"Beyond all question the best history of Greek literature hitherto published."—*Spectator*.

A LITERARY HISTORY OF EARLY CHRISTIANITY. By REV. C. T. CRUTTWELL, M.A., Hon. Canon of Peterborough Cathedral, formerly Fellow of Merton College, Oxford. In Two Vols., demy 8vo, handsomely cloth, 21s.

"Mr. Cruttwell has accomplished his task with remarkable success. His history is eminently readable."—*Athenaeum*.

PREHISTORIC HISTORIES OF THE ARYAN PEOPLES. A Manual of Comparative Philology and the Earliest Culture. By DR. O. SCHRAEDER. Translated from the Second German Edition by F. B. JEVONS, M.A. Large 8vo, handsome cloth, gilt top, 21s.

"It would be hard to find any book more to be recommended to the early student in philology and prehistoric archaeology."—*Classical Review*.

THE VOCABULARY OF PHILOSOPHY and Students' Book of Reference, on the Basis of Fleming's Vocabulary. By HENRY CALDERWOOD, LL.D., Professor of Moral Philosophy in the University of Edinburgh. Fifth Edition. Cloth, 10s. 6d.

In crown 8vo, extra, handsome cloth, 16s.

GREEK ANTIQUITIES (A MANUAL OF).

For the use of Students and General Readers. By PERCY GARDNER, M.A., D.Litt., Professor of Classical Archaeology and Art in the University of Oxford; and F. B. JEVONS, M.A., Litt.D., Principal of Bishop Hatfield's Hall, in the University of Durham.

"A work which, although crammed full of information, is everywhere readable."—*Athenaeum*.

"Fresh, thoughtful, and cleverly arranged."—*Academy*.

ROMAN ANTIQUITIES (A MANUAL OF).

By WILLIAM RAMSAY, M.A., late Professor of Humanity in the University of Glasgow. Revised and Edited by RODOLFO LANCIANI, D.C.L., LL.D., &c., Professor of Classical Topography in the University of Rome. Fifteenth Edition. 10s. 6d.

"The FIFTEENTH EDITION includes a New Map and Plans prepared by Prof. LANCIANI."

"The chief interest in the New Edition centres in the chapter on 'Roman Topography,' which has been entirely rewritten by Prof. Lanciani, the greatest living authority on this subject. . . . It is the best and handiest guide yet produced."—*Athenaeum*.

STANDARD ILLUSTRATED CLASSICS.

By ARCHIBALD HAMILTON BRYCE, D.C.L., LL.D., Senior Classical Moderator in the University of Dublin.

THE WORKS OF VIRGIL. Text from HEYNE and WAGNER. English Notes, original, and selected from the leading German and English Commentators. Illustrations from the Antique. Complete in One Volume. Fourteenth Edition. Fcap. 8vo, cloth, 6s.

Or, in Three Parts { PART I. *Bucolics and Georgics.* 2s. 6d.
" II. *The Aeneid*, Books I.-VI. 2s. 6d.
" III. *The Aeneid*, Books VII.-XII. 2s. 6d.

"Contains the pith of what has been written by the best scholars on the subject. The notes comprise everything the student can want."—*Athenaeum*.

By JOSEPH CURRIE, formerly Head Classical Master of Glasgow Academy.

THE WORKS OF HORACE. Text from ORELLIUS. English Notes, original, and selected from the best Commentators. Illustrations from the Antique. Complete in One Volume. Fcap. 8vo, cloth, 5s.

Or, in Two Parts { PART I. *Carmina.* 3s.
" II. *Satires and Epistles.* 3s.

"The Notes are excellent and exhaustive."—*Quarterly Journal of Education*.

Complete Catalogues post free on application.

LONDON: CHARLES GRIFFIN & CO., LIMITED, EXETER STREET, STRAND.

CASSELL'S EDUCATIONAL BOOKS.

Just published.

CASSELL'S CLASSICAL READERS. For School and Home. In Two Volumes. Abundantly Illustrated. Vol. I., 448 pages, extra crown 8vo, price 1s. 8d.; Vol. II., 736 pages, price 2s. 6d.
Edited and carefully graduated, with Notes, by one of Her Majesty's Inspectors of Schools.

"The selections in these two volumes are essentially *classical*. That is to say, famous literary subjects and the names and works of the great masters of our literature have been introduced from the beginning; and, after going through the course, a young scholar should know the names and something of the works of many of the greatest English writers from the time of Shakespeare, and not a few of the great literary themes which are the common property of the world.

At the same time, the selections are in no way hackneyed, for, besides extracts from the great masters, such as Shakespeare, Ben Jonson, Shelley, Cowper, Longfellow, Thackeray, Dickens, and Scott, there are many gems, less widely known, from such charming writers as Washington Irving, Charles Lamb, Nathaniel Hawthorne, Miss Mitford, Lord Lytton, Richard Blackmore, and Robert Louis Stevenson.

Opinions of Educational Authorities.

From Rev. G. E. MACKIE, *Godolphin School, Hammersmith, W.*—"I am obliged to you for sending me specimen copies of the 'Classical Readers.' Their type is excellent, the selections good, interesting, and, at the same time, pure and sound English. I have determined to discard all other literary Readers and use the 'Classical Readers' exclusively in our Preparatory School."

From Rev. W. H. HOWLETT, M.A., *The Grammar School, Bury, Lancs.*—"I have read your two volumes of 'Classical Readers.' They seem to me admirably adapted for the development of the imagination and that spirit of patriotism which it should be our care to foster in the young."

From ROBERT BRODIE, Esq., M.A., *Whitgift Grammar School, Croydon.*—"I am obliged to you for a copy of your 'Classical Reader,' Vols. I. and II. The selections seem to me to have been made with great judgment. The print and general style of the book are excellent."

Just published. Price 5s.

A HISTORY OF ENGLAND. By H. O. ARNOLD-FORSTER, M.P. Fully Illustrated. Extra crown 8vo, over 300 pages. Bound in cloth.

"The picturesqueness of its manner, its fine national spirit, its insistence on those parts of the story that have most use and interest for the modern world, its numerous choice of appropriate and interesting illustrations—all these things make it a book not for the cloistered student but for everybody who wishes, not merely to be instructed, but to be won to an interest in a study too often made repellant by the Dryadusts. . . . Few popular histories, if any, have been better done."—*The Scotsman*.

Just published. Price 3s.

HOW TO DRAW FROM MODELS AND COMMON OBJECTS.

A Practical Manual. By W. E. SPARKES, Author of "How to Shade from Models and Casts"; Art Master, Borough Road Training College; Certificated Art Master, South Kensington. With 124 Figures in 44 Plates by the Author.

"I like Mr. Sparkes' book very much, and it appears to me to teach a great deal in a simple, plain, and systematic manner, and to be just what is needed in schools. . . . We intend using it here."—PRINCIPAL, *Training College, Lincoln*.

"CASSELL'S FRENCH DICTIONARY

(490th Thousand, price 3s. 6d.)

is at once the cheapest, the most complete and extensive, the only thoroughly accurate book of the kind in this country."—*The Record*.

"*Cassell's French Dictionary* is one of the best books of its kind extant in this country. No pains appear to have been spared in it. . . . As far as we have been able to test the work, it is strictly accurate, and, in short, it leaves nothing to be desired as a handbook of reference with regard to a language which is, as it ought to be, becoming more and more generally known in this country."—*Scotsman*.

"CASSELL'S GERMAN DICTIONARY

(207th Thousand, price 3s. 6d.)

is the best in the field, and, were it not for the special merits of one or two, we might say that this is the first and the best nowhere."—*Journal of Education*.

"*Cassell's German Dictionary* marks a great advance on the class of school dictionaries hitherto produced by the various educational firms."—*Standard*.

"CASSELL'S LATIN DICTIONARY

(112th Thousand, price 3s. 6d.)

is the handiest, the most useful, and certainly the very cheapest to be met with."—*The Rock*.

"CASSELL'S ENGLISH DICTIONARY

(20th Thousand, price 3s. 6d.)

in addition to the clear arrangement, legible type, and other advantages, is provided with a common-sense scheme of pronunciation. An excellent dictionary."—*The Pall Mall Gazette*.

Cassell's Educational Catalogue will be sent post free on application.

History and Geography Examination Papers. By C. H. SPENCE, M.A., Clifton College. Second Edition.

Science Examination Papers. By R. E. STEEL, M.A., F.C.S., Chief Natural Science Master, Bradford Grammar School. In Three Vols. Part I., Chemistry. Part II., Physics.

General Knowledge Examination Papers. By A. M. M. STEDMAN, M.A. Third Edition.

KEY, Second Edition (issued as above), 7s. net.

CLASSICAL TRANSLATIONS.

EDITED BY H. F. FOX, M.A., Fellow and Tutor of Brasenose College, Oxford.

Cicero.—De Natura Deorum. F. BROOKS, M.A., late Scholar of Balliol College. Crown 8vo, 3s. 6d.

Cicero.—De Oratore I. E. N. P. MOOR, M.A., late Assistant-Master at Clifton. Crown 8vo, 3s. 6d.

Cicero.—Pro Milone, Pro Muræna, Philippic II. in Catilinam. H. D. BLAKISTON, Fellow and Tutor of Trinity College, Oxford. Crown 8vo, 5s.

Sophocles.—Electra and Ajax. E. D. A. MORSEHEAD, M.A., Assistant-Master at Winchester. Crown 8vo, 2s. 6d.

Aeschylus.—Agamemnon, Choephores, Eumenides. LEWIS CAMPBELL, M.A., LL.D., late Professor of Greek at St. Andrews. Crown 8vo, 5s.

Lucian.—Six Dialogues (Nigrinus, Icaro Menippus, Cock Ship, Parasite, Lover of Falsehood). S. T. IRWIN, M.A., Assistant-Master at Clifton. Crown 8vo, 3s. 6d.

Tacitus.—Agricola and Germania. R. B. TOWNSEND, M.A., late Scholar of Trinity College, Oxford. Crown 8vo, 2s. 6d.

METHUEN'S COMMERCIAL SERIES.

EDITED BY H. DE B. GIBBINS, D.Litt., M.A.

British Commerce and Colonies from Elizabeth to Victoria. By H. DE B. GIBBINS, D.Litt., M.A., Author of "The Industrial History of England," &c. Second Edition, 2s.

Commercial Examination Papers. By H. DE B. GIBBINS, D.Litt., M.A. 1s. 6d.

The Economics of Commerce. By H. DE B. GIBBINS, D.Litt., M.A. 1s. 6d.

A Primer of Business. By S. JACKSON, M.A. 1s. 6d.

German Commercial Correspondence. By S. E. BALLY, Assistant-Master at the Manchester Grammar School. Crown 8vo, 2s. 6d.

A Manual of French Commercial Correspondence. By S. E. BALLY, Modern Language Master at the Manchester Grammar School. Second Edition. 2s.

French Commercial Reader. By S. E. BALLY. 2s.

Commercial Geography, with special reference to the British Empire. By L. D. LYNDE, M.A., of the Academy, Glasgow. Second Edition. 2s.

Commercial Arithmetic. By F. G. TAYLOR, M.A. 1s. 6d.

Précis Writing and Office Correspondence. By E. E. WHITFIELD, M.A. 2s.

RECENTLY PUBLISHED.

The Decline and Fall of the Roman Empire. By

EDWARD GIBBON. A New Edition. Edited, with Notes, Appendices, and Maps, by J. B. BURY, M.A., Fellow of Trinity College, Dublin. In Seven Volumes. Demy 8vo, gilt top, 8s. 6d. each; crown 8vo, 6s. each. Vol. IV.

"The time has certainly arrived for a new edition of Gibbon's great work. . . . Professor Bury is the right man to undertake this task. His learning is amazing, both in extent and accuracy. The book is issued in a handy form and at a moderate price, and it is admirably printed."—*Times*.

"Gibbon's immortal work has never been presented in so convenient a shape."—*Guardian*.

A Short History of Rome. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 4 Maps. Crown 8vo, 3s. 6d.

"An original work, written on an original plan, and with uncommon freshness and vigour."—*Speaker*.

A Primer of Wordsworth. By LAURIE MAGNUS. Crown 8vo, 2s. 6d.

"Thoughtful and informing."—*Manchester Guardian*.

"Mr. Magnus is both a careful student and an enthusiast."—*Times*.

"A valuable contribution to Wordsworthian literature. Simple and unaffected."—*Literature*.

A Primer of the Bible. By Prof. W. H. BENNETT. Crown 8vo, 2s. 6d.

"The work of an honest, fearless, and sound critic. An excellent guide."—*Manchester Guardian*.

"Scholarly, clear, and interesting."—*Scotsman*.

Voces Academicæ. By C. GRANT ROBERTSON, M.A., Fellow of All Souls, Oxford. With a Frontispiece. Fcap. 8vo, 2s. 6d.

This is a volume of light satirical dialogues, and should be read by all who are interested in the life of Oxford.

Demosthenes against Conon and Callicles. Edited, with Notes and Vocabulary, by F. DARWIN SWIFT, M.A., formerly Scholar of Queen's College, Oxford; Assistant-Master at Denstone College. Fcap. 8vo, 2s.

The Odyssey of Homer. A Translation by J. G. CORDERY. Crown 8vo, 7s. 6d.

Plauti Bacchides. Edited, with Introduction, Commentary, and Critical Notes, by J. McCOSH, M.A. Fcap. 4to, 12s. 6d.

"The notes are copious, and contain a great deal of information that is good and useful."—*Classical Review*.

Taciti Agricola. With Introduction, Notes, Map, &c. By R. F. DAVIS, M.A., Assistant-Master at Weymouth College. Crown 8vo, 2s.

Taciti Germania. By the same Editor. Crown 8vo, 2s.

How to Make a Dress. By J. A. E. WOOD. Illustrated. Crown 8vo, 1s. 6d.

"Miss J. A. E. Wood contributes to Prof. Garnett's 'Text-Books of Technology' an attractive little book called 'How to Make a Dress,' which bids fair to be very useful. The writer is entitled to speak with authority on the subject, inasmuch as she is chief instructress in dress-making at the Goldsmith's Institute, New Cross. The book is intended 'to meet the want felt by teachers and students for a reliable and trustworthy source of information as to how to pass with success the dressmaking examination of the City and Guilds of London Institute.' But, though primarily intended for students, Miss Wood's dainty little manual may be consulted with advantage by any girls who want to make their own frocks. The directions are simple and clear, and the diagrams very helpful."—*Literature*.

Ornamental Design for Woven Fabrics. By C. STEPHENSON, of the Technical College, Bradford, and F. SUDDBURY, of the Yorkshire College, Leeds. With 65 full-page Plates, and numerous Designs and Diagrams in the text. Demy 8vo, 7s. 6d.

The aim of this book is to supply, in a systematic and practical form, information on the subject of Decorative Design as applied to Woven Fabrics, and is primarily intended to meet the requirements of students in Textile and Art Schools, or of designers actively engaged in the weaving industry. Its wealth of illustration is a marked feature of the book.

"It is full of valuable instruction and suggestion, with a wealth of illustrative drawings."—*Globe*.

Passages for Unseen Translation. By E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and A. M. COOK, M.A., late Scholar of Wadham College, Oxford; Assistant-Masters at St. Paul's School. Crown 8vo, 3s. 6d.

This book contains two hundred Latin and two hundred Greek Passages, and has been very carefully compiled to meet the wants of V. and VI. Form boys at Public Schools. It is also well adapted for the use of Honourmen at the Universities.

Exercises in Latin Accidence. By S. E. WINBOLT, Assistant-Master in Christ's Hospital. Crown 8vo, 1s. 6d.

An elementary book adapted for Lower Forms, to accompany the Shorter Latin Primer.

"Accurate and well arranged."—*Athenæum*.

Notes on Greek and Latin Syntax. By G. BUCKLAND GREEN, M.A., Assistant-Master at the Edinburgh Academy, late Fellow of St. John's College, Oxon. Crown 8vo, 3s. 6d.

Notes and explanations on the chief difficulties of Greek and Latin Syntax, with numerous passages for exercises.

"Well arranged, clear, and extremely useful."—*School Guardian*.

A Digest of Deductive Logic. By JOHNSON BARKER. Crown 8vo, 2s. 6d.

A short introduction to logic for students preparing for examinations.

METHUEN & CO., 36 ESSEX STREET, STRAND.

LONDON UNIVERSITY EXAMINATIONS.

Special Subjects, 1898 and 1899.

All texts are annotated and contain full Introductions. The Vocabularies are in order of the Text, and are preceded by two series of Test Papers.

MATRICULATION.

Per Inch in Column	0	8	0

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

- Scholarships, Official Notices, &c.—6d. per line; minimum charge, 5s.
 Situations Vacant and Engagements Wanted.—30 words for 2s.; each to words after, 6d.
 Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s. each 8 words after, 6d.
 [These minimum charges do not include a copy of paper.]

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS. Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION Office, 86 FLEET STREET, LONDON, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "City Bank, Ludgate Branch." Postage Stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under ros., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders should be "crossed."

American subscribers may conveniently remit through Mr. C. W. BARDEEN, 406 South Franklin Street, Syracuse, New York; or Messrs. E. L. KELLOGG & Co., 61 East 9th Street, New York.

LONDON: WILLIAM RICE, 86 FLEET STREET, E.C.

THE ONE THING NEEDFUL: A HIGH COURT OF EDUCATION.

THE attention of every thinking man must be directed at present to what can only be described as the deplorable *impasse* in the secondary education movement. As one partly, at any rate, responsible for this state of affairs, I may, perhaps, be allowed to indicate what I believe to be the only remedy.

Let it be granted that the Government introduce a Bill of some sort this Session; nobody supposes (and, indeed, we are told in the Queen's Speech) that this will, or can be, either the comprehensive Bill which might satisfy most interests, or a "sectional" Bill of such a kind as will not alienate a majority of interests. I used the word "interests" advisedly, for the differences of opinion now dividing educationalists are not educational in their origin, but are due to the natural and inevitable clashing of political, class, and professional claims. There is nothing to be ashamed of in this; every Bill in Parliament is discussed on these lines. Let us, therefore, cease to hold up our hands to heaven and talk as if we are not as these publicans—the mere politicians.

The Government Bill, therefore, being, no doubt, a small and sectional Bill, will not be able to resist the dead weight of indifference and opposition, and will expire for want of time. "As you were till 1901" will then be the word of command to all our forces.

Let me develop a little more fully this, my present favourite, but paradoxical, thesis, the impossibility of any "possible" legislation. The interests to be considered may be described in known terms of Parliamentary parties as follows:—Radicals: the School Boards, the N.U.T. Liberals: the Higher-Grade Association, the Teachers' Guild. Liberal-Conservatives: the Headmasters' Conference, the College of Preceptors (?). Liberal-Unionists: the I.A.H.M. and the Assistant-Masters and Mistresses. Conservatives: the County Councils, &c. Parnellites: the Private Schools' Association. The Fourth Party: the non-county boroughs.

Now a really good Bill to suit the tastes of the majority must be compounded of three ingredients:—(a) central authority, (b) local authority, (c) professional recognition. Such a Bill, dealing with the whole question on the lines of the Commission, and including in (c) professional registration, a Council, and training, must consist of at least fifty clauses; but I am con-

vinced such a Bill would pass. It would be opposed, as every Bill on the lines of the Commission would be opposed, bitterly and savagely by those I have called the Radicals. No concession on earth short of universal, compulsory, and *ad hoc* elected School Boards will satisfy this section; therefore we can dismiss them from consideration until the advent of a different Government, and, I may add, until after the abolition of the House of Lords.

The Private Schools' Association, fearing the School Boards as much as the County Councils, and consisting, practically, of "three men in a boat," may be considered as always "agin' the Government," and is, therefore, a negligible quantity. The Fourth Party will probably find its Sedan in the London Municipalities Bill of this Session, and may be consigned to the same category.

But a Bill containing (a), (b), and (c) can, and no doubt would, satisfy all the other parties, representing at least three-fourths of the educational Parliament.

But, if, as is certain, such a fifty-clause Bill is not compatible with the exigencies of Parliamentary time, and a Bill consisting of (a) or (b), with, perhaps, (c) tacked on to either, be introduced, in the former case it will be opposed by the County Councils—and I can guarantee a very effective opposition—and in the latter case by probably all the other parties, with possibly equally good effect. The opposition—that is to say, the genuine as distinguished from the every-Bill-wrecking opposition—would arise, not on account of what is in the Bill, but of what is left out. Rightly or wrongly, the County Councils will not have a central authority placed in any sense over them unless they are given *simultaneously* the full powers enjoyed by the county authorities in Wales. Rightly or wrongly, the professional interests will not allow any extension of local authority powers unless a central authority (presumably to protect themselves) be *simultaneously* called into being. The quarrel between those genuinely anxious for Commission-born legislation is purely upon a question of priority. Just as the late Archbishop of Canterbury and the late Cardinal Manning are reported to have always supported the highest ideals of Christianity by dodging round each other in order to pass in first to Academy banquets and Mansion House dinners, so, in the words of Dr. Scott, the "true interests of education" are now being advanced (?) by advocates of local and central authorities blocking each other's paths because a gate sufficiently wide to let them pass in abreast does not seem within the range of practical politics.

This is only what one might expect, and is in accordance with historical precedent. In fact, every administrative problem, when tackled at close quarters, resolves itself into some question of priority.

When, in the early eighties, Mr. Hobhouse, Mr. D. Grant, and other municipal M.P.'s were agitating for the reform of local government in London and the counties, they demanded the whole triple machinery of Councils such as now exists outside London, and will shortly exist inside that county also. But when, in 1888, Mr. Ritchie attacked the question on behalf of the Government of the day, his opponents, committed to the general principles, raised the question of times and seasons. It was plain that County, District, and Parish Councils could not be all created at once, so, because "County" Councils were proposed, the "democratic" demand was for "Parish" Councils to lead the way. The organization of District and Parish Councils simultaneously very much aided the smooth passage of the Local Government Act of 1894, and allowed a reasonable allocation of powers to be made to each authority. There is good sense behind this fight for precedence when a division of powers is contemplated. The body which is first established not only consolidates its position, but goes a little beyond it, and establishes vested interests in the "neutral zone," if not actually in the position to be allocated to the non-existent authority. In such wise arose the higher-grade schools, because no secondary authority existed at the time. Again, when secondary education organization was first brought to the front in the years 1891-95, by the Bills known as the Acland-Roscoe and the Roscoe-Hobhouse Bills, the professional element blocked these and put forward their claim for prior organization in the two Teachers' Registration Bills. Both parties more or less approved of the Bills of the other, but wanted something tacked on, or their own immediate interests recognized first. As a result no Bills were passed. *Absit omen!* At present we are in a precisely similar condition.

The Royal Commission made no mention of "times and seasons." It did *not* say that its proposals must all be carried out in one Bill; it did *not* say that, if there were two or three Bills, a certain part of its recommendations must be in the first; it did *not* say that it would scorn the aid of administration, the humble handmaid of legislation, in carrying out its proposals. Professor Jebb's Joint Committee took up a similar attitude. The only time limits in their reports are the words "as soon as possible" before the reference to the complete merging of the Charity Commission—words introduced on my urgent representation that no power on earth could induce a Conservative or Charitable Trust Government to tackle the thorny question of the eleemosynary powers of that body.

Hence we are absolutely without official or authoritative information upon the really important and contentious point—whose interest shall be consulted first. So we are all at sixes and sevens again. Those whom the Royal Commission joined together Mr. Balfour's "Small Bill era" has put asunder. The unholy alliance, or, rather, flirtation, between the Incorporated Headmasters and the School Boards against the County Councils and the Science and Art Department in respect of Clause VII. is the first fruits of the divorce. Concordats or eirenicons, which, as the Dean of Manchester put it to Sir John Gorst, "work very well on paper," naturally follow. The National Union of Teachers and the School Boards, their nursing fathers and nursing mothers, next cut the higher-grade schools off with a shilling for contracting a runaway match with the Incorporated Headmasters. Words, words, words, are all-important, and every actuality and reality in education is thrown aside.

What is the remedy? Surely to retrace our steps and pick up the broken threads of harmony. For those who agree with the Royal Commission (for all others are anathema) to go back to that Commission, call it to life again, and ask it to save the situation. What I have to propose, therefore, is that by a short Act of Parliament, or, better, by an Order in Council, the Royal Commission be revived. It would also, for the purposes it is to fulfil, require to be enlarged. The number of members might well be increased from seventeen to thirty. Professor Jebb's Joint Committee could easily contribute seven more of this number so that private schools, Universities, and assistant-teachers should have expert spokesmen, while the School Board clerks, polytechnics, and higher-grade schools also might each send a representative. The three remaining places I would give to Sir George Kekewich (or his deputy), Sir John Donnelly (or his deputy), and Sir George Young (or his deputy). The position of these three officials and of Mr. Sadler would, of course, be peculiar. They could attend the meetings or stay away, as suited their convenience. They might speak, but, of course, not vote, and in their official position as responsible to the Minister and Parliament they would not be bound by anything which took place at the Council. This body I would call a "*High Court of Educational Information, Advice, and Arbitration*." Its powers would be strictly limited to these functions. It could send for persons, visit schools, or call for documents. But it would have no statutory power to enforce its decisions. It would rule by the force of knowledge and by the weight of authority. All questions raised by the Joint Memorandum, the concordats between local authorities, by the Laurie protest, the Burnley case, dismissals of heads or assistants, &c., would naturally be brought to its notice, and it would focus upon them all knowledge from all quarters. If asked by *both* parties to a dispute, it would arbitrate; if consulted by *one* party, it would advise. Its *published* decisions, which would, of course, only be those practically unanimous or carried by, say, a two-thirds majority, would go out as a Blue-book. It would thus gradually build up a code of educational equity. Opinions on matters so controversial or complex that they could not be settled in this way might go out to the two parties, if they agreed to ask for them, in the form of majority and minority reports with the names attached; public opinion would settle the relative values, but the High Court itself would not be bound by them as it would by its published *chose jugée*.

In five years' time no school or authority would have the hardihood to fly in the face of the verdict of such a court, and the rest of the legislation required would follow naturally. The members might be called together once a fortnight throughout the year; but all of them would not necessarily feel bound to adjudicate upon every matter in dispute. A whole day divided

into three sessions dealing with different kinds of business might be given to each meeting. If the members were paid £1 a day and travelling expenses, the cost would be about £1,000 a year to the Treasury. Its office and permanent quarters might be in connexion with the Intelligence Branch and Library of the Education Department, and the work and inquiries of that Branch might well be under its direction. I would, however, reserve to it the right of reporting direct to the Minister, without the interposition of any of the Departments of State.

Surely *bona fide* educationalists of all sections who differ (even in all else) from educational and not from political or sectarian reasons could unite to demand this concession, so easy to carry out, so truly in harmony with the work of the Commission itself, and so remote from all questions involving administrative or professional interests.

H. MACAN.

THE IRISH UNIVERSITY QUESTION. VIEWS OF DR. MAHAFFY.

IT is not too much to say that Dublin University is the only one that counts in Ireland. Trinity is its sole college, and practically its Fellows and officials form Dublin University. A slight rearrangement, as in the game of "family coach," and you have the same personages once more, with a variation in their style and place. Trinity was founded in 1591; its handsome façade fronts College Green and the old Irish Parliament House. Together they form an imposing pile of which Dublin is justly proud. "The College of the Holy and Undivided Trinity near Dublin" was established in the buildings of the Augustinian Monastery of All Hallows. They were the gift of the Corporation, which spent a large sum of money on repairs. The grounds embrace eleven acres of the best land in Dublin, and the College has, besides large grants of confiscated lands in various parts of Ireland, an endowment which amounts in all to some £40,000 per annum.

Trinity has an excellent library, squares and courts on a large scale—a campanile in the centre of one of them—fine statues of Burke and Goldsmith, by Foley, Schools of Divinity, Engineering, Law, and Medicine, and the agreeable certainty that nothing can be mentioned in the same breath with it on the far side of St. George's Channel.

Dr. Mahaffy is its well-known Professor of Ancient History. He lives in one of Dublin's fine old houses, with a most unpretending exterior, so that its interior is a joyful surprise. He was not at all averse from discussing the Catholic University question. "We do not want a federated University," was his immediate reply, in answer to my question whether there might not be a Roman Catholic College co-equal with Trinity, the two together forming Dublin University.

"We have them in England," said I.

"Oxford and Cambridge cannot be considered as types of the federated University. Each is one city, and the influence of the University is paramount. There are inter-collegiate lectures by the tutors and professors; no teaching is shut out from any man; all is open. That makes a very deep difference. The main thing is always the influence of the great teacher, and that Oxford and Cambridge get. In Victoria University space prevents any two of the colleges having the teacher that is associated with the third. Even the railway cannot re-establish this kind of influence."

"But is it not a pity to establish another University in Ireland, a poor country, which cannot afford too many such bodies? I once heard a University professor say that the net must be cast very wide to sweep in all promising fish."

"Yes," said Professor Mahaffy, "that sounds very nice, but only when one does not know the peculiar circumstances of this country. If we had a Roman Catholic college federated to Dublin University, Catholics, *as such*, would require to have seats on the governing body."

"And is that very awful?"

"We should have the course interfered with. Catholics would want a worse course for the same degree, or else to cut down ours. We should object to either alternative. We should not like in philosophy to revert to Thomas Aquinas in the thirteenth century and his twenty volumes. Protestants imagine that a little advance towards the truth has been made since then."

"But there are other subjects besides philosophy to be studied."

"Yes, there's history, and that requires to be carefully cooked. On our mixed Board—we have had a little experience of mixed Boards in Ireland—we should not even be able to agree on a common professor in such subjects. Mixed boards are so busy balancing that they never have time to advance. It would be the case of a house divided against itself. The very grave matter which lies at the back of this I find a difficulty in stating. As Dublin University is at present constituted, we have no serious trouble; but how long would that last?"

"You are referring to the different standard of honour of the Protestant and of the Catholic?"

"Rather to the fact that on mixed Boards the members feel under an obligation to vote for candidates of their respective creeds. A Protestant would have a far better chance of election on the ground of competence from a Board of Roman Catholic priests than he would from a Board on which they had a bare majority. You certainly cannot understand our position on a University question if you put everything down to religious bigotry on the Protestant side. I shall deal with the bigotry question in a moment. I am concerned now with the fact that on mixed Boards things leak out, and invariably to the advantage of the members of one form of religion. Personally, I am glad to say I have no experience of this kind of thing, but the case in point is known from one end of Ireland to the other."

It was to this effect. A small mixed Board of Examiners drew up a paper on Euclid, to which all agreed. Before sending it to the printer, the examiner who had final charge of it discovered that Question 2 was covered by, say, Question 9. He wrote to his fellow examiners saying that subject to their permission he had altered Question 2, and to this his colleagues assented. In spite of this, all the mathematical pupils of a certain College answered the *expunged* question.

"This is about the sixth time I have heard that story. [It is queer in Ireland how many things leak out 'from the printers,' as the matter is phrased.] Now here is a pendant for the Euclid story. A foreign Consul wrote to a certain Irish mixed Board that its examiner in his language was an impostor, holding none of the degrees or diplomas on which he had obtained the post. After inquiry, the Board held a meeting; it was proposed that the pseudo-professor should receive a handsome sum of money—if I mistake not, a year's salary—and withdraw immediately. The delinquent professor was a Catholic; his co-religionists who were priests were all opposed to this treatment, though the Catholic laity sided with the Protestant majority. To the credit of the last two, it should be said they were astounded at the attitude of the Catholic clergy."

"Yes, I know the *dramatis personæ*. I am not alluding to this difficulty out of desire to wound Catholic feelings, but simply to show that there is a real tangible objection to the airy proposals of outsiders that we should have a mixed Board. You are probably aware that the proposal to 'open up Dublin University' wrecked Mr. Gladstone's Government in 1873. No? Well, people never know contemporary history. The University Bill proposed to combine Trinity College, Maynooth, and the Colleges of Cork and Belfast, into a new University capable of granting degrees; the Theological Faculty of Trinity College was to be handed over to the Episcopal Church. Theology, moral philosophy, and history were to be excluded from the new University; the governing body was to be in the first instance nominated by the Act, but ultimately by the Crown, the Council, the Senate, and professors jointly. The funds were to be provided partly from existing funds, and partly from fees and Government aid. It was rejected," said Professor Mahaffy, in a tone betokening that rejection was the smallest evil that it deserved, "by 287 to 284 votes, and caused a Ministerial crisis."

"I presume that a Catholic can take the degrees of Dublin University."

"But absolutely everything is open to him. I must draw your attention to the fact that Trinity has literally *led the van* in removing all religious disabilities; in 1784 we opened our degrees to Catholics; since then, honours, prizes, scholarships, have been gradually opened to all. Remember that Oxford and Cambridge only removed their religious tests in 1871. At the present moment we have a Catholic Fellow, and two of the Council are Catholics; another Catholic student, the present Lord Morris, won the first gold medal of his year in Ethics at this

University. It might, perhaps, be objected that we have so few Catholics on our teaching staff: that is simply because prelatry will not permit Catholics to come to us, and we choose our staff from those who do come, naturally."

"Then practically no religious difficulty exists."

"That is exactly the case. We do not ask what any man's religion is. None is excluded on account of it, none is appointed to a post because of it. Now we have arrived at the root of the difficulty. Catholics really want, not the removal of a grievance in Trinity College, but the acquisition of a privilege, viz., that a man shall be appointed *because* of his religion. If a man is appointed for such a reason, what he will most care about is the advancement of his creed. We appoint our men because of their attainments in science and literature, and because they will devote themselves to their advancement."

"Of course; anything else would undoubtedly mean the nursing of a religious difficulty. But Catholics talk of a 'Protestant atmosphere' at Trinity."

"They do indeed, and that is the sole Catholic grievance. If Catholic young men came here to any extent, they might modify the atmosphere; indeed, they could scarcely avoid doing so. They never pretend there is any danger to their faith at Oxford, where they go in considerable numbers; and they only raise the cry here, because they think they will get something by it."

"Should you object to a Catholic University?"

"By all means let them have one; they will soon make ducks and drakes of it. If people want their Universities based and founded on religious differences, they must have them. I repeat that Trinity was open to Jews, who came here on purpose to get degrees, when all was closed in England. We do not mind who gets on our governing Board, provided he wins his way there by merit; we do object to men being shovelled on that Board *because* they are Papists. Personally I have had a good many Catholics as pupils—more, I fancy, than any tutor here. I get on well with them, and have many good friends among them; but, all the same, that is my attitude."

"I don't believe we realize in England that you are quite so open as you have been showing. You see you do not admit women to Trinity, and the united grumblings of Catholics and women produce a sort of strophe and anti-strophe effect."

"Ah, yes, the women. We discussed the question of their admission for ten years. I was on the Academic Council of Sixteen which favoured the admission of women. Our governing Board is composed of seven members, and they do not favour the more generous policy. There has been much delay, dodging, and chicanery, not to put too fine a point on it, and I fear the recent refusal of Cambridge has confirmed some in their wickedness."

"Perhaps your Board feels that if it opens the door to women the Catholics may push in, too."

"That might be their view. There are certainly disadvantages in teaching the sexes together." And then Dr. Mahaffy, in his own very lively manner, depicted the pure delights of a feminine University, that favourite chestnut which exploded with so loud a bang at the Conference of the Society of Arts on December 4.

C. S. B.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council, of June 19, 1884, the "Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but the "Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

TENTH GENERAL CONFERENCE AT ABERYSTWYTH, APRIL 18-22, 1898.

The invitation from the Aberystwyth Branch to the Conference and the programme of the meeting are being sent to all members of the Guild with the March *Journal* or reprinted Report. Further particulars will be given in the April Report.

TEACHERS' GUILD LECTURE, Tuesday, March 8, at 8 p.m., in the hall of the Passmore Edwards Settlement, Tavistock Place, Tavistock Square, W.C. (Station on Metropolitan Railway, Gower Street or King's Cross.) Mr. F. W. H. Myers, M.A., H.M.I., a Vice-President of the Guild, will lecture on "Wordsworth." The chair will be taken by W. P. Ker, Esq., M.A., Professor of the English Language and

Literature at University College, London. Heads of schools who may wish to bring some of their senior pupils are invited to give notice at once to the General Secretary of the Guild, 74 Gower Street, W.C. A member may bring a friend.

CENTRAL GUILD.—The sixth Annual General Meeting of the Central Guild will be held at 74 Gower Street, W.C., on Friday, March 18, at 8 p.m. The last Meeting of the Central Guild Council before the Annual Meeting will take place on Saturday, March 5, at 2.30, at 74 Gower Street. It is proposed to complete the filling of the Card-Register of Teachers on this occasion. Offers to help in the work will be welcomed from any members of the Guild.

The Executive Committee of the Council met on February 3. Present:—The Rev. Canon the Hon. E. Lyttelton, Chairman; the Rev. J. O. Bevan, Mr. H. C. Bowen, Miss H. Busk, Mr. Charles, Miss Connolly, Miss F. Edwards, Mr. Langler, Mr. Nesbitt, Miss Page, Miss Smither, Mr. Storr, Mrs. Sutton, Mrs. Tribe, and Mr. Wise.

One hundred and one applicants for membership were elected, viz.: Central Guild, 37. Branches:—Bradford, 7; Brighton, 1; Dublin and Central Irish, 1; Hull, 5; Ipswich Local Guild, 50.

The Local Guild at Ipswich, formed in December, 1897, after a visit from the General Secretary, was duly affiliated as "the Ipswich Branch of the Teachers' Guild."

It was announced that the Guild had received its first legacy, £5, under the will of the late Mrs. Jeffery, of Bath. Mrs. Jeffery was local correspondent of the Guild in Bath, and the prime mover in the formation of the local Branch, and an ardent supporter of it to the last.

It was also reported that steps were being taken to form a Branch in Walsall and Wolverhampton.

The Friends' Teachers' Guild, having unanimously adopted, in general meeting, the terms of alliance with the Teachers' Guild which were proposed by the Council, the members of that association have been put on a footing intermediate between that of full members of the Guild and members of the "allied" Birmingham Teachers' Association, and will receive the publications and notices of the Guild and have the right to attend the General Conferences and other meetings which are not business meetings. The fact of the "alliance" will be notified on the cover of all future issues of the Annual Report of the Guild.

The Birmingham Teachers' Association has made the following arrangements for 1898:—Tuesday, February 22, Sheldon R. Hart, Esq., M.A., Headmaster of the Handsworth Grammar School, on "The Position of the Assistant-Teacher." Friday, March 18, James Gow, Esq., Litt.D., Headmaster of the High School, Nottingham, on "School Curricula." Tuesday, May 10, R. L. Morant, Esq., Assistant-Inspector in Special Inquiries to the Education Department, on "Some Aspects of the Question of the desirability of having a State Organization for Education in all its Grades." Tuesday, September 27, H. E. Armstrong, Esq., Ph.D., F.R.S., Professor of Chemistry in the Central Technical College, London, on "The Heuristic Method of Teaching Science." Tuesday, October 11, the Rev. W. H. Flecker, D.C.L., Principal of the Dean Close Memorial School, Cheltenham, on "The Training of the Teacher." Friday, October 21, J. H. Muirhead, Esq., M.A., Professor of Moral Philosophy and Political Economy at Mason College, on "The Teaching of Morality." Friday, November 4, discussion on the question: "How far should the work of the Class Teacher be supplemented by that of the Subject Teacher?"—Opened by Miss Foxley, Headmistress of Queen Mary's School, Walsall, and the Rev. A. Jamson Smith, M.A., Headmaster of King Edward's Grammar School, Camp Hill. These meetings are open to members of the Teachers' Guild.

CENTRAL GUILD. LONDON SECTIONS. CALENDAR.

Tuesday, March 1st, 8 p.m.—Section F. Musical meeting at Mrs. Christa's, 4 Rectory Grove, Larkhall Rise, Clapham, S.W.

Friday, 4th, 7.45 p.m.—Section B. Shakespeare Reading, "The Merchant of Venice," arranged by Miss S. A. Burstall, B.A. By kind invitation of Miss J. Glover, at Gordon Hall School, Gordon Square, W.C. (west side of Gordon Square).

Friday, 4th, 8 p.m.—Section G. Lecture, "A Country Walk," by the Rev. Theodore Wood, at the Datchelor School. Tea and coffee at 7.30 p.m.

Tuesday, 8th. Teachers' Guild lecture. (See above.)

Friday, 11th, 7.30 p.m.—Section D. Lecture, "John Locke," by the Rev. William C. Stewart, LL.B., at Queen's College, Acton, W.

Tuesday, 15th, 8 p.m.—Section F. Lecture, "Certain Manners and Customs of the Aboriginal Indians of North America" (illustrated by a small collection of implements, pipes, &c.), by the Rev. J. O. Bevan, M.A., at Streatham Hill High School, Wyatt Park, Streatham Hill. By kind invitation of Miss Oldham.

Monday, 21st, 7.30 p.m.—Section A. Paper by H. Carter, Esq., B.A., on "The Teaching of French to Junior Forms." At the Skinners' School, Stamford Hill, N.

Monday, 21st, 8 p.m.—Section B. Lecture, "Typical Curricula of

Secondary Schools for Boys," by M. E. Sadler, Esq., M.A., at the City of London School, Victoria Embankment, E.C. (Open to all Sections.)

Tuesday, 22nd, 8 p.m.—Section E. Lecture, "The Parthenon," with lantern illustrations, by Miss Hutchinson, at the Church of England High School, Graham Street, Eaton Square, S.W.

Tuesday, 22nd, 8 p.m.—Section F. Musical meeting at Miss Withiel's, Airedale, Streatham Common, S.W.

Friday, April 1st.—Section G. Visit to St. Paul's Cathedral. (Particulars from Miss Morse, Datchelor School, Camberwell Grove, S.E.)

Section A.—The Annual General Meeting was held at the Skinners' School, Stamford Hill, on February 7. After the meeting there was a debate on the Teaching of Geography, opened by Mr. H. Holman, H.M.I. Mr. Holman divided the teaching into three parts—realistic, symbolic, and inferential. In the preliminary realistic section, attention was drawn to the fact that every London school was near some park, which could give the necessary experience for the formation of many geographical ideas; and the climate, industries, local government, &c., of a district could be similarly utilized. The second stage, the symbolic, involved the introduction of the map. It was recommended that the ordinary map should be led up to through models of the school buildings and district, to be followed by a relief map. In the inferential stage the lecturer showed how deductions might be drawn from the map of a country. Throughout the whole of the teaching the lecturer insisted on the importance of arousing the active co-operation of the pupil: e.g., it was urged that pupils should compile their own text-books. Valuable hints were given on the construction of models in clay, pulp, sawdust, &c.; and the formation of geographical museums was recommended.

Section E.—On February 8 Miss A. J. Cooper was unable, through indisposition, to deliver her lecture on "History-Costumes." Prebendary Eardley-Wilmot kindly showed instead many new views of the Isle of Wight, of which he and the Rev. J. O. Bevan gave some account.

A party of thirty persons is being formed for a tour to Switzerland and the Rhine in August. Those who join will travel quite independently, except that the outward journey must be taken by the whole party together. The reduction on the tickets for such a party is considerable. Names of those who wish to join should be sent to Miss Escott (a member of the Guild), 29 Beech Hill Road, Sheffield.

TEACHERS' GUILD EDUCATION SOCIETY.—The fourth meeting of the session will be held at 74 Gower Street, W.C., on Thursday, March 31, at 8 p.m. Subject: "A Teaching University for London." Opener: T. Gregory Foster, Esq., Ph.D. It is hoped that members will endeavour to be present.

Three Towns (Plymouth, &c.) Branch.—The new President (Mr. G. P. Dymond, B.A.) gave his inaugural address at the Plymouth Athenaeum on January 28. There was a good attendance, and an interesting discussion followed, in which Messrs. F. H. Colson, D. Slater, A. J. Rider, C. S. Jago, the Rev. F. C. Stebbing, Rev. J. Hirste Haywood, Mrs. Fitzsimon, and Miss Seymour took part. The usual vote of thanks closed the evening. The following is an abstract of the address:—

THE END OF MODERN EDUCATION, AND SOME PRESENT-DAY PERVERSIONS.

The lecturer accepted the fact, about which there was a general consensus of opinion among educationists, that the end of education is "to inform the intellect and to mould the character of the young. As R. H. Quick says: "The old education had one object, and that was learning. The new education treats the human being not so much as a learner as a doer and creator. The success of the education is not determined by what the educated *know*, but by what they *do* and what they *are*." If this be the end, how did they stand with regard to it! Teachers were creatures of circumstances, not allowed to follow their own ideals, but bound by the wishes of others. Parents desired situations for their sons, being often more concerned as to their livelihood than as to their training. The result was that many a lad had to give up the most humanizing studies for the narrow curriculum of the Civil Service, in order that he might enter into a competition where mechanical skill was most required. A limited curriculum also constantly produced this effect, that a candidate who obtained a post was only separated by *one* mark from one who was rejected. The most effective plea in the promotion of technical education had been the cry of "made in Germany." Too much had been done in the direction of arousing a spirit of antagonism to other nations, which it was part of the province of true education to allay. Technical education should rather have as its aim "to create in every scholar an aptitude for and a liking for the labour by which he will have to live." He wished to call attention to what seemed to him a grave defect in the provision made for technical instruction. Apprentices, many of them paying heavy premiums, were expected to attend evening classes after a hard day's work. It should be made a condition of all apprenticeship that time should be given by the employers during the day. Similar defects were apparent in connexion with continuation classes, affecting the teachers as well as their pupils. In the Universities, scholarship-hunting led to the amassing of immense loads of learning, which, if ever properly assimilated by those

possessing it, did not give sufficient evidence of the fulfilment of the highest end of all assimilation, viz., reproduction. Greed for knowledge was as contemptible as greed for gain. Knowledge, like wealth, was only rightly owned by those who rightly distribute it. A just distribution of advantages could not be effected if one successful student was allowed to acquire a plurality of scholarships. The arrogance of superior attainment was fortunately rapidly disappearing before a more general dissemination of culture.

Excessive rivalry and competition in all kinds of education, as elsewhere, were having a serious effect, and mental breakdowns were largely on the increase. One person at least who had climbed the ladder from the Board School to the University had fallen an early victim to over-exertion. Over-specialization must lead to mental decay. Whilst every encouragement was being given to the brilliant, too little attention was being paid to the mediocre and the positively dull. Unless more attention was paid to character, rather than the mere acquisition of learning, this class might constitute a grave menace to our national life. If "equality of opportunity" meant securing the highest development of manhood, it was most desirable, but it was in danger of being degraded into giving to all a like chance of grabbing at educational or other plums. The present tendency to mass large numbers of pupils in huge establishments was not entirely healthy. There was less opportunity of personal contact between pupil and teacher, and individual character might be lost sight of. As to athletics, the abuse of the maxim "a sound mind in a sound body" was producing a state of things which they must deplore. A craving for notoriety was inducing their young people to care more for physical training with its accompanying abuses than for mental culture. As Sir Joshua Fitch has said, "The ideally perfect school should be pervaded through and through by high purpose, by the spirit of work, by a solemn sense of duty, and by the love of truth."

LIBRARY.

The Hon. Librarian reports the following additions to the Library:—Presented by Messrs. Macmillan & Co., Limited:—Euclid, Books I. and II., edited by C. Smith and Sophie Bryant (two copies).

Presented by Mr. David Nutt:—*Etudes sur la Prononciation Classique de la Langue Française*, by Madame L. Horta.

Purchased:—*The Co-education of the Sexes*, by M. Hawtreay; Thomas and Matthew Arnold, by Sir Joshua Fitch.

Presented by Miss Boyer Brown:—"How Dante climbed the Mountain," by Rose E. Selve. A Letter to Girls on Music: A Register of Musical Instruction, by Miss E. Boyer Brown.

Presented by J. Russell, Esq.:—*The Kindergarten System: Its Origin and Development*, translated from the work of A. B. Hanschmann by F. Franks.

Presented by Messrs. Geo. Bell & Sons:—*Graduated Arithmetic*, by Pendlebury and Beard, 7 parts; *Gase's Dictionary of the French and English Languages*.

Presented by Messrs. A. & C. Black:—*Geography of North America*, by L. W. Lyde; *The Conquest of Italy, and the Struggle with Carthage*, by E. G. Wilkinson.

Presented by Messrs. Blackie & Son:—*Shakespeare's Coriolanus*, edited by E. K. Chambers; *Manual of French Prose Construction*, by J. G. Anderson; *Elementary Physics, First Year's Course*, by J. G. Kerr.

Presented by Messrs. T. B. Browne:—*Press Directory for 1897*.

Presented by the *Gymnast and Athletic Review*:—*Hints to Gymnasts*.

Presented by Messrs. Hachette & Co.:—*Public School German Grammar*, by A. L. Meissner; *The First German Book*, by Rev. A. L. Becker; *Commercial Correspondence, French and English*, by Ragon and Korts; *Remi et ses Amis*, par H. Malot, edited by J. M. Rey; *First French Book*, revised edition by H. Bué; *La Poudre aux Yeux*, par Labiche et Martin (Théâtre Français); *Florian's Fables*, Books I., II., and III., edited by H. Attwell, A. P. Huguenet, and E. B. le François; *Passages from Standard Authors for Translation into Modern Languages*, edited by E. L. Milner-Barry and W. Rippman; *Exercises in French Composition*, by J. Lazare and F. Minaggio; *Cicero, Pro Lege Manilia*, edited by Rev. K. Harvey.

Presented by Messrs. Longmans, Green, & Co.:—*History of England*, by Powell and Tout, Part II.

Presented by Messrs. Macmillan & Co. (Ltd.):—*English Grammar, Past and Present*, by J. C. Nesfield.

Presented by Messrs. Swan Sonnenschein & Co. (Ltd.):—*Herbart's Application of Psychology to the Science of Education*, translated by B. C. Mullinger.

Presented by the University Correspondence College Press:—*The Tutorial Chemistry, Part II., Metals*, by G. H. Bailey, edited by Wm. Briggs; *General Elementary Science*, edited by Wm. Briggs; *Xenophon, Anabasis, Book IV.*, edited by W. H. Balgarnie; *Ovid, Metamorphoses, Book XIII.*, edited and translation by J. H. Haydon; *The Preceptors French Course*, by E. Weekley.

Presented by Messrs. Williams & Norgate:—*German Lyrical and other Poems*, with isometrical translations, by A. Campbell Galletly; *Everyday French (Phrases, Proverbs, Idioms)*, by E. Th. True; *German Declensions*, by A. J. Ulrich, revised by J. W. F. Forbes.

JOTTINGS.

SOAMES PHONETIC TRUST.—By the will of the late Miss Laura Soames, a small sum of money was left in trust for the purpose of spreading among English teachers a knowledge of phonetics. The trustees have now decided on spending part of this fund in appointing a lecturer for four months to visit educational centres in England and Wales, with a view to interest teachers in the application of phonetics to the study of modern languages, and to the correction of faults in English pronunciation, and also in Miss Soames' phonetic method of teaching young children to read. Their choice has fallen on Miss Mary Brebner, M.A. London (Classics and Modern Languages). Miss Brebner has enjoyed exceptional opportunities of appreciating the importance of phonetic teaching, having last year, as travelling scholar of the Gilchrist Trust, frequently seen it applied with marked success in German schools.

SOME time ago the Letters and Journals of William Cory, the author of "Ionica," were printed at the Oxford University Press for private circulation. Mr. Froude is now about to publish some of the results of Cory's experience as a schoolmaster, recorded in a MS. journal, dated 1862, and described as "Hints for Eton Masters," although the little book has a much wider scope than this title would imply.

THE post of Principal of Aberdare Hall, Cardiff, becomes vacant at the end of the present term, owing to the appointment of Miss Ethel Hurlbatt as Principal of Bedford College, London. Miss Hurlbatt was from 1888 to 1892 a student of Somerville College, Oxford, where she took a second class in the final Honour School of Modern History in 1891, and remained a further year to pursue the study of history. She was appointed Principal of Aberdare Hall, Cardiff, in 1892, under the presidency of the late Lady Aberdare. During her tenure of office the number of students has risen from seventeen to forty, and new buildings have been erected and in occupation since 1895. Miss Hurlbatt has been closely identified with educational movements in Wales. She has been a governor of Howell's School, Llandaff, and has served on the committee of the Training School of Cookery and Domestic Arts, Cardiff, and is well known as a speaker on educational subjects in South Wales. She has usually spent the Long Vacation calendering charters at the Bodleian Library, Oxford.

COLONEL LOCKWOOD, representing the aims of the Headmasters' Association, put in an earnest plea for the proper organization of secondary education; and Lord Kimberley did the same in the Lords. Otherwise the subject was severely left alone in the debate on the Queen's speech.

THE association for the development of more friendly relations between the United Kingdom and France, known as "L'Entente Cordiale," is about to provide itself with new headquarters, which may be taken as a sign of growth. The Franco-Scottish Society, which has similar aims, issues a very encouraging report. There is an allied society in Paris, and it seems that very friendly relations have been established between the Universities in the two countries.

IT has been settled that the Dean Vaughan Memorial at Harrow is to take the form of a reredos and a medallion in the Harrow School chapel, at an estimated cost of £1,500. For the general memorial, to take the form of a London church, £10,000 is asked, of which £4,000 has been already promised.

WE might safely offer a £50 prize for the clear analysis of the following sentence, taken from the Parliamentary report of the *Westminster Gazette*:—"The Earl of Kimberley and Lord Herschell suggested that when schemes were opposed they should be referred to a Select Committee, a course which Lord Salisbury does not disapprove of, and was probably delighted at the suggestion coming from Lord Kimberley, as likely to appease the Duke of Devonshire—whose entire yielding to the Premier was the event of the night—who is known to have grave qualms of conscience as to the views of other Ministers in safeguarding Church interests in the English Secondary Education Act."

EIGHTEEN undergraduates out of ninety were found at Durham to vote in favour of the admission of women students to the University Union. The admission of women to the University itself has not pleased the male student.

THE long-promised and long-delayed life of Mr. Thring, by Mr. Parkin, may be expected in the course of this month. It is in two large octavo volumes. Sir Joshua Fitch will contribute the article on Edward Thring to the "Dictionary of National Biography."

AN interesting election has just been made at Oriel College to its Fraser Scholarship, founded by Mrs. Fraser in memory of her late husband, the Bishop of Manchester, himself a sometime Fellow of Oriel. The object of the foundation is to enable the scholar to pursue some special branch of post-graduate study. Mr. George Unwin, B.A., the elected scholar, is a native of Stockport, educated up till thirteen years of age in an elementary school, and then for the next seven years a clerk in a hat warehouse. From the warehouse he won a scholarship at University College, Cardiff, and thence passed to Oxford as Scholar of Lincoln, whence he graduated last summer with first-class honours in the School of *Literæ Humaniores*. His coming to Oxford was due largely to his desire to qualify himself for University Extension work, and, after a successful trial at the recent Summer Meeting, Mr. Unwin was appointed by the Oxford Delegates to a junior lectureship in ancient history and philosophy. His ambition is to attract the attention of working men—more particularly in the North of England—to these subjects.

THE following question and answer in the House of Commons is of interest:—Mr. M'Laren asked the Vice-President when the House will be placed in possession of the Government proposals as to secondary education, and whether he will defer making any further orders under pending inquiries, on the application of public bodies to be constituted authorities for the purpose of secondary education, until those proposals have been laid before Parliament. Sir John Gorst: "I am not at present able to state when the Government proposals as to secondary education will be laid before Parliament. As I stated yesterday, no public bodies have made application to the Department to be constituted authorities for secondary education, for the Department has no power to do anything of the kind, and the local authorities for technical education have already been constituted by Parliament. No orders of the kind suggested in the question have been, or will be made; but the Committee of Council have no intention of deferring the operation of Clause VII. of the 'Directory,' which they regard as essential to the better administration of the Science and Art grants."

THE Humanitarian League is carrying on its campaign against "blood sports" with considerable vigour. Witness the following which the Secretary has sent us:—"With the commencement of the Lent school-time, Dr. Warre's 'infants,' who have to be so tenderly protected from the wicked habit of betting, have again returned to the manly pastime of 'breaking up' hares. 'On January 22,' says the *Eton College Chronicle*, 'the Eton College Hounds began their season by meeting at Upton Church.' Whether a benediction was here pronounced by the Rev. Dr. Hornby, Provost, assisted by the Rev. Dr. Warre, Headmaster, is not stated; but from this consecrated ground the sport was auspiciously commenced. On January 29 'we killed her in the open,' after a run of forty-five minutes. On February 1, 'our hare ran very fast up to Burnham village. . . . After a long cast, we were just going to give it up, when hounds spoke to her in the garden of Burnham Priory, and, running up the garden, she jumped up in the middle of the pack, and ran down the park into the gardens the other side of the road, where we were obliged to whip off, as it was quite dark. This was very hard luck, as with a little more light we must have killed. Time, 1 hour 30 minutes.' Is it not about time that Dr. Warre also 'whipped off' his young barbarians from this blackguardly amusement? Or, failing this, that the Committee of the Windsor and Eton Branch of the Royal Society for the Prevention of Cruelty to Animals whipped off from their members' list the names of the Rev. Dr. Warre and the Rev. Dr. Hornby? Meanwhile, we shall continue to draw the attention of the public and the press to this gross scandal."

IT may not be generally known, but it is a significant fact, that the Royal Geographical Society has been paying three-fourths of the stipend of the Lecturer in Geography at Cambridge University, and has promised to continue the grant (£150) for a further period of five years.

No less than eight thousand copies of the Summary Report of the Joint Committee for the Training of Teachers have been distributed. It is probable that there will be a further demand.

THE Joint Agency for Men Teachers will probably open early in May. The appointment to the post of Registrar will be made immediately.

AN important principle, of interest to others than teachers, is treated in "The Economy in High Wages for Teachers," by John Davidson, in the February American *Educational Review*. Other leading articles in that number are: "Functions of the State touching Education," by Andrew S. Draper; "Religious Instruction in American Schools," by Levi Seely; "Student Life at Jena," by Stuart H. Rowe; "The Public School and Community Life," by James K. Paulding; "Ameri-

can Graduate Schools," by Hjalmar Edgren; and "History in the German Gymnasias," by Lucy M. Salmon.

MISS A. B. CLARK, B.A. Lond., assistant-mistress in the Kensington High School for Girls (G.P.D.S.C.), has been appointed Headmistress of the Hulme Grammar School for Girls, Oldham.

CALENDAR FOR MARCH.

[Items for this Calendar should be sent in before the 24th of the month.]

- 2.—Sanitary Institute, 92 Margaret Street, W., 8 p.m. Lecture on "Disorders of Speech due to Developmental Derangement and their Treatment," by M. Friedeberger, Ph.D.
- 4.—Datchelor School, Camberwell, 8 p.m. Lecture on "A Country Walk," by the Rev. Theodore Wood. (Teachers' Guild.)
Gordon Hall, Gordon Square, 7.45 p.m. Shakespeare Reading, "The Merchant of Venice," arranged by Miss S. Burstall, B.A. (Teachers' Guild.)
- 7.—Penbridge Square, at 4.30 p.m. Parents' National Education Union. Lecture on "Art in Education," by Cosmo Monkhouse.
(Sesame Club.) Lecture, with Musical Illustrations, on Schumann's Songs, by Miss Wakefield.
Carpenters' Hall, 8 p.m. Lecture on "Wood Carving, its Design and Practice" (with illustrations), by L. F. Day, Esq. (Free.)
- 8.—Passmore Edwards Settlement, Tavistock Place, 8 p.m. Lecture on "Wordsworth," by F. W. H. Myers, Esq., M.A., H.M.I. (Teachers' Guild.)
University College, Gower Street, 7.30 p.m. Inter-Collegiate Debate on "Trades Unionism." Professor Augustine Birrell in the chair.
- 11.—University College, 8.30 p.m. Lecture in French on "Deux Oubliés: L. Gozlan—F. Soulié," by Professor H. Lallemand, B. ès L., B. ès Sc. (Free.)
Queen's College, Acton, W., 7.30 p.m. Lecture by the Rev. W. C. Stewart, M.A., LL.B., on "John Locke." (Teachers' Guild.)
- 14.—At 29 Dover Street (Sesame Club). Lecture, with Lantern Illustrations, on "Style in Art," by Mr. Holroyd, Director of the Tate Gallery.
- 15.—Streatham Hill High School, 8 p.m. Lecture on "Certain Manners and Customs of the Aboriginal Indians of North America," by the Rev. J. O. Bevan, M.A. (Teachers' Guild.)
Post Translations for Competition.
- 16.—Sanitary Institute, 72 Margaret Street, W., 8 p.m. Lecture on "The Prevention of Deafness in Children," by Wm. Hill, M.D.
University College, Gower Street, 7.30 p.m. Old Students' Annual Dinner. Professor S. Ringer, F.R.S., in the chair.
- 21.—City of London School, 8 p.m. Lecture on "Typical Curricula of Secondary Schools for Boys," by M. E. Sadler, Esq., M.A. (Teachers' Guild.)
At 29 Dover Street (Sesame Club). Lecture on "Proportional Representation," illustrated by a Mock Election, by Sir John Lubbock.
- 22.—Church of England High School for Girls, Graham Street, 8 p.m. Lecture on "The Parthenon," with Lantern Illustrations, by Miss Hutchinson. (Teachers' Guild.)
35 Bryanston Square, 4.30, Parents' National Education Union. Lecture on "The Signs of Overpressure," by Dr. Schorstein.
Post all School News, &c., and all Advertisements for March issue.
- 25.—University College, 8.30 p.m. Lecture in French on "La Comtesse de Martel (Gyp)," by Professor Lallemand. (Free.)
- 26.—(First Post.) Latest time for receiving urgent Teachers' Advertisements (prepaid) for March.
- 28.—At 29 Dover Street (Sesame Club). Lecture on "Telegraphy without Wires," by Mr. Preece, Electrician to the Post Office.
- 30.—Sanitary Institute, 8 p.m. Lecture on "Experience of the Practical Results of Observation of Children in School," by Miss A. S. Byett.
- 31.—74 Gower Street, W.C., 8 p.m. Discussion on "A Teaching University for London," Opener, T. Gregory Foster, Ph.D.

The April issue will be ready on Thursday, March 31.

WARD, LOCK, & Co.—The Opium-Eater, and Essays by Thomas De Quincey. With an Introduction by Richard Le Gallienne. Price 2s. 6d.

WILLIAMS & NORGATE.—French Catalogue.

REVIEWS AND MINOR NOTICES.

Progress in Women's Education in the British Empire. Being the Report of the Education Section, Victorian Era Exhibition, 1897. Edited by the COUNTESS OF WARWICK. (Longmans.)

This book mainly consists of a collection of papers delivered by the writers at the Congress and Conferences held in connexion with the Victorian Era Exhibition, such papers being by far its most valuable part. The preface is most disconnected. The introduction, by Dr. Kimmins, essays to thread together the very various elements which compose the book; so various are they that the conscientious reviewer's task is far from an easy one. We agree with Dr. Kimmins that it would have been "nothing short of a calamity if the valuable papers read at the different meetings had been lost to the literature of so important a subject." At the same time, one cannot help wondering why the book should be entitled "Progress in Women's Education." The second, a very large section, embracing pages 85 to 237, inclusive, treats of such subjects as the care of the sight, training of women in dairy work, indexing—a profession for women, Irish flower farms, and women as factory inspectors. How-

ever, it must be admitted that to find a befitting title would be a much harder task than to cavil at the one that has been adopted.

Several of the monographs are of real excellence; amongst them are noteworthy "The Work of the London School Board," by the Rev. A. W. Jephson, setting forth the number of its teachers and pupils, the sums expended by the Board, its various activities, and even the weight of its pens, pencils, and copy-books in the store-rooms. It may interest the casual reader to note that at the Queen's accession 44 per cent. of the population were illiterate, whereas we have now only 7 per cent.

Mrs. Barnett and Miss Lidgett's articles on "Pauper Children" are quite worth reading, melancholy as many of their facts are. Sir Douglas Galton, quoting Dr. Francis Warner, who examined more than a hundred thousand children, states that we may calculate on having from 3 to 5 per cent. of our children defective, with 16 per mille requiring special care. His remarks preface an excellent paper by Mrs. Burgwin, Superintendent of London Schools for Defective Children. "The Medical Training of Women in England" was noticed by the *Journal* in its report of the Congress held last summer (August number), as well as the progress of medical women in India. Miss Ellaby, on "Care of the Sight," has a good deal to say worthy the attention of teachers.

There are, perhaps, no more interesting, lucid, and concise papers in the whole volume than those by Miss Cecil Gradwell on the "Training of Women in Business"; "The Education of Women in Business," by Miss Janet Hogarth; and "Indexing—a Profession for Women," by Miss Nancy Bailey. Miss Hogarth sensibly points out how women workers readily yield to overpressure, whereas boys, wise for once, decline to be spurred. The fatigue which ensues in the case of the former causes women's work to be less equal, and the natural deduction is for women not to permit themselves to be rushed. One may here call to mind an excellent proverb: "Faisons feu qui dure." Miss Hogarth tilts at present-day handwriting in girls' high schools; but, for our own part, we doubt whether it is worse than their mothers' and grandmothers'. It is astonishing how dull Miss Anderson has contrived to be in so interesting a subject as "Women as Factory and Sanitary Inspectors." The recent report of the Chief Inspector of Factories and Workshops, to which Miss Anderson has contributed a quota, is light reading by comparison. The reasons why women were appointed as inspectors should have been summarized, and, unless the etiquette of the Department forbids it, illustrations of the nature of the work, and, above all, of the great weapon of the employers—passive resistance—would have made her contribution more readable.

The papers on "Education of Women in New South Wales," by Sir Wm. Windeyer; "Education in New Zealand," by the Hon. W. P. Reeves; "Education in South Africa," by Mr. Russell; "Female Education in India," by Professor Gokhale, Sir Wm. Wedderburn, and Mr. H. M. Birdwood, have all been worth preserving.

Brief as are the articles on the University Extension Movement, the names of Miss J. D. Montgomery, Rev. Hudson Shaw, Dr. Roberts, Mr. M. E. Sadler, Dr. Lawrence, and Mr. Mackinder are sufficient guarantee that the movement was well represented.

Miss Montgomery notes that the nineteenth century has been distinguished by a Renaissance, one with more serious recognition of the responsibilities of life than that of the sixteenth century, and links University Extension with the wider movement. The brief criticism of our primary-school system and remarks on an uneducated democracy by the Rev. Hudson Shaw; Dr. Lawrence's statement that we have not yet convinced the people of this country of the need of education; Mr. Mackinder's warning against teaching that knowledge resides in books and not in men—these and many other thoughtful sayings are recorded.

"Periods of European History."—*Europe in the Sixteenth Century, 1494-1598.* By A. H. JOHNSON, M.A., Historical Lecturer to Merton, Trinity, and University Colleges, Oxford. Period IV. (Rivingtons.)

The sixteenth century was pre-eminently a period of change, political, constitutional, and religious—a time during which the ideas of mediæval Europe passed away, and the foundations of a new order were laid. It saw the rise of the idea of nationality

as a principle of union ; it was full of aggressive wars consequent on the new conception of national life, and directed by monarchs as the representatives of nations towards the attainment of purely selfish ends ; it was marked by wars of religion and by the disruption of Western Christendom. To have represented the "history of this period adequately, to have noted the constantly shifting combinations of its diplomacy and the progress and fortunes of its wars, without losing sight of the underlying causes and tendencies of events, or of the influence exercised upon them by individual character," is no small achievement ; all this has, we think, been done in this volume, so far as was possible in the number of pages allowed by the editor of the series. Mr. Johnson's narrative is clear and accurate, and his grasp of the history of his period wonderfully strong and comprehensive. His arrangement, too, is good, and that is a great matter in a book that has to follow so many threads. As he announces in his Preface, he has contracted the sphere of his work by leaving out all mention of the history of Northern and Eastern Europe, and of the domestic affairs of England, so that his book scarcely corresponds to its title, for it does not attempt more than the history of the greater Continental Powers of the West. On this matter his decision is wise ; it has enabled him to treat his period coherently, and to devote sufficient space to his subject to allow of fairly complete and interesting work. Throughout his volume we meet with many suggestive remarks, many signs of mature thought and insight into the significance of events, and many well-considered appreciations of character and motive.

Speaking, for example, of the policy of Julius II., he notes how far it surpassed that of Alexander VI. ; for Alexander simply aimed at the aggrandizement of his own family, whereas Julius won territories for his See, yet, in order to do this he was forced to sacrifice the second object that he set before himself, by calling in foreign Powers to interfere in the affairs of Italy. The discussion of the various attempts to reform the constitution of the Empire in the reign of Maximilian is made intelligible and interesting by a preliminary statement of the conflict of interests in Germany. The Electors desired a more effective judicial system and greater control over the central power, while the Emperor, though not hostile to reforms, determined to accept only those that tended to increase his authority and give him freedom of action, and so would enable him to forward the interests of his house.

Among the many thoughtful, and we may almost say brilliant, appreciations of men and their work that Mr. Johnson gives us, we may call attention to his remarks on Erasmus, Luther, Maurice of Saxony, and William the Silent. Of Luther's revolt from the Roman Church he says that, while "he too lightly cast away the traditions of the Church, and too confidently believed in the possibility of finding all that was necessary to salvation and for the organization of the Church in the Bible alone," while his doctrines have been exaggerated and have led to evil, while the immediate results of the Reformation were not wholly satisfactory, and while his revolt has broken unity and brought a sword upon earth, yet we must remember that Rome has to account for much of all this. Rome drove him to revolt, for, while it could be lenient to unorthodoxy on such fundamental questions as the immortality of the soul, it refused to listen to criticisms of its system of indulgences. Here and there it is possible to find some slip or error in printing. Atilla (page 24) is, of course, a slip, repeated in the Index, for Atella (Aversa). We do not know what Mr. Johnson means when, in his narrative of the conflict between the Spaniards and French on the Garigliano, he says (page 47) that the French "drew back to the town of Garigliano." Is there, or was there ever, such a town? Reference to Guicciardini (Istoria, Lib. VI.) shows that, after the French were repulsed in their attempt to cross the bridge they had erected, they remained stationary in their encampment round the *torre di Garigliano*, facing the Spaniards on the opposite bank of the river, until the battle of December 28, 1503, not 1504, as in the marginal contents, an obvious misprint. We cannot, however, say the same about the date assigned to the death of the Duke of Parma, which Mr. Johnson puts in December of the year after the Duke raised the siege of Rouen. The Duke died December 3 of the same year, viz., 1592, at Arras, from the effects of a wound received at the siege of Caudbec. We must, too, remind Mr. Johnson that to write of a combat *à l'outrance* is a barbarism. These, however, are small matters in comparison

with the general excellence of his work. At the end of the volume are some maps : one of them, of Germany in 1549, deserves special notice.

The Two Duchesses. Edited by VERE FOSTER. (Blackie.)

We could wish that history were always presented to us in the form of human documents such as are contained in this delightful book. But, since the very force and interest of such documents arise from the fact that they were personal communications between beings linked together by community of sentiment and affection, not cold statements of facts compiled for the general public, and that what narration of events they contain was written, red-hot as it were, from personal experience, such presentations are rare, and due, as a rule, to chance discovery, as we are told is the case with this work.

Of the two Duchesses who give a name to the collection of letters, one, Georgiana, known as "the beautiful Duchess of Devonshire," appears only as the author of sundry poems of graceful sentiment, scattered throughout the volume ; in occasional allusions ; and, after her death, in the touching tribute of her heart-broken friend. The chief figure in the book, and the one in whom all the interest centres, is the intimate friend and companion of Georgiana—Lady Elizabeth Foster, afterwards second Duchess of Devonshire, the brilliant and charming "Bess," of whom Gibbon said that, "if she chose to beckon the Lord Chancellor from his woollack in full sight of the world, he could not resist obedience." Her letters to her son Augustus, who was in the diplomatic service abroad, and his to her, form the bulk of the volume.

They are interesting from a threefold point of view. They give a charming picture of good comradeship and affectionate sympathy existing between mother and son, in an age which we are accustomed to regard as characterized by the stiffness and formality of periwigs and minuets. "I tell you all the nonsense in the world," says the son on one occasion, "because I always have and always shall consider you as my sister." And, indeed, the correspondence is throughout far more like that between a devoted brother and sister than mother and son. They are interesting to the historian as teeming with first-hand anecdotes of the times, and as throwing a brilliant, though fitful, light on the events and figures of a stirring and exciting period. And they are deeply interesting to the student of human nature as a study of a charming, large-hearted woman, full of enthusiasm, patriotism, and wide sympathies.

A generous enthusiasm is the soul of the letters, and the element, indeed, which gives them to us now, after nearly a hundred years, as fresh and vigorous and full of life as if the ink were but just dry. One of the letters to her son on the subject of enthusiasm might well serve for a homily in the present day, when the tendency to hide the fire under a cloak of reserved decorum bids fair to quench it altogether. After bidding her son cultivate the muses by way of encouraging the enthusiasm "which I think so necessary to your happiness in every situation," she goes on :

Enthusiasm is, in fact, what, well-directed, leads to the attainment of every virtue, and enables the possessor of it to walk out of the common track of common characters, who rest satisfied with doing what is required of them, but never are equal to that most generous, most rare of all qualities, *l'oubli de soi-même*. It also leads to a great indulgence for others, and a great severity to one's self. In short, enthusiasm appears to me (perhaps you will say I am pleading my own cause) the vivifying heat that must bring forth the seed of all that is good in our natures, and lead to the imitation of all we see good in others.

Her enthusiasm had, as her son says in one of his letters, "a fair and well-shaped channel," both in the times she lived in and in the position she occupied. Connected by birth or friendship with most of the leading spirits of the day, her lines lay, so to speak, near the beating heart of the nation, and her enthusiasm found vent in identifying herself passionately with its interests. She flushed with pride at its victories, paled at its losses, and felt sick at the mere thought of dishonour or disgrace. At the time when most of the letters were written (the latter years of the last, and beginning of this, century), the game that was being played by the nations of Europe was a thrilling one, and her whole soul was bound up in the excitement of watching it. She followed the moves with the intensity of one whose deepest

feelings were concerned. But her enthusiasm did not limit itself to politics. Art, literature, and, above all, her friends were alike capable of drawing it out to that *l'oubli de soi-même* which she advocates with such eloquence.

The book is enriched by a set of interesting and well-executed heliogravures—portraits of those who figure in its pages.

"The Ethical Library."—*The Teaching of Morality in the Family and the School.* By SOPHIE BRYANT, D.Sc. (Crown 8vo, pp. vii., 146; price 3s. Sonnenschein.)

Mrs. Bryant has given us another agreeable book. But it is something more than agreeable: it contains much sound advice on a matter of grave importance—advice founded on considerable experience and much thoughtfulness. Mrs. Bryant's bent is, as a rule, to remain amongst general propositions and general principles, so that sometimes it is a little difficult to realize what precisely one should do in actual practice. But here she comes to much closer quarters with her problem, and is more definite in stating what may be done; she emerges, so to speak, from the outer ether, and enters the earth's atmosphere. Her problem is: Can morality be taught; and, if so, then in what ways and by what means? This, of course, gives rise to the prior question as to what moral education in general means. So she begins with this, and makes it the subject of an excellent introductory chapter—one of the best in the book. Briefly, moral education may be taken to consist in leading the growing mind to think and feel its way towards an ideal of life with which it can, in all the fullness of its powers, be satisfied; while one of the first essentials of morality is the steady recognition by a man of himself as an individual who ought to live according to some system of conduct which binds him equally with all his fellows. The child should be helped to bring all his active impulses under the control of ideas—to think about conduct, to have his own ideas of conduct, and in the long run to act from them—indeed, to do so frequently from the first, for self-activity is an essential factor in the production of moral character; and to treat all other people's ideas with respect, and some with reverence, and to be ready to try his own ideas by the touchstone of the common-sense surrounding him. And finally we may expect the child to recognise the existence of a moral law limiting the exercise of his activity, and to accept the conditions thus imposed with perfect readiness. We are not endeavouring to reproduce the introduction, but merely to give some notion of its contents.

The insistence on ideas just referred to leads us to consider the movements of intelligence and instinct in the formation of a moral ideal. The first two chapters are devoted to these, and, in the former, we are given an excellent account of the parts played by the formation of mental pictures and actual thinking respectively in the processes under consideration. Had we space, we would gladly quote from these chapters, for it is here that we begin to get to close quarters. In particular, we should like to call attention to the convincing clearness with which, here and later on, we are shown the danger of trusting solely to the imagination pure and simple, unattended by any real thinking concerning that which the imagination calls up. And we may add that the story related of "the little drummer boy" is itself a case in point, for, without some careful thought, the real character of his act, owing to the atmosphere of sentiment in which it is involved, is very likely to be misconceived.

We pass on to a chapter on "Principles of Teaching," and enter the school, if not the schoolroom. The advice we get is simple and direct, and, to a large extent, practical. But we need not linger here. Every one will know that so experienced and thoughtful a teacher as Mrs. Bryant is sure to omit none of the essential points, and to treat them all effectively. This is the case; while the chapter also, to a certain extent, draws more definitely together what has been said in the two preceding ones. Lastly, we come to the subject-matter of moral instruction—treated in two chapters under the heads of "Virtuous Character" and "Social Membership" respectively. Here and there in these chapters statements or phrases are a little vague, as, for instance, "stories from the Old Testament." What stories? They vary considerably in character. And perhaps the moral element in Celtic romances is a little magnified; while the stories of the Saxons or those of the southern Teutons are not even mentioned. But, after reading the book, we are in no mood for fault-finding. All will agree with the concluding

statement of the last chapter:—"The end proposed in moral education is to train up not only persons who respect themselves and feel with their neighbours, but citizens who honour the social order and accept the responsibility of making it all that it ought to be." That much, very much, of this aim can be realized in the home and in the school by direct instruction and guidance she has conclusively proved, and, in doing so, has given us a book not only very useful but also very interesting.

"Heroes of the Nations."—*The Cid Campeador.* By H. BUTLER CLARKE, M.A., Fereday Fellow of St. John's College, Oxford, &c. With Illustrations. (London and New York: G. P. Putnam's Sons.)

No more romantic personage has been chosen by any nation as its special hero than the Cid Campeador, Ruy Diaz de Bivar, the hero of the Spanish people, though it must be confessed that when the light of history pierces through the mist with which legend and song have surrounded his name some of his glory disappears. His story is told with much spirit by Mr. Clarke, who knows Spain well, and has evidently studied one part at least of its history with great care. While he records the mighty deeds that have made the name of the Cid so famous, he does not fail to point out that, while he was valiant, wise, and magnificent, he was also greedy, cruel, and false. The achievements of the Cid belong to the latter half of the eleventh century; his figure is dimly seen about 1060, in the wars of Don Fernando, King of Leon and Castille; he first appears in authentic history as the leader of the army of Fernando's son, Don Sancho, who succeeded to part of his father's dominions as King of Castille, and he died in 1099. Although union among themselves was of the first importance to the Christian princes of the North in their struggle with the Saracens, they wasted their strength in making war upon one another, and during Sancho's reign the Cid was more often employed in fighting against Christians than against infidels, for Sancho overthrew his two brothers, who inherited kingdoms from their father, and was assassinated while endeavouring to wrest Zamora from his sister. His death left the Cid in an awkward position, for he had been foremost in destroying the power of Alfonso, who succeeded his brother Sancho in Castille. Nevertheless, he was too rich and powerful to be crushed by a new king, and was employed by Alfonso both against Christians and Saracens. Yet it is probable that they distrusted one another all the time, and after a while Alfonso banished the Cid on the pretext that he had made war on the Saracens without his orders. It was on his banishment that the Cid played the shabby trick on the Jews of Burgos that is commemorated by the chest still to be seen in the cathedral there. This chest, we are told, is not a genuine relic. We confess to having beheld it with unsuspicious eyes, and regret the destruction of our belief in it.

The Cid's banishment was, Mr. Clarke points out, a disastrous event for the Christian cause. While Alfonso was warring successfully against the Saracens of the South, the Cid was living in the service of the Saracen prince of Saragossa. Driven almost to despair by the victories of the King, the Saracens called the Almoravides from Africa to help them, and Alfonso was totally defeated at Zalaco. The common danger led to a reconciliation between the King and the Cid, and then again they quarrelled, and again the Cid was outlawed, and gathered an army together and began to win a dominion for himself. At last, after another reconciliation and another quarrel with Alfonso, he conquered Valencia and ruled over the city and the country round as an independent prince and in Oriental magnificence. He is said to have died of rage at the news of a defeat of his army, which he could no longer lead in person against the Almoravides. Such is the bare outline of the Cid's career, which has been made the subject of a crowd of stories, some probably more or less historical, others quite legendary. Mr. Clarke has based his work on both Spanish and Arabic authorities, and acknowledges his indebtedness to Professor Dozy's valuable books on Spanish history; he notes as far as is possible what is certainly or probably true, and what seems to be mere romance, in the story that he has to tell, though the critical spirit in which he writes does not detract from the interest of his narrative; and he has given us a vivid picture of the political condition of Spain during an important period of its history. The illustrations taken from drawings by Don Santiago Arcos are a pleasing feature of the volume.

A History of the Indian Mutiny. By T. RICE HOLMES. Fifth edition. (Macmillan.)

Mr. Holmes' account of the Indian Mutiny has long been favourably known. The present edition appears slightly enlarged and completely revised by aid of the proof-sheets of the two latest authoritative accounts—Lord Roberts' reminiscences and Colonel Vibart's important contribution to the Delhi episode. Setting apart Kayes and Malleson's work as appealing more to military students, we are confirmed in our impression of Mr. Holmes' as the best popular history of a struggle in depicting which the professional soldier is at this disadvantage, that its victories seem as often as not won by sheer audacity, in defiance of all rules. The story is one which could hardly be made tame by the dullest pen; but our author needs no such apology. Not encumbering himself too much by military details, he gives a clear account of what happened in as orderly a sequence as allowed by the confused interlapping of the events. If we have any exception to make, it is in the episode of Havelock's struggle through Lucknow, where a too hurried summary fails to illustrate the dramatic force of that rather futile feat of arms. Here, however, as at other thrilling points, Mr. Holmes' narrative does not want in spirit, while his judiciousness is shown in the discussion of such vexed questions as the slow caution of Sir Colin Campbell, the divided counsels before Delhi, and the conduct of Major Hodson. The extent to which the whole story is one of picturesque individuality justifies his giving some thirty pages of text and appendix to the mingled character of Hodson, who on one side has been held up as a type of the Christian soldier, and from another point of view figures as the villain of at least two well-known novels, after being, according to some, the original of East in "Tom Brown." He was brother of a notable schoolmaster, head successively of the Edinburgh Academy and of Bradfield College; and the present writer can testify that his pupils who got a holiday for the Delhi princes affair had then no doubt as to the glory of that exploit. This is a book that should be in every school library, even though, like other historians, its author does not notice the part played by the boys of the Martinière College at the Lucknow Residency.

Reviews and Essays in English Literature. By the Rev. DUNCAN C. TOVEY. (G. Bell.)

Though we should hardly go so far as to pronounce these essays permanent contributions to English literature, yet they have more than an ephemeral interest, and were well worth recovering from the oblivious pool of the *Guardian*. The caveat that that journal is in no way responsible for the opinions of the author seems to us an unnecessary precaution. Mr. Tovey is careful to moralize his literary criticisms, and we fail to detect even a suspicion of heresy. The only possible exception to this blameless orthodoxy is the first article in the book, on the teaching of English literature, which, by reason, perhaps, of natural depravity, we like the best. In it Mr. Tovey undoubtedly allows himself to speak evil of dignities: he casts doubt on the methods of the Cambridge Local Examinations, and arraigns the authorized editions of Mr. Verity and Dr. Aldis Wright. We are not prepared to break a lance in their defence, but we will venture to remark that when the author leaves his proper sphere of criticism, and points out a more excellent way, he is hoist with his own petar. He would have us teach English literature by the historical method. It is not desirable for boys to read "The Tale of a Tub" or "The Vision of Piers Ploughman"; but it behoves them to know all about the respective writers that they will find in manuals of literature. The new cram that such a method would encourage would be worse than the old. It may be barbarous to subject the reader of Scott to Phillpotts's torturing wheel, or to plague the young Wordsworthian with the derivation of "landscape" and "down"; but, in spite of Grimm and Skeat, the "Lay" and the "Excursion" are read. Let us by all means banish philology and grammar, or at least keep them separate from literature; but let us beware of substituting a reading about books. All such second-hand knowledge is, in its very nature, flat, stale, and unprofitable.

At the other essays we can only take a hurried glance. Mr. Tovey has a keen eye for the salient points in a writer, and he makes his own points clearly and forcibly. Thus the Ossian question is sifted with the acuteness and shrewdness of a

practised lawyer. As we have said, Mr. Tovey is stronger in negative than positive criticism. The weak sides of Coventry Patmore and of Matthew Arnold are ruthlessly exposed—the irrational Toryism of the former, the unphilosophical aloofness of the latter.

The Age of Milton. By the Rev. J. HOWARD B. MASTERMAN, M.A., with an Introduction by J. BASS MULLINGER, M.A. (7×4½ in., pp. xxi.; 254, price 3s. 6d. George Bell & Sons.)

This is one of the "Handbooks of English Literature," published under the general editorship of Professor Hales. It was to have been written by Mr. Mullinger; but, pressure of other work preventing this, such material as had been collected and prepared was handed over to Mr. Masterman, who used to be a lecturer at St. John's College, Cambridge. Personally we are by nature unfitted to enjoy histories of literature, even when written on a fairly large scale as in the present case. But there can be no doubt that Mr. Masterman has done his work carefully and with scholarly judgment and knowledge. Naturally, Milton himself is given the lion's share of attention, and the three chapters on him and his works are interesting; but we cannot but think it rather superfluous to tell the story of "Comus," unless some particular idea or view was to be brought out by the process. The chapter on Thomas Fuller, though certainly well written, seems to us to occupy more space than a due sense of proportion required. To some extent the same may be said with regard to Sir Thomas Browne; but both the subject and Mr. Masterman's treatment of it are so charming that we cannot find it in our heart to wish the space curtailed. Another good chapter—and perhaps the hardest to keep within bounds—is that on the "Caroline Lyrical Poets." The selection of poets and poems and the critical and expository judgments expressed are both excellently done. We are given a chronological summary and a good index; the former of which, however, might very well have been somewhat fuller. One thing we certainly have to be thankful for; and that is that we are almost entirely spared what most histories of literature inflict upon us—long lists of names with descriptive epigrams attached to each. There is a little of it in the chapter on "Dramatic Poets," but hardly any of it elsewhere. Altogether the book is decidedly a satisfactory book of its kind.

Introduction to Philosophy: a Handbook for Students of Psychology, Logic, Ethics, Aesthetics, and General Philosophy. By OSWALD KÜLPE; translated by W. B. PILLSBURY and E. B. TITCHENER. (7½×4¾ in., pp. x., 256; price 6s. Sonnenschein.)

Mr. Külpe is Professor of Philosophy and Aesthetics in the University of Würzburg; Mr. Pillsbury is Instructor in Psychology, and Mr. Titchener Sage Professor of Psychology, in the Cornell University. The book, therefore, comes to us with considerable guarantee as to its soundness and probable utility—a view which is speedily confirmed by even a hasty perusal of its pages. It is, as its author hoped it would be found to be, a good elementary guide to philosophy past and present, mainly, but not exclusively, from a German point of view. English philosophy is given courteous but rather scant attention; and French philosophy is in much the same predicament. There is another drawback which the translators have endeavoured in a measure to modify—the lists of books for the student given at the ends of the various sections consist almost entirely of German books, very few of which have as yet been translated. These are not likely to be of use to those who need a translation of Professor Külpe's book itself. Beyond this, however, and the fact that the subject-matter is necessarily rather closely packed, we have nothing but praise for the book. The translation is very carefully done, and the cross-references as plentiful as they should be. Students of philosophy are sure to find this "Introduction," with its abundant historical citation and literary reference, decidedly useful.

The Story of Lancashire. (7×5 in., pp. 256; price 1s. 6d. Edward Arnold.)

This little volume is evidently intended to be used as a reading book; and there are only two faults we have to find with it. First, the title-page is undated; and, second, the chapters are cut up into short unnumbered paragraphs, which considerably detracts from the pleasure of reading it. Otherwise the story is well and simply told, and the book is well printed in clear bold type, and well illustrated. Children—especially children in the great duchy—will find plenty in it to instruct them. The idea of the series, which already includes Yorkshire, Wales, and Scotland, seems to us a good one. But possibly Wales and Scotland will not like to be treated as the equivalents of English counties.

Psychology: an Introductory Manual for the use of Students. By F. RYLAND, M.A. Seventh edition, revised and largely re-written. (7 x 4½ in., pp. xi., 291; price 4s. 6d. Bell & Sons.)

This capital little book is no doubt well known, or should be well known, to most of our readers. It was, we believe, originally intended for those who are preparing themselves for the examinations of the University of London and elsewhere, and the list of questions at the end shows that it is still so intended. That it has been found well fitted for its purpose the fact that after seventeen years it is already in its seventh edition amply proves. Nor would any one who has read the book be surprised at this. It treats its subject succinctly and clearly, and, without aiming at anything distinctly original, it is careful to give all the more important results of recent inquiries in their proper places and with their proper significance. *Volition* might, perhaps, have received a somewhat fuller treatment; but, taking the book as a whole, it is really wonderful how much it contains for its size, without producing any sense of crowding. Beginners will certainly find this manual very much to their purpose.

"The University Tutorial Series."—*A Manual of Ethics.* By JOHN S. MACKENZIE, M.A. Third edition, revised, enlarged, and, in part, re-written. (6¼ x 5 in., pp. xix., 456; price 6s. 6d. W. B. Clive.)

It is now close upon five years since we noticed, at some length, the first edition of this manual. It has since then been considerably increased in size, in some respects re-arranged, and, in part, re-written. The references to metaphysics have been made a good deal more definite; in fact, Professor Mackenzie tell us that it has been his aim to conduct the student gradually inwards from the psychological outworks to the metaphysical foundation of his subject. The metaphysical point of view which he has adopted—or, rather, continued to adopt—is that of the school of idealism, *i.e.*, the school founded by Kant, and developed by Hegel, Green, and others—which, to some, may be a stumbling-stone. It is a mistake, by the way, to continue to speak of Dewey's "Outlines of a Critical Theory of Ethics" and Muirhead's "Elements of Ethics" as books very recently published. They must be at least six years old. There can be no doubt that the manual has been considerably improved in many ways, and that without in any way spoiling the charm of manner in which it was first written. Most of the alterations occur in the early part of the book, and a great deal of new material has been added, on the development of the moral life and the moral judgment. Instead of the last two chapters, on the relation of art to ethics and of ethics to religion, we are now given one on ethics and metaphysics, the references to art being almost entirely omitted. Personally we regret the omission; but probably Professor Mackenzie has acted on good advice. We note, too, that the table of contents has been very much abridged, which seems a pity. We think we have now indicated all the most noticeable changes in the book. We cannot, of course, go again into a discussion of its subject-matter and method of treatment, but will content ourselves with saying that, for its size and readableness, we do not know of a better manual of ethics, especially for those who do not desire to go deeply into metaphysics.

Practical Ethics. By Professor H. SIDGWICK. Price 4s. 6d. (Sonnenschein.)

The volume consists of addresses delivered before the London and Cambridge Ethical Societies (of which the Knightsbridge Professor of Moral Philosophy *pars magna fuit*), and essays which serve as practical illustrations of the method and spirit in which the President would wish to see moral questions treated by members of these societies. The work of an ethical society is well summed up in the first address:—"The region in which we are to move I conceive as philosophically a middle region, the place of intermediate ethical generalization, which we are content to conceive in a rough and approximate way, avoiding fundamental controversies as far as we can; while, from a religious point of view, it is a secular but not therefore irreligious region, in which we pursue mundane ends, but yet not in a worldly spirit." In other words, a common ground may be found, on which necessitarians and free-willists, utilitarians and idealists, agnostics and religionists, may meet and profitably discuss the moral problems that face us in our every-day life, and hope to arrive on some general agreement concerning the *axiomata media* of conduct. In this work the teacher has a special interest. In his daily business he has to face and decide points of morality—most of them, it is true, such as Bishop Butler's "plain honest man" will determine rightly, but not a few on which professional authorities differ widely, and which are clearly cases for the casuist. Thanks to Herbart, it is now generally acknowledged that the science of education must derive from ethics no less than from psychology, and Bain's dichotomy is generally discredited. Such problems are only indirectly touched upon in the present volume, but in "The Ethics of Religious Conformity," "Clerical Veracity," and "The Pursuit of Culture," the teacher will find help and guidance. In the first pair of essays Dr. Sidgwick runs a tilt against what, by a euphemism, has been called the economy of truth. The protest comes with double force from a Liberal who himself sympathizes with the views he reprobates in clerics, and from a utilitarian who holds that in certain cases dissimulation, and even simulation, are allowable. We would also call attention

to the essay on "Public Morality." Mr. Morley's Romanes lecture on Macchiavelli provoked a whole crop of articles on this moot point of ethics, but neither Mr. Morley himself nor any one of his critics seems to us to have gone so near to the root of the problem or suggested such sound rules of action as Dr. Sidgwick.

(1) *Contributions towards a Bibliography of the Higher Education of Women.* Compiled by a Committee of the Association of Collegiate Alumnae; edited by Mary H. Rollins. (Boston: The Trustees of the Public Library.) (2) *Handbook of Courses open to Women in British, Continental, and Canadian Universities.* Compiled for the Graduate Club of Bryn Mawr Coll., U.S.A., by ISABEL MADDISON, B.Sc., London. (New York: The Macmillan Company.)

These two handbooks, both published in America, deserve a word of commendation, if for nothing more than the considerable amount of labour their compilation has entailed. The Bibliography, as the name implies, has brought together the names of authors of books, articles in periodical literature, papers, addresses, and lectures on the higher education of women in America and Great Britain, with an author index at the end. We miss one or two minor names, but, on the whole, the work has been well done, and such names as that of Dorothea Beale, Emily Davies, Mary Gurney, Emily Shirreff, Maria Grey, Millicent C. Fawcett, are carefully chronicled. Even so recent a book as C. S. Bremner's "Education of Girls and Women" is not omitted.

The "Handbook" of Universities open to women is also convenient and useful. It would require a minute knowledge of Universities and their attitude towards women to afford an adequate criticism; the *Journal* reviewer therefore confines his attention to Great Britain. The information chiefly covers the privileges given to women at the different Universities, College fees, lists of University professors and lecturers, and College lecturers, age of admission for students, number of women students, and the prizes and scholarships obtainable by them. One would like to inquire what system has been adopted for the arrangement. To most people who are acquainted with the history of British Universities, Cambridge, Oxford, London suggests itself as a natural order, simply because ancient Universities take precedence, and because London has done so much for women. Miss Maddison proceeds: Cambridge, *Durham* (only opened in 1895), London, and relegates Oxford to a back place. Surely the arrangement is not merely alphabetical. Miss Maddison also gives Dundee College a most prominent place in the Scottish section, but no place at all to similar Colleges in England, such as Mason College, Firth College, Bristol College, and many others. Still, this book is useful. There are interesting details about foreign Universities, and Miss Maddison wisely gives these, even when, as in Germany, Universities are closed to women.

Allegories. By FREDERIC W. FARRAR, Dean of Canterbury. (Longmans.)

An allegory, so the dictionaries tell us, is a prolonged metaphor, a story or representation in which some meaning or moral is conveyed under a totally different aspect. Judged by this canon, these are not allegories, but moral tales. The scene, it is true, is laid in the Purple Island, and the time is a past that never was present, salamanders and other wild fowl are introduced; but the fiction is surface deep, and we are conscious throughout that the writer's first object is to preach and teach; that he is not describing a vision of fairy lands forlorn, of knights and dragons, witches and warlocks, enchanted maidens and errant princes, but representing the temptations and trials of an English youth in the last decade of the nineteenth century. To give a single instance, the first allegory is a variation of the "Tannhäuser" saga, and that Aner, the Prince Fortunatus of the Purple Island, should receive an intimation from the secretaries of his various clubs that he had been expelled at a special meeting of the committee seems to us a wanton disillusionment which brings us back from fairy-land to Piccadilly. But we dare say we are hypercritical, and Bunyan's contemporaries may have likewise objected in his immortal work to the introduction of Bedfordshire tinkers and dissenting parsons. However that may be, Dean Farrar resembles one of his characters, of whom we read: "When Fidelis begins to quote the poets, he pours them upon us in a cataract." We ourselves confess to an old-fashioned liking for an apt quotation, but we may reasonably doubt whether the thirteen grandchildren to whom the book is dedicated will be able to construe the numerous lines from Dante, let alone the Latin, Greek, French, and German. "In deiner eigener Brust" is an obvious misprint, and "He must be Stronger than thee" a case of Homer nodding. As a Sunday story book, we can heartily recommend the volume, but not as allegories in the strict sense of the word.

A Dictionary of the French and English Languages. By F. E. A. GASC. (George Bell.)

We welcome a new and revised edition of Gasc's popular dictionary, first published in its complete form in 1877. We gladly endorse the *réclame* of the preface that it can compare favourably with any existing French and English dictionary, though as a matter of taste we think the remark would come with better grace from the critics than from the author. We welcome none the less this opportunity of testifying that

we have made daily use of the 1895 edition since it was published, and rarely found it fail us. There is still room for improvement, and we offer one or two suggestions for the next edition. Space might be gained by cutting out half of various equivalents given under common words, and this space utilized to add brief examples of their uses. Thus under *faire* we find a bare list of some hundred and fifty meanings: "to draw up; to coin; to build; to raise; to lay" (we give one line as a sample), and under *piquer*: "to bite; to gnaw; to eat; to blow; to cut." This *enumeratio simplex* is almost worthless. The prepositional constructions with verbs and adjectives should be indicated. Among the neologisms added we note *fin de siècle*, but the meanings attached are very wide of the mark—"hackneyed, trite, obsolescent, uncouth." To us it conveys rather the notion of "in the latest fashion, super-refined, the efflorescence of decay."

Aucassin and Nicolette. Edited and translated by F. W. Bourdillon. (Macmillan.)

Mr. Bourdillon has entirely recast his admirable translation, which first appeared in 1877, the same year as Mr. Andrew Lang's. With such a version, the happy mean between the lifeless transcript and the lively paraphrase, and a full glossary, the study of Old French becomes a luxurious pursuit. It is easy, as Mr. Lang has done, "to work up the old writer's materials with an admixture of modern sentiment and poetic phrase into a set of pretty little poems, savouring much of the nineteenth century"; to give at once the letter and the spirit of the thirteenth century is a Rachel courtship, a seven years' labour of love. Mr. Bourdillon has wooed and won.

Williams & Norgate's *French Catalogue* is a pamphlet of a hundred pages, price 3d., in which we advise not only teachers of French but readers of modern French literature to invest. We have ourselves again and again wanted to see at a glance what some favourite author—Cherbuliez, Anatole France, Coppée, Mérimée—has written, and in what form and at what price it may be procured; or again what of Tolstoi, Tourgueneff has been translated into French. To turn to the London Library catalogue with its numerous supplements is a nuisance, and there the price is not given. Here we have our heart's desire.

"Heath's Modern Language Series."—(1) *Volkmann's Kleine Geschichten*. (2) *Baumbach's Die Nonna*. Edited by Dr. W. Bernhardt. (3) *German Selections for Sight Translation*. Compiled by G. F. Mondan. (Isbister & Co.)

Volkmann, better known under his pseudonym "Leander," is a charming writer, and "The Two Watch-hands" and "The Lumber-Room," here chosen, are among his prettiest tales. We have in the same volume Baumbach's "Seven-League Boots," and a legend by Emil Ezil, an Austrian writer new to us. The four tales make an excellent Reader for pupils who have passed the first stage. "Die Nonna," a humorous story, is a stage more advanced, and the text is hardly long enough for a term's work with a higher class. Both books are fully annotated and provided with vocabularies. Herr Bernhardt is not great as a translator of poetry. For—

"And if a girl should ask this
No words to tell I'd need;
Just an embrace, a kiss,
Affectionate and sweet"—

we would suggest—

"And if a maiden fails to grasp
The story, she would scarcely miss
My meaning might I only clasp
Her tight and give her just one kiss."

Miss Mondan has given us forty-nine sight-passages, averaging about twenty lines, chosen mostly from contemporary writers, and in difficulty up to Senior Locals standard. The price is 9d., and teachers who have used up the usual "unseen" books will be glad of substitutes. The selection seems to us judicious.

Der Schwiegersohn. By RUDOLF BAUMBACH. Edited by Dr. WILHELM BERNHARDT. (Isbister.)

A story of German mercantile life of thirty years ago, interesting in itself, and not too difficult. Short explanatory notes are given, and an introduction sets forth the *motif* of Baumbach's story.

(1) *First Year in German*. By I. KELLER. (American Book Company.) (2) *A Second German Course*. By H. BAUMANN. (Blackie.)

The author of the "First Year in German" claims to combine the "natural" method with the purely grammatical method. That is to say, each lesson begins with a piece of continuous prose, and on this oral and written practice are built up, and the accidence is introduced, systematically. The book is quite easy enough for young beginners, and seems to us to be based on a very sound idea. Several supplementary reading pieces are introduced, and the lessons include the whole of the accidence. Mr. Baumann's book is intended to be a continuation to Lechner's "First German Course." The elementary accidence is summarized, and full explanations are given of prepositions, separable verbs, subjunctive mood, &c. The grammar section is continuous.

This is followed by the Reader; while the third section gives retranslation exercises. A vocabulary makes the book complete.

Biblical Quotations in Old English Prose Writers. By ALBERT S. COOK. (Price 17s. net. Macmillan.)

This collection will interest mainly the student of Early English, but the Biblical scholar and all who take any interest in the more subtle problems of literature and language will find their account in it. The text is taken from the best printed editions, and Professor Cook has wisely abstained from emendation, altering only punctuation, capitals, &c., for the sake of uniformity. At the bottom of the page we have the Vulgate or other Latin original. There is a full index of the Biblical passages and one of the principal words. The introduction is described by the author as a pioneer effort to give a sketch of the prose literature from the seventh to the tenth century, and it is certainly far fuller and more adequate than any with which we are acquainted.

"The Children's Study."—(1) *Old Tales from Greece*. By ALICE ZIMMERN. (6¼ × 4 in., pp. xiii., 296. T. Fisher Unwin.) (2) *France*. By MARY C. ROWSELL. (6¼ × 4 in., pp. vii., 362. T. Fisher Unwin.)

These prettily bound and prettily printed little volumes belong to a series of books of which we have already noticed several. Miss Zimmern had more than one serious rival in the field before her. There are Professor C. Witt's "Myths of Hellas" and his "Trojan War" and "Wanderings of Ulysses"; Sir George Cox's "Tales of Ancient Greece"; and Kingsley's "Heroes." But Sir George Cox's versions of the stories, though very pretty and interesting, and in the main very suitable to children, are marred by his constant desire to see nature myths in everything; while Kingsley's tales have almost as much of Kingsley in them as of ancient Greece. Miss Zimmern's only serious rival is Professor Witt. In order to give her book a special character of its own, she has taken each of her tales directly from some Greek author, usually a poet, and has restricted herself to abridgment or, when necessary, omission. So that, she hopes, the children who read her book will not have anything to unlearn when they grow up. But that must, of course, depend upon which Greek versions of the tales she chooses. On the whole we think she has chosen her versions wisely, though here and there a tale or an episode strikes us as somewhat meagre and dry. Whether it would not have been a better plan to collate all the best Greek versions of each tale, and so to produce something less marked by one author's idiosyncrasies, is a question we shall not discuss here. Miss Zimmern has chosen her own lines, and on those lines she has given us a good book. Her selection of tales is satisfactory; and she writes with simplicity and directness. She gives us fewer tales than Sir George Cox, and more than Professor Witt. Whether it is well in a book of this kind to retain the story of Edipus, shorn of the Jocasta episode, rather than to omit the story altogether, we are doubtful; but we are quite sure that it is well to omit Medea's revenge from the story of Jason, and to end with the return of the Argonauts to Iolcus. We heartily recommend this little book to our readers.

Miss Rowsell has given us a small "History of France," which in most respects is satisfactory, though here and there not quite up to date, and here and there somewhat carelessly written. On page 2 we have the startling statement that "the rivers of France are very long, winding and crossing each other in all directions." On page 8 we are told that "the Germans call themselves *Deutschlanders*," which also is disconcerting. But we will not harp upon small blemishes. The book is certainly pleasantly written, and on the whole well informed. But what small children—and it is evidently written for children under twelve years of age—will have time to study the history of France we do not know. We wish the thing were possible even for older children; but it could only be managed, we fear, by omitting something else of greater value.

UNIVERSITIES AND SCHOOLS.

CAMBRIDGE.

The University has this month lost two men of eminence, each of whom had won in no ordinary fashion its affectionate esteem. Dr. W. F. Moulton was in status but an honorary M.A. among us, and so had no voice in the councils of the University; but as "a great scholar, a great saint," in the words of Canon Gore from St. Mary's pulpit; as the colleague and friend of Lightfoot, Westcott, and Hort, among the revisers of the Bible; and, lastly, as the head, and indeed the founder, of the Leys School, he exerted a wide influence among many classes of University men.

Bishop Selwyn, who died at Pau, whither he had recently gone in the hope of recovering from a serious illness, was universally loved and honoured, and did much to make Selwyn a college in more than name. The son of the Bishop of Lichfield who was first Bishop of New Zealand,

an Eton man, a University "stroke" in 1864, and a missionary bishop who had sacrificed his health for his work, he united many claims to honourable regard. But his fine personal character, his perfect "straightness," his hearty interest in all that was manly and Christian, excited a warmer admiration. The loss of his services to the institution over which he presided is of the gravest.

A Cambridge anthropological expedition to Torres Straits and Borneo starts next month. It consists of Dr. Haddon, of Christ's, Dr. McDougall and Dr. Rivers, of St. John's, Dr. Seligmann and Dr. Myers, of Caius, Mr. Wilkin, of King's, and Mr. S. H. Ray, a London schoolmaster famed for his knowledge of the Polynesian languages. The language, ethnology, physiology, psychology, decorative art, and music of the natives will be studied by experts in each branch, and it is reported the phonograph and the cinematograph will be used to obtain records of savage songs and dances. By the aid of grants from the University, and from various scientific societies, the expedition has been handsomely equipped with apparatus, and great results are expected. The department of anthropology founded by Professor MacAlister is only in its vigorous youth, but this important outcome of the interest in the study of mankind it has already stirred up promises well for its future.

Mr. Skeat, Magistrate of Perak, and son of the Professor of Anglo-Saxon, has presented to the University a very fine collection of models, tools, weapons, and other objects illustrative of the native arts and crafts of the Malays and their wild neighbours of Selangor. The native-made models of houses, boats, looms, &c., produced under Mr. Skeat's supervision, are exceptionally beautiful and instructive. No more important addition has ever been made to the Museum of Ethnology.

Dean Charteris, Professor of Biblical Criticism in the University of Edinburgh, and Dr. Muir, the incumbent of Glasgow Cathedral, have been preaching to large University audiences at St. Columba's Presbyterian Church, which is rapidly becoming a rival to the University Church with those who affect good sermons. Canon Gore's late remarkable discourse on the need for immediate reforms of a democratic kind in the Church of England, and his strong recommendation of the polity of the Church of Scotland as a model to be imitated, have stimulated interest in the Scottish outpost that has lately been planted in Cambridge, and is soon to be reinforced by the opening of Westminster College.

The Seeley Memorial Committee report that sufficient funds have not been collected to found a "Seeley Studentship," so that they propose to establish a Seeley Medal for a historical dissertation on some point of international policy, and to invest the balance for the benefit of the library of the History School.

The General Board of Studies, having apparently surveyed the probable candidates for the Professorship of Surgery under existing conditions, and found them wanting, has resolved to suspend the office *sine die*, and to transfer its duties to a new Readership in Surgery, with a stipend of £240 a year. As the General Board includes representatives of every branch of study *except* surgery, and as the function of appraising candidates devolves by the statutes on the electors to the chair, who are thus to be barred from acting, the opinion of the Board scarcely carries so much weight as its omniscience might seem to deserve. But, as its proposal will save the University some £60 a year, we may expect that an impoverished Senate will assent, notwithstanding the violence done to constitutional principles.

The Royal Geographical Society have with great liberality agreed to continue their annual grant of £150 towards the stipend of the Lecturer in Geography for a third period of five years. The success of the experiment they have made in introducing this subject of study justifies the Society in thinking that the University might now take it over without extraneous aid; but the state of the University chest has been pleaded with effect, and the only recognition that can at present be offered is the promotion of the Lecturer to the status of a Reader, at the old stipend. Perhaps in five years' time the financial outlook will be brighter, and meanwhile any patron of geographical science who is looking for a good "object" might do worse than endow the new Readership in perpetuity. Benefactors will please note.

The Roman Catholic institution known as St. Edmund's House, which has taken possession of the premises lately erected by Mr. Ayerst for his pupils, has applied for formal recognition as a public hostel. The house owns its buildings and the adjoining land, and the Duke of Norfolk guarantees it an endowment of £5,000. The Council of the Senate report that it has fulfilled the preliminary conditions as to financial resources, suitability, and discipline; and the grace for recognition will accordingly come on for voting next term. The purpose of the House is to provide a residence and suitable ecclesiastical discipline for students intending to become secular priests in the Church of Rome. They will read for honours degrees, attending the ordinary University and college lectures, their special preparation for the priesthood being undertaken afterwards, and probably elsewhere. Except as to stricter supervision and religious exercises, they will apparently differ little from ordinary students. The parallel with Selwyn College is very close, but it remains to be seen whether the Senate will be influenced by logic or by sentiment. Church of England institutions are one thing, in spite of the Tests Act; but Roman

Catholic institutions, based on the same principle of segregation, are quite another—in the minds of some, at least, of the voters with whom the decision will rest.

The Prince Consort Historical Prize is awarded to Mr. J. H. Clapham, King's; the Naden Divinity Studentship to Mr. R. F. Pearce, St. John's; the Balfour Studentship in Zoology (for another year) to Dr. A. Willey; the Chancellor's Classical Medals to Mr. A. W. Mair, Caius, and Mr. G. C. Armstrong, Trinity; the Craven Scholarship to Mr. E. Harrison; the Browne Scholarship and the Members' English Prize to Mr. A. E. A. W. Smyth; the Baltic Scholarship to Mr. J. Toplis, and the Isaac Newton Studentship in Astronomy to Mr. C. Godfrey, all of Trinity. Archdeacon Wilson, St. John's, has been appointed Hulsean Lecturer; Sir A. C. Mackenzie an Elector to the Chair of Music; Sir W. H. Broadbent an Elector to the Downing Professorship of Medicine; Sir J. Sterling an Elector to the Downing Professorship of Law; Lord Walsingham an Elector to the Chair of Zoology; Sir W. H. White an Elector to the Chair of Mechanism; Professor Schäfer an Elector to the Chair of Physiology; Lord Lister an Elector to the Chair of Surgery; and Mr. W. D. Niven an Elector to the Plumian Professorship of Astronomy. Professor E. V. Arnold, of Bangor, and Mr. S. Schechter, the discoverer of the Hebrew text of Ecclesiasticus, have been approved for the degree of Doctor of Letters. Dr. Routh has been elected a Governor of Dulwich College, and Canon Childe a member of Council of the Ladies' College, Cheltenham. A junior Fellowship at Christ's College has been awarded to Mr. J. Graham Kerr, who has made his name as an intrepid explorer and naturalist in the wild parts of South America.

LONDON.

ONE is struck by the success in some of the recent class-lists of that meritorious but often despised individual the "private student." At the January Matriculation, out of eighteen successful candidates, no fewer than eleven are credited with private study as their only training, and of these John H. Woods is disqualified by age for the second exhibition of £20 for two years, Jas. Strachan is disqualified by age for the first prize of £10, Rd. Pendlebury and Alf. F. Page are similarly debarred from taking the second prize of £5; but Albert M. Smith takes the third prize of £5, while Fras. W. Harvey, Wm. M. Carey, and Geo. E. Crawford are all disqualified by age from taking it. The private student can clearly hold his own with the picked pupils of the best grammar and other schools. The first exhibition, of £30 for two years, was won by Frank Slator, of Burton Grammar School; the second, of £20, by Thos. Beacall, of the Merchant Venturers' Technical College, Bristol, which has distinguished itself more than once of late; the fourth exhibition, of £15 for two years, was gained by Jno. W. E. Sommer, of Rydal Mount, Colwyn Bay. Chas. R. B. Lane, of Plymouth and Mannamend College, took the first prize of £10, and Geo. H. Delf, of Camberwell Grammar School, the second prize, of £5.

The same success of the private student is seen in the Laws lists. At the LL.D. John Davies Williams gained the Gold Medal by "private study" only. It is an open secret that correspondence tuition is invariably thus described by the University, and doubtless in the higher examinations, where only a small percentage of the students' work can be reviewed by that method, there is not much unfairness in the appellation. Leon Bottomley, Wm. H. Hibbert, both private study; J. Montague Newnham, B.A., King's College and private study; and Stephen Miall, B.Sc., private study and tuition, were the other successful candidates at LL.D.

At the Intermediate Examination in Laws, Jos. H. Kemp, private study and King's College, took Second Class Honours, and Edith Temple Orme, private tuition, took Third Class Honours, both in Jurisprudence and Roman Law. At LL.B. Honours in Common Law and Equity, Wm. A. S. San Garde, private study, won the Scholarship; Rob. W. Aske, W. Grey Hart, Ed. C. Robinson, M.A., all by private study; and David T. Oliver, Middle Temple, took a First Class; Wm. H. Owen and Luther H. Pratt, both private study, obtained a Second Class; and Reg. J. Wickham Hurd, private study, and W. Tapper Jured, M.A., Middle Temple and private study, a Third Class in Honours.

I regret to report a great decline in Classical Honours at the late B.A. Examinations: only four candidates entered, of whom one only passed, taking a Third Class—Beatrice Rickwood from Bedford College.

This is terribly poor compared with the 1896 record, when fifteen came up for Honours in Classics, of whom twelve passed, two from private study only, Third Class, and two gained a First and five a Second Class.

Similarly at the B.A. and B.Sc. conjoint examination for Honours in Mathematics, in 1897 two candidates only came up, and both passed, E. R. Darnly, B.Sc., from Trinity College, Cambridge, took the scholarship, and J. E. Boyt, B.Sc., from St. John's College, Cambridge, took a Second Class. This is what the advocates of the "Teaching University" style "branding other people's herrings." In 1896 five candidates took Honours out of seven, Cambridge again

carrying off the scholarship, though a University College man also qualified. Do these figures show any tendency or do they simply mark a year with a chance dearth of good candidates?

Your readers may remember that last July all the fourteen candidates for Honours in Botany at Intermediate Science failed. Looking with interest for the result at B.Sc. Honours, we find again that none of the five candidates are recommended for Honours. Now this would seem a serious matter, therefore let us ask how did our botanists fare in 1896, when the same examiners, Professors Reynolds, Green, and Trail, were in office. The ominous facts are that at B.Sc. out of seven entries one only got a place and that a Second-Class; at Intermediate, the ruthless examiners had a fine field of eighteen starters, of whom one would have taken Honours but did not owing to failure in the pass examination. Thus we note, in 1896, twenty-five entries and one class awarded; in 1897, the entries down (naturally) to nineteen and not a single success! Will any one be bold enough to come up for Honours in Botany in 1898? Where are the moderators?

In Mental and Moral Science at B.A., 4 took Honours out of 6, and Beatrice Edgell gained a First with a view to D.Lit.; in French, 6 out of 8, in English, 18 out of 21 passed; two came up but failed to take a First Class with a view to D.Lit.

In Experimental Physics at B.Sc. 14 took Honours out of 20, and Mr. C. W. C. Barlow took a First for D.Sc. purposes. In Zoology 4 out of 6 succeeded, and a lady from the Edinburgh School of Medicine gained a First with a view to D.Sc.

In Physiology 1, a Cambridge man, passed out of 4. At M.B. 11 took Honours in Medicine out of 46, 12 out of 46 in Obstetric Medicine, and 17 out of 29 in Forensic Medicine.

At the B.A. Pass Examination 154 passed out of a total of 378, as against 184 out of 388 in 1896.

The most formidable subjects, in order, were Mental and Moral Science, Greek, Pure Mathematics, English, and Latin. The greater severity of standard in Greek seems marked; the same applies to English. History shows the opposite tendency, and Mixed Mathematics is now far simpler than of yore. In French and German there are few failures. 136 of the candidates were women, of whom 71 passed, 14 in the First Division.

London University has lost two very distinguished graduates within one week: Dr. Samuel Newth and Dr. William F. Moulton; and their loss to Nonconformity will be, specially in the latter case, almost irreparable.

Dr. Newth was one of London's earliest students; he passed the second Matriculation Examination held, and took Mathematical Honours at B.A. in 1841 from University College, whence Isaac Todhunter followed him the next year. He there had the advantage of Professor De Morgan's training. The M.A. was taken in 1842. Dr. Newth produced the well-known handbook on Natural Philosophy that for so many years was the recognized book for Matriculation, ere these latter days were thought of, when some dozen text books on mechanics pour from the press yearly. Dr. Newth was an assistant-examiner in the University for some time. At New College, London, he eventually became Principal. He was an ardent teacher and delighted in his work so long as his pupils followed him: to the dull or idle he was an object of wholesome awe, but he took the kindest and most sympathetic interest in his students. He was an active member of the New Testament Revision Committee.

Dr. Moulton was a member of one of our most brilliant Nonconformist families. His ripe scholarship and erudition had a wide reputation in the world as well as within the Wesleyan Methodist Church. He matriculated in 1851, took Honours in Mathematics at B.A. in 1854, and in 1856, at the age of twenty-one, gained the gold medal at M.A. for Mathematics and Philosophy. He also carried off the University prizes for Hebrew, Greek, and Christian Evidence. His great knowledge of Biblical Greek enabled him to give valuable assistance in the production of the Revised Version, and he prepared the marginal references of the New Testament. He was the first Principal of the Leys School at Cambridge, a higher-class public school, chiefly intended for Wesleyans, but the unsectarian character of its teaching and its brilliant academic successes attracted members from all the Evangelical Churches.

On February 28 Sir Charles Dilke will ask Mr. Balfour in the Commons whether the new London University Bill will be substantially the same as the last, and whether amendments can be inserted to secure the examination of candidates by independent authorities.

UNIVERSITY COLLEGE, LONDON.

The annual general meeting of the members (Fellows, Governors, and Life Governors) was held on February 23, in the Botanical Theatre. The Right Hon. Lord Reay, G.C.S.I., was re-elected President, Mr. R. B. Haldane, Q.C., M.P., Vice-President, and Mr. J. F. Rotton, M.A., LL.B., Q.C., Treasurer. There were eight vacancies on the Council: six of these were filled by the re-election of Dr. J. Bourne Benson, Mr. H. Lucas, Sir John Williams, Mr. Sydney Webb, and Professor Carey Foster; the two remaining by the election of Sir J. Blundell Maple, Bart., and Professor R. J. Godlee.

The following former students were elected Fellows

—Mr. C. N. G. Filon, B.A., Lecturer in Mathematics in the College, Mr. B. W. Henderson, Tutor of Merton College, Oxford, Mr. E. Denison Ross, Professor of Persian in the College, Miss M. Benson, D.Sc., Mr. D. K. Morris, Ph.D., Mr. H. M. Richards, M.D., B.S., Mr. W. M. Stevens, M.D. Lond., Mr. B. A. Whitelegge, M.D., B.Sc.

The following former students were admitted life governors:—Rt. Hon. W. C. Gully, Q.C., M.P., Sir G. Faudel-Phillips, Bart., Edwin Waterhouse, B.A., F.C.A. The following were also admitted life governors:—the Duke of York, the Duke of Bedford, the Lord Mayor of London, Mr. M. E. Sadler, Professor James Sully, Lady Russell Reynolds, Mrs. Berkeley Hill.

The report of the Council showed that the number of students last session was 1,451, and that the efficiency of the College had been thoroughly maintained, confirmation of that being given by the eminently favourable report on the College by the Treasury Commission.

In addition to the new trust funds named in our last report, the Council has received £1,000 from the Chadwick Trustees for apparatus in the Hygiene and Engineering departments, also a third part of the residuary estate (about £5,000) of the late Sir J. C. Bucknell, Fellow of the College, for the endowment of a medical scholarship. A new Lectureship in Indian Law has been established, to which Mr. Romesh C. Dutt, C.I.E., has been appointed. Professor Charlton Bastian has resigned the Chair of Clinical Medicine and his physiciancy to the Hospital, after thirty years of service.

The Library Catalogue has been completed and printed: a catalogue of accessions for 1897 is in preparation. The Library, which contains the valuable collections of the Barlow Dante, Grant Literary, Quain Law, Fine Art, will thus be made much more useful to all students. The Hospital has received an endowment of £2,000 from a former student, the late Brigade-Surgeon-Lieutenant-Colonel R. C. Chandra; the report also referred to the handsome sum of £1,020, subscribed and collected for the Hospital last session by the students of the College and Hospital and by the nurses. The Council's report called attention to the new athletic ground at Acton, and the generous gift of the plans for the pavilion by Messrs. Roger Smith, also to the successful inauguration of "Foundation Week" last July.

The President, in moving the adoption of the report, pointed out the many signs of healthy vitality in the College, and expressed the hope that the University of London Bill would this session become an Act.

Since our last report, several important functions have been held:—The Union dance on January 31 was a great success; there were about 360 present, including students of all faculties and departments, as well as many members of the professional and assistant staff; the Debating Society has had several good meetings, to which we must add a very convivial smoking concert, at which the powers of members were shown in other ways than that of making speeches; the festival dinner of the Hospital was held on February 2 under the chairmanship of the Duke of Bedford, and subscriptions reaching nearly £3,000 were announced.

The Pavilion has been begun at Acton, all but £100 of the equipment fund having been subscribed. The Secretary of the Union will be glad to receive subscriptions from former students.

The London Inter-Collegiate Debate will this year be held at the College on Tuesday, March 8, at 7.30 p.m., the subject being "That Trades Unionism is a necessary safeguard to the interests of Labour." Professor Augustine Birrell, Q.C., M.P., will take the chair.

The annual dinner of the Old Students' Association will be held at the College, on Wednesday, March 16, at 7.30, Professor S. Ringer in the chair. Tickets from G. A. Aitken, 12 Hornton Street, Kensington.

WALES.

A special meeting of the Central Welsh Intermediate Education Board was held at Llandrindod on Friday, February 18, in the new buildings of the local intermediate schools, under the presidency of Mr. A. C. Humphreys-Owen, M.P. A letter was read from the Charity Commission, stating that they had reported to the Treasury in the case of all the schools inspected that the conditions required for the payment of the grant had been fulfilled. In two schools, however, the examination results had been so poor that a warning was given that unless there was an improvement in the results of the next examination the full grant would not be paid. The managers of the Neath School, who had not complied with the directions in the Glamorganshire scheme for the appointment of assistant masters and mistresses, were also informed that any further breach of these regulations would lead to a reduction in the grant.

The question of modern *versus* ancient languages arose when the draft general regulations of 1898 came under discussion. One of the teachers complained that it was possible for a lad to secure three thousand marks for Latin and Greek, but only fifteen hundred for French and German. Some speakers feared the tendency in the schools was to neglect modern languages in favour of classics. No resolution was adopted, and the matter will probably be dealt with by the Executive.

Much time was taken up in discussing the draft regulations for the certificates which the Board proposes to issue. These were of four kinds: (1) junior certificates, (2) commercial certificates, (3) senior certificates, (4) honours certificates. The opinion was generally expressed that the time was not ripe to decide on the matter, and eventually it was resolved: "That the certificate examinations be not held in 1898, and that the Executive Committee be requested to redraft the regulations; to circulate them among the county governing bodies, headmasters, and headmistresses for their consideration and criticism; and to submit the amended draft for the consideration of the Board at their autumn meeting. It was further decided that the Executive Committee should arrange for conferences of headmasters and headmistresses and members of governing bodies, to discuss the best methods of teaching modern languages. The first conference will take place at Carmarthen. The Chief Inspector's offices were fixed at Cardiff for the next three years. The ordinary half-yearly meeting of the Board will be held at Rhyl in April. During the visit of the members of the Board to Llandrindod they were entertained by the Urban District Council.

SCOTLAND.

Principal Geddes proposes to draw the attention of Aberdeen University Court to the present position of Professor Johnston's case, and to move a resolution in regard to it. If the learned Principal has concocted a means of putting an end to a perfectly ridiculous state of affairs, he deserves well of his country. At a recent meeting of the Students' Representative Council of Aberdeen University, attention was drawn to the movement for cultivating relations with foreign Universities, and a committee was appointed to co-operate with others interested in the matter. A sum of £250 has been presented to Aberdeen University to endow a medal commemorative of Dr. David Rennet, the well-known mathematical coach. The medal will be awarded annually to the student of either sex who, having, in the examination for the degree of M.A. with honours in the department of mathematics and natural philosophy, reached the standard necessary for First Class Honours, has gained the highest marks in the papers devoted solely to problems.

The gown has been made compulsory for art students at King's College, Old Aberdeen. An anonymous well-wisher has promised £10,000 for Aberdeen University Extension Scheme if the Government will give £20,000; £5,000 if the Government will give £10,000. But he makes it a condition that Grey Friars' Church, which stands within the quadrangle, shall be retained, and this condition may be hard to meet, since the original scheme, for which public moneys were given, involved the removal of the church. Of course the Town Council may consent to allow the building to remain. In that case there would be some ground for hoping for the completion of the Extension Scheme, which is, meantime, in a parlous state.

The Senatus Academicus of Edinburgh University has placed on record its sense of the value to the University of the services rendered by Dr. Rowand Anderson during a long period of years as architect of the University New Buildings. The Muir Hall of Residence, which has been erected in George Square, Edinburgh, for the use of women medical students attending the University, was opened with appropriate ceremony by the Duchess of Buccleuch. With Masson Hall, Muir Hall, and Crudelin's House, the women students are fairly well provided for.

The statement has been repeated that Principal Caird is about to retire, and it has been authoritatively contradicted.

Dr. Michael Foster has been appointed Gifford Lecturer at Glasgow in succession to Professor Bruce. We wonder what Lord Gifford would think if he were permitted to hear some of the lectures given under his bequest for the furtherance of investigation into the grounds of religious belief. We question whether he would regard a lecture on the Book of Job delivered on a Sunday as part of a religious service as the kind of lecture he left his money to procure.

Professor Simpson is about to resign the Chair of Forensic Medicine in Glasgow University; the state of his health has prompted him to this step. It is proposed to take advantage of the vacancy to found a separate Chair of Public Health. There is a general feeling that medical jurisprudence is not a subject of the first importance, and that it is a waste of money to give £600 a year for fifty lectures on the subjects dealt with. An Act of Parliament would be required before the proposed change could be carried out, and funds would be necessary to put the Chair of Public Health on a proper basis.

It is significant that the secondary school teachers have begun to press for the training of those destined for secondary school work.

The Education Department has met the complaints about a deficiency of trained teachers by raising the number of students in training by two hundred. This should make a substantial difference, although its effect will not be felt for some little time. The Education Department having taken over the administration of the grants for science and art instruction, Glasgow School Board has agreed to submit the following recommendation to the Department:—" (1) That the Leaving Certificate Examination be extended so as to include those subjects in the syllabus of the Science and Art Department which are necessary to form a combined curriculum of general and

scientific subjects, such as the subjects referred to in the regulations of the Science and Art Department for schools of science. (2) That managers be free to submit curricula suited to the requirements of their districts. (3) That during the first two years of the secondary course teachers be free to take up such elementary science subjects as would prepare for higher classes, in accordance with a syllabus to be submitted by the teacher to the Department at the beginning of the school year. (4) That the results of these elementary classes be judged chiefly by inspection of the school and of the general methods and appliances. (5) That during the last two years of the course the results may be tested by written examinations as at present in the Leaving Certificate and Science and Art Examinations. In schools or departments with a curriculum in which science predominates, the standard of examination in the literary and language subjects other than English should not be beyond that of the Lower Grade Certificate, and in the science subjects not beyond that of the Advanced Stage of the present Science and Art Department Examinations; and (6) That the Government grant for the higher departments of schools organized on these lines should be sufficient to include the ordinary Government grant at present paid, and such an amount as will be sufficient for the encouragement of the science classes—say, from £3 per scholar in the earlier years of the curriculum to £6 in the higher classes."

The Professors of History are doing their best to have their subject recognized as one that should be taught in schools. Professor Prothero, Edinburgh University, is the latest exponent of the value of history as a factor in the education of children; but teachers are not disposed to be convinced. They say that history as it *might* be taught and history as it *must* be taught are very different.

Mr. Carnegie, the perpetual benefactor, has given £10,000, instead of £7,000, for a technical school in Dunfermline.

At a meeting of representatives of the largest Scottish School Boards it was agreed to urge that children should be obliged to attend school till they have passed the sixth standard or have reached thirteen years of age. Some would prefer to retain the children till they are fourteen years of age, and to say nothing about standards. But the educationists are not having it all their own way. Some prominent newspapers object to further compulsion, and call on teachers to make better use of the time during which scholars are under instruction. This is foolish talk. Three years of idling about the streets is sufficient to undo a great deal of what school can do for young people.

The trustees of the William Anderson Trust, Elgin, finding a deficiency of male applicants for their University bursaries, have applied for power to give bursaries to women.

The complaint of the teacher is loud in the land. He complains of small salary, slow promotion, over-pressure, and unsafe tenure. The complaints have attracted the notice of the members of other professions, who relate their hardships, and tell him to be quiet in the face of their misery. But the teachers, not to be daunted, and the assistants in particular, are pressing their claims with unwearied pertinacity.

Lord Balfour's speech in Glasgow did not give complete satisfaction. His assurance that the general position and arrangements of a school devoted to science and art would be tested by the higher inspectors of the ordinary schools was well received; so also was the expression of his desire to foster organized science schools alongside of the ordinary secondary schools. But when he came to speak of the organization of education he was particularly vague. He deplored the lack of co-operation among the different educational authorities, and the consequent waste of money, but he did not suggest how he proposed to meet the situation, by creating one controlling body or more. Some people are particularly anxious to know his mind in this matter.

The Educational Institute has prepared a most damaging criticism of the past operations of the Science and Art Department, and is resolved to leave the Education Department under no misapprehension as to the reforms necessary in the sphere it has just entered.

ASSOCIATION OF TEACHERS IN THE SECONDARY SCHOOLS OF SCOTLAND.

[By a resolution of the Association, at the Annual Meeting on November 23, 1895, the "Journal of Education" was adopted as the medium of communication among members of the Association.]

A meeting of the Aberdeen Branch was held in the Grammar School, for which the local committee had secured the services of Dr. Hugh R. Mill, Librarian to the Royal Geographical Society. Dr. Mill lectured on "Geography in Education." There was a large attendance, about three hundred being present.

The Aberdeen Branch is at present in a very active and healthy state, owing greatly to the continued energy of the secretary. An increase of ten in the membership is intimated. An "at home," which was also highly successful, was held in the Girls' High School, Aberdeen, on February 4.

EDINBURGH AND ST. ANDREWS BRANCH.—A meeting of this branch was held on February 19, at which a paper was read by Professor Hardie, Edinburgh University, on "The Transition from School to

University in England and Scotland." The lecturer said that he was purposely to put forward the best arguments he could in favour of the English Universities of Oxford and Cambridge. He argued in favour of more specialization in Scotch schools than there was. He had found that the ideas in Scotland of the Southern Universities diverged considerably from what was actually the case. He combated the notion that at the Universities of the South more time was given to athletics than to study. In fact, Scotland compared unfavourably in this respect, because there physical training and exercise were mostly taken advantage of by those who did not require it. Also, the English Universities were not nearly so expensive as they were represented to be. He calculated that, leaving out railway expenses, each year need not prove more costly than £120. Professor Hardie also maintained that, although Scottish critics claimed that their Universities were more on democratic lines, they were not so in all respects. The difference of station and wealth were aggravated by the non-collegiate system. In Oxford wealthy and poor students lived on the same landing, to their mutual advantage. After Dr. Marshall, of the Edinburgh High School, and Mr. R. J. Mackenzie, of Edinburgh Academy, had spoken, a hearty vote of thanks was awarded to Professor Hardie. Miss Walker, of St. George's High School for Girls, occupied the chair in the absence of Mr. Oliphant, who was ill.

SCHOOLS.

BANGOR COUNTY SCHOOL.—School Prizes: Margaret Owen (Form IV.), Ceridwen Jones (Form IV.), Gwladys Williams, Blodwen Lloyd (Form III.), Netta Jones and Mamie Ambrose Jones (Form II.), Elsie Irving and Sallie Jones (Form Remove). Mathematical Prize, given by Mrs. Thomas Gee, divided between Margaret Owen and Ceridwen Jones. English Prize given by Mr. Gray: Margaret Owen. General Information Prizes: Marjorie Glynn Williams, Myfanwy Williams, Katie E. Jones, Elsie Pritchard. Holiday Botany Prizes: Margaret Gray (Form IV.), Ethel Webster (Form III.), Nell Owen (Form II.), Hilda Glynn Williams. Certificates for Scholarships renewed for third year and internal scholarships awarded for a year: Margaret Owen, Ceridwen Jones, Katie Jones, Bessie Hughes, Myfanwy Williams, Elizabeth Williams, Kate Hughes, Blanche Gill, Gwladys Williams. On Friday, February 11, the first prize distribution at the Bangor County School for Girls was held in the Hall of the new school-house. There was a large audience of parents and others interested in the school. After a programme of singing and recitation by the girls, Mrs. Thomas Gee, daughter of Mr. Henry Tate, who has always been keenly interested in the progress of the school, presented the prizes. The Ven. Archdeacon Pryce made an appropriate speech to the girls, and Miss Mason, the Headmistress, read her report.

JERSEY LADIES' COLLEGE.—The awards in connexion with the examination of the Société Nationale des Professeurs de Français en Angleterre have just been announced. Of the three pupils who entered from the Jersey Ladies' College in competition for the silver medal given to the best French scholar educated in French-speaking countries, Daisy Wynne Bellis is placed second in the list with prize, and A. G. J. Perkins and H. M. Williams *accessits* with prizes of books.

LADIES' COLLEGE, CHELTENHAM.—The following pupils of the Cheltenham Ladies' College have passed the Matriculation Examination of the University of London:—Class I.: Agnes Campbell, Maud Hunter. Class II.: Louise Goodbody, Hester Kerr, and Edith Hibbert Ware, former pupils.

SHREWSBURY HIGH SCHOOL.—In September, 1897, the school removed to the new building, of which the foundation stone was laid on October 10, 1896, but it was not until Wednesday, January 19, 1898, that H.R.H. the Princess Louise formally declared the building to be open. H.R.H., who was accompanied by the Marquis of Lorne and the Duchess of Westminster, was received at the school by Miss Gavin, Miss Gurney, and Mr. W. Bousfield (the latter two representing the Council). The Princess visited some of the class-rooms and the studio, where she was pleased to command that a set of designs by the pupils should be sent for use in a school of design in which she was interested. Luncheon was then served in the dining-room to the Royal party and the town and county magnates. Meanwhile, the girls took their places in the Hall, and the remaining space was filled by visitors invited to the prize giving. Mr. Bousfield, who presided, spoke of the interest H.R.H. had always shown in the education of women and girls, and specially mentioned the part she had taken as Patroness of the Girl's Public Day School Company, and asked her to declare the school open. The Princess pronounced the building to be open, and wished the school success. H.R.H. then distributed the prizes and certificates gained by the pupils in the previous school year. A vote of thanks to H.R.H. was proposed by Lord Powis, and seconded by the Mayor, the Bishop of Shrewsbury supporting the resolution. The Marquis of Lorne replied on behalf of the Princess, thanking all for the hearty reception accorded to her. Among the honours won by the pupils in 1897 may be mentioned the £50 scholarship awarded by the Shropshire County Council, to be held at a place of higher education, and nine other minor scholarships.

PRIZE COMPETITIONS.

The Translation Prize for February is awarded to "Saxon."

The Extra Prizes for February are awarded to "A.D.R." (select candidates) and "Dewdrop" (open competition).

Afin qu'il ne manquât aucun personnage au théâtre, le maréchal de la Meilleraye, qui jusque-là était demeuré très ferme avec moi à représenter la conséquence du tumulte, prit celui du capitain. Il changea tout d'un coup de ton et de sentiment sur ce que le bonhomme Vennes, lieutenant-colonel des gardes, vint dire à la Reine que les bourgeois menaçaient de forcer les gardes. Comme il était tout pétri de bile et de contretemps, il se mit en colère jusqu'à l'empoiement et même jusqu'à la fureur. Il s'écria qu'il fallait périr plutôt que de souffrir cette insolence, et il pressa qu'on lui permit de prendre les gardes, les officiers de la maison et tous les courtisans qui étaient dans les anti-chambres, en assurant qu'il terrasserait toute la canaille. La Reine donna même avec ardeur dans son sens; mais ce sens ne fut appuyé de personne; et vous verrez par l'événement qu'il n'y en a jamais eu de plus réprouvé. Le Chancelier entra dans le cabinet à ce moment. Il était si faible de son naturel qu'il n'y avait jamais dit, jusqu'à cette occasion, aucune parole de vérité; mais en celle-ci la complaisance céda à la peur. Il parla et il parla selon ce que lui dictait ce qu'il avait vu dans les rues. J'observai que le Cardinal parut fort touché de la liberté d'un homme en qui il n'en avait jamais vu. Mais Senneterre, qui entra presque en même temps, effaça en moins d'un rien ces premières idées, en assurant que la chaleur du peuple commençait à se ralentir, que l'on ne prenait point les armes, et que, avec un peu de patience, tout irait bien.

Il n'y a rien de si dangereux que la flatterie dans les conjonctures où celui que l'on flatte peut avoir peur. L'envie qu'il a de ne la pas prendre fait qu'il croit à tout ce qui l'empêche d'y remédier. Ces avis, qui arrivaient de moment à autre, faisaient perdre inutilement ceux dans lesquels on peut dire que le salut de l'État était enfermé.

By "SAXON."

That no rôle might be lacking in this drama, the Marshal de la Meilleraye, who had hitherto steadily sided with me in representing the importance of the outbreak, now began to play the part of swaggerer. He suddenly changed his tone and his way of thinking when the good-natured Vennes, lieutenant-colonel of the guards, came to tell the Queen that the citizens were threatening to break through the guards. Being a man of choleric disposition and possessed by a very demon of contradiction, his anger at this news amounted to rage and even to fury. He cried out that we must die rather than permit this insolence, and urged that he should be allowed to take command of the guards, the officers of the Household, and all the courtiers who were in the ante-chambers, declaring that he would utterly confound all the rascally mob. The Queen entered even with ardour into his view, but this view was supported by no one else, and you will see by the issue that no idea was ever so greatly to be repudiated. The Chancellor entered the room at that moment. He was of so feeble a nature that he had never before this spoken a word of truth; but at this juncture his fear overcame his complaisance. He spoke, and spoke, moreover, as he was impelled by what he had witnessed in the streets. I noticed that the Cardinal seemed much impressed by this freedom of speech on the part of a man in whom he had never before seen such a thing. But Senneterre, who entered almost at the same time, speedily dispelled these first notions, asserting that the excitement of the people was beginning to cool down, that there was no taking up of arms, and that, with a little patience, all would be well. There is nothing so dangerous as flattery on occasions when he who is flattered has cause for fear. His very desire not to be afraid makes him believe everything which prevents him from obviating the need for fear. These tidings, arriving from one instant to another, were the cause that those moments were lost in inaction in which, one may say, the safety of the State was involved.

We classify the 259 versions received as follows:—

First Class.—Acta non Verba, J.J., Saxon, L.M.M., Field ermine, Innis, Careful Martha, C.P., Fortis et fidelis, Arbor Vale, Preterite, Prospero, Clausa Vallis, Gempy, Vierzigler, Tot, Mazarin, W.S.M.

Second Class.—Eicarg, Zeus, Nicotine, Salopian, Beowulf, Teja, El Macbob, I spy, Ekkehard, Cosette, Leod, Meg, Leigh Side, Marie Louise, Rikki-tikki-tavi, Staffa, Chce, Naow, J., Southern Cross, Nazianzen, Ellis, Thorn, Silly Suffolk, Brook, 100,000, Dr. Maclure, Instar Omnium, Craven, W. Bag, Babbling brook, R.F.F., Diff, M.M., Miranda, Polchasa, Borealis, Cheltenham, Dum, K.J.J., Incubus, Chingleput, Chicken cat, E.H.O., Couleur Verte, Petere, Tetsu, Laura, Fabula sed Vera, Kittifornia, Repivoc, Pia Shooter, Yak, Rugly Grangers, Nectarine, A. Griffin, Etoile, Candlelight, Gentian, S.S. (Grey Silurian), W.H.W., Frondeur, Sirack, Fox, A.F.R.,

Marion St. Elmo, Jeanne, Auntie Mi, Italia, Marsac, Hamlet, Swallowtail, Hebe, Mona, Dode, Pawn, Mars, O Mimosa san, Thural goona, H.M.S., No. 41, Fest und treu, Gretchen, Rheda, R.A.H., Hellené, Ganymede, Yeomanry, Minevia, Orange Free State.

Third Class.—P.T.I.S., J.M.A.L., Two hours, Pick-me-up, Rhys, Dark blue, Gitana, Sea Serpent, Scratch, Solidad, Canterbury, Beta, Apathy, Mick, Haste makes Waste, Quand même, Mrs. Gamp, Lacrimam, Stansted, Sally Brown, Don, Rantendelein, Prig, Bloodstone, Inadversis, Leander, Forward, Volo non valeo, Excelsior, Franzeska Luigi, Lavinia, R.B.S., West Central, Bathampton, R.A.F.T., Tourangeau, Gänseblume, B.T.A., Vlaamsche Meisje, M.W., Mask, Romola, Ragout, S.S., M.L.F.B., Fahrtheit, A.D.V., H.K., Buxton, Nihil, La Marguerite, H.M.S., Wake, Dodo, Fenagh, A.F.H., E.S.P., Mulvaney, Kay, B.S.K., A.A.P., Chemineaux, Piano Organ, Dame Durden, Felicia, Nemo, Toby, Nathan, Arcla, Amleto, Pat, R.L.B., Hatasu, E. M. Walsh, R.A.F.B., Nil Desperandum M.F.D., Du Boccage, Asp, Olden, Aeneas, χρυσῶν χαλκεία.

Fourth Class.—Remlaw, T.S.M., Alcestis, Noblesse oblige, E.B.M., Mahquippa, Garde bien, Miss May, G.M.K., Pumpraint, Aurora, Durham, De Retz, Smollett, Eyeglass, Anglo-Dane, A. W. Forden, Larisum, Thelma, Mayde Marianne, Souris Grise, B.F.A.H., Anon, Ober Ammergau, Intriguée, Lily of the Valley, Marmaduke, W.W., S., It, M.L.O., (2 + ωε), Maisie, Amine, Tuff, Poodle, Conatus, Ballasalla, Pittchen, Shena, Zero, Nonyev, Catchedecam, M.N., L.A.G.S., Ἀλὲν ἀπιστεύειν.

Fifth Class.—Reganam, Novice, I.R.O., T.A.S., Lais, Rompo, Seventeen, Dulcinea, First essay, O la! Camp, Dolores, Visca, Sump, Sweep, Cardinal, Tempe, C.A.B., Eton, Note, V.I.S., Ortheris, E.F.B., Violet.

The best commentary on the passage from Retz's "Mémoires" is supplied by Victor Cousin: "Sa narrative est pleine d'agrément; il excelle dans les portraits: . . . il est unique pour la profonde intelligence des partis et la peinture vivante de l'intérieur de chacun d'eux. Il a de la jeunesse, de la vigueur, de l'éclat, et par-dessus tout une parfaite simplicité, une aisance du plus haut ton. Une seule chose lui a manqué, c'est le soin et l'étude. L'art n'a pas achevé son génie: il est négligé, quelquefois même incorrect."

A représenter—"in urging the gravity of the disturbance"; *la conséquence* was commonly confused with *les conséquences*. *Prît celui du capitain*, "assumed the part of Braggadocio"—mistaken by one in three for *capitaine*. *Il changea*, &c.—"When honest Vennes reported to the Queen . . . his whole tone and attitude suddenly changed." *Le bonhomme* is slightly patronising, but "simpleton" is far too strong a word. *L'int* was confused with *venait de*. *Tout pètri de bile et de contretemps*—"a mass of spleen and contradictoriness," "naturally splenetic and cross-grained." This, as many have seen, must be the meaning of *contretemps*, though it is not recognized by the dictionaries, and Masson, in his notes, renders it "inopportune resolutions," but to say of a man that he is "compounded of inopportune resolutions" is hardly sense. *Donna dans son sens*—"supported his view." *Réprouvé*—"reprobate" or "damnable," a theological word. *Peut avoir peur*—"not 'can be afraid,' but 'is liable to panic.'" *L'envie de*—"His anxiety to save his nerves inclines him to believe anything that will save him from taking active measures"; *la* refers to *peur*, not to *flatterie*, and *y* is loosely used for things in general, the situation. The prize version here leaves much to be desired. *Avis* is a difficult word, including, as it does, both the news and the comments on the news; "reports" may serve. *Ceux dans lesquels* must refer to *moments*, supplied from *de moment à autre*, as *perdre inutilement*, "to waste," could hardly be used either of counsels or of persons. This is a glaring instance of Retz's negligence and occasional incorrectness, noted by Cousin.

A Prize of Two Guineas is offered for the best translation of the following lyric of Heine:—

BABYLONISCHE SORGEN.

Mich ruft der Tod — Ich wollt', o Süsse,
Dass ich dich in einem Wald verliesse,
In einem jener Tannenforsten,
Wo Wölfe heulen, Geier horsten,
Und schrecklich grunzt die wilde Sau,
Des blonden Ehers Ehefrau.

Mich ruft der Tod — Es wär' noch besser,
Müssst' ich auf hohem Seegewässer
Verlassen dich, mein Weib, mein Kind,
Wenn gleich der tolle Nordpolwind
Dort peitscht die Wellen, und aus den Tiefen
Die Ungetüme, die dort schliefen,
Haifisch und Krokodile, kommen
Mit offenem Rachen emporgeschwommen. —
Glaub' mir, mein Kind, mein Weib, Mathilde,
Nicht so gefährlich ist das wilde

Erzürnte Meer und der trotzig Wald,
Als unser jetziger Aufenthalt!
Wie schrecklich auch der Wolf und der Geier,
Haifische und sonstige Meerungeheuer;
Viel grimmere, schlimmere Bestien enthält
Paris, die leuchtende Hauptstadt der Welt,
Das singende, springende, schöne Paris,
Die Hölle der Engel, der Teufel Paradies —
Dass ich dich hier verlassen soll,
Das macht mich verrückt, das macht mich toll!

Mit spöttischen Sumsen mein Bett umschwirm
Die schwarzen Fliegen; auf Nas' und Stirn
Setzen sie sich — fatales Gelichter!
Etwelche haben wie Menschengesichter,
Auch Elefantenrüssel daran,
Wie Gott Ganesa in Hindostan. —
In meinem Hirne rumort es und knackt,
Ich glaube da wird ein Koller gepackt,
Und mein Verstand reist ab — oh wehe! —
Noch früher, als ich selber gehe.

EXTRA PRIZE.

A Prize of One Guinea is offered for the best solution of the following word puzzles:—

The puzzles are selected from the 73 sent in for the last Extra Prize. For the sake of new competitors we repeat the terms of the problem. The numbers stand for the number of letters in the words to be supplied. Each word in the series must contain all the letters of the previous word, and one additional letter—thus: *a, at, tea, cate*.

1. By "DEWDROP."

A pirate 1? well, it 2 a bit strange, now I 3 quiet at home and muse:
For it 4 the life of a 5 that 6 our pirates and their crews,
And some of the 7 things we did would have made your 8 quiver.—
But my purpose just now is the why and the how that I chuck'd that
game for ever!

One day 1 was watching the sun as it set,—it was somewhere near
Athens we lay,—

How 2 3 where it 4 on the windows and 5 of the 6 old town on the
bay:

I was thinking of 7 events in the past where I'd done what I hadn't
oughter,

When I saw in the sea a man under our lee with only his 8 'bove
water!

I tug 2 a rope, and we had him aboard; and we'd threatened to 3 him
or hang him,

But a 4 didn't 5 his calm as he turned to our chief and began to
harangue him,

And went on to 6 of the virtues of love in a way so 7 and sensible,
That our former design, 8 rapine seemed to us even incomprehensible!

Then 1 look in his eye, 2 he gazed out to 3, seemed to 4 itself deep in
my soul,

And to 5 all my evil desires from my heart, and to point it a worthier
goal.

"6 thou ever to virtue, the bliss it 7 is better than treasure," said he;
"For in doing the right is 8 pure height!" And to this we felt bound
to agree!

Chorus.—Says Philosophy: Now mind

That thy 9 to mankind

Be ever brotherly; for plunder, theft, and strife

Is are of those

Who never should be foes!

And this argument has changed our mode of life.

And as these 11

Have dispelled 12,

For our philosopher bid all of us be friends.

Though not quite 13,

We may call ourselves chameleons!

We've changed our colours! and we're going to make
amends!

2. By "A.H.K."

THE LAST RIDE TOGETHER.

(FROM HER POINT OF VIEW.)

I said 2 answer—Mr. B.,
You 3 in pressing thus your plea!
Since 4 die shavings fail,
5 nothing all my "no's" avail—

(Continued on page 190.)

MAGMILLAN & CO.'S NEW BOOKS.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated, with a Commentary, by J. G. FRAZER, M.A., LL.D. (Glasgow), Fellow of Trinity College, Cambridge. In six volumes. Illustrated with about Thirty Maps and Plans, Four Photogravure Plates, and upwards of Two Hundred Engravings in the Text. 8vo, £6. 6s. net.

Crown 8vo, 4s. net.

OTIUM DIDASCALI. Translations into Greek and Latin Verse. By WALTER HOBBHOUSE, M.A., Headmaster of Durham School, late Student and Tutor of Christ Church, and formerly Fellow of Hertford College, Oxford.

Crown 8vo, cloth extra, 6s.

MARCUS AURELIUS ANTONINUS TO HIMSELF: An English Translation, with Introductory Study on Stoicism and the Last of the Stoics. By G. H. RENDALL, M.A., Litt.D., Headmaster of Charterhouse School.

Times.—"This volume not only gives us a translation up to the level of the best modern scholarship, but an elaborate essay of 146 pages on the philosophy which the Emperor represented and expressed."

Globe 8vo, 4s. 6d.

ENGLISH GRAMMAR, PAST AND PRESENT. In Three Parts. Part I.—Modern English Grammar. II.—Idiom and Construction. III.—Historical English: Word-Building and Derivation. With Appendices on Prosody, Synonyms, and other outlying subjects. By J. C. NESFIELD, M.A.

Demy 8vo, 5s.

COMPLETE PERSPECTIVE COURSE, comprising the Elementary and Advanced Stages of Perspective, the Projection of Shadows and Reflections, with Exercises in Theory and Practice, also the Practical Application of Perspective. By J. HUMPHREY SPANTON, Gold Medallist, Royal Academy of Arts, London; Instructor in Drawing to Naval Cadets in H.M.S. Britannia. Designed to meet all the requirements of Army and Science and Art Examinations.

English Mechanic.—"To those who desire to learn how to draw in perspective the work may be commended, as the subject is treated as clearly and as successfully as it possibly can be in a book."

A Text-Book for Commercial Students and a Reference-Book for Business Men.

MODERN BUSINESS METHODS.—THE HOME TRADE.—Being a Guide to the Operations incidental to the Trade of the United Kingdom, with the Customary Documents and Correspondence. By FREDERICK HOOPER, Secretary of the Bradford Chamber of Commerce, and JAMES GRAHAM, Inspector for Commercial Subjects and Modern Languages to the West Riding County Council. 8vo, 2s. 6d.

TEACHERS' COMPANION in the Press.

Commerce.—"To those engaged in purely commercial pursuits we can favourably recommend this volume for study. Particularly interesting and instructive are the chapters on mediums of exchange, banks and banking, and bills of exchange. The less ambitious duties of invoices, forwarding of goods, remitting money through the post office, &c., are all of a satisfactory character, and should be of value to the beginner in a business house."

Globe 8vo, 2s.

THE CITIZEN OF INDIA. By W. LEE-WARNER, C.S.I., M.A., &c.

Times.—"The book is well-timed, admirable in conception, and successful in execution."

FONETIK, NEUILLY-ST.-JAMES, FRANCE.

My 6 arguments all pooh-poohed—
I'll come—but under protest, mind!—
The day 7; steeds and wind—
8 all! I can but feel
9 wishes for your weal;
10 melts at your appeal—
I may be heartless, I'll not be rude!

3. By "ISCA."

1 guinea offered! 2 I right to 3
With 4 in my verse real gold to 5?
Chill winds of 6 spare my shivering lines!
Not as in fostering 7 interwines
With them the 8, my graceful verse,
May wriggle round these calembours perverse
No 9 am I of race Shenetic,
10 I write "Pass it, kind critic!"
My last line is 11.

4. By "A.D.R."

1 2 such rhymes as mine can hope to gain
Your puzzle prize; much less Apollo's bays.
If 3 has any longing for such praise,
This he may 4—ten-lettered words are vain
To bring the ancient shepherd's 5 strain
Into the 6 harmony that peals
From orchestra and organ—why one feels
'Twere 7 both to artist and to swain!
Much more for me, from lonely Scottish glen,
When 8 your desk with voice of song,
To bring my offering of letters ten,
And your rejective task in vain prolong.
For who would 9 anointed kings?
Or talk when herald's shout 10 rings?

5. By "JEANNE."

1 give not 2 a 3 the 4 which brings
Honour to 5 as to uncrowned kings.
With metaphors and 6 thou 7 scorn
By thy weak verse on him who wisely sings.
Thy 8 and grimaces I defy,
Thou 9 to win unworthily;
But thy 10 I will dash to earth,
And die protesting at thy feeble lie.

6. By "E.M.M."

1 question 2 wide as the 3 arises,
4 friends advise us in spending our prizes!
To futile 5 we leave the defeated,
The cake is ours—but how shall we eat it?
For three-pence-half-penny who shall endeavour
To gain some beauty or joy for ever?
Our fancy 6 through shops-full of splendours,
But to offer that sum 7 the vendors;
8 with disgust they stand at its mention,
Till a buyer more rich 9 attention.
"O were it but summer," we cry, "we could spend
Our prize on 10 and so make an end."

7. By "GOGMAGOG."

1 stirpe nota sedibus 2 bonis,
O 3 beati, queis 4 ex avis
Pro 5 doctrinae cupido
Nobilis, innumerique laudant
6 amice, donaque filio
7 8 splendida. Sic domus
9 et sic io
11 in arte clari!

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled, on application, to a copy of "Essays in Translation."

H. G. WELLS'S NEW STORY.

THE WAR OF THE WORLDS.

By H. G. WELLS,

Author of "The Time Machine."

1 vol., 6s.

THE SATURDAY REVIEW.—"In Mr. Wells the intellectual processes are foremost, not the emotional. To possess a new view of life and literature, to create its image with minute and assiduous care, that is the way to secure fame."

THE SPECTATOR.—"As a writer of scientific romance Mr. Wells has never been surpassed. Poe was a man of rare genius; but in his work there is a stifling hot-house feeling which is absent from Mr. Wells's work. Even when he is most awful there is always something human about his characters. Both Poe and Mr. Wells are followers of Swift, but Mr. Wells keeps nearest to the human side of the author of Gulliver."

LE MERCURE DE FRANCE—"Curieux livre et original; supérieur aux fantaisies de Jules Verne; avec les qualités brillantes et les préoccupations sérieuses de R. L. Stevenson: avec dans le bizarre et le terrible quelquefois des aspects d'Edgar Poe."

LONDON: WILLIAM HEINEMANN, 21 BEDFORD STREET, W.C.

THE EDUCATIONAL MUSICAL INSTRUMENT CO.

OCCASIONAL NOTES.

AS a result of the recent County Council elections it seems probable that the proposed Tenification Bill will be shorn of much of its grandeur. This curtailment may give the Government time to bring forward their Secondary Education Bill soon after Easter. But the terms of the Bill are still in doubt. The *Athenæum* has lent its weight to certain surmises with which our readers are familiar. It seems quite clear that the Government has resolved that County Councils shall be the local education authorities. Many concurrent signs point to this. The unknown quantity in the equation is the composition of the central authority. The Duke of Devonshire's reply to Lord Norton seems to suggest that the existing powers of Technical Education Committees will be slightly increased, with larger funds placed at their disposition; and that the control exercised by the Science and Art Department will be strengthened. "It is not," he says, "and never has been, the intention of the Government to do anything in the nature of what may be called establishing secondary education all over the country." The Duke also took the opportunity of defending the action of County Councils against Lord Norton's indiscriminate impeachment. If we are right in our surmises, it is high time for the County Committees organized by the Teachers' Guild to bestir themselves and protest while it is yet time against a measure which would give the supreme control to a Government Department which has done nothing in the past to win the confidence of teachers and is officered mainly by retired Army men.

THE *Birmingham Argus* is again to the front with its special information as to the Education Bill. These revelations that are supposed to emanate from high officials in the Department may usually be discredited. They may be based on a hint given in a conversation with an official who has no knowledge of the latest draft of a Bill, that is always liable to alteration until the authorities have finally

made up their minds. What the *Argus* does not seem to know is that the Bill, so far as it refers to local authorities, may be made permissive and selective. That is to say, that any County Council that wishes to undertake the responsibility of appointing a local authority for secondary education may apply for permission to do so. If this latest rumour is correct, a great deal of opposition would disappear; and we should have no fear of the final result. A local authority coerced into action against its will effects very little. On the other hand, the action of forward counties would ultimately be imitated owing to the inevitable force of public opinion.

WE could not expect any startling changes in this year's Elementary Education Code. Teachers and inspectors may become bewildered by too frequent alterations. The subject of drawing is, as was already known, to be handed over from South Kensington to the Whitehall Inspectors. The number of pupils in classes has been slightly diminished, so that no teacher in the future is to be responsible for more than an average attendance of sixty. The Instructions to Inspectors have been revised, but do not seem to contain anything new. Still greater stress is laid on the statement that inspection is a better guarantee than examination of the efficiency of a school; and Inspectors are reminded that the value of goods can be adequately determined by means of a fair sample. There are two omissions in the Code which, perhaps, will cause disappointment to enthusiastic reformers. The Committee appointed to investigate the pupil-teacher system—whose report we discuss elsewhere—had many changes and improvements to suggest. Not one of these finds its way into the 1898 Code. The reason is not far to seek. All reforms towards greater efficiency imply the expenditure of more money. In spite of the annual grant of half a million, the "intolerable strain" continues. The Department cannot at present enforce changes that would increase this strain on voluntary schools.

INDEED, no sooner was the report of this Committee issued than the Standing Committee of the National Society issued a memorandum taking exception to all the principal recommendations, on the ground that, if carried out, they would involve a very large additional expenditure in voluntary schools. The Code does not even venture to touch Article 68. This famous article allows "a woman over eighteen years of age," with the approval of the Inspector, to be recognized as an additional teacher. There are, at present, nearly thirteen thousand of these "women over eighteen" employed as teachers, and nothing but poverty can justify their retention. This means that many more missionary speeches must be made before localities are willing to spend the money that the increasing needs of education demand. But the publication of the report of this Departmental Committee marks a great stage in advance. Its recommendations will, we are quite sure, be referred to and acted upon in the more enlightened districts, although they have not the authority of law, just as the recommendations of the Education Commission of 1894 are generally accepted as authoritative. The policy of the Department is not to enforce changes until public opinion has generally endorsed them.

THE London University Commission Bill has, with trifling amendment, passed its third reading in the House of Lords. When the Bill comes before the Commons, there will be no doubt much discussion and some opposition. We read in one paper the boastful

utterance that "the Bill will be blocked," and we are reminded of a remark of Mr. Lyttelton's at the College of Preceptors the other day—that to block a Bill is the easiest matter in the world and nothing to be proud of; but that to get a Bill passed needs the strength of ten Hercules. The Government has in this case both the necessary strength and the will to overcome an opposition which is merely factious. It is curious to contrast the methods of the two Houses. On the day on which this Bill finally passed the Upper House the Lord Chancellor took his seat at a quarter past four o'clock, and their Lordships adjourned at twenty-five minutes to five. In this brief period of twenty minutes Hart's Divorce Bill was moved forward one stage, Lord Norton moved for a certain "return," and the London University Commission Bill was passed. It is to be wished the Commons would follow this lead. All the really important points of the Bill have been threshed out and settled outside the House.

THE annexed extract from the *Wimbledon Post* of March 5 tells its own tale, and is significant of the future of private schools:—

One of the most interesting applications at the Licensing Sessions was that made by Mr. William Henry Bedbrook for a full licence for a new hotel in Wimbledon—a hotel pure and simple. In other words, it is Mr. Bedbrook's intention, if possible, to convert the fine building at the end of Worcester Road, which until very recently has been known as St. George's College, with Mr. Bedbrook as headmaster, into a first-class up-to-date hotel—an institution which, as everybody knows, is at present strangely enough a *non est* in the town. From a boys' college to a hotel is a far cry, but there are cogent reasons in this case why Mr. Bedbrook has come to the conclusion to give up the imparting of knowledge at the handsome new building alluded to, and to carry on there the business of catering for a more or less travelling public.

The history of the causes at work which led to the disappearance of this well-known private school are particularly interesting, as tending to prove the groundlessness of the fears and the inaccuracy of the calculations of the Private Schools' Association—or, at least, "all that is left of it." Four years ago there were no public secondary schools for boys in Wimbledon. The County Council then took steps which led to the foundation of the Rutlish School, opened two and a half years ago. This school, with a fee of £6 a year, "endowed" with nearly £1,000 a year from the County Council and the Science and Art Department, and having valuable scholarships attached given by the Rutlish Trustees and the Wimbledon District Council, rapidly filled with pupils. But not the slightest effect was produced upon the numbers or the prosperity of St. George's College. Some months ago, however, King's College School came to Wimbledon. A first-grade school, with a £20 fee, managed by a "voluntary" body of governors, without State grants from Departments or County Councils, it took up its situation about the same distance one side of St. George's College as the Rutlish School was on the other. It is flourishing and increasing as the result of the change. The result upon St. George's College is seen in the "interesting application" to convert it into "a hotel pure and simple."

THE exponents of what is called commercial education have been greatly in evidence of late. The Chambers of Commerce, individually and in association, have passed resolutions urging the immediate need of better schools for the purpose. Letters have appeared in the *Times*, and my Lords of Whitehall have been approached. We may sum up the net result as follows:—It has been found that existing examinations have failed to bring about the end desired; special schools must be built and equipped to fill up the

vacant space between the lower-grade commercial schools and such an institution as the London School of Economics; these schools will be partly supported by County Councils, and partly by the Science and Art Department, which will, it is hoped, place certain "commercial" subjects on the same grant-earning basis as chemistry and drawing; and, lastly, the idea that commercial education is a mere technical training, absolutely divorced from the real meaning of the word education, has given way to a belief that commercial subjects, properly dealt with, may afford as sound and as wide an intellectual and moral training as almost any other subjects in a school time-table. The establishment of a few good tertiary schools of commerce would have a great result. The heavens would soon work downwards. Such schools would, perhaps, aim in particular at supplying the growing want of competent managers of joint stock companies.

THE London School Board is unhappy because its truant schools have proved too popular. Boys do not try to run away and seem always pleased to come back. This speaks volumes for the staffs of these schools. From a visit paid to one of them we are inclined to think that the truants are by no means necessarily vicious. Their truancy is frequently the result of either a bad home or of no home at all. When they are removed from their surroundings, and find themselves no longer obliged to sell newspapers to buy themselves food, they have a chance of becoming useful citizens. But to bring them up on a diet of bread and birch would probably not conduce to this end. Another probable reason of the popularity of these schools is that the children are treated as half-timers as far as lessons are concerned. For the other half of the day they are taught a trade. It was proposed at the Board meeting that boys returning more than twice should have lessons all day. The moral of the discussion seems to us to be this: In the ordinary Board schools there should be more handicraft instruction and less book lessons. In the school to which we referred above, the inspector's report showed that the half-timers had done the same work, and as creditably, as other children doing a full day's lessons.

THE Cambridge Local Examinations Syndicate have issued a long and weighty report urging the Senate to institute a diploma in Arts, to be granted to external students. This seems to us a wise proposal, and one that is in accord with the fair claim of the two older Universities to control to a large extent the education given in the majority of secondary schools. But we would go farther, and suggest that Oxford and Cambridge might agree upon a diploma of varying grades, and including a wide range of subjects which should become practically a "leaving certificate." This system exists in Germany under the name of *Abiturienten Examen*, and is generally approved. Scotch schools have their Leaving Certificates, and we understand that a similar system is to be introduced into Welsh schools. This proposal by no means suggests a universal standard or a limited curriculum. The standard must vary according to the leaving age, and the subjects must include everything that may be taught in a secondary school. It is, in fact, only a development of the present system of Junior and Senior and Higher Locals. But the age limit should be insisted upon. At present candidates over age may pass the examination, and, oddly enough, many heads of schools do not seem to appreciate the disgrace involved in a candidate of eighteen passing an examination intended for candidates under sixteen years of age.

THERE has been a keen controversy carried on in some quarters as to the merits and possibilities of dual schools. The opponents of the system seem to forget how largely the practice is at present in vogue. We look in vain for any complaints on the subject from teachers (or parents) in the numerous mixed schools in Scotland of all grades, from the new dual schools in Wales, from the mixed elementary schools in England, or from the mixed schools of America. In fact, all the reports we have seen are exceedingly favourable. Doubters have become converted when they have tried the system or seen it in work. We refer to the subject again because we are convinced that those who bring forward the "moral difficulty" are entirely wrong. From some of the letters we have lately read, it might be imagined that no boys have sisters, nor sisters brothers; or that, in cases where parents were unfortunate enough to have children of both sexes, the boys were brought up in one wing of the house and the girls in another, with no door of intercommunication. What is called the "moral difficulty" is very largely the result of the practice of separating boys and girls, and bringing them up in large boarding schools. Far healthier is the home life, where the boys know their sisters' friends, and the sisters know their brothers' friends.

THE author of "Stephen Remarx," in describing his ideal school, says: "The boys and girls play most of their games together, which keeps them pure." Dual schools do not necessarily imply that all subjects are studied together by both boys and girls. Therefore, the argument that boys and girls should not be taught the same subjects falls to the ground. As a matter of fact, the subjects taught in the two sorts of school largely coincide. We are not suggesting that Eton College should be thrown open to girls, or even that our country grammar schools should become dual. We are only protesting against what seems to us a very exaggerated and unfounded dread—a dread that does not seem to be justified by experience. When we are told that "every master knows what boys are," and that "the objection raised will remain unanswered and unremoved as long as human nature remains human nature," we would suggest as a reply: Is schoolboy nature really human nature, or is it the result of his artificial and unhealthy barrack life?

IN giving away the prizes at the College of Preceptors, Canon Lyttelton spoke winged words in reference to the unity of the profession. He thought the immediate chances of legislation small, and urged that the interim should be devoted to increasing the union of different branches of teachers. This is a subject we have often dealt with here, and its importance cannot be too strongly insisted upon. When we teachers speak with one voice, parents, the lay public, and the Government must listen. The signs of the times are distinctly hopeful. Mr. Lyttelton instanced the fact that the whole movement for the training and registration of teachers emanates from ourselves, and is not being forced upon us by a hostile or suspicious public. This apathy of the public who are parents was characterized as astonishing and inexplicable. He also made some scathing remarks about the baser sorts of private schools conducted by persons "bankrupt in purse and mind." Such schools are only made possible by public apathy. Every honest private schoolmaster, as well as every public schoolmaster, would welcome the sweeping away of a few schools which discredit the whole profession, and which constitute, in Mr. Lyttelton's words, "a grievous scandal."

THE National Union of Teachers has published a fly-sheet on higher-grade schools which reflects little credit on the executive. From an educational body we expect a judicial summing-up, not a mere *ex parte* statement from which all adverse evidence is carefully excluded. But the publication in question is not only partial, but positively misleading. It professes to give "the opinion of the *Times* and a Royal Commission on the matter." What it does give is the opinion, not of the *Times*, but of a correspondent of the *Times*, and one sentence, of a line and a half, from the Secondary Education Commission Report. Moreover, the *Times* correspondent who is thus identified with the *Times*, and put in the forefront of the battle, is himself the master of a higher-grade school. In stating this we are revealing no secret, but merely noting what is obvious on the face of the letter itself. And we have not yet done with this precious document. When quotations are given in inverted commas we expect verbal accuracy. Here words and sentences are omitted without any indication, and the language of the *Times*, or its correspondent, is freely emended. "Quality," for instance, is changed to "qualification," and the Latin "flourished" substituted for the Saxon "thriven." But some of the alterations are worse than any breach of literary etiquette. The *Times* is made to say: "Each of the schools contains a chemical laboratory, a physical laboratory, a workshop, a science lecture-room, a kitchen, and some have laundries." The actual words of the *Times* correspondent are: "Each . . . workshop . . . while most of them have a science lecture-room, an art-room, and a cookery kitchen." (The italics are ours.) *Non tali auxilio*. Higher-grade schools have no need to be bolstered up by garbled extracts and special pleading.

AN instructive debate took place in the House of Commons on Sir John Lubbock's motion to increase the number of "class-subjects" that may be taken in any one elementary school. The discussion was severely technical, and Sir John's speech bristled with figures. We learn that geography is taught only in two-thirds of the elementary schools; history still more rarely. Out of more than five million children, only a hundred and forty thousand take a "specific subject;" of these none were presented in history. We may venture to suppose, or at least to hope, that a good deal of history and geography is taught by means of "Readers"; otherwise the state of affairs is indeed lamentable. In Scotland a child may take four "class-subjects" and so earn double the grant under this head that an English child may earn. The speech was in reality an indictment of the elementary teacher. And we fear that it was not far from the truth. It may be that comparatively few teachers are capable of taking either "class" or "specific" subjects. This seemed to be the view taken by Mr. Yoxall and Mr. Gray, both of whom vigorously opposed the motion. Sir William Harcourt took the opportunity to deliver a speech in favour of secondary education, and quoted from Mr. Sadler's volume of "Special Reports." The *Times* reporter was caught napping, and called it "a yellow-book on education, published in Germany." The motion was withdrawn, but the discussion was a fruitful one.

THE Cambridge scheme for secondary training in connexion with the Day Training College, which we briefly noticed two months ago, is now in operation. It starts with three students—two graduates in high honours and one an undergraduate. Their work is done partly in common with the primary students, but they have one criticism lesson a week by themselves, and will have had in the

course of the term each a week's teaching in school, under supervision. Besides the higher-grade school at Cambridge, the two great schools at Bedford admit them as *Gäste*. In this close connexion between primary and secondary students we see much advantage, both economical and social, and no corresponding loss, as at Cambridge all the primary students are undergraduates, and most of them reading for honours. The "Master of Secondary Method," which appears in the prospectus seems to us a meaningless designation. On the other hand, we hope that the admission of undergraduates to the training course is only a temporary makeshift.

THE *Modern Quarterly of Language and Literature*, of which the first number appeared a few days ago, is our old friend the *Modern Language Quarterly* grown almost out of knowledge—though the name of Dr. Heath is a voucher for the personal identity—and emerging from the schoolroom into the world of letters. For frontispiece we have an excellent portrait of Mr. F. J. Furnivall; and among the new literary articles, which will appeal to a larger circle than teachers, are an appreciation of Daudet by Charles Whibley; "The Similes of Dante," by Professor Ker; and Professor Herford's Taylorian Lecture on Goethe's "Italiänische Reise." Teachers will find their account in Professor Spiers' new theory of the French imperfect and past definite (we hope he will go on to treat of the past indefinite) and the tabulated answers of Oxford and Cambridge tutors on French and German in entrance and scholarship examinations. For the bibliography, a huge labour of love, we have still to thank Professor Rippmann.

TECHNICAL EDUCATION.

THE writer of a somewhat pathetic report on the doings of the North Bucks Divisional Committee indulges in a reflective dissertation on the capacity of figures to "conceal ugly facts." Average attendances at lessons, he submits, are by no means an infallible indication of success. "If, for example, Teacher A., at a course of four lectures, has had 20, 30, 10, 5, attendances, and Teacher B., at a course of four lectures, has had 12, 11, 13, 14, although A.'s average attendance is more than 16, and B.'s less than 13, the strong probability is that A.'s class was a failure and B.'s a great success." Alas for A.! Alas for everybody—even B.—if failure and success in educational work be measured without regard to the subject taught or the end in view!

INNUMERABLE courses of instruction, huge totals of attendances, may represent a cheerful amount of activity and a helpful awakening of drowsy thousands, but, failing certain essentials, not, as North Bucks would boast, "great progress," or "great success." They conceal ugly facts. Let us, by all means, call the many—but choose the few. Sooner or later every administering body must face the question whether it is a more profitable educational investment to spend £10 on one student, or 10s. on each of twenty. Consider the bearing, for instance, of the extreme case suggested by Professor Silvanus Thompson, as to the value to the chemical industry of the many hundred students instructed in elementary chemistry. "One thoroughly highly-trained research chemist," he declared, "is worth them all."

It would not be generally true to say that progress in really effective educational work undertaken by County Councils may be measured by the rate of decrease in the number of courses of instruction and the total average attendance. This simple paradox is, however, applicable to the policy adopted in some administrative areas, and is well illustrated by the work of the Somerset Education Committee. The following figures are taken from the reports on the years stated:—

Year.	No. of Courses.	Total average Attendance.
1893	748	13,303
1894	600	11,083
1895	571	9,097
1896	515	7,750
1897	465	6,602

These figures mean not diminished expenditure, decreasing activity, or

flagging interest, but an undeniable and reassuring evidence of steady and substantial educational progress.

THE direction of that progress and some explanation of the above figures may be gathered from the barometer of expenditure on certain enterprises as follows:—

	University Extension Lectures.	Cookery, Laundry, &c.	Scholarships.	Secondary Day School Maintenance
1893	1,160	2,779	845	—
1894	1,155	1,583	1,455	696
1895	1,127	1,358	2,078	1,173
1896	543	740	2,235	1,376
1897	—	632	2,018	1,867

Thus the £3,939 expended in 1893 on University Extension lectures, cookery, dressmaking, and similar subjects, and which accounted for over 9,000 in the total average attendance for that year, is now nearly all applied to scholarships and secondary day schools. In addition to the maintenance grants set forth above, secondary schools in Somersetshire have received large building and equipment grants—in 1895, £2,135; 1896, £1,523; 1897, £901.

THE "residue" at the disposal of the Education Committee in Somerset is something over £13,000 a year, and encouraging "results" are recorded in the various branches of a comprehensive scheme. Evening continuation schools, which in 1893 numbered 61, totalled in 1897 135, with a total average attendance of 2,584. The grants paid by the County Council amounted to £3,744, towards which £1,368 was received from Government. The certificate of attendance awarded by the County Committee to those who make not less than 85 per cent. of the possible attendances was gained by 1,448 pupils. "These figures mean that 1,448 persons have during the winter each received not less than 60 hours' systematic instruction in useful subjects, whilst in many cases the time so spent has been from 75 to 80 hours. Work of this kind is necessarily more lasting in its character (and more fruitful as regards practical results) than attendances at short courses of instruction." Who can doubt it?

In the West Riding of Yorkshire, unlike Somerset, there has been a steady growth in the number of students attending classes and lecture courses. It may be of interest to record the figures for six years:—

	Attendance at Classes, &c.	Scholarship Holders.
1892-3	19,600	2,744
1893-4	25,110	2,746
1894-5	26,489	2,869
1895-6	33,301	2,881
1896-7	33,553	3,061
1897-8	32,996	3,222

These totals, it will be understood, include attendances at "Extension" and other lectures, as well as systematic courses of instruction. In the West Riding, as in other counties, there has been a great development of evening continuation schools. Against 8 in 1892-3, with 348 pupils earning grants from the County Council to the sum of £77. 17s., there were 128 in 1896-7, 7,453 pupils, and a grant of £1,452.

THE amount of the "residue" at the disposal of the West Riding Committee for the year ending March 31, 1897, was £31,710, and the expenditure for the year was within £200 of that sum. Scholarships and exhibitions absorbed £8,715; grants to schools and classes, £13,881; special classes and summer vacation courses for teachers, £1,148; agricultural, including dairy instruction, £1,773; coal mining, £959; grants for apparatus, £804; and so on. The Committee "have still to regret the absence of legislation on the lines suggested by the recent Royal Commission in reference to secondary education. Meanwhile, with their present limited powers, the Committee have endeavoured to organize and develop such branches of secondary education as come within the legitimate scope of action of the County Council under the Technical Instruction Acts."

THE funds at the disposal of the Cumberland Technical Education Committee amount, on the average, to about £6,000 per annum. The main provisions of the scheme which is promoted include the direct supply of instruction: (a) in agriculture, by means of a farm school, travelling dairy, demonstration stations, and public lectures; (b) in subjects of household economy by peripatetic teachers; (c) for teachers, by the organization of central classes: the aiding of instruction— evening continuation schools, science, art, technical, and commercial classes, supplied by other authorities; direct grants to urban authorities to meet equivalent amounts raised locally; and, finally, a scheme of scholarships and exhibitions. The report contains much interesting information concerning the cost of different forms of instruction. During 1896-7 94 evening continuation schools (32 urban and 62 rural) earned, on the

average, £15. 11s. 2d. from the Education Department, and £7. 8s. 8d. from the County Council. But, it appears, while the schools in the urban districts received grants from the Education Department averaging £25, the rural schools secured £10. 18s. With these figures before them the Committee can adjust their scheme so as to avoid giving aid where it is not required, and helping the small schools to pay their way.

GRANTS were paid by the Cumberland Committee on 72 science and 42 art classes, amounting to £778. These classes earned £725 from the Science and Art Department. The average attendance per class at both the urban and rural evening classes in science was 7; at art classes 16 in the former and 9 in the latter. In technology there were 29 classes and 524 pupils, the average grant paid being £8. 14s. per class; at 54 ambulance classes there were 899 pupils examined, the total grant being £229.

In his attempt to demonstrate the folly of annual reports "A Southern Secretary," in another column, brings a strange motley of fact and fancy to support his argument. Our correspondent appears unable to distinguish between "county reports" or instructions issued for special purposes, which must of course be published according to requirements, and the annual report of a Technical Education Committee, which, like the annual report of the Education Department, or Science and Art Department, should be a complete record and review of a year's work. To argue that authorities spending large sums of money annually should not render some such collected account of their stewardship, or that it could be done by the National Association or the Special Inquiries Department, is simply nonsense.

THE difficulties suggested in the curious medley of times and seasons, beginning with "the County Council financial year ends on March 31," are in respect to the main question "as tithes of mint and anise and cummin." Given the disposition to issue an annual report, all these difficulties will disappear. We should be the first to welcome the appearance of annual reports immediately at the conclusion of the educational session. But because, owing to circumstances over which nobody has any control, a report is necessarily delayed, it is a poor reason for declining to issue one at all. If the administrative methods of a county education office are such that its annual report can neither be "an accurate record," nor "such as to enable one to readily comprehend the entire scheme," and "intelligently designed," it is not the "fetish" which is a folly, but the methods which are faulty.

ATHLOMANIA.

WE are glad to see that men of distinction and authority are beginning to protest against the athletic mania which at present rages in England, and is working and promising to work very serious mischief. It is indeed time for those who have a right to be heard to lift up their voices against an already grave and a widely growing evil. No sane person wishes to refuse athletics a place—and an important place—in our schools and colleges; but are they to have the first place in them? Is everything else to give way? Are assistant-masters to be chosen mainly for their excellence as sportsmen? The headmasters—are they presently to be selected for their prowess on the river or on the fields of cricket and football? Such is, assuredly, the present tendency; and it is a tendency that ought to be stopped. The position is becoming ridiculous—becoming comic, if it was not tragic!

To avoid periphrasis, we will venture to use the term "athlo-mania" to describe *this wild excess of passion for physical exercises and athletic contests*. It is convenient to have a single word as short as may be. Athlo-mania is the leading "educational" feature of the close of the nineteenth century. Generations ago, no doubt, games were most inadequately appreciated. Even one generation ago, they were very imperfectly arranged and organized. But at the present time in some schools they enjoy a monopoly, and in all, with few exceptions, they usurp a quite unreasonable and enormous share of interest and devotion.

But we do not now propose to treat of this question at large. We want specially to call attention to two facts that have lately come to our notice. One is, that preparatory schools are being started on a purely athletic basis—by men, as we are informed, of no pretensions to literary culture, and that profess none. The other is, that in some preparatory schools games are carried on rather for the pleasure and benefit of the masters than of the boys, which is surely a deplorable state of things. Of these two facts there may not yet be many specimens; but that there

are some there is no doubt, and that there will soon be more is certain, if the public will not set its face against teachers that do not teach, and places of education that do not educate.

Principiis obsta; venienti occurrere morbo.

The evil deserves some consideration before it spreads and prevails. It is already formidable.

Let us ask, then, if parents are willing that the schools to which they send their children should be gymnasia—not in any secondary sense, but literally and physically mere gymnasia? Do they assent and consent to the subordination of literary and other intellectual culture to mere bodily training, or, rather, to abandon mental culture in favour of bodily training? As we have said, no sane person nowadays would have the body undeveloped and neglected. Neither do we for a moment forget the value of well-managed games in forming character. But, as the old saying ran, "All work and no play makes Jack a dull boy"—what will all play and no work make of the said Jack? A yet duller boy, perhaps? Certainly an unsatisfactory and even offensive person—one lacking in many worthy interests—imperfectly, or not at all, provided with the means of arriving at any valuable conclusion on the great questions that concern citizens and patriots and men. But how monstrous that it should seem necessary to utter such truisms as these! Or is a truism to be defined as something that has ceased to be true—as what was once a truth, but has become decayed and obsolete—as a statement that has lost all its meaning and life? Are we drifting back into barbarism? The question may seem extravagant; but we submit that the rise of purely or mainly athletic schools is a phenomenon that justifies it. Such, we may suppose, were the academies of Philistia—all the leading academies of Gath and Askelon. In them the things of the mind went for little, the things of the body for much. Literary cultivation and the intellectual life, if heard of at all, were the objects of flouts and jeers. Words in their behalf met with a frankly bucolic reception.

*Dixeris hæc inter varicosos centuriones,
Continuo crassum ridet Vulfenius ingens,
Et centum Græcos curto centusse licetur.*

Perhaps, after all, we are never so far off from our old rough and rude ancestry as we think. Scratch us and the savage is quickly discovered. Atavism is a reality to be reckoned with. The "polite wisdom and letters" to which we "owe that we are not yet [*i.e.* still] Goths and Jutlanders," have to this day their instinctive and hereditary enemies, however under ordinary circumstances the enmity may be disguised and restrained. To many, literature is a bore and a nuisance. Let us clear our minds of cant, and look the fact in the face. Is the genuine Saxon—the Saxon of pure breed—really a highly intellectual animal? Happily for the English nation, many other elements besides the Saxon have combined to form it. But in the South at least the Saxon element predominates, and the much more important element, the Anglian—it was amongst the Anglians, and not amongst the Saxons, that a poetical literature first arose—is after all kindred to the Saxon. So in our race—perhaps in all races that now flourish, certainly in the French and unquestionably in the German—there yet lurks an old primitive antagonism to culture. Are we not often made conscious of it? Again and again do we not recognize it in the ambitions and in the careers of many of our countrymen? To the end of time knowledge will have its foes as well as its friends. To the end of time there will be persons, like the Duke of Norfolk in 1540, who prefer ignorance. "It was merry in England," said that disgusted old nobleman in the midst of the Renaissance, "before the new learning came up. Yea, I would all things were as hath been in time past." Thus we must always be prepared for recrudescences of barbarism, and, at the present time, we are front to front with one in the exorbitant athlo-mania that now so widely prevails. Is demoralization to be the rule *à la fin du siècle*?

To turn to our second fact: we hear of preparatory schools where the sports are kept up for the benefit of the masters rather than of the boys—where in all the matches the entire staff plays, along with just as many boys as are wanted to complete the team, all the rest of "our young friends" being left to look on or to play what game they can amongst themselves. The British parent is said to be of a long-suffering nature; will he suffer such an arrangement as this? Even the parent who is touched with the epidemic athlo-mania—what will or does he

think of it? It is in all ways desirable that masters and boys should play together; but surely it should be understood that in the playing field the masters are the guests rather than the hosts, so to speak—that they take part in the pastime of their pupils, rather than allow their pupils to take part in theirs. Surely, cricket and football clubs in preparatory schools are not founded primarily for the sake of the masters? It is strange indeed that such a question should have to be asked. But we believe it is necessary to ask it. We believe that some masters, in their eagerness for “sport,” are in imminent danger of forgetting their proper relation to school games—of becoming usurpers, and, so far as may be, monopolists! We strongly urge parents to keep an eye on these oblivious gentlemen, and to recall to their memories what is their right place in this department of school life. “Games for the boys” is, it must be allowed, a perfectly defensible cry; but “Games for the masters”?—i.e., for the masters first and mainly, with just enough boys to form a quorum!

No doubt it is a good and pleasant thing for a school to have a distinguished athletic record, and no doubt the assistance of adults in the persons of the masters is of great use in that direction. But are masters to be selected simply or mainly for their athletic prowess, and are they to form, as far as possible, the constituents of the Eleven or the Fifteen? These are questions for parents now seriously to consider—questions truly urgent and imperative. Should not all who really care for the fair and full development of their children’s minds, as well as their bodies, make a determined effort to have sports reduced to the proportion that befits them, and to remind such masters as need such a reminder of what is their proper relation to the said sports? “Philistia, be thou” not “glad of” us. “Upon Philistia will” we “triumph.” Or shall we have to revise certain famous lines, and read—

Let knowledge pine from less to less,
But more of muscle in us dwell.

UNIVERSITIES AND SCHOOLS.

OXFORD.

Owing to the regrettable and culpable failure of your correspondent to deliver his periodical account last month, there remains a whole term’s news to be communicated in this letter. From the educational point of view, there is a plentiful lack of incident to record. The work of the last few years—the Research degrees, the Honour School of English Language and Literature, the Day Training College, the new examination and Diploma in the Theory, History, and Practice of Education, and last, but not least, the prolonged, but unsuccessful, struggle to procure the admission of women to the B.A. degree—these efforts have, for the time, exhausted the legislative energy of the University. There seems a general agreement to maintain the *status quo* at present. The Congregations are sparsely attended, and do little but the routine business, mostly *nemine contradicente*.

I mentioned in one of my autumn letters that the question of a possible three years’ Honour course was again being raised in certain quarters, the suggested solution this time being, not to push back Honour Classical Moderations (which was the rock on which a previous attempt was wrecked), but rather to dispense with it altogether, to establish three elements in the final examination, viz.: History, Philosophy, and Scholarship, and allow options. This, at least, was *one* of the ideas which was discussed, for it cannot be said that there was anything definitely agreed upon, and the proposal has, so far, not passed beyond the stage of *pourparlers*.

One result, however, of these discussions was visible this term, which created some surprise and even amusement. Two gentlemen who were supposed to favour the new scheme (Mr. Ball and Mr. Farnell) had been nominated for the Board of Faculty of Arts; and an active canvass, dictated, it is supposed, by a fear of their revolutionary tendencies, in the direction indicated, was organized against them with success. This panic-bred plot (if there was a panic, and if there was a plot) seems rather absurd; the Board of Faculties does not offer many attractions to the aspirant; it performs dull though useful functions, and any scheme for reorganizing the Honour course would be threshed out in the Hebdomadal Council and hardly in the Board of Faculties. Moreover, the proposal is only in its initial stage, and before it is ever presented to the University in any shape it will have to secure a substantial support which will render any “packing” of the Board of Faculties quite nugatory.

The only actual change which has been carried this term deserving a

mention, is the institution of a *third* opportunity to candidates to pass Moderations, namely, at the end of the Lent Term. At present a candidate enters first at the close of his freshman’s year. If he fails, he can try again at Christmas; but those who fail at Christmas have to wait till June—i.e., for *two* terms. It is argued that in this way they waste not only the Summer Term, but also the Long Vacation. On the other hand, it is feared that those who pass the new examination at Easter, being *ex hypothesi* the weaker and less studious men, will have an unusually slack and enjoyable time in May. The proposal was carried in very small houses by very small majorities, which is unsatisfactory. Still, though not very important, the experiment is worth trying, and it will now be tried.

We are glad to see that a conference of Headmistresses is to be held in Oxford in October, to consider the question of the preparation of girls for University education. The invitation is issued by the Association for the Education of Women. The meeting will be presided over by the Master of Balliol; it is to last one day, and it is to be severely practical. Papers will be read on the preparations required for University studies in classics, English, science, and history, and one paper in each of these subjects will be read by a University teacher and a school teacher. As there are now two hundred resident students, who largely come from the best high schools, it is high time that the two teaching bodies should exchange ideas on what is so important to both of them.

An interesting experiment has been this term tried at Christ Church by one of the most distinguished of the Divinity Professors—Dr. Sanday. He has held meetings on Saturday evenings for papers and discussion, which all who are interested are invited to attend. The last meeting, on March 12, excited very great interest, as the Professor of Anthropology read a striking paper on Prehistoric Religion, which consisted mainly in a criticism on some of the views, notably in regard to totem-theories, contained in Jevons’ “Introduction to the Study of Religion,” and Frazer’s “Golden Bough.” The views of so distinguished an anthropologist naturally command the most serious attention, and it is hoped that Professor Tylor’s paper will appear in a more permanent and widely accessible shape.

CAMBRIDGE.

A most interesting lecture was given at the beginning of March by Mr. Yule Oldham, University Lecturer in Geography, on the North-West Frontier of India. The audience was large and distinguished, many being, no doubt, attracted by the presence of Sir George Scott Robertson, who took the chair. The gallant defender of Chitral supplemented the excellent discourse of the lecturer by a happy speech, in which he dwelt on the character of the frontier tribes, and expressed the opinion that the men of the hills, in India as elsewhere, are destined to give way before the men of the plains.

The Local Examination Syndicate have reported in favour of establishing a Diploma in Arts (D.A.) for external students who have passed through a prescribed course of Extension Lectures and of Local Examinations. The diploma is apparently to be obtainable by women as well as men, and may, perhaps, take the place (for a time) of the de-siderated degree for women students.

The Graces for the suspension, *sine die*, of the Professorship of Surgery, and for the establishment of a Readership in its stead, passed the Senate on March 10. The conversion of the Lectureship in Geography into a Readership was effected at the same Congregation. The appointment of the new Readers by the General Board of Studies will take place early in May.

The Cobden Club has for a number of years offered a triennial prize of £60 for an essay on some prescribed subject in economics. “In view of its many responsibilities,” the Club now proposes to substitute for this a prize of £20 and a silver medal.

The question of the abolition of Paley in the Previous Examination is to be brought before the Senate next month in such wise that both those who wish to see it eliminated *sans phrase*, and those who will only let it go if Old Testament History is substituted for it, will have the opportunity of showing their numerical strength. The voting is likely to excite much interest, and we shall probably have an influx of non-residents.

A keen discussion took place in the Senate on the proposed recognition of St. Edmund’s House as a place of general education for students destined for the secular priesthood of the Roman Catholic Church. Mr. McTaggart, Mr. Dickinson, and Mr. Tanner, as junior graduates professing to speak in the interests of Liberalism, denounced the proposal as an infraction of the “spirit of the Tests Act” of 1871. The University should decline to recognize any body of students who were already pledged to a belief. The case of Selwyn College was brushed lightly aside; it might have been a mistake to recognize a Church of England hostel, but, in any case, the Church of Rome was in a different position. All kinds of special claims to similar recognition would be made by other sects if this claim were allowed; we might even have a college for veterinary surgeons! Liberals who remembered the old struggle for the religious freedom of the University, like Dr. Butler, Dr. Jackson, Dr. Verrall, Mr. Austen Leigh, and others, were amazed at the attitude of

the juniors. The latter were striving to set up an agnostic test in place of the old test of creed. The "spirit of the Tests Act" involved the maintenance in the existing colleges of the worship of the Church of England, while it debarred no one from office or emolument because he did not belong to that Church. It was perfectly fair for the Roman Catholics to establish a hostel in which their own worship and discipline should be maintained, and the University should take no step to impose any, even the slightest, disability on those who preferred to observe these. Dr. Porter and Dr. Jebb, from the Conservative side, joined with the "old Whigs" in urging that the University would betray its principles if it refused the application. Mr. Sutcliffe and Baron von Hügel, as Roman Catholics themselves, pointed out that in every University in the world candidates for the priesthood were required by the law of the Church, which dated from the Council of Trent, to reside apart from other students, and to submit to a stricter discipline. They could not come to Cambridge at all unless the present application were granted. Roman Catholic laymen might now come freely to the other colleges, and the laity desired that their priests, who would be the early educators of these students, should themselves have received a Cambridge education. The weight of argument certainly appeared to rest with the seniors in this debate, and it is not likely that the Grace for the recognition of St. Edmund's, which is to be offered on May 12, will be rejected.

Seven colleges have now combined into one group for the Entrance Scholarship Examinations on November 1, namely, St. John's, King's, Emmanuel, Pembroke, Christ's, Caius, and Jesus. These offer about sixty scholarships and exhibitions in mathematics, classics, and natural science. Caius, King's, and St. John's also offer scholarships in history, modern languages, or Hebrew. Trinity has combined with Clare and Trinity Hall to hold a scholarship examination on the same date. Thus the competitions at the ten largest colleges will this year be simultaneous. Arrangements are made by which candidates may indicate the order of their preference for the several colleges included in the group.

Sir Ernest Clarke has communicated to the Vice-Chancellor an offer of Sir Walter Gilbey to provide a stipend of £200 for ten years for a Reader in Agricultural Science, who should act as Director of Studies in the Agricultural Department of the University. Sir Walter desires to attract the future owners and managers of land among Cambridge undergraduates to the study of the scientific principles of husbandry. He suggests that the present preliminary examination for the Diploma in Agriculture, which includes the elements of chemistry, physics, botany, zoology, geology, and physiology bearing on agriculture, should be recognized as a special examination for the ordinary B.A. degree for those who have already passed the Previous and General Examinations. A similar arrangement already exists in regard to engineering and to music. The proposed examination would certainly not be inferior in standard and scope to the other special examinations, and the suggestion has much to recommend it. The future landowner would probably study agricultural science in this sense with greater zest than he at present displays over history or political economy.

An influential meeting of Cambridge medical graduates has been held in London for the purpose of raising funds for the urgently needed rebuilding of the Medical Schools. Dr. Dickinson, Dr. Jebb, Dr. Hill, Dr. Macalister, and others, pleaded the cause with effect. In the end a large and representative committee was formed, the members of which pledged themselves to procure donations and subscriptions for the object in view. £20,000 is said to be required for the erection and equipment of the building. The University has provided an excellent site, but it has no funds for bricks and mortar.

Professor Giles has been appointed honorary keeper of the Chinese books given to the University by the late Sir Thomas F. Wade. The Maitland Prize for an essay on the Non-Christian Sects of India has been gained by D. M. Thornton, Trinity. The degree of Doctor of Science, *honoris causa*, has been conferred on Professor Pfeffer, of Leipzig, Croonian Lecturer of the Royal Society. Dr. Hill, Master of Downing, has been appointed a member of the Council of the Cambridge Training College for Women; and the Rev. and Hon. A. T. Lyttelton a governor of the Manchester High School for Girls. The Chancellor's Medal for English Verse is adjudged to G. W. Young, Trinity; three Porson Prizes for Greek Iambic Verse are awarded this year, namely to J. H. Marshall, King's, R. K. Gage, Trinity, and J. Toplis, Trinity. The Browne Medals go to T. G. Johnson, Jesus (Greek ode), N. C. Armitage, Trinity (Latin ode), and J. Toplis, Trinity (Greek epigram). The Director of the Art Museum, South Kensington, has been appointed an Elector, *ex officio*, to the Slade Professorship of Fine Art. Professor Ewing, F.R.S., Trinity, and Professor Kanthack, St. John's, have been elected to Professorial Fellowships at King's College. It is stated that Mr. R. T. Glazebrook, F.R.S., Bursar of Trinity, has been appointed Principal of University College, Liverpool, in succession to Dr. Rendall, the new Headmaster of Charterhouse.

LONDON.

Death has removed another distinguished figure in the person of the great physician Sir Richard Quain, Bart., M.D., F.R.S. Sir Richard

had been lying dangerously ill for some time, and the end came on March 13, when he had just passed his eighty-first year. In 1837 he entered the medical school of University College Hospital, and he greatly distinguished himself at London University, where he took the degree of M.D. in 1842. Sir Richard became Vice-President of the Royal College of Physicians, and, in 1891, President of the General Medical Council. He accomplished much good work in the cause of medical education and the well-being of his profession. Sir Richard's aid was most valuable in enlarging and correcting the "British Pharmacopœia." In 1882 he brought out his "Dictionary of Medicine," which has had an extraordinary sale, and has come to be regarded as a trustworthy guide to non-professional people in medical matters.

Sir Richard Quain's death creates a vacancy on the Senate of the University, and it falls to Convocation to fill it. At the moment of writing no public nomination of any candidates has been made, but it is far from improbable that the election will once more turn on the now highly complicated question of Reconstitution, and afford an opportunity for the expression of the opinion of the graduates on the new London University Bill.

This Bill has duly passed the third reading in the Lords, where, as anticipated, it met with no opposition. Archbishop Temple, according to the Press reports, has again forced his will on the Government in the form of an amendment that met with universal condemnation—viz., to add the words as "far as practicable" to the provision for equality of standard in the two examinations for degrees for internal and external students respectively. This seems not only weak on the part of the Duke of Devonshire, but a clear departure from the "compromise" embodied in the schedule to the Bill, which also contains two other transgressions of the "compromise," both being by way of increasing the influence of the London teachers. A seat on the new Senate of fifty-five is taken from the Crown and given to the City and Guilds Institute; and the examiners appointed by the University are now cut out from the "Faculties," thus removing a somewhat independent element from the body of University teachers, and, in proportion, strengthening their power. These points ought most certainly to be rectified in the Commons, together with other points of important detail, previously indicated in the *Journal*, which are essential to lay a sound and stable basis for the permanent and harmonious development and working of the two diverse functions of the reconstituted University.

Among these provisions, which would go far to disarm the strong opposition still existing among the graduates, are: (1) Convocation to vote for Senate in a body, as hitherto, and not by Faculties, as proposed, the seats, of course, being distributed among the Faculties; (2) a definite clause precluding the Senate from abrogating, in the future, the provision of the schedule (this is in the new Bill vaguely conceded); (3) omit power to grant honorary and *ad eundem* degrees to teachers of the University; (4) neither party to an appeal before the Privy Council to pay costs of the other party; (5) Convocation to consist solely of graduates who have graduated in the ordinary course; (6) external students to be admissible to final or degree examinations of internals, should they desire it; (7) External Council, which will be mainly composed of Convocation Senators, should have the right to consult the Academic Council on matters affecting the educational interests of the external students; (8) the clause "No disability shall be imposed on the ground of sex" should be amended by the addition of "on any student" after "imposed"; (9) all final examinations for degrees, both for Honours and a Pass, to be identical for all students in those subjects which are of so definite a nature that identity would involve no educational disadvantage to either class of student—e.g., Classics, Mathematics, and others to be agreed upon; (10) no person to act as examiner in any subject whilst acting as a teacher of the University in that subject or within a year of having so acted; (11) omit the words "if practicable" in the provision to add one external examiner in each subject at each examination.

None of these changes can fairly be considered as inconsistent with the essential principles of the advocates of the teaching University, and they would probably remove the apprehensions of those who foresee in the future the inevitable decline of the influence of the non-collegiate or independent element, and the decay of those characteristics which have made the University what it is.

This question of inserting such further amendments in the Commons by consent of both parties to the controversy is really the key to the situation, as I am informed that very serious opposition is to be expected, and, as the question bristles with highly controversial points, the Government may be not unwilling to curtail such discussion as far as possible.

It is stated that the Irish members will oppose the Bill, and that very sturdy opposition will come from the Welsh members, many of whom take a keen interest in the independence and impartiality of educational tests. The London Press is not unanimous in favour of the Bill. The *Morning Post* has printed several long and cogent letters, indicating the points needing securities, and the other day had a leading article expressing the opinion that the arguments in favour of the teaching University have no real weight. Certainly the feeling against establishing it in London itself is gathering force. The scholarly and witty diarist in the *Cornhill* for March writes: "Should not the excited

behaviour of the Parisian students give pause to the gentlemen who are for departing from the wisdom of our ancestors by setting up a University in the capital? We do not want undergraduates parading Pall Mall and Piccadilly shouting an English version of "Conspuez Zola." An evening contemporary writes: "It was long ago discovered that the true University does not flourish in a town which is of too great municipal position, still less in a capital that is of national importance. These were the views of founders in the interests of their scholars and professors. . . . We know something of our medical students. Paris could tell us a little about her turbulent enthusiasts. Municipal authorities in Oxford and Cambridge can add a word of warning, even at the end of centuries of experience in harbouring the heirs of the nation's knowledge in their bosoms. The undergraduate needs more than lecture-room and council-chamber. He wants to 'spread himself' occasionally. He needs a fairly large expanse of country. Our traffic is quite large enough for us to manage as it is, without the addition of a score of Proctors and their 'bull-dogs' chasing Verdant Greens across Trafalgar Square."

It is clear that, if the teaching University of the future is to be a reality, and to give London a vast increase of collegiate students bound together by close ties of fellowship and *esprit de corps*, there is much weight in these considerations. It has been suggested to me that the new University should be situated in some fairly open suburb or outlying district, such as Dulwich (or I would suggest Wimbledon), and should absorb some old foundation and endowment which at present there is difficulty in expending in educational work. Would it be possible to hold the added teaching in such a locality, leaving the present colleges to go on as at present in their own buildings, or occasionally send their students and professors to the main buildings? Doubtless residential halls for students would in time spring up, and the advantages of their being out of London are too patent to need mention.

New regulations for the Preliminary Scientific and Intermediate Science Examinations have been framed, and are now ready, and will take effect in 1900. Thus the regulations issued last year to come into force in 1899 will have a life of one year only. The change in Intermediate Science is highly important, and is evidently being made to some extent in deference to the protest against linking Zoology and Botany together as one subject, as in the 1899 regulations. Your readers will remember that by the recently issued regulations only three subjects need be taken for a Pass or Honours, respectively, at Intermediate Science in 1899, out of the four: (1) Mathematics; (2) Experimental Physics; (3) Inorganic Chemistry; and, (4) Botany and Zoology. Thus those who are lucky enough to be able to come up next year need offer only (the first) three subjects, and those who have taken their B.A. need not be re-examined in mathematics, and thus have only two subjects to dispose of.

By the revised edition of this revised syllabus, which comes into force in 1900, candidates will be examined for a Pass in any four out of the following six subjects: (1) Pure Mathematics; (2) Mechanics; (3) Experimental Physics; (4) Chemistry; (5) Botany; and (6) Zoology; or for Honours in any one or more of the following: Pure Mathematics and Mechanics; Experimental Physics; Chemistry; Botany; Zoology. A candidate who passes this examination in Physics, Chemistry, Botany, and Zoology, taken together, will be admissible to the Intermediate Examination in Medicine as if he had passed the Preliminary Scientific (M.B.) Examination. A candidate who has passed in both Physics and Chemistry, or in both Botany and Zoology, will be exempt from examination in the corresponding section of the Preliminary Scientific, subject to the regulations governing Honours at that examination. It should be noted that new syllabuses in Mechanics and Botany, both for a Pass and Honours, have been drawn up for Intermediate Science. The Pass syllabus for 1900 contains a good deal of new matter, some of it taken from the B.Sc. syllabus—*e.g.*, Uniform Motion in a Circle, the Pendulum, Harmonic Oscillations, Equilibrium of Liquids, &c., Work and Energy, Impact. Other new matter is: The Determination of Stresses in Simple Jointed Frames; the Simpler Linkages; and the Theory of Statics and Dynamics is more definitely required. There will be two papers in Mechanics instead of one in Mixed Mathematics. Turning to the Honours syllabus, we note the addition of Theories of Projection and Reciprocation, the Elements of Algebraic Geometry of Three Dimensions, including questions on Surfaces of the Second Order referred to their Principal Axes. The Calculus is defined as "including Simple Ordinary Differential Equations." "Statics and Hydrostatics" are now asked for without any limitation. A final addition is: "The Theory of the Potential, including Applications to Gravitation and Electrostatics, treated by Simple Methods." Exception has been taken, and naturally, to the words "and Electrostatics" for an examination in Mixed Mathematics.

In the Honours syllabus in Chemistry, instead of Inorganic Chemistry, simply "Chemistry" is now prescribed. The changes in the Botany syllabuses, both for Pass and Honours, are very great, and, taken in conjunction with the unique severity in this subject at every examination from Matriculation to B.Sc. Honours, will probably deter any large number of students from entering, unless there is a change of methods or *personnel*. In the Pass two papers will be set instead of one. One marked feature of the change is the very detailed particularization under "Special Morphology and Taxonomy," in which the morphological and

physiological characteristics of a very large number of orders are required. The syllabus is completely recast, and students must carefully study it for themselves. The requirements for the practical examination are considerably more exacting also; in fact, what is asked of Pass candidates in 1900, and after, in practical work is exactly what is required of Honours candidates in 1899. The general curricula under the three heads of Anatomy and Histology, Physiology, and Morphology for a Pass in 1900, and after, are also, word for word, identical with those for Honours in 1899. No change has been made in Zoology or other subjects.

In the new syllabus for Preliminary Scientific (M.B.), the only change in the Pass range is the substitution of "Chemistry" for "Inorganic Chemistry." The same holds good with regard to Honours Chemistry. The other change is that the Honours requirements in Botany are identical with those described above for Intermediate Science Honours.

It is well known that the receipts from fees cover the vote required to defray the expenditure of the University. In the year 1897-8 the fees amounted to over £17,000. For the year we are now entering upon an increase of about £1,000 is expected. A sum has been allowed for the compilation of the hand catalogue of the Library, the work for which is being proceeded with.

Dr. Benham, one of the Examiners in Zoology, has resigned his appointment on his nomination to the Chair of Zoology in the University of New Zealand. The University has lent its portrait of Mr. Grote for the East London Millais Exhibition. Mr. Busk has been reappointed as representative of the Senate on the Council of the Ladies' College, Cheltenham. Delegates will represent the University at the Sanitary Congress proposed to be held at Birmingham in September next, and at the Ninth International Congress of Hygiene, to meet at Madrid from April 10 to April 17. An arrangement has been made with the Royal College of Science for the occasional mutual loan of apparatus.

The Council of the Finsbury and City Teachers' Association have passed a resolution to the effect that teachers in all grades of schools should (under the University Bill) be represented on the governing body of the University, and that the Council view with apprehension "the apparent attempt to reduce the value of the degrees of the University." Mr. Balfour gave an unfavourable reply to Sir C. Dilke's query as to whether amendments could be inserted to place the examinations in the hands of independent examiners, and the Duke of Devonshire does not show any disposition to insert amendments, although, as has been shown above, he has himself seriously disturbed the arrangement that had been arrived at by negotiations, and to which he was pledged. H.

SCOTLAND.

Principal Geddes has, after all, made no proposal with reference to Professor Johnston's case, so that we are still in the dark as to the expedient that may have occurred to Sir William as a means of getting rid of the Johnston difficulty. A not less pressing difficulty is that raised by a condition attached to the anonymous gift of £10,000 to Aberdeen University Extension Fund; the donor, whoever he may be, insists that Greyfriars Church, which stands inside the quadrangle of Marischal College, shall be retained as part of the College front, and the proposal is the subject of somewhat acrimonious discussion. On the one hand, it is contended that to retain the church will ruin the original design; on the other, that an attempt is being made to use Greyfriars Church as a means of making a future extension of Marischal College impossible. This is said to be the desire of those that are opposed to the transference of all the King's College classes (in Old Aberdeen) to Marischal College (in the new town). Mr. Cullen, of Aberdeen University, and Mr. Melville, of Edinburgh University, have received the second and first prizes respectively offered for competition among the students of the Scottish Universities by Miss A. F. Yule, through the Education Committee of the Scottish Branch of the Franco-Scottish Society, for the best essays on the history and characteristics of the Scottish Universities.

The entrance examination does not seem to be perfect as a means of excluding students of immature intellect. The other day an arts student of Aberdeen University was sentenced to a month's imprisonment for putting obstructions on the railway. He put coal on the line to see it broken by passing trains!

Professor Seth, Edinburgh University, has succeeded to the estates of Haining, &c., and the whole personal estate of Mrs. Pringle Pattison, taking the names Pringle Pattison in addition to his own. The will is to be contested on the ground that the testatrix was insane.

Mr. Henley's essay on Burns is still a theme for discussion. Several are curious to know whether the essay would have taken quite the same form if Mr. Henley had got the English Chair in Edinburgh University.

Speaking of chairs, it is amusing to note the literary output of the candidates for the Moral Philosophy Chair in Edinburgh University. They are making haste to show their paces.

Sir William Fraser has left £25,000 to found a Chair of Ancient History and Palaeography in Edinburgh University.

The work of the Edinburgh Town and Gown Association received a useful fillip from the conference held at Westminster. One part of the operations likely to be usefully stimulated is that connected with the provision of collegiate houses for colonial students. Last year there were at Edinburgh University 227 colonial students.

Sir Wm. Priestley, M.P. for the Universities of Edinburgh and St. Andrews, has given £1,000 to defray the cost of cleaning and re-decorating the ceiling of the library in Edinburgh University.

Professor John Glaister, St. Mungo's College, Glasgow, has been appointed Professor of Forensic Medicine in Glasgow University.

Some time ago attention was drawn to the Muirhead Bequest for the founding and maintenance of an institution for the instruction of women in physical and biological science, so that they might be fitted to become medical practitioners, dentists, chemists, electricians, &c., and to the difficulties experienced by the trustees in attempting to carry out the testator's purpose. The trustees have applied to the Court of Session to obtain judicial sanction to a scheme for the administration of the trust, and the Court has decided that the trustees must carry out Mr. Muirhead's intention if they can. What underlies the proceedings is this. The general medical education of women is already well provided for in Glasgow, and the establishment of an institution on the lines proposed by Mr. Muirhead would probably injure the existing school without achieving any compensating good, while the £35,000 available under the trust could be usefully employed in providing facilities additional to those already existing.

The Educational Institute has made another attempt to have modern languages placed on a footing of equality with Latin and Greek at the bursary examinations (at present the marks assigned to each of the subjects English, Latin, Greek, and mathematics are double the marks assigned to any other subject), but the University authorities are not disposed to make any alteration in the plan approved by the University Commissioners.

Glasgow University Court has resolved to appropriate for competition, *without restriction as to sex*, all the open bursaries tenable in arts, science, and medicine that have taken effect prior to August 30, 1864.

According to a letter addressed to Lord Balfour of Burleigh by the Marquis of Bute, the case of *Macgregor v. St. Andrews University* Court is to be appealed, and it will depend upon the result of that appeal whether a Bill will be introduced into Parliament, *which Bill will be introduced in subsequent Sessions if it does not pass in the first*. On the other hand, if University College, Dundee, would consent to an incorporation modelled upon that of St. Mary's College, I presume that this union would be sanctioned by an unopposed Act of Parliament, that all idea of an appeal in the case of *Macgregor v. St. Andrews University* Court would be dropped as a matter of course, and that there would be no further difficulties of any kind between St. Andrews and Dundee College.

The University Court of St. Andrews has resolved to establish a Chair of Anthropology and Anatomy and also a Chair of Physiology. The report of the committee appointed to consider the past and present action of President Donaldson in relation to the University has been received by the Court and read, but its contents are still hidden from a curious public. Lord Bute stated that he was willing to provide the salary for the Lectureship on Post-Classical and Modern Greek for five years further, in the event of the present lecturer being retained in office for that period, and also to pay the salary of Miss Umpherston as Lecturer on Physiology for an additional period of two years in the event of the Court being unable to do so from the University funds.

There are ominous rumours that one of the first uses one at least of the Universities will make of the freedom of action now granted to the Scottish Universities will be the extrusion of education from the lists of subjects that qualify for the M.A. degree. Any such action would have a deplorable effect on the status of the subject, and rumour, it is to be hoped, is now, as often, a lying jade.

The Edinburgh Academy gave an excellent performance of the "Alcestis"; three years ago the "Antigone" was the play produced. Such a performance is of the rarest on this side of the Tweed, and the Academy is to be congratulated on its enterprise.

Mr. Morland Simpson, Rector of the Aberdeen Grammar School, complains that boys coming from the elementary schools know nothing of the history of their country; that some have never heard of William Wallace. There can be no doubt that history has been sacrificed to pseudo-science, and one is glad to note that the new code does something to encourage the study of history. We commend to the elementary teachers a notable passage in "Guesses at Truth." "The teachers of youth in a free country should select those books for their chief study—so far, I mean, as this world is concerned—which are best adapted to foster a spirit of manly freedom. . . . Is this to be learnt from the investigations of science? Is it to be picked up in the crucible—or extracted from the properties of lines and numbers?"

Dr. Rogerson, the honoured Headmaster of Merchiston Castle School, is retiring from the post he has so long adorned, though he will still retain his office of managing director.

Glasgow School Board has resolved: "That this Board, having in view the serious evils arising from the early age at which children leave

school, resolve to urge upon Parliament such an alteration of the law as will secure that children shall not leave school until they have reached the present legal age limit of fourteen years or have passed the sixth Standard and are thirteen years of age." Educationists are pretty well agreed on the necessity of such a change in the law, but Parliament may take a very different view of the desirability of imposing further restrictions on the liberty of parents.

Giving evidence before the Committee of Inquiry of the Educational Institute of Scotland, Mr. Arnott, Clerk to the Edinburgh School Board, said that Edinburgh district had far too many bursaries, and that there was no ardent desire among the public to take advantage of the facilities for higher education. With regard to the system of examinations, he suggested that in the elementary schools inspectors appointed by Government should make their visits to the schools at any time and as often during the session as they thought proper, and leave the headmaster and the Boards to draw up a course of instruction suitable not only for the school, but for the district in which the school was situated. Teachers complained of the requirements of the drawing schedule as being excessive, but they did not seem agreed on the alterations that should be made in the scheme of work drawn up by the Department for the different standards.

ASSOCIATION OF TEACHERS IN THE SECONDARY SCHOOLS OF SCOTLAND.

[By a resolution of the Association, at the Annual Meeting on November 23, 1895, the "Journal of Education" was adopted as the medium of communication among members of the Association.]

On March 18 the Aberdeen Branches of the Secondary Teachers' Association and of the Educational Institute held a joint meeting in the Grammar School. There was an excellent attendance of both elementary and secondary teachers, and, in the absence of Professor Trail, the chair was occupied by Mr. Alexander Brenner. A discussion on primary and secondary education was the business on the programme, and opening papers were read by Mr. John Adams, Rector of the Free Church Training College, and by Mr. H. F. Morland Simpson, Rector of the Grammar School. At the outset of his paper Mr. Adams dealt with the distinction usually drawn between primary and secondary work, and pointed out that there was no really fundamental difference between them. Mr. Adams thereafter considered in detail the question of the stage at which a boy should pass from the primary to the secondary school, summing up with the conclusions that a boy intended for the University should leave the primary school for the secondary, if possible, on entry to Standard V.; that boys likely to have only two years at school after Standard VI. should have only an ex-standard course, and should not enter a secondary school at all; and that primary schools in town should not attempt secondary work leading up to the University.

Mr. Simpson agreed with Mr. Adams in maintaining that a boy ought to begin his secondary course at the stage of Standard V. In order to secure the boys for the secondary school at this stage, he advocated the freeing of education all round up to the age and standard which the law regarded as final in elementary schools. Under present conditions pupils coming from such schools showed great diversity in the specific subjects they had studied, and great inequality of attainment even when the same subjects had been studied and for the same length of time, and this, too, in the case of pupils who were nominally at the same stage of their school course. Payment by results was largely responsible for the chaotic state into which the study of specific subjects had fallen in elementary schools.

After some discussion, the meeting terminated with votes of thanks to Mr. Adams and Mr. Simpson.

IRELAND.

Although it is certain that no legislation with regard to Irish University education will be attempted this Session, it is plain that the debate which took place on the amendment to the Address has advanced the question to a more definite stage. Mr. A. Balfour, while unchanged in his own belief in the justice and necessity of granting a Catholic University, seemed considerably impressed by the opposition to the proposal which has arisen recently from the Orange section in Ireland and the Nonconformists in England; and his speech was rather an appeal to the House to allow such a measure to pass than an assertion of any intention on the part of the Government to introduce it in the teeth of opposition.

The Nonconformist objections, however, were the means of clearing away a good deal of vagueness as regards the constitution of the proposed University. The discussion brought to light the fact that much unprejudiced opposition arose from the total want of any guarantee that efficient education would be given in return for the expenditure of a large sum of money.

It did more: it showed that even the supporters of the principle

themselves, such as Mr. Balfour, Mr. Lecky, Mr. Morley, and Mr. Courtney, were not willing to grant a Catholic University without such guarantees. The object in granting it—the improvement of Catholic education—would, in fact, without guaranteed efficiency, be defeated.

Mr. Courtney proposed in the debate that after the first ten years all appointments to fellowships, professorships, and to the governing body should be made from the graduates of the University, who had gone through a long course of study and had won the appointments in open competition in scholarship, by examination or otherwise—a system, in short, resembling that of Oxford and Cambridge or Dublin. In this way the teaching and direction of the University would be in the hands of scholars devoting themselves to an academic life. Of course, the whole standing of the University, and its success, would depend on the scholars so produced really receiving high training and education within its walls.

It is now announced that since the debate the bishops have been in consultation with Mr. A. Balfour on this question of the constitution of the proposed University. In fact, the possibility of the measure being introduced at all seems now to depend on whether the bishops will accept such a scheme as will satisfy the statesmen who are willing to promote legislation, or not.

It is said that the bishops have stated that they are willing that the University shall be open to students of all denominations, and the professorships also open, with certain specified exceptions. They are willing that not more than one-third of the governing body shall be clergymen, the remainder being laymen, and not necessarily Catholics. The question of the election of the governing body is still uncertain. The Government, it is said, desire to appoint it at the outset, and also, even when there is a body of students formed capable of electing a Senate, to have the power still to nominate certain members. This, it is probable, would be objected to. So far nothing has transpired as to whether a definite test of scholarship for fellowships and professorships, such as Mr. Courtney suggested, has been accepted or not by the bishops.

The point in the whole of this matter that strikes an outsider is that the negotiations are carried on between the bishops and the Government without, apparently, the laity being consulted—the people for whom, and for whose children, the University is being founded. It is to be hoped that the laity will show some independence, energy, and intelligence at this important juncture, and ask for such a constitution as they really desire and would have confidence in.

Professor Mahaffy has been speaking on the question recently at Belfast. His remarks are almost the first public utterance we have had on the subject from Trinity College, with the exception, of course, of the members for Dublin University. He strongly emphasized the well-known objections of Trinity to any Catholic college being affiliated to it, and to the governing body's being altered to receive Catholic representation; but he said that he and his colleagues trusted the assertions of all parties that Trinity was not to be touched. He remarked that it depended on the College itself not going to sleep, but keeping abreast with the times, whether it would retain a high academic position or not. This was a remarkable admission from Professor Mahaffy, who always loyally paints his University in very roseate hues. His remarks concerning the Irish Catholics were ungenerous and offensive. He spoke as if none existed of the class capable of taking advantage of University education, and said that, from his experience, he considered that higher education could not be given to people of a lower class in Ireland without doing far more harm than good, though such education might be given to such classes in other countries with advantage. These statements are as groundless and as easily disproved by facts as many of Professor Mahaffy's other dogmatic assertions and pet prejudices.

The death of Mr. Carson, one of the oldest of the Senior Fellows, has made some changes in Trinity College. Mr. Gray has become Senior Fellow. Professor Tyrrell has given up the professorship of Greek, which is now taken by Mr. Bury, perhaps the most brilliant scholar the College possesses. He has up to the present been Professor of History.

Many rumours are afloat of impending changes in the Intermediate system. The long-continued dissatisfaction with the results it has produced has at length borne fruit. The Board are themselves meditating large alterations, one of which is believed to be the introduction of inspection, and the doing away with the present results fees system. It is also rumoured that the senior grade will be abolished, and that there will be much larger attention and encouragement given to science. The educational bodies have presented memorials asking that they may be consulted in the changes, but, so far, the heads of schools and teachers have not been communicated with. It would be a grave mistake if important changes were made without laying them first before those whom they vitally affect, and whose opinion experience ought to make valuable. The system of inspection is full of difficulties. Good inspectors are hard to obtain, particularly in special subjects. Moreover, all the jealousy of schools and sects would immediately break forth, and there would be large openings for unfairness and deception.

The Royal Dublin Society appointed a committee to examine the position of science under the system last year; and this committee has drawn up a series of suggestions which have been laid before the Lord

Lieutenant, and have obtained his approval. It is being urged that a Royal Commission should be appointed to inquire into the working of the system, but the Board are unfavourable to this course. The Technical Education Association in their last report, after an indictment against the Intermediate, demand a Royal Commission. Mr. Balfour, questioned in the House lately, replied that he was not prepared at present to recommend that course.

It is being urged that the new Irish Local Government Bill affords a good opportunity for the enforcement of compulsory education in Ireland. In the Act of 1892 the compulsory clauses only applied to such places as possessed permanent local authorities who could carry out the provisions. These places, at present 119 in all, have only in some instances appointed school-attendance committees, and where the latter are practically working great good has been effected. But the majority have not put the clauses into force, either on account of the exclusion of the Christian Brothers' schools, or because they have no funds which they think they can legally use for the purpose.

The Act of 1892 stated that, if Councils, similar to the English, were introduced into Ireland, compulsion should be extended to rural districts.

It is hoped that this will now be made one of the functions of the proposed rural District Councils, as it will be of the urban, and that the means for defraying the cost will be fixed. Mr. Balfour, in reply to Mr. Field, has already stated that the matter is under the consideration of the Government. It would be but a small addition, as the urban District Councils will have such powers.

The Government have declined to extend the time appointed for the national teachers to give in their acceptance of the new pension rules beyond the original limit, *i.e.*, this April. They have, however, expressed their willingness to give time for the discussion of the rules. Mr. Balfour has stated that the fund is bankrupt to the extent of £1,000,000, but, as usual, no adequate explanation of this assertion is given. It is supposed that it is by looking far ahead into future claims on the fund that this estimate has been reached. It is proposed that some of the deficiency shall be met by raising the amount of the teachers' contributions, and by reducing the largest pensions.

The teachers have taken legal opinion as to whether the Government have not a contract with them by the old rules, under which they have been induced to enter the profession, and that, therefore, it is not competent to the Lord Lieutenant, without an Act of Parliament, to sanction and enforce the new rules if the teachers object. Counsel's opinion is, on the whole, adverse to this view. It declares that the Lord Lieutenant has not this power as regards the raising of the teachers' contribution, but that he has as regards other portions of the rules; moreover, that, if the new rules were established, the teachers could not obtain legal redress, or get the amounts guaranteed under the old rules paid to them. The hopes of the teachers, therefore, rest on the strong support of the Irish members—all of whom are in their favour—in the House. That support was sufficient to obtain the payment of the arrears, and it is to be hoped it may effect as much in this case this Session.

BEDFORD COLLEGE, LONDON, FOR WOMEN.

Miss Ethel Hurlbatt, appointed Principal on the resignation of Miss Emily Penrose, will enter on her duties at the beginning of the Easter term. At a recent meeting of the Council, Arthur Bernard Cook, Esq., M.A., Fellow of Trinity College, Cambridge, was appointed to the Professorship of Ancient History vacated by Miss Penrose, and W. H. Marett Tims, Esq., M.D., M.S., to the Professorship of Zoology, resigned by Dr. Benham on his appointment to the Chair of Zoology in the University of Otago, New Zealand.

At the January examination for Matriculation at the University of London, J. M. Allen, E. L. Calkin, A. M. Newton, and A. M. Sorabji passed in the First Division, M. L. Lees and F. E. Taylor in the Second. At the Preliminary Scientific Examination, B. M. Kidd passed in the First Division.

SCHOOLS.

PORTSMOUTH HIGH SCHOOL.—An entrance scholarship for Girton, of the value of £30 for three years, has been awarded to Kate Edwards on the results of the Cambridge Local Examination held in December, 1897. Of the fourteen candidates seven Senior and seven Junior entered for the Cambridge Local Examination in December last. Twelve have passed, of whom four were over age. The following are the results:—Seniors: Class I., Kate Edwards, distinguished in Religious Knowledge, Latin, and French; Class II., Fanny West; Class III., Isabel Smyth, distinguished in French and Drawing; satisfied the examiners, Edith Ascough, Bessie Handley, Ethel Roffey. Juniors, Class III., Madeline Chapman; satisfied the examiners, Grace Stares, Mary Andrews, Ethel Barr, Daisy Gloyne, Mabel Smith.

MR. EDWARD ARNOLD'S EDUCATIONAL LIST.

ARNOLD'S SCIENCE MANUALS.

General Editor—Prof. R. MELDOLA, F.R.S.

THE CALCULUS FOR ENGINEERS. By Prof. JOHN PERRY, F.R.S. About 400 pages. Second Edition. Crown 8vo, cloth, 7s. 6d.**ELECTRICAL TRACTION.** By ERNEST WILSON, Wh.Sc., M.I.E.E., Assistant Professor of Electrical Engineering in the Siemens Laboratory, King's College, London. Crown 8vo, cloth, 5s.**STEAM BOILERS.** By GEORGE HALLIDAY, late Demonstrator at the Finsbury Technical College. With numerous Diagrams and Illustrations. Crown 8vo. 400 pages. 3s.

ARNOLD'S SCHOOL SHAKESPEARE.

General Editor—J. CHURTON COLLINS, M.A., assisted by Special Editors in the preparation of the different Plays as follows:—

KING LEAR. By the Rev. D. C. TOVEY, M.A., late Assistant-Master at Eton College. 1s. 6d.**ULIUS CAESAR.** By E. M. BUTLER, M.A., Assistant-Master at Harrow School. 1s. 3d.**MACBETH.** By R. F. CHOLMELEY, M.A., Assistant-Master at St. Paul's School. 1s. 3d.**MERCHANT OF VENICE.** By C. H. GIBSON, M.A., Assistant-Master at Merchant Taylors'. 1s. 3d.**TWELFTH NIGHT.** By R. F. CHOLMELEY, M.A. 1s. 3d.**MIDSUMMER NIGHT'S DREAM.** By R. B. JOHNSON. 1s. 3d.**AS YOU LIKE IT.** By S. E. WINBOLT, B.A., Assistant-Master at Christ's Hospital. 1s. 3d.**KING HENRY V.** By S. E. WINBOLT, B.A. 1s. 6d.**THE TEMPEST.** By W. E. URWICK, M.A., Assistant-Master at Manchester Grammar School. 1s. 3d.**HAMLET.** By W. HALL GRIFFIN, Professor of English Literature at Queen's College, London. 1s. 6d.**RICHARD III.** By F. P. BARNARD, M.A., late Headmaster of Reading School. 1s. 6d.**RICHARD II.** By C. H. GIBSON, M.A. 1s. 6d.**CORIOLANUS.** By R. F. CHOLMELEY. 1s. 6d.**KING JOHN.** By F. P. BARNARD. 1s. 6d.

ARNOLD'S BRITISH CLASSICS FOR SCHOOLS.

General Editor—J. CHURTON COLLINS, M.A., assisted by Special Editors in the preparation of the different Works, as follows:—

SCOTT.—LADY OF THE LAKE. Edited by J. MARSHALL, M.A., Rector of the Royal High School, Edinburgh. With Introduction, Notes, and Questions. Cloth, 1s. 6d.**SCOTT.—LAY OF THE LAST MINSTREL.** Edited by G. TOWNSEND WARNER, M.A., Fellow of Jesus College, Cambridge; Assistant-Master at Harrow School. Cloth, 1s. 3d.**SCOTT.—MARMION.** Edited by G. TOWNSEND WARNER, M.A., Assistant-Master at Harrow School. With Introduction, Notes, and Questions. Cloth, 1s. 6d.**MILTON.—PARADISE LOST.** Books I. and II. Edited by J. SARGAUNT, M.A., Assistant-Master at Westminster School. With Introduction, Notes, and Questions. Cloth, 1s. 3d.**MILTON.—PARADISE LOST.** Books III. and IV. Edited by J. SARGAUNT, M.A., Assistant-Master at Westminster School. With Introduction, Notes, and Questions. DU PONTET, B.A., Assistant-Master at Winchester College. With Introduction, Notes, and Examination Questions. Cloth, 1s. 6d.**THE ANALYTICAL DRAWING SHEETS.** By W. H. HOWARTH, Certified Master under the Science and Art Department; and A. W. F. LANGMAN, Inspector in Drawing under the School Board for London. The Series consists of Seven Sets, each of Twenty-Four Sheets (except Set II., which has Twelve Sheets), on stout paper, size 20 in. by 15 in., and the Sets are supplied flat in large envelopes.

Prices: Sets I., III., IV., V., VI., VII., per set, 3s. 6d. net. Set II., 2s. net. Sets I.-VII., complete in well-made box, 25s. net.

FRENCH TEXT-BOOKS FOR READING.

The following Volumes are all carefully prepared and annotated by such well-known Editors as Mr. F. TARVER, J. BOIELLE, &c., and will be found thoroughly adapted for school use:—

ALEXANDRE DUMAS' VINGT ANS APRÈS. 3s.**FRENCH REVOLUTION READINGS.** 2s. net.**MODERN FRENCH READINGS.** 3s.**STAHL.—MAROUSSIA.** 2s.**RICHEBOURG.—LE MILLION DU PÈRE RAULOT.** 2s.**BALZAC.—UNE TENÉBREUSE AFFAIRE.** 2s.**HUGO.—QUATRE-VINGT-TREIZE.** 3s.**DUMAS.—MONTE CRISTO.** 3s.**DUMAS.—LES TROIS MOUSQUETAIRES.** 3s. 6d.**GRÉVILLE.—P. 3DUE.** 3s.**FRENCH WITHOUT TEARS.** A Graduated Series of French Reading Books, arranged to suit the requirements of quite young Children beginning French. With Humorous Illustrations, and a Vocabulary. By Mrs. HUGH BELL, Author of "Le Petit Théâtre des Enfants." Book I., 9d. Book II., 1s. Book III., 1s. 3d.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

CASSELL'S EDUCATIONAL BOOKS.

IMPORTANT NEW WORK.

Ready in a Few Days. Demy 4to. Price 5s.

Blackboard Drawing.

By W. E. SPARKES.

With 52 Full-page Illustrations by the Author.

In exact accordance with the Syllabus recommended in the recent Departmental Report on the Pupil Teacher System.

This book is intended for Teachers to enable them to illustrate their lessons on the blackboard. In Mr. Sparkes' book, copious explanations, hints, and instructions are given of blackboard drawing, and the fifty-two full-page illustrations, which are exact reproductions of chalk drawings on the blackboard, show how a sketch is gradually, easily, and rapidly built up.

Just Published.

HOW TO DRAW FROM MODELS AND COMMON OBJECTS.

By W. E. SPARKES, Art Master, Borough Road Training College.

With 184 Figures in 44 Plates by the Author.

Price 3s.

"Simply written, interesting, ingenious in its examples and methods... the object of Mr. Sparkes' Manual is to show how Model Drawing, as generally understood, may be an intelligent means of driving home those principles of fore-shortening and grouping that must be grasped before a satisfactory sketch of any object can be made."—*Birmingham Daily Post*.

A HISTORY OF ENGLAND. By H. O. ARNOLD-FORSTER, M.P. Fully Illustrated. Extra crown 8vo, over 800 pages, bound in cloth. Just published. Price 5s.

The Daily Mail says:—"The 'History of England,' by H. O. Arnold-Forster, M.P., which Messrs. Cassell have just issued at 5s., has all the ingredients which go to the formation of a universally popular work. While it is certain to become a standard history book in schools, it is at the same time most conveniently arranged for use in the home."

CASSELL'S CLASSICAL READERS. For School and Home. In Two Volumes. Abundantly Illustrated. Just published. Vol. I. (for Young Children), 448 pages, extra crown 8vo. Price 1s. 8d. Vol. II. (for Boys and Girls), 736 pages. Price 2s. 6d.

"I am obliged to you for sending me specimen copies of the CLASSICAL READERS. Their type is excellent; the selections good, interesting, and at the same time pure and sound English. I have determined to discard all other literary readers and use the CLASSICAL READERS exclusively in our Preparatory School."—*Rev. G. E. Mackie, Godolphin School, Hammersmith, W.*

THE CHEAPEST DICTIONARIES IN THE WORLD.

"Cassell's French Dictionary is at once the cheapest, the most complete and extensive, the only thoroughly accurate book of its kind in this country."—*Record*.

CASSELL'S FRENCH DICTIONARY. 490th Thousand. Cloth, pp. 1,150, extra crown 8vo, 3s. 6d.

"To say this is the best of the smaller German Dictionaries in the field is faint praise, and were it not for the special merits of one or two we might, without exaggeration, say that Miss Weir is first and the rest nowhere."—*Journal of Education*.

CASSELL'S GERMAN DICTIONARY. 207th Thousand. Cheap Edition. Cloth, pp. 1,120, extra crown 8vo, 3s. 6d.

"This new edition of Messrs. Cassell's 'Latin Dictionary' has been well and widely overhauled. Its nine hundred odd pages are sure to prove a popular investment, and as regards price, at any rate, the book need fear no rival."—*University Correspondent*.

CASSELL'S LATIN DICTIONARY. 102nd Thousand. Cheap Edition. Pp. 920, extra crown 8vo, 3s. 6d.

CASSELL'S ENGLISH DICTIONARY. Together with American Words and Forms, Technical Terms, Colloquial and Slang Expressions, Obsolete and Archaic Words—the whole based upon the "Encyclopædic Dictionary." Edited by JOHN WILLIAMS, M.A. Oxon., Editor of the "Encyclopædic Dictionary." Pp. 1,100, demy 8vo. Cheap Edition, 3s. 6d.; Superior Edition, 5s.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & COMPANY, LIMITED LUDGATE HILL, LONDON; AND ALL BOOKSELLERS.

Williams & Norgate's FRENCH & GERMAN SCHOOL BOOKS.

Delbos' French Reader.

The Student's Graduated French Reader.

For the use of Public Schools. By LÉON DELBOS, M.A., late of King's College, London. I. First Year:—Anecdotes, Tales, Historical Pieces. Edited with Notes and a complete Vocabulary. Eleventh Edition. Crown 8vo, 2s.

— II. Second Year:—Historical Pieces and Tales. 180 pages. Sixth Edition. Crown 8vo, 2s.

"It would be no easy matter to find a French Reader more completely satisfactory in every respect than that of M. Delbos. . . . The arrangement of the materials is no less happy than their selection, the shorter extracts being often grouped under general heads, and carefully graduated in difficulty."—*Athenæum*.

"A better book will always supplant those that are inferior. . . . The intrinsic merits of these Readers justify their appearance."—*Educational Times*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes."—*Journal of Education*.

Eugène's French Grammar.

Eugène's Student's Comparative Grammar of the French Language.

With an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises. By EUGÈNE FASNACHT, late French Master in Westminster School. Eighteenth Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen. . . . The book is likely to be useful to all who wish either to learn or to teach the French language."—*Athenæum*.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern languages. . . . The rules and observations are all scientifically classified and explained. . . . It is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

Weisse's Complete Practical Grammar of the German Language.

With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Re-written. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German Grammar yet published in England."—*Journal of Education*.

Weisse's Short Guide to German Idioms.

Being a Collection of the Idioms most in use. With Examination Papers. Second Edition. 8vo, cloth, 2s.

Eugène's French Method.

Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." Fifteenth Edition. Crown 8vo, cloth, 1s. 6d.

French History and Literature.

First Steps in French History, Literature, and Philology.

By F. F. ROGET, of Geneva University. For Candidates for the Scotch Leaving-Certificate Examination, the various Universities Local Examinations, and the Army Examinations. Third Edition. Crown 8vo, cloth, 5s.

"This manual will be a boon to many who have neither time nor inclination to work through a large volume on the history of French literature, but who yet desire to obtain a knowledge sufficient to enable them to pigeon-hole their reading of French prose and poetry."—*Educational Times*.

"He has displayed qualities which are rarer and more praiseworthy than mere erudition."—*Saturday Review*.

BY THE SAME AUTHOR.

An Introduction to Old French.

History, Grammar, Chrestomathy, and Glossary. Third Edition, with Map of French Dialects. Crown 8vo, cloth, 6s.

WILLIAMS & NORGATE,
14 HENRIETTA STREET, COVENT GARDEN, LONDON;
20 SOUTH FREDERICK STREET, EDINBURGH;
AND 7 BROAD STREET, OXFORD.

Professor Meiklejohn's Series.

A New Arithmetic. By G. A. CHRISTIAN, B.A. Lond., and G. COLLAR, B.A., B.Sc. Lond. Crown 8vo, 562 pp. 4s. 6d.

"We recommend teachers and students to judge for themselves what a powerful auxiliary to success has been given them by the experience and judgment of the able authors."—*Schoolmaster*.

"We also welcome it because in several of its chapters—such, for example, as those on factors, decimal fractions, involution and evolution, surds, and logarithms—it seems to us to mark a distinct advance on the majority of its predecessors."—*School Guardian*.

"It is not too much to prophesy that this reliable exposition of the principles of Arithmetic and carefully collated examples will become the leading text-book for P.T. Centres, Schools, and Colleges."—*The Pupils' Teacher and Scholarship Student*.

"We consider it so satisfactory that we have at once placed it on our list of books."—*Rev. G. H. S. Walpole, D.D., Principal, Bede College, Durham*.

The English Language: its Grammar, History, and Literature. By J. M. D. MEIKLEJOHN, M.A. Sixteenth Edition. Enlarged, with Exercises and additional Analysis. Crown 8vo, 470 pp. 4s. 6d.

"For the first-class College of Preceptors your work is most excellent and valuable."—*The Rev. F. Marshall, M.A., Almondbury Grammar School*.

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnson, Esq., B.A., Elmfield College, York*.

A New Geography on the Comparative Method. With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twentieth Edition. 105th Thousand. Crown 8vo, 630 pp. 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of Geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education*.

"For all that is best worth knowing no better book than this could be studied."—*Educational News*.

A New History of England and Great Britain. With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Twelfth Edition. Crown 8vo, 740 pp. 4s. 6d.

"We like the arrangement of the text, which is a distinct success for the purpose of catching the eye. We shall have much pleasure in warmly recommending it to our H.C.S. Class II. candidates."—*Messrs. Wren & Gurney, Powis Square, London*.

The Principles and Practice of Teaching and Class Management. By JOSEPH LONDON, F.G.S., Vice-Principal in the Saltley Training College. Third Edition. Crown 8vo, 462 pp. 5s. 0d.

"We have no hesitation in saying that this is one of the best treatises on this subject which has appeared for some time, and we cannot too strongly recommend it to the attention of all interested in the practical work of education."—*Educational News*.

The British Empire: its Geography, Resources, Commerce, Landways, and Waterways. By J. M. D. MEIKLEJOHN, M.A. Fourth Edition. Crown 8vo, 350 pp. 3s. 0d.

"It is certainly one of the best books of the kind that have come under our notice for a long time, and can be heartily recommended to teachers."—*St. James's Gazette*.

"Professor Meiklejohn's work is of high educational value, and the facts are handled with much picturesqueness."—*The Scottish Geographical Magazine*.

A School Algebra for Junior Forms. By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. 1s. 6d. With Answers, 266 pp. 2s.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.

"The scientific method, from known to unknown, from Arithmetic to Algebra, has invariably been adopted, while lucid explanations and proofs precede oral exercises, followed in turn by numerous carefully-graduated examples for attaining the necessary mechanical accuracy."—*The Educational News*.

 10 words after, 6d.
 Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s.;
 each 8 words after, 6d.

[These minimum charges do not include a copy of paper.]

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.
 Date of publication of next issue will be found at top left-hand corner of front page.
 [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS
 NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter
 Office."]

All Letters respecting Advertisements and Subscriptions should be addressed—
 "THE PUBLISHER," JOURNAL OF EDUCATION Office, 86 FLEET STREET, LONDON,
 E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should
 be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "City
 Bank, Ludgate Branch." Postage Stamps can only be received at the rate of thirteen
 to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped
 envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad,
 stating full name and address of the sender; and all Foreign Money Orders should
 be "crossed."

American subscribers may conveniently remit through Mr. C. W. BARDEEN, 406
 South Franklin Street, Syracuse, New York; or Messrs. E. L. KELLOGG & Co.,
 61 East 9th Street, New York.

THE STUDY OF LITERATURE IN GIRLS' SCHOOLS.

THE interesting paper in the December number of this
Journal on "English Literature and Examinations" deals
 with a matter that is well worthy of consideration and discussion.
 There is little doubt that literature, as at present taught in our
 high schools, is a far from satisfactory subject. In this respect
 our girls' schools compare unfavourably with the German
 schools, where excellent literature teaching is a marked feature
 of the whole system. It is rare to go into a *höhere Mädchen-
 Schule* without being struck by the interesting lessons in this
 subject and the thorough work of the pupils. In these schools
 a scheme for literature teaching is drawn up for all the classes,
 so that when a girl leaves at fifteen or sixteen—the usual age—
 she has some idea—a rough one, it is true—of the literature of
 her country, and she has read a dozen or so good classical works
 (by Herder, Lessing, Goethe, Schiller) as well as many of the
 finest short poems in the language, a great many of which she
 has also learnt by heart.

The excellent results obtained in these schools are due to many
 causes, the most important, perhaps, being the almost entire
 absence of examinations. As long as literature is made a sub-
 ject for examinations, as we understand examinations to day,
 it cannot be *well* taught; but it might, however, be possible to
 do something better than what we are doing at present. The
 mere absence of examinations, however, would not be sufficient
 to account for these good results in German schools. Much
 more time is devoted to the subject; in all German *höhere
 Mädchen-Schulen* three and generally four lessons a week are
 given in the upper classes, as compared with the one, or at most
 two, in our schools. Thus, of course, it is possible to get
 through a far greater amount of work, especially in the matter
 of reading. The literature teaching is almost entirely in the
 hands of teachers who have made a special study of the subject,
 and who are genuine and enthusiastic lovers of it. Conse-
 quently, they are able to inspire their pupils with something of
 their own feeling towards literature. Knowledge joined to
 enthusiasm is, perhaps, the most valuable qualification a teacher
 can possess, and especially a teacher of literature, but unfortu-
 nately these two valuable commodities are not always found in
 combination. Knowledge alone leads to that dull grinding at
 words, that elaborate explanation of phrases and allusions,
 which rob a poem or play of all its beauties; while enthusiasm

based on inadequate learning may bring about evils that are possibly worse: superficial judgments, lack of discrimination, extravagant praise, and an incapacity to see things in their right perspective.

In the German schools no attempt is made in the literature lessons to teach history, philosophy, or mythology, or to produce the student, the pedant, or the moralist. The main object of the lessons is to produce an enthusiasm for literature, so that later on the girls may care much to read some of the great works of their own countrymen. Such being the object, very little time is spent on notes—indeed in many cases I found the texts used by the girls were *without notes* of any kind—and much time is devoted to the work itself, to a consideration of the beauties of thought, language, and style, and to the characters. Minute points, such as other readings, derivations (unless really necessary in order to understand the passage), are not gone into, as these are thought suitable to the scholar rather than to the beginner. Much stress is laid on correct and expressive reading, but dramatic recitation is generally avoided. The teachers believe that good reading aloud in class will render many explanations superfluous, and will teach the girls to appreciate the beauties of rhythm and of sound far more than such criticisms as “this line is beautiful,” “that is harmonious,” and so on. As, therefore, but few explanations are given, the pupils read the plays, poems, &c., far more quickly than girls of a like age would in English schools. Two, and sometimes three, plays are read in a term in the highest form (the girls are about fifteen or sixteen), besides which a period is studied. By this means it is possible to compare plays or poems, a method that is extremely valuable in the teaching of literature. I remember hearing some excellent lessons towards the end of one term on Goethe’s “Egmont” compared with Schiller’s “Wallenstein,” the two plays having been studied earlier in the same term. I was immensely struck by the intimate knowledge displayed by the girls, as well as by their thought and originality. It was quite evident that they understood and appreciated the two plays, and had learnt to see something of the difference in spirit between the two great writers; there was no trace of “cram” anywhere, or of “criticisms” taken from literature primers. In whatever school I went I found that the girls showed the greatest interest in everything connected with literature, and looked forward to their literature lessons as the most enjoyable in the week.

If the above facts be correct, and I believe few who have visited the German girls’ schools will doubt that such is the case, is there not much that we in England might learn from our neighbours? The average high-school girl of eighteen leaves school with but a poor equipment of English literature: she has “studied” two or three of Shakespeare’s plays, perhaps one of Milton’s shorter poems; perhaps, though less likely, she has read the “Prologue” and the “Faery Queene.” She has seldom read more than this. Of the history of literature, of the connexion between one period and another, I venture to think she knows nothing, or next to nothing. She can give the dates of Shakespeare and Milton, no doubt; but she would find it exceedingly difficult to tell you anything of the literary period of which each may be regarded as the principal figure. For, indeed, “to understand an author we must first understand his age,” and it is very doubtful whether a play or poem of any considerable length can be studied with real advantage apart from its literary environment. The study of a few isolated works can never be a satisfactory way of studying literature.

It is, therefore, suggested that, before the teaching of literature can be made really satisfactory, a syllabus should be drawn up, which should cover, in outline only, of course, the whole of English literature, so that by the time a girl reaches the sixth form she has obtained some idea of its main development. To induce others, far more competent and experienced, to draw up a better one, I now give a rough sketch of such a syllabus. It is meant for high schools where two lessons a week, of three-quarters of an hour each, can be devoted to literature.

YEAR’S SYLLABUS OF LITERATURE FOR HIGH SCHOOLS.

Lower II.—Stories of the Greek heroes.

Upper II.—Stories from English literature: “Beowulf,” “Northern Myths,” ballads.

Lower III.—Stories from Chaucer, “Morte d’Arthur,” Spenser.

Upper III.—Three of Scott’s poems to be read, and one novel.

Lower IV.—Begin outlines of literature, from earliest times to Elizabeth. Read in class either poems, &c., illustrative of this period, or a play of Shakespeare.

Upper IV.—Elizabethan period. Two plays of Shakespeare; Book I. of “Faery Queene.”

Lower V.—Milton to end of seventeenth century. Read one play of Shakespeare, selections from Milton; “Pilgrim’s Progress.”

Upper V.—Eighteenth century. Read selections from essayists: Pope, Dryden; one play of Shakespeare; one of Jane Austen’s novels.

Lower VI.—1800–1850. Read selections from the works of writers of the period; one play of Shakespeare. If possible, some of Chaucer, who, on account of his language, seems better suited to the elder girls.

Upper VI.—1850 to present time. Read one play of Shakespeare, selections from the works of Ruskin, Carlyle, Browning, Tennyson, &c.; one novel of George Eliot. A few lessons at the end of the year to be given on living writers.

As an alternative to this syllabus, I suggest that, from form Lower IV. upwards, periods of literature parallel with periods of history might be studied, and that books written during these periods should be read in class. At least one play of Shakespeare should be read during the year, whether it fall within the allotted period or not.

It may, of course, be objected that my syllabus covers a great deal of ground, and that the subject must, therefore, be dealt with but superficially. But the latter does not necessarily follow from the former. Though the pupils will certainly learn a little of many writers, there is no reason why their knowledge should be superficial, for it will be obtained *first hand from the works themselves*. No “Stopford Brookes” or primers of any sort will be used, except, perhaps, in the highest form as handy books of reference for dates, &c. The teacher must herself supply, during the lesson, any information that is required, and the pupils will either read for themselves, or will hear their teacher read, selections from the works of the chief writers. Some such book as Ward’s “English Poets,” if it could be brought out in a cheaper and more compact form, will supply everything that the pupil can require to obtain an excellent and thorough knowledge of the best poems in the English language. In prose the question of obtaining first-hand knowledge would be a little more difficult, but it is a difficulty not impossible to surmount by means of the careful selection of characteristic passages. In dealing with Addison, for example, it is quite possible to give the girls a very good idea of his prose style by reading a dozen or so of his essays from the *Spectator*. So, in the same way, much may be learnt both of the spirit and style of Carlyle by reading a chapter from, say, the “French Revolution,” one from “Heroes and Hero-worship,” one from “Past and Present.” Then it must be remembered that, according to my scheme, *no notes* will be furnished, and the books will be studied from the point of view of *literature*, and not in order to learn something else, however valuable that something else may be.

We get no good

By being ungenerous, even to a book,
And calculating profits—so much help
By so much reading. It is rather when
We gloriously forget ourselves and plunge
Soul-forward, headlong, into a book profound,
Impassioned for its beauty and salt of truth—
’Tis then we get the right good from a book.

Therefore it will be possible to read a great deal more in class than under the present system, when so much time is spent over prefaces, introductions, and notes.

Another objection may be taken to my scheme on the ground of the inadvisability of dealing with modern literature. “So many doubtful subjects will be introduced”; “our century, and especially the end of it, deals with so many difficult problems.” It will be difficult to steer clear of rocks in dealing with modern writers, and a very careful selection will be necessary. But, if these rocks can be avoided—and I believe they can—a course of lessons on later Victorian literature to the sixth form—to girls of from seventeen to nineteen, be it remembered—may be of inestimable value to them. These older girls who are going out into the world, where there are many

problems to be faced, are just the girls who require some guidance in their reading. They will soon join libraries, and, if we do not help them, they are likely to go far astray in their choice among the multitude of modern books. If a girl has read at school, and to some extent, however faintly, appreciated "Sesame and Lilies," "Silas Marner," "Scenes of Clerical Life," some of the novels of Scott and of Jane Austen, she will not be likely to rave over the Marie Corellis, the Hall Caines, and the Sarah Grands. Only a little while ago a high-school-girl of sixteen told me in all seriousness that the only stories she had read were those by Miss Corelli. What a commentary on our boasted modern education! Then, again, if our pupils have read much of Wordsworth, Tennyson, the Brownings, and know something of Kipling, of Henley, and of Austin Dobson, the works of such very minor poets as Mr. Le Gallienne and his friends who are to be found at the Bodley Head would not enjoy such a wide circulation.

"We needs must love the highest when we see it" is not, perhaps, always strictly true. We cannot force our pupils to love what is loveliest, however much we ourselves may love it. Literary appreciation, like literary ability, is to a large extent an innate quality; but much may be done to develop the germ of true appreciation which so often lies dormant in many a childish heart, only requiring the touch of a skilful hand to quicken it into life. And knowledge of the beautiful must come before appreciation of the beautiful. By storing the minds of our pupils with beautiful thoughts, beautiful images, beautiful words even—for what a charm have mere words!—we are giving them an heritage of infinite value—an heritage which nothing can destroy. Unless we begin to love poetry in our childhood, we seldom love it later. Most of us who care for poetry can trace back our love to very early days, when to listen to certain poems being read was an entrancing delight, even though we did not quite understand what the poems meant.

"Poetry," said Coleridge, "has been to me its own exceeding great reward." That is how we want our pupils to feel about literature—that it is its own reward. It is to be studied for its own sake; not for the sake of passing an examination, not in order to appear learned and cultured, not even primarily to gain knowledge, but because—

A thing of beauty is a joy for ever.
Its loveliness increases; it will never
Pass into nothingness, but still will keep
A bower quiet for us, and a sleep
Full of sweet dreams.

F. B. LOW.

THE REPORT ON PUPIL-TEACHERS.

THE Report of the Departmental Committee on the Pupil-Teacher System is a document of interest far beyond the circles to which it more immediately appeals. It was presided over by the Rev. T. W. Sharpe, C.B., and consisted of chief inspectors, heads of training colleges, and primary teachers, and most of its witnesses were drawn from the same sources. Three "outsiders" only were called in; they were Professor Armstrong (on behalf of heuristic science), Mr. T. E. Ellis, M.P. (as an authority on Welsh developments), and Mr. H. Macan (with a brief for the County Councils). The terms of reference were fairly wide, and included an inquiry into the working of the present pupil-teacher system and the supply of teachers, as well as to the alterations which are desirable as regards the methods of training. Nothing startling or sensational was the result of the deliberations of such a purely professional and official body. No Clause VII. wrought a revolution by blue-book. Some may regret that a few M.P.'s were not put upon the committee to give it more backbone and urge it to recommend the abolition of the whole system, the staffing of all schools with adult teachers only, and the passage of all such teachers through a secondary school. The Committee, however, agreed "that for the present, the system is established so firmly in the economy of national education that it would be impossible," &c.; but once the fatal word "economy" is mentioned, there is nothing more to be said, the Treasury of course fulfilling its function of the lion in the path. It is a pity that another reason also is given. "We do not wish to see, at present, the entire abolition of a system which ensures an early acquaintance with the processes of teaching." This is surely rank heresy; it is

nothing more or less than placing specialization in a technical process before a secondary education, which is on all fours with teaching the "processes of plumbing" to children who ought to be occupied in arithmetic.

But it is ungracious to carp or criticize where so much is admirable. The keynote is contained in these words in the introduction:—"The time has come when the primary school ideal . . . shall give way to something higher," and "the preparation of young teachers can and ought to approximate more closely to the more liberal methods and studies which would help to bring them to the same level as the best scholars of secondary schools." Surely here, once for all, we have broken down the great "Tribe of Levi" theory, which has done so much to separate primary and secondary teachers. We have been told that the secondary teacher is untrained and effete, hopeless and incompetent. Now we have a purely primary Committee telling us—at any rate, by implication—that, without a secondary education, all the training in the world but produces the sounding brass and the tinkling cymbal. "We think," they say, "that all intending teachers should pass through a secondary school for the completion of their ordinary education." They go still further, and give their reasons. "The traditions of primary teachers are still [observe the 'still'], through no fault of their own, narrower than is consistent with sound education," and, as the results of a secondary education, we find "better methods, greater spontaneity, a wider outlook, and social influences good for both grades." Such things, say the Committee, make for a "solid profession." We hope and believe they will. More knowledge and less Trades-Unionism will result in better teachers and better citizens. We note, however, as a curious omission, that there is no mention of the effect upon pupil-teachers or others of "higher primary" concordats. Perhaps the Committee were too busy with practical questions.

How is the pupil-teacher to be given a secondary education? was, therefore, the important problem. Certainly not through the present pupil-teacher centres. "We do not think that the pupil-teacher centres, under present conditions, adequately fulfil the purposes of secondary schools." Much less, of course, through the "central classes" usually attended by pupils from voluntary schools. These come in for a scathing condemnation, which is well deserved. It is flattering to call them even an apology for an education of any kind. As to a few of the best centres, the Committee "look forward to their ultimate conversion into real secondary schools, where, though perhaps intending teachers may be in the majority, they will have ampler time for their studies, and will be instructed side by side with pupils who have other careers in view." The Schoolmaster considers the final words revolutionary. So they are. If the proposal is carried out, the primary teacher, learning, fighting, playing alongside of the parson, the lawyer, the stockbroker, or the shopkeeper, will become an ordinary citizen, not a member of an elect, or peculiar, people. What, then, will happen to the N.U.T.? But the source of supply will be but a drop in the ocean. "The action of some local authorities [Surrey being cited] offers what is perhaps the most promising contribution to a solution of the immediate problem." No less than twenty-three counties and county boroughs have found that one hundred and fifty of their scholarship holders have afterwards become pupil-teachers. Hence the recommendation: "We desire to see the powers at present possessed by County Councils further utilized for sending intending pupil-teachers to secondary schools and for creating special classes for the instruction of pupil-teachers." Finally, the example of Wales is quoted, showing how this can best be done. The Education Bill of 1896, we must add, contained all these things.

The problem, from the elementary teachers' point of view, is fully treated in our Supplement.

REVIEWS AND MINOR NOTICES.

"Bell's Cathedral Series."—(1) *Winchester*. By PHILIP W. SERGEANT. (2) *Exeter*. By PERCY ADDLESHAW, B.A. (3) *Lichfield*. By A. B. CLIFTON. With Illustrations. (George Bell & Sons.)

With the help of "Bell's Cathedral Series" no one need visit our cathedral churches unintelligently. Its volumes are cheap

and handy, so that a tourist will have no excuse for hesitating to buy any of them that he may need; they contain almost everything that he is likely to want to know about a cathedral, and they are full of well-chosen and capably executed illustrations, that, when his tour is over, will serve to recall to his memory what he has seen and admired. The idea of producing these guides was excellent, and so far has, on the whole, been carried out satisfactorily. We would venture to suggest that in future volumes the part allotted to the building and its monuments might be rather more concisely written than in the Winchester volume, and that in all cases room should be found for some account of the constitution of the church. For example, a visitor to Winchester should be told something about the chapter in the days when St. Swithun's was a monastic church, about the relations of the prior with the bishop, and the duties of the chief officers of the convent; he should be reminded how a cathedral of the new differed from one of the old foundation, and a word should be said as to any peculiarity in the present constitution, such as the exceptionally autocratic position of the Dean of Winchester.

In all three of these volumes there are signs that the writers are weak in ecclesiastical history. In the Winchester volume the speculations about churches of the second and third centuries might have been left out with advantage. Though it is highly probable that there was a church at "Venta" in Roman times, we know nothing at all about one, though, if, as we are told here, one was overthrown there at the time of the Diocletian persecution, we do know that its overthrow should not be dated in the year 266, as we find it here. We think, too, that Mr. Sergeant would find it difficult to substantiate his assertion that there are frequent references in writers of the third century to the old monastery at Winchester; indeed, we are at a loss to know what he can mean. His notice of St. Swithun is inadequate, and we have failed to find any mention of King Alfred, though visitors to the cathedral should surely be reminded how, owing to his foundations, it once formed one of a great group of monastic churches, with the New Minster on its north side and the Nuns' Minster on the north-east. Again, no one, we are sure, could have thought that Lucius III. (a slip, probably, for Lucius II.) would make Henry of Blois an archbishop. The Pope who is said to have sent him a pall was Innocent II. Lucius did not even grant him the legation that he so eagerly desired. Why, too, are we told that the charming story of how Henry II. took away the Winchester Bible, and gave it to his new foundation at Witham, which, by the way, was not an "abbey," and how St. Hugh restored it to its rightful owners, is "a legend probably unfounded"? It rests on the best possible authority, the "Magna Vita S. Hugonis." Whether the splendid Bible now in the Cathedral Library at Winchester is the book in question is another matter. Lastly, we are amazed to hear that George Morley, afterwards Bishop of Winchester, attended Charles I. on the scaffold. Has Mr. Sergeant confused Morley with Juxon, or King Charles with Lord Capel? With what he says about the building of the cathedral we are quite satisfied, save that we think that it might have been said more briefly.

Of Exeter Cathedral as a building less, of course, has to be said than of Winchester, and what we have here is enough, and not more than enough. In this volume, too, there are some things that need correction. For instance, the remark that Bishop William Warelwast's embassy to Rome rests on a "somewhat slender foundation" shows entire ignorance of the ecclesiastical history of the period. He was thrice sent to Rome before his consecration by Rufus and Henry I. on important business connected with Archbishop Anselm. But the journey to which reference is made here is perhaps his mission to Calixtus in 1120, when he is said to have been blind; he certainly went to the Pope in that year, though Calixtus was not then at Rome, but at Valence. In the part headed the "History of the Church" we are told that Bishop John Booth was translated to Bath and Wells in 1478, and that, "inspired by a dream," he "caused the building of the abbey church in the former city." Now the see of Bath and Wells was not vacant in 1478, for Robert Stillington held it from 1466 to 1491, and in 1478 Booth was, we hope, translated to a higher sphere, for he died in that year. The Bishop who had the dream about the "abbey," or, rather, priory, church of Bath was, as we are correctly told in another part of this guide, Oliver King, who was translated from Exeter to Bath and Wells in 1495, though we may observe

that he was not, as we are twice told here, the builder of Bath Priory, but its restorer. We do not agree with what is said in the Lichfield volume as to the work executed under the direction of the late Sir Gilbert Scott; the restoration of the West front appears to us to be an excellent piece of work. The author has, of course, a right to express his own opinion, but he should not have been guilty of his impertinent remark about "a Sir Gilbert with his cheap statuettes and Italian trumperies." We do not know who Mr. A. B. Clifton is, and, if, as we suppose, he is a very young man, we hope that, as he gains in knowledge, he will also learn that he should speak with respect of those to whom respect is due from us all—yes, even from the youngest of us. At present he has much to learn, for he asserts that the British Church held the feast of Easter "on March 14, whatever day of the week it might be." Now the Britons, as Bede at least twice points out, were not Quartodecimans, though their opponents sometimes unkindly called them by that opprobrious name; they did not keep Easter on any other day than Sunday. Nor did they, or any other body of Christians, fix it to March 14. They kept Easter on the fourteenth day of the Paschal moon, if it fell on a Sunday, and, if not, then on the Sunday between the 14th and 20th days of the moon; whereas the Roman Church followed the Alexandrine rule, and reckoned it from the 15th to the 21st days of the moon. The idea that any Church kept Easter on a fixed day of a calendar month is simply ludicrous. We cannot see where the work of the editors of this series comes in. Messrs. Bell do their share in the undertaking so thoroughly that it is grievous that their volumes should be disfigured by such evidences of ignorance or carelessness as those we have cited, specially as we are told that the series is designed, not merely for tourists, but "to be of value to the student of archaeology and history."

- (1) *A Short History of the Royal Navy, 1217 to 1688.* By DAVID HANNAY. (Methuen.) (2) *The Story of the British Army.* By Lieut.-Colonel C. COOPER KING. (Methuen.)

These seem to have been planned as companion works, but they have parted widely in execution. Mr. Hannay's book is plain and businesslike. He asks that due allowance may be made for a landsman dealing with sea affairs, but, though he owns that he once made a fleet sail within two points of the wind, his competence as a naval writer is well known. Three-fourths of this volume are given to the century between the Armada and the Revolution. This is a large enough canvas to allow of fairly detailed treatment. The Calendars of State Papers and the publications of the Navy Record Society have supplied abundant fresh material, and Mr. Hannay makes skilful use of it.

The incidents of naval warfare are interwoven with the course of naval administration and made to illustrate it. Full justice is done to Elizabeth. Froude's stirring account of the defeat of the Armada leaves the impression that it was in spite of the Queen, her hesitations and her parsimony, that the Spaniards were beaten. But we see here how much she had done for the Navy, first to restore it to the position in which Henry VIII. had left it, and then to raise it higher. She had fewer ships than he, but the total tonnage was greater. "It must not be forgotten that, if Elizabeth did less to increase the strength of the Navy than her father, she did not inherit a treasure as he did; neither had she the spending of the plunder of the Church. He spent his capital. She had to confine herself to income." Her successors spent more money, but got much less value for it.

The services of the fleet to the Parliamentary cause in the Civil War are well brought out. It was already in good condition, owing to Charles I.; Parliament did much to improve it, both as regards ships and men; and employment at sea, especially in dealing with Rupert after Charles' death, heightened its efficiency. The account of the Dutch wars is prefaced by an excellent comparison of the two rival powers, but it is too long to quote. Mr. Hannay argues forcibly that there was already a recognised order of battle, and that the prevailing opinion that the ships fought pell-pell is erroneous.

There seems to be a misprint of "seventeen" for "seventy" on page 251, and "but" for "and" at the bottom of page 264. Following Green's example, the chapters are headed by a short indication of the leading authorities. This is very useful, but

one could wish for some fuller statement of contents than the mere titles of the chapters, especially as the index is mainly of proper names. This, however, is a small matter. The book is one to be heartily recommended, and we hope the further volume promised will soon follow it, and will give sketch plans of the chief engagements.

In this respect "The Story of the British Army" is not deficient. It gives several plans, rough, but not inadequate, and several drawings of soldiers which, though the men themselves are rather wooden, serve to show the changes of costume. But of the book itself it is impossible to speak favourably. As to the style, one sample will be sufficient. Speaking of the Norman invasion:—

Never has the end better justified the means. Never have the means themselves, in 1066, been more ignoble. . . . It cannot be too definitely expressed that to "have come in with the Conquest" is only a confession that those who use the expression are ignoring the fact that many a Saxon thane could show a title far deeper set in the history of England than any of the men who usurped and trampled on those whose pedigree went back to the days of Ascendune, before the soldiers of fortune of the Duke of Normandy had emerged from their original obscurity.

As regards accuracy, what reliance can be placed on a writer who confuses Arthur Wellesley with his elder brother (page 270); makes Walpole Minister of England after 1745 (page 99); says of Fontenoy that, "when St. Antoine was carried, matters looked serious for Marshal Saxe" (page 103); and of the English Civil War that cavalry in the early battles, "seriously, effected little, and was rather a cause of disaster than of victory" (page 37)? An apocryphal story about Wolfe (page 98) is given as though it were established fact, and one about Whitelocke is distorted (page 146).

The history of the British Army is, to a great extent, buried under the history of its wars. To deal with so large a subject within the compass of four hundred pages is, it may be allowed, no easy task; but why waste two pages in comment on Cromwell's action in Ireland, omitting all details of what he did? Why give half a page to the familiar lines from "Childe Harold" about the Duchess of Richmond's ball, and four pages to the discussion of Wellington's conditional promise to support Blücher at Ligny? Colonel King has a bias against the Duke which leads him into the astonishing statement:—"No careful student of the art of war, *no foreign military critic, certainly*, has ever classed him among the greatest generals, or thought his campaigns worth studying seriously." That German critics are apt to ignore campaigns in which Germans took no prominent part may be true enough, whether in Spain or in America—it is a proof of their limitations, not of their competence. But the fact that out of the twenty-five volumes forming M. Malo's excellent "Bibliothèque Internationale d'Histoire Militaire," one is devoted to the Peninsular War shows that that war is not without interest to foreign students. That a historian of the British Army should dismiss it in this way is indeed surprising. If these campaigns are not worth serious study, what chapters of British military history are? Why write the story of the British Army at all. If the author had himself studied them with a little more care, he would have avoided the mistake of speaking of Colbourne's *division* at Albuera, and the 29th as the "Die-hards" (page 193).

There are a good many misprints: Brenner for Brenner, Allen for Alten, Lord Somerset for Lord Edward Somerset, 8,000 instead of 18,000 as the number of the French cavalry at Blenheim, 130 instead of 1,800 as the French loss at Inkerman, and several others.

Journeys through France: Being Impressions of the Provinces. By H. TAINÉ. (Size 8 x 5½ ins., pp. xi., 296, illustrated; price 7s. 6d. Fisher Unwin.)

This book is a translation—and a good translation it is—of certain "Carnets de Voyage" written by Henri Taine in three successive years, during the journeys which he made as examiner for admission to the military school of Saint-Cyr. They were casual entries in a number of small note-books, generally written in pencil, and rarely corrected or modified. Apparently Taine had once intended to publish them, but never found the time to prepare them for the press, and, as we are given them here, they form a collection of incomplete and disconnected sketches of impressions. Well written as the translation un-

doubtedly is, we somewhat doubt whether the work was worth doing. The material is not of any very great value, as far as we can see; and surely any one who wanted to get at it could go to the French original—especially as Taine was so perfect a master of clear and simple prose. No matter what care and skill were bestowed, there must be a loss of charm in the transference from French to English, which could only be compensated for by the value of the contents. But, though the intrinsic worth of the contents seems to us small, we must add that the book is lively and pleasant reading, and gives us many a pretty verbal etching of place and people and life in provincial France. Here is an impression of Provence after a long spell of dry weather:—

Apart from Marseilles and the sea, this Provence is a gloomy land; you might imagine it to be burnt up, worn out, gnawed to the bone by a civilization which has fallen to decay. There are no trees except the occasional mulberries and sickly olives, amidst myriads of boulders and bare, dried, whitened rocks. At times there is as much as a quarter of a league of naked and sterile land. On the horizon the unclothed hills pile their rocky skeletons one above another. Man has devoured everything, until there is nothing left alive.

Later he saw the country by moonlight, and had a somewhat different impression. Here is another little picture—of Douai:—

One is very comfortable here. The cheerful morning light breaks in through the three large windows of my room. The high brown roofs and brick chimneys cut the limpid air and the pale blue sky. Everything is clean and bright and peaceful. Some little girls in tightly-drawn white stockings are crossing the square, leaning on the arms of their nurse; a mother follows with four more, like a fine hen proud of her chicks. A donkey trots quietly along, drawing a market-woman's vegetables, and she as red as her own carrots. A hussar rides by on his horse. Workmen come next, smoking long pipes. The square is wide, open, clean, free from dust or noise or smells. How restful it is after Paris!

All through the book there is a marked anti-clerical feeling, and some of the practices of the Roman Church and her clergy are severely criticized. Nor does the lack of intellectuality in the provincial towns escape satirical notice. Still, on the whole, the chapters are easy-going and pleasant reading, with touches here and there which agreeably remind one of Daudet's sketches of Provence.

Psychology of the Moral Self. By B. BOSANQUET. (7½ x 5 in., pp. viii., 132; price 3s. 6d. Macmillan.)

That this is a well-informed and thoughtful book no one who has read it with any care and who knows something of its subject can for a moment doubt. It consists of ten lectures delivered not long ago to a class of students, and when so delivered must have been very interesting and stimulative; but, to be frank, we have not found the reading of it very easy. The reason for this seems to us to be that the views set forth are stated very briefly, as Dr. Bosanquet himself confesses, and at times even curtly; while the reader or student is supposed to be well acquainted with certain books recommended, to which frequent reference is made. The fairest test of the book, therefore, would be to use it with a class of students who had mastered, or were mastering, the books referred to, and who desired to have the views with which they were making acquaintance briefly discussed and co-ordinated. We do not mean to imply, however, that Dr. Bosanquet had given us no more than the statement and discussion of other people's views. There is much—and that not the least valuable part of the lectures—which is the result of his own observation and thought; while the general plotting-out of the subject is also his own. Personally, the lectures which have interested us most are the three on the Growth of Consciousness, on the Organization of Intelligence, and on Self-Consciousness. The two on Volition, though undoubtedly good, do not seem to us entirely satisfying—probably because we have felt in more than one place the need of a somewhat fuller treatment, which, no doubt, was given when they were delivered. The discussion of what is meant by "reasonable action" is good and interesting: we do not, however, entirely agree with the statement that when we ask a person to be reasonable we want him to come down to some sort of average standard. It seems to us rather that we require him to *rise* to some higher and wider view, so that the whole matter may be seen, and also its bearing on other

related matters. This, however, is really a matter of words, and no one will differ from the admirable summing-up given at the end of the lecture. We regret to notice that the book is not provided with an index. Teachers who are considering the problem of how to bring their knowledge of psychology to bear on the development of the moral self in their pupils will find Dr. Bosanquet's lectures very helpful and suggestive.

A Simple Grammar of English now in use. By JOHN EARLE. (Smith, Elder, & Co.)

Every one knows, or ought to know, Professor Earle's "Philology of the English Tongue," a book full of subtle analysis and original observation, expressed in clear and forcible language, and illustrated by well-chosen examples. As a popular lecturer on philology Professor Earle is admirable, but as a school-master he seems to us out of his element. The aim of the book, he tells us, is educational, but we are at a loss to see for what class of boys or girls it is adapted. It begins at the very beginning, and is presumably intended for beginners; but, if this is so, it violates the first canon of pedagogics. Instead of proceeding from the known to the unknown, and gradually evolving a terminology as it is needed, it presents in the very first section all the parts of speech. There are, according to the Professor, ten parts of speech, numerals forming a distinct category. The classification labours under two fatal defects, one of detail, the other of principle. It is a cross division; articles are adjectives of a kind, and numerals are either adjectives or adverbs. Moreover, if, as we are told, the parts of speech are "functions of thought," if grammar is a study distinct from philology, how does the Professor explain the anomaly that in Latin—a highly developed and strictly logical language—one of these "functions" is non-existent. Can he expect that the pupil of twelve or thirteen will discover for himself, or even appreciate when pointed out to him, these categories of thought concerning which grammarians are not yet agreed?

We turn to the section on Case, and the latest treatment of this knotty point of English grammar does not appear to us an improvement. Case, we read, is an affection of the noun; it points to the thought relation in which a noun stands to other parts of speech, in a sentence. Here, as throughout the book, there is the common confusion, scotched, but not killed, by Mr. Mason, between a part of speech and that for which a part of speech stands. Secondly, Macaulay's schoolboy will certainly inquire why, if "of me" is a case, "by me" is not also a case, as it was in Old English.

Once more conjunctions are defined as link words. "They join together words or phrases or sentences." So do adverbs and relative pronouns, and we look in vain for any differentia. "And" is *sui generis*; "also" and "where" cannot properly be classed as conjunctions. We are sorry that Professor Earle should have quitted the neutral zone of philology and invaded the territory of grammar.

Mistakes in Teaching. By JAMES L. HUGHES. (7¼ in. × 4½ in., pp. 124; price 1s. G. W. Bacon & Co.)

Most of our readers, we think, must already know this excellent little book. Mr. Hughes is an Inspector of Schools at Toronto, Canada, and has had ample opportunity for observing good and bad teaching, and for detecting the causes of both. He is, and has long been, a careful student of education, and a stanch Froebelian; and his remarks on common mistakes are not only the result of experience and thought, but will also themselves result in setting teachers thinking. In the former edition—the copy before us is called "the English Edition" and bears date 1897—Mr. Hughes dealt with mistakes in school management, in discipline, and in method. To these the new edition adds "Mistakes in Aim" and "Mistakes in Moral Training"—both excellent, but, as Canon Daniel remarks in the preface, both rather more suitable for more advanced teachers. The chapters are enlivened with some good anecdotes. Here is one of a conversation one evening between a little girl and her mother: "Well, Bertha, have you been a very good girl to-day?" "No, mamma." "Have you been a bad girl?" "No, mamma." "Well, what kind of a girl have you been?" "Oh, just a comfortable little girl, mamma." To which Mr. Hughes adds the very apt remark: "Mature goodness is an unnatural development in

young children. Play is better than formal piety for a child. Genuine play may be a true expression of a child's piety." We have hinted that Froebelian teachers will find the book useful. We specially recommend to their notice the remarks on its being a mistake to arouse the emotional nature too much, and to arouse feelings and thoughts about distant possible duties, instead of about those which lie close at hand and within the child's power. The best preparation for distant duties is not to dream about them, but to do those which lie near as effectively as we can. Emotionalizing, severed from practical outcome in doing, and kept apart from knowing, is apt to be morally weakening. But we spoil the force of Mr. Hughes' statements by paraphrasing his crisp, clear sentences. Those who have not got the book had better get it at once, and those who have only got the old edition had better get the new one. We could have wished that the publisher had seen his way to bringing out the book in a somewhat more attractive form, with better paper and better printing. It is well worthy of it. But we are glad to have it in any form.

The Bases of Design. By WALTER CRANE. (George Bell & Sons.)

"The Bases of Design" is another addition to the long row of books upon art published in the present reign, and it is of unusual value. Unfortunately, Mr. Walter Crane has endeavoured to give a philosophic treatment to a subject which has hitherto evaded the grasp of more profound thinkers. The attempted analysis of the origin, nature, and development of design in its widest sense provides headings under which Mr. Crane has placed his chapters, and, so far, no doubt gives a useful semblance of orderly arrangement. We do not here propose to examine in detail Mr. Crane's theory. His book is, and is meant to be, mainly educational, and theories of origin can hardly be said to have much importance from the point of view of the artist, even when plausible. That a right understanding of the history of design would also be "tracing the course of human thought and history themselves" is mere rhetoric. We think it very doubtful whether design is really architectural in origin, and that the Greek amphora was suggested by a female figure we think almost a foolish fancy. Mr. Crane becomes much more interesting when he gets free from his scientific bent, and gives us a real artist's impressions upon the many subjects which he treats, and it is impossible not to be struck by the extraordinary scope of his knowledge. His book is really educational, but at the same time, beyond an insistence upon some well-worn principles, there is not much which will be found of practical help to the designer. Indeed, exception must be taken to the practice of drawing imaginary geometrical lines upon a work of art explanatory of the foundation of the design. The illustration of this kind of analysis given by Mr. Crane from the Parthenon frieze is, in fact, quite misleading.

A designer who cannot feel instinctively that this or that mass is wanted has no art in him, and such pseudo-analysis as this is one of the banes of the modern school of teaching. Mr. Crane speaks wisely indeed when he remarks that "nothing has degraded the form of common things so much as a mistaken love of ornament," and he might have added a warning against the confusion of "smoothness" with "finish" in plastic work, which has robbed so many objects of their artistic interest. On the subject of books we think Mr. Crane has elevated a fad into a law when he maintains that "the double page is the true unit and not the single page," and in his dictum that the print should be crowded into the centre, leaving a narrow margin at the top, a wider margin at the sides, and a still wider margin at the bottom, to leave room for the thumbs of the reader. Again, it is much too sweeping to advocate, as he does, the exclusive use of line drawing in the illustration of a printed book. It will seem equally true to many artists that a wash drawing is often a delightful relief to the speckled printed page. Mr. Crane is too often led into sweeping statements, and is most useful and interesting when he is less general in his expression. The illustrations of the book are strikingly good, and are a triumph also over the difficulties of selection. Mr. Crane's own drawings of familiar objects are delightful, as well as his sketches of architecture—with one exception, the Tower of the Palazzo Vecchio, Florence; the examples showing the difference of character between carving in stone and in wood might have

brought out more fully the quality of the stone carver's chisel as contrasted with the wood carver's gouge.

The book as a whole is undoubtedly delightful to mind and eye.

A Text-Book of Zoology. By T. JEFFERY PARKER and W. A. HASWELL. 2 vols., illustrated. (Macmillan.)

This is a painstaking and useful manual, which we heartily recommend to second-year classes, and to solitary students who have gone through a practical elementary course in zoology. It gives in clear language the substance of the best text-books, occasionally, but not very often, drawing upon special memoirs, and still more rarely giving unpublished matter. This is not an epoch-making book, but it will be a real help to many a student and lecturer. Practical utility, and not originality or learning, is its most prominent feature. Mistakes are few, the most conspicuous that we have noticed being the substitution of *Pulex* for *Culex* (fig. 473). The illustrations are numerous and well executed; a fair proportion are original. We could wish that many more had been either new or less familiar; it is a pity to occupy much valuable space by reproducing figures so well known as those here copied from Claus, Gegenbaur, Lang, and Wiedersheim. Our authors must have had plenty of material for new figures, such as would have been a real addition to the resources of the teacher.

Though one author has taught in New Zealand, and the other in Australia, there is no strong local flavour about the book. Southern examples are occasionally taken, but only such as are closely similar to common European forms. The book is better suited to European students than to any others. A text-book of zoology, based upon the indigenous animals of the Southern Hemisphere would be an interesting addition to scientific literature, but this is a want which our authors do not attempt to meet.

The death of Dr. Jeffery Parker, on the eve of the publication of his chief text-book, is a blow to zoology, and especially to the zoology of New Zealand. Under difficult circumstances he had laboured hard and successfully to set a good standard of work, and to take advantage of the opportunities which a new country offers to the naturalist. His loss will be felt, not only in New Zealand, but wherever steady scientific industry is valued.

Philosophical Lectures and Remains of Richard Lewis Nettleship. Edited, with a biographical sketch, by A. C. BRADLEY and G. R. BENSON. 2 vols. Price 17s. net. (Macmillan.)

A Balliol tutor and lecturer for twenty-three years, and for the latter part of that period reckoned by all Balliol men among the *Dii majores* of their college, Lewis Nettleship was known to the outer world only as the disciple and biographer of R. C. Green. The notices that his tragic and heroic death on Mont Blanc in 1892 called forth from friends and pupils revealed to the general public that there had passed away a man of striking originality, a philosopher whose life was greater than his writings, or even than his oral teaching. This impression will be deepened and strengthened by these "Remains," and still more by the all too brief biographical sketch contributed by his most intimate friend.

To attempt the roughest estimate of his philosophy of life would far exceed our limits. Perhaps it is best summed up in his favourite distich from Goethe:—

Nur wo du bist sei alles immer kindlich,
So bist du alles, bist unüberwindlich.

To follow Nature is a Lesbian rule professed by the most opposite schools of thought, but Nettleship's interpretation was plain and consistent. His ideal was the realization of a man's whole self, not by suppression of the lower parts, but by the absorption of the lower nature in the higher, a living present self-sufficient without regard either to past or future. The letters, or, rather, extracts from letters, are somewhat austere impersonal. Even when a man is discoursing of life, death, and immortality, one likes (such is human weakness) to know the time, place, and name of his correspondent. The lectures on the "Republic" of Plato, which form the second volume, have been very skillfully redacted from the notes of pupils, and are as thoughtful and suggestive as the essay on Platonic Education in "Hellenica." Higher praise we cannot award them.

Sophocles Tragediæ. Edited by ROBERT YELVERTON TYRRELL.

Price 5s. net. (Macmillan.)

An elegant edition of the text of Sophocles, printed in the Image type, and bound in vellum. Professor Tyrrell is a conservative, and in his introduction he contrasts the wise caution of Professor Jebb with the rash blundering of Mekler and other German editors. The introduction is all too short. How is it possible to vindicate the adopted readings in fifteen short pages when the editor gives the rein to his humour, quotes Sheridan and Mrs. Poyser, and favours us with versions of his own? We should be very loth to see them expunged; our complaint is that we have not enough of them. In one passage ("Ed. Col." 547) we prefer the despised Mekler's reading to Professor Tyrrell's. For Mekler's *καὶ γὰρ ἂν οὐκ ἐφόνευσ' ἐμ' ἀπάλεσαν*, the text gives: *καὶ μ' ἐφόνευσ' ἀλαδὲ καὶ ἀπάλεσα*. The Chorus asks: "What canst thou plead?" (Edipus answers: "A plea in justice. I acted in self-defence.") This seems to Professor Tyrrell an anticlimax. But can his own proposed rendering: "It was a murder of myself too, a murder of my happiness," stand as a plea in justice? A murderer is not acquitted because he has tried to commit suicide. Further, *καὶ ἀπάλεσα* seems to us as faulty, metrically, as Tyrwhitt's conjecture, *ἀγνώσ*.

Conington's Virgil. Fifth Edition, revised by F. HAVERFIELD.

Vol. I. Price 10s. 6d. (G. Bell.)

The fourth edition of Conington's "Virgil" was revised by his successor in the Chair of Latin, the late Henry Nettleship, a ripe and full scholar, who had made of Virgil a special study. The orthography was throughout emended, and four introductory essays on the life, the text, the ancient commentators, and the early criticisms added, as it were, a new façade to the building. Mr. Haverfield is a worthy *διάδοχος* of the Oxford tradition. Little was left for him to do, but he has done that little well. By incorporating the *marginalia* left by Mr. Nettleship at his death, and collating the more recent Virgilian studies—in particular, those of Ribbeck and Philo—he has brought the fifth edition up to date. As instances of happy improvements, we may refer to the notes on "B." I. 65, *rapidum cretae Oaxen*, and on "B." IV. 62, *cui non risere parentes*. Modern literature is so saturated with Virgil that a commentator may well hesitate to take notice of the echoes to be found even in English poets. Yet we cannot help thinking that these might sometimes afford a more faithful commentary than Servius and Nonius. Such notes, however, would be perhaps too wide a departure from the original scope of this edition.

"The University Tutorial Series."—*Virgil, Æneid, Book I.*, edited by A. H. ALLCROFT and W. F. MASON; *Book IV.*, edited by A. H. ALLCROFT and A. E. W. HAZEL. *Ovid, Metamorphoses, Book XIII.*, edited by J. H. HAYDON; *Book XIV.*, edited by A. H. ALLCROFT and B. J. HAYES. (W. B. Clive.)

These editions are intended for London Matriculation students, and will satisfy all their needs. The notes are mainly syntactical; every subjunctive is tabulated, and every case where the least doubt could arise referred to its proper genus or species; the prosody is treated in an introduction, and the mythology in an index of proper names. Into such a scheme nicer points of scholarship and literary criticism do not enter; they are out of the ken of the matriculant, and, therefore, of his editors; but we find not infrequently real difficulties of meaning passed over. Thus, on "Æneid I." 561-612:—567, *obtusius*, not *obtus*, is the true reading. 571, *tulos*: the participle needs a note. 574, "agetur: 'shall be regarded,' is wholly inadequate. 591, "adflarat, an example of zeugma." Page clearly shows that it is not. Here and in the following similar references to the Homeric originals are almost essential. 603, "quid: predicative, 'if justice, &c., be aught at all.'" The alternative rendering, which couples *mens sibi conscia recti* with *Di* as subject of *ferent*, should have been noticed. 608, "convexa sidera, 'the vaulted stars'"—an exploded interpretation; at any rate, the alternative should be given. Ovid's "Metamorphoses" is easier and less trite ground than the "Æneid," and serviceable editions like these are far more needed, though we feel inclined to pick a quarrel with the University Senate for setting third-rate poetry. In XIV. 18, *pudor est* is not "it would be a shame," but "modesty forbids me."

Exercises and Test Questions on the "Tutorial Latin Grammar." By F. L. D. RICHARDSON and A. E. W. HAZEL. (Clive.)

The bulk of the book consists of simple sentences—Latin into English, and English into Latin—of the Arnold type. There is a special vocabulary for each exercise, and a general vocabulary at the end. The test questions are very good—not catchy, and yet requiring thought.

The World's Lumber Room. a Gossip about its Contents. By SELINA GAYE. (Size 7×4¼ in., pp. xii., 316, illustrated; price 2s. 6d. Cassell.)

This excellent little book is now in its eighth thousand, and, therefore, must be known to most of our readers; and we advise those who do not know it to make its acquaintance forthwith. Its subject-matter is well selected, and it is well informed, and brightly written. It begins with the Dustman; and goes on to tell us all about dust and its uses: what makes dust—frost, wind, glaciers, volcanoes, animals, vegetables, &c.; what becomes of dust—coral islands, flint, salt, &c.; scavengers,

animal and vegetable; and so on. It is full of interesting matter, interestingly put together, and fairly well illustrated. It would serve excellently as a Reader, or a school prize, or a gift-book. Boys and girls with any taste for Nature-study are sure to enjoy it, and so will many of their elders. Amongst many other good points, we have been particularly struck by the quiet force with which the lesson is brought home that everything has its use, and nothing is actually wasted: material is transformed and does not perish.

Scenes of Child Life in Colloquial French. By Mrs. J. G. FRASER. (Macmillan.)

Baby dialogues, as good in their way as the "Dolly Dialogues," and showing as intimate a knowledge of human nature in embryo. The differences of the *bébé* and the baby are clearly taken off in the preface. The illustrations by H. M. Brock are very apposite. We have noticed a few misprints, as *voilà*, and *si on* for *si l'on*.

English Grammar Past and Present. By T. C. NESFIELD. (Macmillan.)

This may be described as an attempt to combine in a single volume Mason, Morris, and Kellner, and it has much to commend it. The author, a Director of Public Instruction in the North-Western Provinces, has been able to try his 'prentice hand on the young Baboo, and, in compiling this English edition, he has been privileged to consult Professor Skeat as general referee. The London Matriculation papers in English set during the last eighteen years have been tabulated, and the author's boast that he has provided materials for answering nearly all is justified. Once and again he ventures to break a lance with the *dozen* of English grammarians, but in our judgment he rarely succeeds in scoring a point. Thus Mason tells us that *and* is the sole conjunction which unites words as well as sentences. "No," says Mr. Nesfield; "*but* is another. 'I admire the character of a poor but honest man' is exactly parallel to Mason's example: 'Two and three make five.' We cannot possibly split up *but honest* into a separate and independent clause." Surely we can—"of a man who is poor, but is honest." Mason tells us that "*than whom*" is a syntactical anomaly. "Perfectly simple syntax," replies Mr. Nesfield; "*than* is a preposition." The point is quite arguable, but some of the instances adduced make rather against than for Mr. Nesfield's view. Thus "No other than a graduate need apply." Would Mr. Nesfield write: "No other than *him* can have done it"? Weaker still is the argument from analogy: "Better than mine = superior to mine." In exactness and precision the book leaves much to be desired. On the very first page the student is warned against the faulty definition: "The subject is what we speak about," and instructed to say: "The word or words denoting the person or thing," &c. Yet, on turning the page, we find: "An adjective qualifies a noun, an adverb qualifies anything except a noun or pronoun." Is it hypocritical to suggest that the author's first definition is itself faulty?—"A combination of words that make a complete sense is called a *sentence*." Are not "Go!" "Fire!" sentences? Again, we are told that in "all of a sudden," "greatly to his credit," the adverbs modify the prepositions *of*, *to*. The appendices on prosody and poetry and figures of rhetoric are too brief to be of any value. What is the possible use of such model scansion as this?—

"He sinks' | intó | thy depths' | with búh- | bling groan',
Without | a gravé, | unknelled', | uncóf- | fined, and' | unánówn."

The fifth appendix, on vocalic sounds, by Professor Skeat, is admirable. "Dialect," by the way, is not derived from *διαλεκτική*; and Gray in his "Elegy" did not make *lea* rime to *day*, but to *me*.

"The Organized Science Series."—*First Stage Physiography.* By A. M. DAVIES, A.R.C.S., B.Sc., &c. (6¼ × 4¼ in., pp. viii., 238; price 2s., illustrated. W. B. Clive.)

The title-page of this book tells us that it is intended for the elementary examination of the Science and Art Department, and the chapters reveal that this examination has been kept very prominently before the eyes of the writer. But Mr. Davies, who used to be Demonstrator of Geology at the Royal College of Science, London, has produced something much better than a mere cram book. Physiography draws on so many sciences for its material that it is common to find in the little treatises which are constantly appearing some department, or departments, very inaccurately, or, at any rate, very inadequately treated. But Mr. Davies has treated all his departments with equal accuracy and skill. The experiments described and suggested are good, and the explanations of phenomena are simple, clear, and sound. Feebler students may perhaps require here and there a little more than is given—in the case of latent heat, for instance—but, as a rule, the descriptions and explanations are quite adequate.

After dealing with some "preliminary notions" concerning matter and force, Mr. Davies proceeds to treat of motion and energy, the mechanical powers, heat, the chemistry of the earth, and then moves on to what used to be more commonly considered as physiography proper. The order is rather that of a man of science who is thinking of his science than that of a teacher who is thinking of the learner as well as of the subject-matter. Much of the earlier part of the book is

considerably harder for the young student to master and imagine than what follows. It is better, we think, to begin with the earth as we see it, and with some of its commoner phenomena, which can be directly dealt with in the laboratory, than with the earth as a planet such as science enables us to imagine it. However, in this Mr. Davies was not entirely a free agent. He had to bear in mind the published syllabus, and has not thought it well to deviate from this to any great extent. The result is a decidedly useful little book. There is one small matter which we cannot help mentioning here. In books on physiography it is becoming more and more common to speak of the same winds sometimes as north-west winds and sometimes as north-westerly winds, there being no apparent object in the change. Would it not be better to stick to one epithet? "North-westerly" might very well be kept to mean "in a north-west direction," as it means this most frequently in common speech; and not be used sometimes to mean this and sometimes to mean "from a north-west direction." All the points of the compass suffer in the same way.

Carlyle's Sartor Resartus. Edited, with Introduction and Notes, by J. A. S. BARRETT. (A. & C. Black.)

In a very modest preface, the editor craves indulgence for errors of omission and commission due to a 'prentice hand. No such apology is needed. The introduction discusses Carlyle's biography, philosophy, and literary style, with competent knowledge of his other works, and of the voluminous literature that these have generated. The notes (unlike those in a recent edition of selections) leave no allusion unexplained, and err only on the side of excess. Does any reader of the "Sartor" need to be informed that the Tiber is a river in Italy, on which Rome is situated; that the Chimæra is a fabulous monster described by Homer, and so forth? These, however, are specks of grit, that can easily be removed from an admirably compounded salad. From Mr. Barrett's estimation of Carlyle's social and political philosophy we differ widely. To us he seems, even at his best, only a preacher in the wilderness, a great iconoclast, not an evangelist; but this is not the place to debate so moot a question.

A Run round the Empire: being the Log of Two Young People who circumnavigated the Globe. Written out by their father, ALEX. HILL, M.A., M.D. (Size 7¼ × 4¼ in., pp. viii., 285, illustrated; price 3s. 6d. Sonnenschein.)

This is a light-hearted, pleasantly written book of travel and chatter and fun. It might be described as London to Liverpool, *via* the Suez Canal. Dr. Hill is Master of Downing College and Vice-Chancellor of the University of Cambridge, so we have a sufficient guarantee of the general accuracy of the narrative; while the fact that the illustrations—which are numerous—are from photographs gives us an additional feeling of security. But neither facts nor photographs are what do most to render the book attractive. Its greatest attraction is the high spirits and evident enjoyment of the young travellers, and the freshness of the impressions made on them by places and people. One regrets not to have been a member of the happy party. The book will be read with pleasure by other young people, and will make a capital reading book for schools; all the better because it was evidently written without any such intention. Would that other young people might have such an object-lesson on the British Empire; and may *puer* and *filia* soon realize their desire to see the rest of it. Meanwhile, we thank them and their father for showing us that such an expedition is not an impossibility, and for allowing us to share, in imagination, the pleasures of their journey.

"The Oxford Manuals of English History." No. IV., *England and the Reformation.* By G. W. POWERS, M.A. (6½ × 4½ in., pp. 143; price 1s. Blackie.)

The idea of this series is to cover the period from 55 B.C. to 1832 A.D. by six little volumes, written by different teachers of modern history at Oxford, and so fitted on to each other that the whole shall form one continuous history of England. How far this aim has been realized we cannot say, for this is the only volume which the writer of this notice has seen as yet. The books are intended for middle and upper forms of schools, and "presuppose a desire in the scholar to know something of the social and constitutional history of England, as well as of purely political events." With this view we heartily agree, and we may add that, on the whole, it has very satisfactorily influenced the contents of this particular volume. So much happened between 1485 and 1603 that it is no wonder that Mr. Powers has found it impossible to avoid an amount of condensation here and there which robs the pages of all charm, especially for the young. For them it would have been better to provide more, or somewhat larger, volumes, than to have to resort to so much compression. The young mind prefers a much more loosely constructed story, which taxes the attention to a smaller extent and less continuously. However, given the conditions of this book, we do not think it could have been done very much better by any one. The subject has been well thought out and well set forth, and certainly teachers of history in schools will find this volume valuable and suggestive; and, if they will expand it a little here and there, their pupils, also, will be able to profit by it considerably. But, in any case, both will find it useful.

English History for Children. By MRS. FREDERICK BOAS. (6¼ × 4¼ in., pp. viii., 264; price 2s. 6d., illustrated. J. Nisbet & Co.)

Mrs. Boas has told the story of England from the times of Julius Caesar to the present day, simply, clearly, and interestingly; and her work has been revised by the Regius Professor of Modern History at Oxford. The book is refreshingly free from one-sidedness, and shows a very satisfactory knowledge of what it is among important matters that children will best like to be told about, and how the story should be told. The print is clear and good, and the illustrations generally satisfactory, and not overdone. We can heartily recommend the little book to those who are looking out for an English history for children between eight and twelve years of age.

The Reign of Queen Anne. By MARGARET A. ROLLESTON. (6½ × 4 in., pp. xii., 132; illustrated. George Philip & Son.)

The secondary title of this little book—and it gives its main gist—is “A Phase in the Revolutionary Settlement of Great Britain.” It has a brief introduction by the Hon. E. Lyulph Stanley. We quite agree with him that the book “gives a lively and faithful glimpse of a reign which will require extended reading to be well understood.” Miss Rolleston obtained a First Class in the Historical Tripos twelve years ago, and has had a good deal of experience in lecturing pupil-teachers and others. She is, therefore, doubly qualified for her task, and she has given us a useful little epitome, which teachers who are dealing with the reign will find very much to their purpose.

The Bible Text-Book. By JOHN JACKSON. (Sampson Low.)

A pretty little volume in red and black type, with a triplet of texts for each day—a prayer, a promise, a precept. The three are correlated thus for the day on which this notice was written. We find “Remove me far from vanity and lies;” “I will remove the iniquity;” “Remove thy foot from evil.”

“Arnold’s School Shakespeare.”—(1) *King John*. Edited by F. P. BARNARD, M.A. (7 × 4½ in., pp. lii., 152; price 1s. 6d.); (2) *Coriolanus*. Edited by R. F. CHOLMELEY, M.A. (7 × 4½ in., pp. xxviii., 172; price 1s. 6d.).

These books are so much alike in plan and general character that they may be conveniently treated together. Both have useful well-written introductions—the greater part of the contents of which, however, should be given as appendices, to be studied after the play has been read, and not before. To introduce a student to a play is one thing; to help him to comment on it after he has read it is another. Both editions contain what, to our mind, is quite superfluous in books of this kind, viz., a life of Shakespeare, a chronological table of Shakespeare’s works, ditto of his life, and a classification of histories, tragedies, and comedies—which occupy in all eight pages of small type, and are identical in the two volumes. Both also give us some pages of examination papers—which, in our experience, are liable to prove incentives to cram. The notes in both cases are fairly adequate; but err, as far as they err at all, on the side of bareness and briefness. Mr. Barnard’s notes are a little fuller than Mr. Cholmeley’s, and the latter is now and then given to introducing superfluous etymologies, especially from Anglo-Saxon. But, as we have said, the notes are in the main adequate; though we have not noticed in them much attempt at literary appreciation, which is one of the special aims of the series. Both volumes adopt the excellent plan of giving a full index to the notes. Both are neatly bound and well printed, though the type used for the text might with advantage be a little larger. There is one small defect, for which, however, the editors are not responsible—the title-pages are not dated.

Soldiers of the Legion. By HERBERT HAYENS. (Nelson.)

The “Legion” is the contingent of British soldiers who took service in Spain in behalf of Queen Isabella against Don Carlos. One does not quite see why the Englishman who tells the tale joined the Legion at all, except that some sort of story is needed on which to hang the historical part. It is probably the fault, not of Mr. Hayens, but of the facts, that the account is a rather confusing succession of well-meant efforts, which fail for want of support, of brave blood shed in vain, and hopeless delays made desperate by cold and famine; but it is not easy to get a clear idea of the events of the war.

Gubbins Minor. By FRED WISHAW. (Griffith, Farran, Browne, & Co.)

A school story, with some amusing sketches of odd characters. It is somewhat fragmentary, and is rather a series of pictures than a continuous story. Gubbins and the bicycle is one of the best chapters in the book, and will commend itself to all who have tried the office of instructor in the art of cycling.

“ALKESTIS” AT EDINBURGH ACADEMY.

THE “Alkestis” of Euripides was produced at the Edinburgh Academy on Friday the 18th ult. in a style somewhat unusual in amateur performances. A spacious and lofty stage, representing the marble front of Admetos’ palace, had been specially constructed for the occasion, and across the luminous background thus afforded, moved, with rare

beauty of grouping, the scenes of a play which can scarcely be matched in Greek drama for splendour of situation.

The opening passage in which Apollo, his period of servitude in the halls of Admetos at an end, leaves sadly the palace that has harboured him so long, and encounters the Death God, arriving true to the fatal day, was effectively rendered on every night but the first, when it was somewhat injured by one of those strange fits of forgetfulness which is apt to fall upon amateur performers.

In contrast with the method pursued at the production of the “Antigone” in 1895, the female parts were entrusted to ladies. Upon dramatic grounds such a course is always to be recommended. Few boys with treble voices have the physical gifts and stature which admit of a successful representation of one of the grand female parts of Greek drama; and, if a lad of riper years is chosen, his large hands and feet, and bass or baritone voice, sadly injure the dramatic illusion. In the present instance, Miss Duncan, a sister of a former pupil of the school, in the title rôle, and Mrs. Nairn in the part of the Handmaid, more than justified the decision which had been made, while Miss May Robertson, a little girl of about five years old, who played the part of the sister of Eumelos, added much to the pathos of the scenes by the unconscious charm of her acting.

By judicious excision, one of the main difficulties of the “Alkestis” as an acting play, namely, the wearisomeness of the repulsive egoism of Admetos, was considerably lessened. Under Mr. Laming’s skilful presentation, attention was rather directed to the redeeming points of the character—to wit, the recognition of hospitality as a religious duty, even in the hour of affliction, and the genuine love of Alkestis and faithful veneration for her memory.

The part of Herakles, like that of Alkestis, demands unusual physical gifts. Mr. Thomas looked the picture of the open-air god, and, while imparting to the play the element of heroic jollity which the poet designed, never degenerated into buffoonery. From the dramatic point of view, however, undoubtedly the most telling scene was the terrible one between Admetos and Pheres. It would be difficult in the whole range of dramatic art to find any speeches more horrible than those of the latter when he turns upon his son, who has reviled him for his cowardice in not dying in his stead, with: “At least you do not jeer, as you carry out the old man”; or, as he points to the dead body of the noble Alkestis upon the bier: “I wot she was not shameless, but a fool.” The callous scorn of the old man was admirably portrayed by Mr. Johnstone. Mr. P. J. Ford, as the cup-bearer, was a pathetic and graceful figure. He might have stood for an ideal representative of *Il Penseroso*, and acted and spoke well. Mr. R. Macpherson was highly successful in the famous song sung over his mother’s corpse, and throughout the play looked the picture of childish grief. Mr. G. D. Knox spoke his Greek well, and was impressive and sonorous in the sententious part of Koruphaeos.

It remains to speak of the music. This was especially composed for these performances by Mr. Ernest Torrance Thomson, a boy of nineteen, who had recently left the school, and proved extraordinarily successful. A large portion of the best musical talent of Edinburgh had been drawn to the play by the fame of it, and a number of most favourable criticisms have appeared in various newspapers. The beauty of the melodies, which Mr. Thomson has woven into his work, and the skill with which he has reproduced the colour of the poetry, render this first attempt upon his part at choral composition singularly full of promise. The chorus, which was composed of old and present boys of the Academy and masters, gave an excellent specimen of how such work should be done, and sang with a steadiness and a vigour and refinement of expression which only a long course of previous training in concerted singing could have produced. The play was dressed by Messrs. Nathan, 17 Coventry Street, Piccadilly, and the richness, variety, and correctness of the costumes set off the beauty of the grouping, which afforded a continual feast to the eye. Photographs of the play will probably be produced in a forthcoming number of the *Sketch*.

JOTTINGS.

AT the recent meeting of the Lancashire and Cheshire Branch of the Assistant-Masters’ Association, held in Liverpool, the Secretary stated that the membership now exceeded a thousand, three hundred new members having joined during last year. The Lancashire and Cheshire Branch numbers nearly a hundred and twenty. After approving alterations in the rules, the meeting unanimously passed the following resolutions:—(1) “That this Branch deeply regrets that the Bill for the Registration of Teachers in Secondary Schools does not appear among the Government proposals for this Session, and that the Executive Committee be requested to forward this resolution, at an early date, to the members of the Cabinet, and that in the meantime the Executive Committee be requested to draft a Registration Bill and endeavour to get it introduced by some private member.” (2) “That this Branch, in view of the urgency of the Registration question, and seeing that the Association has always put this question in the fore-front, hereby requests the Executive Committee to at once approach the Incorporated

Association of Headmasters, with a view to secure their aid in the immediate formation of a register, such register, like that of the Medical Council, to be later on submitted to Parliament for the Royal Assent, and the granting of a Charter."

WE gave last month, from a Parliamentary report, a sample of English as it should not be written. We may cap it by three choice specimens which have come under our notice in the last month. The first is from an article on Systematic Commercial Education in the *Journal of the Society of Arts*—"I use the term 'systematic' as its omission would be met by the assertion that the opportunities for commercial education exist in the form of evening classes." The second is from the recently published sermons of a recently appointed Bishop—"Every house had a family in each room to eat and sleep in." The third is a boy's character by a famous ex-headmaster, now a Bishop—"Seems enhancing into oldering steadiness."

I HEARD a modern Churchman
Preaching in yonder dome
A doctrine founded on Darwin,
And a ritual following Rome.
By the time I left the building
'Twas night; and by good hap
There was the New Moon, hugging
The Old Moon in her lap.

F. W. B.

MM. CH. V. LANGLOIS and Ch. Seignobos' important "Introduction to Historical Studies" is being translated into English by Mr. G. G. Berry, of the Bodleian Library, Oxford, and will be published by Messrs. Duckworth & Co., 3 Henrietta Street, Covent Garden, W.C. The English edition will contain a special preface by Professor York Powell.

MR. R. J. LLOYD, D.Lit., has accepted a unanimous invitation from the Senate and Council of University College, Liverpool, to lecture on Phonetics at the College, as honorary Reader. The invitation was strongly supported by the modern-language professors.

AN exquisite instance of euphemism or euphuism, or both, occurs in Mr. Lallan's report to the Headmasters' Conference of the Olympic Congress at Havre. The second resolution runs: "The Congress desires the establishment of a hydrotherapeutic service [*service d'hydrothérapie; anglée*, "tubs"] in every educational establishment."

THE University Hall, Paris (95 Boulevard Saint Michel), is arranging an Easter course in French. "The classes open as soon as the students arrive, and will continue so long as any students remain."

OVER nine thousand entries have been made for the examinations of the Society of Arts. The greater number of these entries are for shorthand or for book-keeping, but some hundreds offer one or other modern language.

LORD DAVEY, the Bishop of London, Sir William Roberts, Sir Owen Roberts, Professor Jebb, and Professor Michael Foster are proposed by the Government to constitute the Statutory Commission under the London University Bill.

THE sons of Dr. Spiers are about to publish a supplement to Dr. Spiers' "French-English and English-French Dictionary." They would be grateful for any suggested additions and corrections, addressed to Professor Victor Spiers, King's College, London.

MR. J. MONTGOMERY, assistant-master at Parmeter's School, has been appointed Headmaster of Uckfield Grammar School. Mr. Montgomery founded the Assistant-Masters' Association in 1891, and has continued Honorary Secretary since that date.

MR. ARTHUR SIDGWICK has been made an honorary LL.D. of Glasgow University.

AN International Congress of Teachers of the Blind will be held in Berlin on July 25 next.

DR. RENDALL, Headmaster of the Charterhouse School, has been entertained at a banquet by the Mayor and Corporation of Godalming. This town is probably unique for the influence over municipal affairs exercised by the masters of a public school.

NEARLY £100,000 has been already subscribed to the fund for the new buildings of Aberdeen University.

ON March 16, at Bloomsbury County Court, Judge Bacon awarded £10 for wrongful dismissal to an assistant-master of a private school at Haddon. The Judge "chaffed" the defendant unmercifully, and wondered, after he had seen the headmaster, that matters had stood so long. The defence was that an assistant-master must go to bed at 10 o'clock, and the plaintiff had refused, and was summarily dismissed.

FROM the *Times* advertisement columns:—"Required for the summer term, in a large Preparatory School, a Master who is a first-rate cricketer. School-work elementary."

MODERATIONS at Oxford are in future to be held every term, instead of twice a year.

THE two latest Inspectors of the Education Department are Mr. Alfred Eichholz and Mr. Basil Sidney Cornish.

THE Duke of Devonshire's reply to Lord Norton in the House of Lords, on March 11, is worth quoting *in extenso*:—"As my noble friend is aware, the hope was expressed in the Queen's Speech that it would be possible to introduce a Bill in the course of the present Session. I am not able to state that it is at all likely that the measure will be introduced in the other House before Easter. I hope that after Easter it will be possible to make some announcement on the subject. After what has fallen from my noble friend, I think I ought to make a reservation by stating that it is not, and never has been, the intention of the Government to do anything in the nature of what may be called establishing secondary education all over the country. Any measure which we propose will be solely for the purpose of organizing in a better way that which already exists, and, possibly, for supplementing it to a certain extent. That what is being done by county authorities, or municipal bodies, or private individuals, is something to be done by the Government is not an idea which has ever been entertained by the Government. No doubt a certain amount of the £800,000 which has been given to be principally expended on technical education may have been at the outset misapplied, and perhaps a certain portion of it has been wasted; but, on the other hand, I believe that a very large portion of it is now being most usefully employed, and with very great advantage to the various localities. It is not, as my noble friend has supposed, dependent entirely upon the will and pleasure of the County Councils. Almost every County Council has, for the purpose of administering this grant, established an Educational Committee, which does not usually consist solely of members of the County Council, or need not consist solely of members of County Councils. Those bodies are gradually acquiring a great deal of experience, and I believe that in a great many centres they are at present doing very valuable work."

DR. W. J. SIMPSON, late Health Officer of Calcutta, has been appointed Professor of Hygiene in King's College, London. Professor John Glaister has been appointed Professor of Forensic Medicine in the University of Glasgow. The Rev. W. T. A. Barber is the new Headmaster of the Leys School, Cambridge, in succession to Dr. Moulton.

THE town of Preston, with a population of 115,000 and a grammar school of forty boys, requires a headmaster. The Corporation pay him £100 a year and let him take the fees and make what he can. Can no one make the city fathers realize their responsibilities?

AN appeal, signed by a strong committee of notables, is made for the sum of £4,000 in order to make the buildings of St. Mary's College complete for the purposes of a training college for secondary-school mistresses on distinctively Church lines.

Two vacancies on the governing body of the Royal Holloway College have been filled by the appointment of the Dean of Windsor and Mr. James Anstie, Q.C.

THE way language grows:—"Moderatism is simply Progressism minus charlatantry"—from a leading article in the *Times*.

THE Agricultural College at Wye is to be treated, under the provisions of the London University Bill, as if it were within a thirty-mile radius of London. The College was started, and is maintained by, the County Councils of Kent and Surrey. It has always claimed to be of University rank.

THE Joint Agency Committee has postponed the appointment of Registrar until the 6th of this month. As an illustration of the willingness of different bodies of secondary teachers to work together for a common end, it is interesting to note the composition of the Committee. It consists of representatives from the following bodies:—

The College of Preceptors, the Teachers' Guild, the Incorporated Association of Headmasters, the Assistant-Masters' Association (two representatives each); the Headmasters' Conference, Private Schools' Association, Welsh County Schools' Association, Association of Headmasters of Preparatory Schools, Association of Headmasters of Catholic Schools, Association of Technical Institutes (one representative each); and also a representative from the Oxford Appointments Committee and from the Cambridge University Scholastic Agency.

THE first annual convention of delegates of the Dublin, Belfast, and Cork branches of the Association of Intermediate and University Teachers was held in the Royal University Buildings, Dublin, on Friday, January 7. Professor Fitzgerald moved a resolution to the effect that the present system of secondary education in Ireland was unsatisfactory and demanded reform. It was, he said, principally at fault from want of money. They had not the large endowments which existed in other countries. One of the greatest faults of the intermediate system, and of the way in which, especially of late years, it had been controlled by the Board, was that a great majority of the boys had their interests sacrificed for the sake of the smaller number who were likely to take up an advanced University course. In Germany they had a secondary system of education, in which teaching was provided for both the commercial and professional classes, but entirely apart in a different set of schools. He thought that was very unfortunate, and that the English system was much better. They wanted in Ireland a grant of more money and also a school of agriculture, which was quite as scientific a subject as medicine. Other resolutions were passed asking for the institution of some standard of qualification for teachers and for the extension to Ireland of the clause of the forthcoming Bill which deals with the compulsory registration of teachers.

IN his admirable lecture on "School Curricula," a brief summary of which is given under "Teachers' Guild," Mr. Sadler brought home to his audience the contrast between German organization and the chaos which still prevails in English schools by quoting two parallel advertisements for a clerk from an English and a German paper:—

"Youth (smart, well-educated) wanted in Office as Junior Clerk. Must be a good writer, quick and accurate at figures."

"Junior Clerk wanted in Merchant's Office. Certificate for one year's military service indispensable."

SIR WALTER GILBEY has offered to provide a stipend of £200 a year for ten years for a Reader of Agriculture in the University of Cambridge.

THERE are nearly 120,000 half-timers in the elementary schools of England and Wales. Of these Lancashire contributes 40,000, and the West Riding of Yorkshire half that number. The other counties are spotless in comparison.

THE Associated Chambers of Commerce have passed resolutions in favour of the compulsory adoption of the metric system of weights and measures.

THE University of Cambridge is in want of £50,000 to provide suitable and complete Medical Schools.

THE late Mr. Philip Egerton Barker has bequeathed his house and grounds, near Nantwich, and a sum of £20,000 for the foundation and maintenance of an institution to be called the Barker Collegiate School.

LORD CHARLES BERESFORD had an enthusiastic reception at Harrow on the occasion of his address on "The Navy." The head-master, in moving a vote of thanks, said that if the recount at York were entrusted to one of the Harrow masters, Lord Charles could rely upon a majority of at least one vote. What is this mysterious power which a Harrow master possesses?

"OLD ALSTONIAN" inquires for a recently published book of Greek and Roman portraits. We welcome the opportunity of recommending "Atlas of Classical Portraits," by W. H. D. Rouse (Dent & Co.), a new departure in school books.

THE portfolio monograph on Greek bronzes, to be published by Messrs. Seeley & Co. the middle of April, is written by Mr. Alexander

Stewart Murray, keeper of the Greek and Roman antiquities at the British Museum; author of "Greek Sculpture under Pheidias," &c. The number will be illustrated mainly from the collection of bronzes in the British Museum, and will contain several that have not been previously reproduced.

PUBLICATIONS RECEIVED.

- AIRD & COGHILL (Glasgow).—Old Age Pensions. By William Birkmyre.
- GEORGE ALLEN.—Contributions to the Organization of a Normal Tertiary (Higher Secondary) School. No. 1. Sketch of Educational Ideas and Methods with Work-plan and Report-form, constituting a Normal Program of Work for English Boys of 11 to 18 years of age belonging to the Directing Classes, a Synopsis of Educational Science, and a Form for recording the Worth of each Boy. By Cecil Reddie, Hermann Lietz, and G. Herbert Hooper, of Abbotsholme. Price 1s. net.
- AMERICAN BOOK COMPANY (New York).—Laboratory Manual of Practical Botany. By Charles H. Clark. Price 96 cents.—A New Astronomy for Beginners. By David P. Todd, M.A., Ph.D. Price \$1.30.
- EDWARD ARNOLD.—Synopsis of Chief Events in Ancient History. Rev. E. C. Everard Owen.
- G. W. BACON & CO.—Bacon's British Empire Tree; illustrating the Acquisition and Growth of the Colonies, &c.—Picture Lessons in Natural History: Comparative Sizes of Animals.
- JOHN BALE, SONS, & DANIELSSON.—Five-and-Twenty Exercises on Two Hundred French Verbs. By N. Perini. Price 6s. Key, to Teachers only, 2s.
- GEORGE BELL & SONS.—The Bases of Design. By Walter Crane. Price 18s. net.—The Works of George Berkeley, D.D., Bishop of Cloyne. Edited by George Sampson. With a Biographical Introduction by the Rt. Hon. A. J. Balfour, M.P. Vol. II. Price 5s.—Registers of Examination Results. Part II. By James M'Cubbin. Price 1s. net.—All-England Series: Dumb-Bells. By F. Graf. Price 1s.—Cathedral Series: Norwich, by C. H. B. Quennell; Peterborough, by Rev. W. H. Sweeting. Price 1s. 6d. each.—Graduated Arithmetic. By C. Pendlebury and W. S. Beard; in seven parts. Parts I., II., and III., 3d. each. Parts IV., V., and VI., 4d. each. Part VII. 6d. Answers 4d. each.
- ADAM & CHARLES BLACK.—The Conquest of Italy (Historical Latin Reader). By E. G. Wilkinson. Price 2s.—School Geography of North America. Lionel W. Lyde. Price 1s.—Who's Who. 1898. By Douglas Sladen. Price 3s. 6d. net.
- BLACKIE & SON.—A School History of English Literature. Part II., Shakespeare or Dryden. By Elizabeth Lee. Price 2s.—Palmerston Sight and Sound Primers. Infant Reader II. Price 7d.

Nesfield, M.A. Price 4s. 6d.—Schiller's Wilhelm Tell. With Introduction and Notes by W. H. Carruth, Ph.D. Price 4s. 6d.—American Literature. By Katherine Lee Bates. Price 6s.—Promotion Test Cards in Arithmetic, Scheme B. Price 1s. 6d.—

French and German Reading Books: Scenes of Child Life in Colloquial French. By Mrs. J. G. Frazer. Illustrated by H. M. Brock. Price 2s. 6d.—Foreign Statesmen Series: Mirabeau. By P. F. Willert. Price 2s. 6d.—The Eversley Bible. Vol. VI. (Ezekiel to Malachi). Price 5s.—The Modern Reader's Bible (St. Matthew and St. Mark and the General Epistles), in one Vol. Price 2s. 6d.—The Teacher's Manual of Object Lessons in Domestic Economy. Vol. I. By Vincent T. Murché. Price 2s. 6d.—Psychological Review for March 1898.—Ratzel's History of Mankind. Part 24. Price 1s. net.—Arithmetic for Schools. By S. L. Loney. Price 4s. 6d.—Teacher's Companion to Modern Business Methods. By Frederick Hooper and James Graham. Price 2s. 6d. net.

- METHUEN & Co.—Discipline and Law. Some Lenten Addresses by H. Hensley Henson, B.D. Price 2s. 6d.—A Voyage of Consolation. By Sara Jeannette Duncan. With Eight Illustrations by Robert Sauber. Price 6s.—Some New Testament Problems. By Rev. Arthur Wright. Price 6s.
- JOHN MURRAY.—A History of France from the Earliest Times to the Fall of the Second Empire in 1870. By W. H. Jervis, M.A. A New Edition thoroughly Revised and in great part Re-written by Arthur Hassall, M.A. With a Chapter on Ancient Gaul by F. Havercamp, M.A. With Coloured Maps and many Wood Engravings. Price 7s. 6d.
- SIR ISAAC PITMAN & SONS.—Pitman's Manual of Business Training. Parts 8 to 15, completing the work. Price 1/6d. each.
- G. P. PUTNAM'S SONS.—Nullification and Secession in the United States. By Edward Payson Powell. Price 9s.
- RELIEF BROTHERS.—Paul Bert's First Year of Scientific Knowledge. Revised by Dr. Wormell and Dr. Montague Lubbock.
- RIVINGTONS.—Handbooks of Practical Science: Mensuration, Hydrostatics and Heat. By G. H. Wyatt. Chemical Experiments. By G. H. Wyatt. Price 6d. each.
- SWAN SONNENSCHNEIN & Co.—An Eton Bibliography. By L. V. Harcourt. Price 5s.—Parallel Grammar Series: Fourth German Writer. By R. Gordon Routh. Price 2s.—Port-Royal Education. Extracts, with an Introduction, by Félix Calet. Translated by Adnah D. Jones. Price 4s. 6d.
- SMITH, ELDER, & Co.—Gardner's Household Medicine and Sick-Room Guide. Revised by W. H. C. Staveley. Price 8s. 6d.
- T. FISHER USWIN.—The Franks. From their Origin as a Confederacy to the Establishment of the Kingdom of France and the German Empire. By Lewis Sergeant. Price 5s.
- WAKE & DEAN.—A History of England for Lower Forms. By C. H. Simpkinson, M.A. Part I. Price 1s. 8d.
- WEEKES & Co.—First Steps in Music. By A. E. Clark. Price 1s. 6d. net.
- WHITTAKER & Co.—Drawing and Designing in a Series of Lessons. By Charles G. Leland, M.A. Third Edition, with additional Designs. Price 2s.

CALENDAR FOR APRIL.

[Items for this Calendar should be sent in before the 24th of the month.]

- 13.—Howard House, Arundel Street, Strand. Training Courses for Teachers in Modern Languages (Gouin Method). Easter course begins.
- 15.—Post Translations for Competition.
- 18-21.—Teachers' Guild, Tenth Annual Conference at Aberystwyth. For full particulars see separate Teachers' Guild Report.
- 19, 26.—Royal Institution of Great Britain, 3 p.m. Two Lectures on "Phases of Art, Past and Present," by T. C. Gatch, Esq.
- 21.—Bedford College, London. Easter term begins.
- 21, 28.—Royal Institution, 3 p.m. Three Lectures on "Some Leaders in the Poetic Revival of 1760-1820—Cowper, Burns, and Scott," by the Rev. Canon Ainger, M.A., LL.D.
- 22.—Post all School News, &c., and all Advertisements for April issue.
- Royal Institution of Great Britain, 9 p.m. Lecture on "The Recent Eclipse," by W. H. M. Christie, C.B., M.A., F.R.S.
- 23, 30.—Royal Institution, 3 p.m. Four Lectures on "Programme Music," by Sir Walter Parratt, Mus. Doc.
- 26.—(First Post.) Latest time for receiving Teachers' prepaid Advertisements for May issue.
- 29.—Royal Institution of Great Britain, 9 p.m. Lecture on "Magneto-Optic Rotation and its Explanation by a Gyrostatic Medium," by Professor Andrew Gray, M.A., LL.D., F.R.S.

The May issue will be ready on Saturday, April 30.

PRIZE COMPETITIONS.

The Translation Prize for March is awarded to "Noch Einmal." *Proxime accessit*: "G.E.D."

The Extra Prize for March is awarded to "Leaf."

"Leaf" and "Dewdrop" both solved five of the seven puzzles, but, as one of them was "Dewdrop's" own composition, we award the prize to "Leaf."

The winner of the Translation Prize for February is Miss E. M. Henley, 47 Tavistock Street, Bedford.

The winner of the Extra Prize (select candidates) for February is Miss Agnes D. Ross, 18 Addison Place, Arbroath.

The winner of the Extra Prize (open competition) for February is Mrs. McCormick, Bath House, St. Andrews, N.B.

(Continued on page 232.)

Charles Griffin & Company's List.

CRAIK'S ENGLISH LITERATURE.

New Edition. Now Ready.

In Two Vols. Royal 8vo, handsomely bound in cloth, 25s.

A COMPENDIOUS HISTORY OF ENGLISH LITERATURE AND OF THE ENGLISH LANGUAGE FROM THE NORMAN CONQUEST. With numerous Specimens. By GEORGE LILLIE CRAIK, LL.D., Late Professor of History and English Literature, Queen's College, Belfast.

"Professor Craik has succeeded in making a book more than usually agreeable."—*The Times*.

Tenth Edition, Revised and Enlarged. Crown 8vo, cloth, 7s. 6d.

A MANUAL OF ENGLISH LITERATURE, for the use of Colleges, Schools, and Civil Service Examinations. Selected from the larger work, by Dr. CRAIK. With an Additional Section on Recent Literature, by HENRY CRAIK, M.A., C.B., LL.D., Secretary to the Scotch Education Department, Author of "A Life of Swift."

"A Manual of English Literature from so experienced a scholar as Professor Craik needs no other recommendation than the mention of its existence."—*Spectator*.

A HISTORY OF ROMAN LITERATURE. By Rev. C. T. CRUTT-
WELL, M.A., Hon. Canon of Peterborough Cathedral. From the Earliest Period to the Times of the Antonines. Fifth Edition. 8s. 6d.

"Full of good scholarship and good criticism."—*Athenaeum*.

A HISTORY OF GREEK LITERATURE. From the Earliest Period to the Death of Demosthenes. By FRANK B. JEVONS, M.A., D.Litt., Principal of Bishop Hatfield's Hall, in the University of Durham. Second Edition. Cloth, 8s. 6d.

"Beyond all question the best history of Greek literature hitherto published."—*Spectator*.

Now Ready, Extra fcap. 8vo, pp. 110, stiff covers, Price One Shilling and Sixpence (40 cents).

LIVES FROM CORNELIUS NEPOS:

MILTIADES, THEMISTOCLES, PAUSANIAS.

WITH NOTES, MAPS, VOCABULARIES, AND ENGLISH EXERCISES.

BY

JOHN BARROW ALLEN, M.A.,

Late Scholar of New College, Oxford; Author of "An Elementary Latin Grammar," "A First Latin Exercise Book," "A Second Latin Exercise Book," &c.

FROM THE PREFACE:

These Lives are published, not as an absolutely first reading book for beginners, but as a first introduction to the pages of a Latin Author, to suit the needs of such pupils as have learnt their Nouns and Verbs, and have gained some notion of the simple Rules of Concord. The accepted text has been slightly modified in places, to suit the needs of beginners, but no material alterations of any kind have been made, beyond the insertion or omission of a word or two here and there.

The purpose of the Notes has been, not so much to give scraps of information upon antiquarian points, as to help the pupil, by the further aid of his vocabulary, to render the text into sensible English. The constant reference to Grammar rules should, if properly attended to, furnish the basis for a sound elementary knowledge of Latin Syntax.

BABYLONISCHE SORGEN.

Mich ruft der Tod — Ich wollt', o Süsse,
Dass ich dich in einem Wald verliesse,
In einem jener Tannenforsten,
Wo Wölfe heulen, Geier horsten,
Und schrecklich grunzt die wilde Sau,
Des blonden Ebers Ehefrau.

Mich ruft der Tod — Es wär' noch besser,
Müsst' ich auf hohem Seegewässer
Verlassen dich, mein Weib, mein Kind,
Wenn gleich der tolle Nordpolwind
Dort peitscht die Wellen, und aus den Tiefen
Die Ungetümme, die dort schliefen,
Haifisch und Krokodile, kommen
Mit offenem Rachen emporgeschwommen. —
Glaub' mir, mein Kind, mein Weib, Mathilde,
Nicht so gefährlich ist das wilde
Erzürnte Meer und der trotzig Wald,
Als unser jetziger Aufenthalt !
Wie schrecklich auch der Wolf und der Geier,
Haifische und sonstige Meerungeheuer ;
Viel grimmere, schlimmere Bestien enthält
Paris, die leuchtende Hauptstadt der Welt,
Das singende, springende, schöne Paris,
Die Hölle der Engel, der Teufel Paradies —
Dass ich dich hier verlassen soll,
Das macht mich verrückt, das macht mich toll !

Mit spöttischen Sumsen mein Bett umschwirrt
Die schwarzen Fliegen ; auf Nas' und Stirn
Setzen sie sich — fatales Gelichter !
Etwelche haben wie Menschengesichter,
Auch Elefantenrüssel daran,
Wie Gott Ganesa in Hindostan. —
In meinem Hirne rumort es und knackt,
Ich glaube da wird ein Koffer gepackt,
Und mein Verstand reist ab — oh wehe ! —
Noch früher, als ich selber gehe.

By "NOCH EINMAL."

THE BURDEN OF BABYLON—NEW VERSION.

Death summons me. Ah, would, my love,
That I might leave thee in some grove,
A savage grove of hemlocks, where
Wolves howl and lammergeiers pair,
And on the ear harsh discords grate—
The wild sow grunting to her mate !

Death summons me. Yes, I were fain
To leave thee on the yeasty main,
My wife, my child, a castaway,
Where the mad Arctic blasts hold sway ;
Lashing the surge, and from the deep,
Sea-monsters in the ooze who sleep,
Sharks, crocodiles, with gaping jaw
Uprise, and haste to glut their maw.

Trust me, Mathilde, my wife, my child,
Not half so perilous the wild
Tempestuous sea, or forest fell,
As this our home where now we dwell.
Feller than crocodile or shark,
Or wolves that ravin in the dark,
The human beasts that lurk in this,
The world's renowned metropolis.
Fair Paris, haunt of bouts and revels,
The angels' Hell, the Heaven of devils.
To leave thee here alone, how sad !
The pity of it drives me mad.

All round my bed with mocking hum,
A swarm of buck flies go and come.
They buzz, they sting, my plaguing foes,
They settle on my brow and nose,
Some take the features of a man,
And elephantine trunks I scan,
Like god Ganesa's in Hindustan.

A girding, grating din is racking
My brain, as though a box were packing ;
My wits are taking flight, are gone—
Ah, woe is me !—and I live on.

We classify the 93 versions received as follows :—

First Class. — Sivü-Parvati, A.M.C., G.E.D., 100,000, χρυσέων χαλκεία, Ryber, Noch Einmal.

and you will find

WE CAN SAVE YOU MANY POUNDS.

[Please mention this Paper.]

Second Class.—B.S.K., Nitetis, L.N.S., Saga, E.P.L., Rushlight, E.H.O., W.S.M., Einnim, Corbar, Anchor, Gorey, A Speckled Bird, Jeanne, Innis, Semipaganus, Sheet Anchor, Lotte, Fides.

Third Class.—M.T.T., L.M.M., Agnes Bernauer, Kaia, W.W.W., Müde, Auntie Mi, Dummkopf, Pasht, Silly Suffolk, F.E.K., J.S.L., O Mimosa San, M.A.B., Sea Crocodile, Teja, Vlaamsche Meisje, Elizabeth, Dresden China, C.V.X., Jacinta, Pokerwork, Gudule, The Pretender, x, Flowers, Ambulator, Cyril, Cameron, Franconia, A.H.K., Fido, Baden-Baden, Nazianzen, Auntie Biddy, Reata, Merton, Opal, Bat.

Fourth Class.—E.M.B., Benedetta, Gipsy Queen, Moschus, E.R., Dane, Couleur Verte, Bathampton, Tyro, Franziska Luigi, Sirama, Ruksh, Leaschold, Sans Peur, Germania, Cymraes, E.W.L., Volo non valeo, F.G.M., Francesca, Polo, Rimini, Neb, U.R., T.A.G., Fal, Lace, Joe.

The grim humour of Heine's "Schwanenlied" is inimitable. The *motif* is wholly tragic, but the metre is half-melodramatic—the resolved octosyllables of Cristabel and the double rimes. The latter, as most have felt, must be partially sacrificed. If we begin:—

"Death calls me away, and I would, my deary,
I were leaving thee in a forest dreary,
Where wolves have their lair and vultures their eyrie,"

we force the ironic note and fall into burlesque. So the name "Matilda" is hopelessly vulgarized. Again:—

"In my brain there's a patter of thumps and knocks
As though they were packing and nailing a box"

suggests Gilbert rather than Heine. It is better to err on the other side, as the prize version does, and tone down the humour.

SOLUTION OF PUZZLES.

I.

1. I, is, sit, isn't, saint, trains, nastier, entrails.
2. I, it, lit, list, tiles, silent, salient, toenails.
3. A, at, eat, tear, alter, retail, reliant, oriental.
4. A, as, sea, seat, steal, leanst, entails, elations.

Chorus.—Relations, alienators, alterations, retaliations, Aristotelians.

II.

I, in, sin, sine, since, nicest, entices, enciters (*better* enticers), sincerest, resistance.

III.

A, am, aim, mica, claim, malice, climate, clematis, alchemist, Shemitchal, hemistichal.

IV.

O, no, one, note, oaten, ornate, treason, resonant, re-anoint's (?), stentorian. (If *re-anoint* is the word intended, *s* is wanting. Can *re-anoint's* stand for *re-anoint his*? Despair inspires the following guesses:—Rate-on-sin, Nero-stain, re-on-saint, anti-snore, ante-snort, Nestorian.)

V.

O, to, sot, post, poets, tropes, pourest, postures, purposest, supporters.

VI.

A, as, sea, sage, rages, ranges, enrages, sea-green, re-engages, greengages.

VII.

E, et, ter, erat, parte, patres (or partes), sperant, parentis, permansit, sempiterna, permanecatis.

A Prize of Two Guineas is offered for the best translation of the following passage from Victor Hugo:—

La nature est impitoyable ; elle ne consent pas à retirer ses fleurs, ses musiques, ses parfums et ses rayons devant l'abomination humaine ; elle accable l'homme du contraste de la beauté divine avec la laideur sociale ; elle ne lui fait grâce ni d'une aile de papillon, ni d'un chant d'oiseau ; il faut qu'en plein meurtre, en pleine vengeance, en pleine barbarie, il subisse le regard des choses sacrées ; il ne peut se soustraire à l'immense reproche de la douceur universelle et à l'implacable sérénité de l'azur. Il faut que la difformité des lois humaines se montre toute nue au milieu de l'éblouissement éternel. L'homme brise et broie, l'homme stérilise, l'homme tue ; l'éché resté l'éché, le lys reste le lys, l'astre reste l'astre.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled, on application, to a copy of "Essays in Translation."

All Competitions must reach the Office by April 16th, addressed "Prize Editor," JOURNAL OF EDUCATION, 86 Fleet Street, E.C.

MESSRS. BELL'S NEW BOOKS.

Educational Catalogue post free on application.

ELEMENTARY BOTANY. By PERCY GROOM, M.A. (Cantab. et Oxon.), F.L.S., Examiner in Botany to the University of Oxford. With 275 Illustrations.

Large 8vo, 12s. 6d.

DICTIONARY OF THE FRENCH AND ENGLISH LANGUAGES (French-English and English-French). By F. E. A. GASC. A New Edition (the Eighth), Revised, Enlarged, and Reset from beginning to end. 960 pages, in treble columns, bound in half-buckram.

BOOK-KEEPING BY DOUBLE ENTRY, Theoretical and Practical; including a Society of Arts Examination Paper fully worked out. By J. T. MEDHURST, A.K.C., F.S.S., Fellow of the Society of Accountants and Auditors (Incorporated), Author of "Examination Papers in Book-keeping." Crown 8vo, 2s.

GRADUATED ARITHMETIC, for Junior and Private Schools. By C. PENDLEBURY, M.A., and W. S. BEARD, F.R.G.S. In Seven Parts, in stiff canvas covers. Parts I., II., and III., 3d. each; Parts IV., V., and VI., 4d. each; Part VII., 8d. Answers to Parts I. and II., 4d.; Parts III.-VII., 4d. each.

Vol. V. In Two Parts.

GREGOROVIVS' HISTORY OF THE CITY OF ROME IN THE MIDDLE AGES. Translated from the German by Mrs. HAMILTON. Crown 8vo, 9s. net.

VERGIL. Vol. I. (containing the *Eclogues* and *Georgics*). Edited by the late JOHN CONINGTON, M.A., and H. NETTLESHIP, M.A., late Corpus Professor of Latin in the University of Oxford. Fifth Edition, Revised by F. HAVERFIELD, M.A., Christ Church, Oxford. Demy 8vo, 10s. 6d.

Vol. II. The *Æneid*, Books I.-VI. Fourth Edition. 10s. 6d. **Vol. III. The *Æneid*, Books VII.-XII.** Third Edition. 10s. 6d.

BELL'S CATHEDRAL SERIES.

NEW VOLUMES. Crown 8vo, 1s. 6d. each.

EXETER. By PERCY ADDLESHAW, B.A. With 35 Illustrations.

WINCHESTER. By P. W. SERGEANT. With 50 Illustrations.

LICHFIELD. By A. B. CLIFTON. With 39 Illustrations.

NORWICH. By C. H. B. QUENNEL. With 38 Illustrations.

PETERBOROUGH. By Rev. W. D. SWEETING, M.A. With 51 Illustrations.

HEREFORD. By A. HUGH FISHER. With 40 Illustrations.

Other Volumes to follow.

*** Full Illustrated Prospectus of Series post free.*

BOHN'S LIBRARIES.

NEW VOLUMES.

THE LAY OF THE NIBELUNGS. Metrically translated from the Old German Text by ALICE HORTON, and edited by EDWARD BELL, M.A. To which is prefixed the Essay on the "Nibelungenlied" by THOMAS CARLYLE. 5s.

"A new and excellent translation, faithful in sense and spirit, and admirably versified in the ancient ballad style. . . . The version possesses the advantage of resembling the original. Every reader, moreover, will take pleasure in the rhythmic well-rhymed verse; and students who know the old poem in its ancient form will scarcely be dissatisfied with the new presentation of the poet's meaning."—*Standard*

THE PROSE WORKS OF JONATHAN SWIFT. Edited by TEMPLE SCOTT. With an Introduction by the Right Hon. W. E. H. LECKY, M.P. In about Ten Volumes, 3s. 6d. each. [*Vols. I. and II. ready.*]

THE CAMPAIGN OF SEDAN: the Downfall of the Second Empire, August-September, 1870. By GEORGE HOOPER. With General Map and Six Plans of Battle. New Edition, 3s. 6d.

THE WORKS OF GEORGE BERKELEY, Bishop of Cloyne. Edited by GEORGE SAMPSON. With a Biographical Introduction by the Right Hon. A. J. BALFOUR, M.P. Three Vols., 5s. each. [*Vols. I. and II. ready.*]

London: GEORGE BELL & SONS York Street, Covent Garden.

THE TRAINING AND WORK OF ELEMENTARY TEACHERS.

IT is not easy to generalize on any subject connected with elementary education, and, accordingly, this paper contains only my personal opinions and experiences as an elementary teacher. It may, however, be mentioned that, though several of my suggestions appear also in the recently-issued Report of the Departmental Committee on the Pupil-Teacher System, my paper was in existence before the Report was published. Since its publication I have not altered my conclusions, but I have indicated in what respects it agrees with them, and in what it differs. The intrinsic value of the education given in elementary schools is usually taken for granted, and most educational discussion now turns upon such subsidiary questions as irregularity of attendance and the age of exemption. While I admit the value of elementary education as a discipline, it seems to me that school-work is open to improvement on its other sides. There are two methods by which this improvement may be brought about. The first is by introducing changes in the curriculum; the second is by amending the education of the teachers, who might then be allowed to develop their work in schools as they thought best. The latter course seems to be the preferable one; it involves a principle of growth and of adaptation to local needs, and is less mechanical than the former. Hence this paper deals, in broadest outline, first, with the training of teachers during their apprenticeship and in the training college, and, secondly, with the actual work of teachers in elementary schools.

The training of teachers now begins with their apprenticeship or pupil-teachership. During the three or four years spent in this stage, a youth should develop the power of controlling a class and of making himself intelligible to those from among whom he has recently been raised. It is best and easiest to acquire these special powers when young, and, in fact, an adult suddenly introduced to school-work frequently finds it very difficult to overcome the awkwardness and weariness he feels when first brought into contact with unformed minds and restless bodies. The Pupil-Teacher Report recognizes in its first and sixth paragraphs the value of apprenticeship, and in the twenty-ninth paragraph urges that the pupil-teacher's position in school should not be the sinecure it frequently is, at any rate in large urban districts. In the paragraph referred to, the Report goes so far as to advise that "senior pupil-teachers should have the charge of a small class, not exceeding twenty-five in average attendance, under the supervision of the head-teacher." During this apprenticeship all pupil-teachers should develop the powers of teaching and discipline which are actually required in school-work; but all pupil-teachers are not able to follow the same course of general study. It thus seems a pity that the more favourably placed among them should be kept back for the sake of their weaker brethren.

The sixty-second paragraph of the Report mentions that, in large centres of population, students suitably prepared for University work are found in larger proportion than in other districts. It should be the aim of the course to make this proportion still greater, at any rate in large towns where the centre system of instruction is in force. Perhaps the best means of attaining this object would be to prepare the teachers for examinations such as the Cambridge Local, instead of making them work for the Departmental examinations now taken. In its summary of recommendations (6, VI.-VIII.) the Report proposes such a course of study as an alternative to that already pursued, and in paragraph 6 and elsewhere in the Report itself there is a proposal that "all intending teachers should pass through a secondary school for the completion of their education." In these schools the various "local" and other examinations would probably be taken, and the pupil-teachers would thus have an opportunity of measuring themselves with candidates taught under different conditions and working for different objects—an opportunity which has hitherto been altogether lacking. Contact with others than teachers in training would, moreover, tend to remove the shyness and awkwardness which many young teachers feel in unaccustomed surroundings—a source of possible danger if a University course is to succeed the apprenticeship stage.

Not only would the proposed alterations greatly help to break down the "barrier between primary and secondary education" spoken of in the Report (paragraph 3), but apprentices entering

from secondary schools, in accordance with the strong recommendation of the thirteenth paragraph of the Report, would be enabled to take the successive stages of the ordinary secondary examinations. Their centre work would thus become a continuation of that done at school, and, of course, the final stages of these examinations greatly facilitate, and in some cases actually qualify for, admission to a University. Such a course seems likely to attract increasing numbers of pupil-teachers from secondary schools—a consequence, moreover, indicated as probable in paragraph 62 of the Report.

While residence at a University would probably at first be open to a comparatively small number of pupil-teachers, University teaching could be, and is, given to far greater numbers by means of the Extension lectures; and, although it might be well to have special courses for pupil-teachers (as the Report recommends in paragraph 43), yet, surely, the pupil-teacher should be treated as much like a responsible being, and as little like an educational babe, as possible. The education of pupil-teachers would in this way be put more upon a level with secondary education than, according to the fifteenth paragraph of the Report, it now is. But the Department would probably find it necessary to supplement the open examination by another covering the more distinctly professional subjects, and dealing also with those taught in schools, but not sufficiently tested in the open examination.

The pupil-teacher period is at present concluded by the Queen's Scholarship examination and the scramble for places in training colleges. Those who are so fortunate as to gain admittance pursue a course of professional training and general education. The professional training is both practical and theoretical, the practical consisting of a certain number of hours' teaching in a normal school; the theoretical including the study of educational writers and of the science and art of school management.

Turning to the general education, we find that it usually consists in the repetition—in the case of most students for the third time—of work already done at school and during the period of apprenticeship. The Report, in its thirty-fourth paragraph, describes this as an "unsound and wasteful educational practice," and probably few will be found to disagree with this criticism.

Hitherto I have been in agreement with the Report and with general—or, at any rate, with expressed—educational opinion upon the training of elementary teachers. I have, however, at this point to differ from both as regards the value of training beyond the period of apprenticeship, when it is taken into consideration that such further training involves the loss of many of the advantages of a liberal education. I shall, therefore, now make a digression upon the subject of training colleges, and try to show how recent developments have affected their value. Training colleges originated in the very early days of popular education, when the teachers were adults recruited from a great variety of occupations, and when they taught their pupils largely through their brightest scholars, who were made monitors. This first generation of teachers had neither the skill nor the knowledge required in their new calling, and to them the training college was of the greatest value. In course of time the pupil-teacher displaced the monitor, and acquired—under unfavourable conditions, but yet, as a rule, effectively—the instinct of command and of exposition. The value of the training college as a place where these powers could be acquired was accordingly lessened, for it was the ex-pupil-teacher who now entered its gates, and not the inexperienced adult.

The general opinion among those who have passed through the course at the training college is that it adds but little, if at all, to the student's powers as a teacher. The average student fresh from college is hardly expected to recover the technical ability acquired during his apprenticeship, until at least a year after his appointment to a school. Educational bodies such as School Boards usually re-engage those who have been pupil-teachers under them; for, generally speaking, a course of training in college seems to give a professional *cachet* rather than any special teaching power. This power is acquired and used by a kind of instinct, and to a youth who feels the instinct within him the writings of the educationalists seem either obvious or out of touch with the modern conditions of elementary education, with its codes, time-tables, large classes, and professional ideas upon "teaching" and "order."

So much for the first movement and its effect upon training colleges. We turn now to the second. This is the decline of the system of payment by results. As was to be expected, under this system the attainment of mechanical accuracy became the chief object of school-work, and "slow and sure" was adopted as the favourite motto of the teacher. The progress of the class was measured by that of the "lame duck"; learning was made as easy as possible in order that its results might be easily reproduced, and memory was the chief faculty cultivated. Very little was taught beyond that which was to be reproduced; "suitable to the capacity of the children" became a favourite phrase, and under cover of it much of the interest was extracted from school-work. The art of teaching thus became the art of making things easy to learn and of persisting in dull work. It was, in fact, a modification of the primitive "cram," and thus was very far removed from the real education we hope to see in the future.

Ay! but a man's reach should exceed his grasp,
Or what's a heaven for?

It must be remembered that the results, or percentages, which gained grants under the old system could not be obtained apart from so-called "good order," which made "shirking" by dull boys difficult. The inspector looked for "order" as a sign of progress, and in large classes loose order is of course apt to degenerate into inattention, especially if interest in the work is small. But, on the other hand, "good order" often connotes lethargy, or, at any rate, the absence of the higher mental efforts, unless, indeed, such "order" is the outcome of absorbing interest. Such intense interest in school-work is usually not a dominant force, and "order" has to be obtained and kept by other means.

It must be acknowledged that some of the means adopted are not beneficial; but they are frequently forced upon the teacher by the unwarrantable restrictions as regards corporal punishment which have been in favour during recent years. Surely it is more healthy to correct faults by corporal punishment than to develop by voice and manner a soporific, perhaps even a mesmeric, state of body and mind, in which there is little inclination to do either good or evil, but simply to work mechanically at the exercises set. It is certainly better to flog a boy than to leave him under the surveillance of a fellow-member of his class, of a monitor who should be his comrade but who thus becomes a spy upon him. It must, however, be remembered that without these professional devices school-work would be extremely exhausting to the teacher, and perhaps rather too exciting to the boys. Nevertheless it is a mistake to "make a desert and call it peace," or to expect from schoolboys virtues like stoicism and love of the public good, which properly belong to a later period of intellectual and social development. It is on the ground of "good order" that the brighter majority are made to travel at the pace of the dull minority. Uniformity of work throughout the class is aimed at, and any exhibition of originality or individuality is accompanied by so much "diffusive energy" that the general "order" is imperilled. But I need hardly say that intellectual progress has rarely been made by a general and simultaneous advance along the whole line. I am not speaking against discipline. I think it necessary as a tonic to laziness and as a corrective to over-excitement. But I draw a distinction between discipline and "order"; the discipline of the school should not be the discipline of the camp. The test of school discipline should be ready obedience, not perpetual "good order." The latter seems to diminish the energy and enterprise which have enabled England to make her place in the world, and which she must foster if she would continue to hold her own.

Why should a man whose blood is warm within
Sit like his grandsire cut in alabaster?

The current professional ideas on teaching and order may thus be traced to the system of payment by results. But the system is passing, and another spirit is at work. Intelligence is looked for above and beyond accuracy; progress rather than order is the mark of the new movement, and it will soon be seen that in teaching, as in agriculture, the soil has to be broken up before the seed can enter.

The training colleges grew up under the older system and produced teachers who could earn large grants; it is naturally difficult to modify the ideas developed and fostered in these colleges so as to meet the requirements of a more intelligent system. The Pupil-Teacher Report, in paragraph 13, accordingly says with truth: "The traditions of primary teaching are still, through no fault of the teachers, narrower than is consistent with sound education."

In a word, then, the training college seems merely to be marking time as regards the education of teachers; it engrosses years of student life which might more profitably be spent elsewhere. On the other hand, the training college continues to inculcate ideas which grew up under a former *régime*, and which were in harmony with the system of payment by results. The value of the professional part of the training college course thus seems to be open to serious question. There remains to be considered the general education there imparted.

Though the pupil-teacher may not have derived much benefit from the technical part of his training, yet it was at the college alone that he acquired any intellectual discipline and any ideas of methodical study. Now, however, that the centre system is spreading, students in training need not depend so much as hitherto upon the college to show them what study means. They should, in fact, as a rule be sufficiently well prepared to benefit by a wider course than that pursued at the normal colleges, and it is only the supposed necessity for further professional training that prevents them from taking their places in the ordinary centres of liberal education, where the great variety of intellectual and social pursuits is in itself, perhaps, the greatest of educative forces. It is true that much work for degrees is done in the training colleges, but hardly under University conditions.

In no other profession does the period of general education coincide with that of professional training. The lawyer or clergyman passes through the former during his school and college days, and then enters an institution where he acquires the skill, knowledge, and enthusiasm necessary for the successful pursuit of his profession. The Report, in paragraphs 39 and 58, evidently contemplates some such course in the future, but it will not be well based unless the student in training has behind him a liberal education to counteract the narrowing influence of his professional studies. The pupil-teacher has no such propædæutic, even when he has previously passed through a secondary school. If the beginnings of a liberal education are then made, it is surely well to continue that education during a period in which its value is greater than that of technical training, especially as the latter has been practically acquired during apprenticeship. In fact, the whole question resolves itself into a choice between the small improvement in teaching ability gained at the training college and the general development resulting from a liberal education. This development, in its turn, would certainly manifest itself by increased educational power, if the student already possessed its necessary technical elements.

The superiority of the latter course need hardly be argued, but a couple of illustrations may not be out of place. In the seventeenth century Cambridge resisted a scheme whereby it was proposed to reconstitute the University on Continental lines, establishing separate colleges, each for the exclusive studies of one faculty; and, in resisting this scheme, the University probably preserved to herself greater opportunities for useful educational work than she would otherwise have possessed. Again, the training of Indian Civil Servants is entirely non-technical, and yet an Imperial Commission of the hyper-technical Germans was constrained to pronounce the training actually acquired to be one of the finest the world has ever seen. In this system the candidates—native candidates, at any rate—receive scholarships tenable only at Universities, and are allowed to pursue any course of study they may desire. Having passed a perfectly general examination in their chosen subjects, they are allowed a hundred pounds and a year's probation to enable them to mix with their fellow-men, to read up the law and learn the language of their future district, and to practise horsemanship.

Some such scheme might be adopted in the college training of teachers, and it is gratifying to see that the Report makes some suggestions tending in this direction, in the part dealing with the Queen's Scholarship examination. (Summary 7.) The examination, however, would still include technical subjects, and would still lead to the training colleges. I should have liked the Report to go further, and say that all those who show that they are fit for a University course, by passing the University entrance examination, should receive a sufficient scholarship and should be free to engage in any study they like, unfettered by the requirements of technical training. If, for the sake of students who have not been pupil-teachers, some special training is still necessary, it might follow the

degree work ; but the nearest approach the report can make to this ideal of a free University course is strongly to recommend the day training college system in paragraphs 60, 61, and 62. But even here we find hostels recommended as securing "the advantages of discipline and supervision in study of a first-rate residential college." It is, however, only fair to state that the Commissioners "much prefer" those hostels which are "open to other students of the University or college." Indeed, those which are not so open merely reproduce under new conditions the most serious defects of the residential training colleges. "Birds of a feather flock together," and this is particularly true of training college students, whose comparative seclusion during apprenticeship makes contact with the outer world uncongenial ; but I do not find that, as regards training colleges, the Report condemns this flocking together, although in paragraph 48 it speaks of the "healthy stimulus" resulting from the admission of ordinary students into centres, and from the education of the pupil-teachers in secondary schools.

It might be urged against any proposals for the liberal education of primary teachers that only a few of the best pupil-teachers in the centres of our largest towns would be able to profit by such a course. But paragraph 60 says that, "where local school authorities provide adequate preparation for their pupil-teachers, where tutorial aid is afforded at the colleges, and where examinations below those of University standard are also available, ex-pupil-teachers of average powers, if willing to take full advantage of their opportunities, make very satisfactory progress"; and, if the changes in the education of pupil-teachers recommended elsewhere were adopted, the number fit for a University course would be still further increased.

But the rural apprentice, though often a good teacher, is, as a rule, intellectually behind the urban pupil-teacher. The proposal in paragraph 20 to reserve to him certain scholarships to secondary schools might, indeed, improve his intellectual position, but the chances are against his being able to follow the University course possible for his urban colleague. If the latter chose to follow such a course, the place he now fills in the training college would be open for somebody else, though the supply of college accommodation would still be insufficient. At present the colleges receive only about a third of their applicants (Report, paragraph 56), and the great number of the unsuccessful are rural teachers.

The fifty-sixth paragraph speaks unfavourably of proposed training colleges for rural teachers, as "their constitution would lead to their being stigmatized as an inferior order of colleges established to produce a lower caste of teachers." This might be so, but the public would prefer for rural teachers some kind of college course rather than none at all. Unity is desirable, but there is a false kind of unity which levels downwards, and it is from this kind of low-level unity that elementary education is suffering in all its branches. I do not, however, propose the establishment of more training colleges, although the Committee "think that offers made by individuals or local bodies to increase the supply of accommodation should be by all means encouraged." I should prefer to see this local need met, as other local educational needs have been met, by the County Councils. The educational work of these bodies is very varied, and if they assisted rural teachers in their general education, or received them into their technical colleges or polytechnics, not as normal, but as general students, such teachers would receive a much wider education, and therefore a better training for their subsequent work, than they can hope for at a training college. I gather, from paragraph 19 (i.), that County Councils are already helping pupil-teachers ; if they helped would-be students, not to training colleges, as they have tried to do, but to other seats of learning, they would be meeting a local need in a satisfactory manner.

I shall now endeavour, by briefly considering the essential nature of ordinary school-work, to justify my preference for a general education rather than a technical or professional training for teachers after the stage of apprenticeship. There is a constant struggle between the human and the mechanical in primary teaching, between the development of general intelligence and of technical skill, between growth of character and inclination on the one hand and the acquisition of knowledge on the other. At present we are under the sway of machinery. Our elementary schools are fettered with codes, time-tables, drudgery, and unfruitful "good order," and with what result? Evening classes,

as Sir John Gorst recently told a deputation, are largely filled with young people who wish to re-learn what they were taught a year or two previously, and employers find a "plentiful lack of wit" among their newest office-boys fresh from the elementary schools. These and other consequences are the result of exalting the mechanism of education into the end and object of school-work. The subjects which constitute it are taught like "accomplishments," which can only be exercised in the way in which they have been learnt.

For instance, let us see how reading is taught. "Readers" are used. These are compilations of short pieces, each written to suit a certain standard of difficulty. They are read and re-read, and usually nothing beyond them is attempted because, if the scope of the reading were enlarged, the field to which the "spelling" test might be applied is extended. The monotony of the exercise naturally produces a monotonous enunciation. To counteract this, teachers aim at a more or less artificial "intelligence" of expression ; the Education Department object to this "intelligence" in a circular upon the teaching of reading, and yet do not remove the cause of the whole trouble. Again, in arithmetic, few people ever use higher rules than the four simple processes, with addition and subtraction of money. Yet school arithmetic soars into most abstruse regions, dealing with stocks and shares and other mysteries. If this higher arithmetic is ever required in after-life, it is usually learnt again by rote in workshop or counting-house, and worked with the help of numerous tables and ready-reckoners. Well may the Report say, in paragraph 2, that "much of the mischief is done while [the schoolboy] is a scholar in the standards," and go on to speak of the "excessive importance attached to some of the least valuable subjects of instruction."

It must not, however, be inferred that our present elementary education is valueless. The regularity and order of school-work is a useful discipline, insuring habits of carefulness and accuracy, and, for the first three years of his school-days, the boy needs a great deal of this kind of discipline. During these three years of drudgery, he has learnt mechanically the arithmetic he will require in after-life and a sufficient power of reading and writing to make more intelligent progress possible ; but, if drudgery is continued throughout school-life, Jack becomes a dull boy, and is in great danger of losing his power of intellectual growth.

Upon entering the fourth standard, the pupil should find a change. But, before noticing the character of this change, I should like to mention two developments which bring teacher and taught into closer relation than was formerly possible. I refer to the system by which the teacher has under him the same boys throughout their school career, and to the growing interest taken both by boys and by teachers in athletics.

How can the teacher use this greater intimacy with his boys for educational purposes? He has recently been allowed certain powers—for instance, that of promoting a boy—which were formerly exercised by the inspector only ; but he has, as yet, no power to choose or alter the subjects he teaches. Such a power ought to be conceded to a liberally educated teacher, just as a clergyman is allowed to preach the sermons he thinks best, or a doctor to prescribe the remedies he thinks most beneficial. In paragraph 2 we find it recommended that teachers should influence "the construction of the elementary code"; but, if each teacher were allowed to plan his own work, it would be better still.

Here, however, we should ask ourselves : What is the object of school-work? The question may be fitly answered in the words of paragraph 34 : pupils "should be exercised in this elementary material in such a way as to acquire good intellectual habits, with the inclination and the capacity to profit by a liberal education." This extract refers, as a matter of fact, to pupil-teachers ; but, although "a liberal education" will be the lot of but few elementary-school children, the words, in a broad sense, are applicable as describing the ideal of primary education for all. At present no great inclination to continue study is fostered in our primary schools ; the school-work is too uninteresting to attract the child to independent effort. Interest begets interest, and, if a teacher feels lukewarm upon the subjects prescribed in his time-table, the work of his class in those subjects will be mechanical, and, so far, without educational value. But, if he is allowed to teach the subjects in which he is interested, intelligence is kindled in his

class, and this intelligence, directed towards the necessary minimum of compulsory work, would soon accomplish it. Common interest in a subject of study would not only furnish a bond of sympathy between teacher and pupil, but might give the latter a hobby with which he could profitably employ his leisure after school-days are over, and so the better perform his duties in life.

Again, reading is, perhaps, the best medium of self-education—at least, for dwellers in towns. If study is, then, to outlive school-days, a love of reading should be fostered in school. The current methods of teaching reading seem, from this point of view, to be anything but hopeful. They aim at the development of an elocutionary facility which is of no great value as a means of subsequent self-development. Boys should be trained to read to themselves, and to summarize clearly, and in their own words, passages they have been given to read. Instead of making them spend time over “readers,” the teacher should put popular editions of standard works into their hands; these might be talked over in class, and given to the boys when done with. They can be bought at prices varying from a penny to fourpence-halfpenny each, and, if kept by the boys, might go to form the nucleus of small private libraries. School newspapers and periodicals are an improvement upon the “readers,” but their ephemeral character makes them inferior to cheap classics. These methods of arousing interest would result in the growth and multiplication of ideas, and “composition” would soon cease to be the farce it now too frequently is. Especially would this be the case if conversation during school-hours were encouraged, instead of being checked and frowned upon. We should then have a generation of practical men who could write intelligently upon their own affairs, instead of depending helplessly for the expression of their ideas on the “writer” who has the knack of style, the “literary man” *par excellence*.

This development of tastes and inclinations need not displace technical training, which, if carried out by practical methods, is interesting and therefore educationally useful. But it seems a mistake to set ourselves to copy uncritically the methods of countries whose conditions are diverse from our own, and whose populations are more drilled and disciplined than the inhabitants of this free and independent island. Mere accretions to knowledge will be soon forgotten, especially if there is no immediate use for them; but general intelligence is useful in any direction. It is this that should be aimed at in school, rather than the premature acquisition of an undigested mass of technical or any other knowledge. Intelligence is developed, not by any one method, but by the contact of mind with mind. It is thus that the “quickenings and stimulating influence of the teacher” (Report, paragraph 12) makes itself felt. Common interests and sympathy are the best masters of method, and school-work should be as much as possible like the social intercourse which afterwards takes place between master and former pupil. If the social connexion is to endure after school-days, it must during that period be begun and established upon the same footing as that on which it is to continue.

“As iron sharpeneth iron, so a man sharpeneth the countenance of his friend.” But the friendship of the Man in the Iron Mask was not sought after. A technical training is apt to provide the teacher with such a mask of professional method, and, if he is also wrapped round, as in a mantle, with Code regulations, his personality is certain to be hidden from his boys. He needs *some* method and skill, but only as a means to an end, not as the end in itself, and he acquired enough skill for his immediate needs when he was a pupil-teacher. His real, though perhaps his unconscious, work is to make his boys like unto himself, and to do this he must stand revealed before them. He should be a man, a friend, an educator of character, not merely a teacher, an inculcator of swiftly-fading knowledge. And, as the educated man should, *ceteris paribus*, possess a fuller and richer character than the merely trained man, I prefer a liberal to a professional education for those upon whose efficiency so largely depend the destinies of the nation.

FRANK J. ADKINS.

THE Duke of Devonshire, in answer to a question, said that it is not intended in the 1898 Code to give inspectors the power of forcing upon managers the recommendations of the Pupil-Teacher Departmental Committee.

THE TEACHING OF SCIENCE IN SECONDARY SCHOOLS.*

By BEVAN LEAN, D.Sc., B.A.

LET me say at once that when I am advocating in this paper the inclusion of science in a school curriculum I do not intend my remarks to apply to children younger than thirteen or fourteen. It is often asked: “How soon should children begin science?” I would reply: “The earlier the better, provided right methods are followed”; but I am strongly of the opinion that children should not in general begin systematic work in science (in chemistry and physics, for example), nor be allowed to enter the laboratory, before the age of thirteen or fourteen. Pleasant lessons on natural history may, however, most suitably be given, and little inquiries may be suggested incidentally by the dew on a window pane, by a rainbow, and by many other disconnected matters of common experience. The object of such elementary science with young children should be to maintain their wonder in the world around them and stimulate their curiosity, rather than to give training in scientific method.

Moreover, as has been insisted elsewhere, unless boys—and, I may add, girls—“have mastered the elements of arithmetic, decimals, the unitary method, percentages and proportional parts, they are recommended to go back to their ciphering. There can be no sound knowledge of physics or of chemistry without mathematical backbone. There is nothing more distracting to teachers and to students than to find that laboratory results cannot be worked out for want of adequate mathematical knowledge.”

Having said so much as to the legitimate range of systematic science teaching among children of varying ages, I will add that I believe those who have not themselves prosecuted a thorough science course find it very difficult to grasp what it is which some of us believe to be of value. The aims, the methods, the laws of science are very generally misunderstood.

For an instance I may refer to a recent address in which the problems of the chemist were spoken of as admitting of exact and definite answers, and were contrasted with the problems afforded by linguistic study, to the effect that it is characteristic of the latter alone to “admit of a variety of form which is almost endless, and a change of significance according to circumstances.”

Another idea, still very prevalent, was illustrated by a boy who told me a few weeks ago that he was going on leaving school into a dye manufactory, and his mother wished him to learn the chemistry of dyeing. Let it be clear that we do not wish to make specialists. On the contrary, the teaching of science in schools (and in general that means chemistry) *should have no reference to practical applications*, and by that I mean it should not be taught with a view to its subsequent use in commercial life; nor is this my own opinion only. It was stated in these very words in a report† issued a year ago by a special Committee appointed by the Technical Education Board of the London County Council, based upon evidence placed before them not only by prominent teachers such as Dr. Armstrong and Dr. Tilden, but also by manufacturers such as Dr. Ludwig Mond, Mr. Calderwood (managing director of Price's Candle Company), and Dr. Hurter (of the United Alkali Company), and others.

It was not easy for me to tell that boy that before he could be of service as a chemist—and by a chemist I do not mean a testing machine; reformatory boys may be such—he ought to have three years' thorough training in scientific chemistry of University standard, and then gain at least two years' experience in original research. As the report said, no attempt should be made to impart in schools any knowledge of the applications of chemistry for commercial purposes.

In this connexion may I enter my protest against teaching *qualitative analysis in schools*—the mere detection of lead and bismuth and iron, of sulphates and chlorides and so forth. Such teaching demands a minimum of exertion on the part of the teacher, and carries with it a minimum of educational value, and, while such elementary analysis is usually interesting to

* A paper read before the Friends' Guild of Teachers in Birmingham, January 18, 1898.

† “Report on the Teaching of Chemistry”: Edward Stanford, 2d.

children, the sense of knowledge which it often gives is pitiable, nor can it rest on any secure foundation. It was the experience of the demonstrators at the Owens College that the methods of qualitative analysis learnt at school had usually to be unlearned at college, and it was always preferred that boys should come with a good general intelligence rather than a supposed knowledge of analysis.

In the report already referred to evidence was taken from twenty-five secondary schools in London, in which there were 3,960 boys learning chemistry. Of these, 1,698 boys, or 42·9 per cent., did no practical work whatever, while with 955 boys, or 24·1 per cent., the practical work consisted only of qualitative analysis together with a certain amount of the preparation of gases. Of these 743 boys had not reached the study of the metals in their theoretical work, and so there was *no connexion between their practical work and their class work*. In six schools the first introduction to practical work was through qualitative analysis. A knowledge of the history of chemistry seems to me to show not only that practical work must be begun at the outset, but also that quantitative work must come at a very early stage. It is, therefore, a matter for congratulation that the Science and Art Department have now banished qualitative analysis from their First Stage examination.

Any parent who wishes his son to learn chemistry at school with a view to his future occupation in life should read a dialogue between a well-to-do drysalter and a schoolmaster in Professor Miall's "Thirty Years of Teaching." *

Nor, again, is our object gained if we succeed only in being *interesting*. People sometimes say: "Oh, X. Y. is so interested in his science," and I always feel that if that is all the teaching has been a failure. The awakening of interest in science in children over fourteen is not the end, but it is most certainly a condition, of successful work—a condition which will be secured if the children themselves work at the benches, if they are led to be original discoverers, and so obtain a consciousness of achieved success.

Further, our object is *not to impart knowledge or information*. I saw it urged in a newspaper article the other day that it was a misfortune for a boy to leave an organized science school after only one year's work, on the ground that the knowledge gained would certainly be lost in a very short time. Surely in nine cases out of ten the knowledge gained may be lost, and without regret, and yet solid gain remains provided right methods have been pursued. It is of little import to know that when acid is added to chalk carbonic acid is evolved; but to establish, after many experiments, by observation and inference, that the gas comes from the chalk, and not from the acid, and not in part from the chalk and in part from the acid, will give a discipline the effect of which cannot be lost. Or, again, it is of little consequence that you have forgotten what occurs when dilute sulphuric acid is poured upon zinc; but, if you have learnt to measure the volume of gas obtained when acid acts upon one gram of zinc, and have understood that you could not at once prove whether the gas came from the zinc or the acid, or in part from one and in part from the other—if you have understood why you could not answer these questions at once, solid gain must remain.

Why, then, do I urge the inclusion of science in the school curriculum? Let me attempt to answer this at the risk of reiteration. I urge it *solely as a means of mental culture and education*, in order to develop the mind in a way which is not possible through the exclusive study of languages, history, and mathematics. It is because I believe it is through science teaching that we can best arouse and stimulate the power of *accurately ascertaining facts and drawing correct inferences*.

I have a vivid remembrance of driving a ball at golf one day from the top of a hill over a valley: it alighted safely on a grassy slope on the other side of a ditch. Just then a white ball appeared travelling in the opposite direction, and I saw it roll down into the ditch. As I walked on with a sense of satisfaction a gentleman appeared on the opposite slope and triumphantly approached his green with my ball. In vain did I point to his ball in the ditch and tell him that I had had my ball in view all the time, while he had lost sight of his; in vain did I point to the marks on my ball and the hole it had made in the soft ground—he had the fixed idea that his ball could

not get into the ditch, and to this day he is driving my fugitive ball.

May I add that I believe a well devised course in physical science is best calculated to enable men—and, I would add women—to weigh and receive fresh evidence, and render them less tenacious of fixed ideas—surely a matter of great importance in both political and social life.

It is not so easy to correctly ascertain facts as may be supposed—nor are girls at all more likely to be correct than boys. During the past year I took a class of twenty-six girls, and another class of forty boys through precisely the same introductory course on physical measurement. I then gave the same practical examination to all, with the result that, though the average age of the girls was nearly a year above the average age of the boys, the average result attained by the girls was 3 per cent. below the average secured by the boys. I think half the girls did not read the level of water in a burette even approximately correctly, although they were more successful in reading the temperatures of Fahrenheit and Centigrade thermometers to the tenth of a degree.

Now, if our science teaching is to have the educational value of which I have spoken, I believe *chemistry* (and with it I include the elements of physics) gives us the opportunity we desire better than any other branch of natural science; I hold this to be so, firstly, because chemistry admits of accurate quantitative experiment even within the time of a short class; secondly, it admits of an infinite variety of experiments and the conditions of an experiment can be readily varied; thirdly, hypotheses formed upon observed facts can be readily tested by further experiment; and, lastly, and this is important, just as truly as any other branch of natural science, chemistry so frequently touches matters and operations that are familiar to children in everyday life.

Let me illustrate this connexion with everyday life. During the last few months a class of boys was studying solution. They found that some solids are much more soluble in water than others; they measured the solubility of saltpetre and salt in water; they found that alcohol, ether, and benzol are most useful solvents of fats, oils, and substances insoluble in water; they found that some natural waters contain a greater quantity of dissolved solids than others; and they themselves were able to measure the relative hardness of rain water, the school spring water, and that of the town supply.

It goes without saying that, if our teaching is to have this educational nature, *we must illustrate the scientific method of investigating Nature*. What is this scientific method? In a recent review it was pointed out that "it includes all the logical processes—induction, deduction, analogy, verification—every way in which the intellect passes from fact to fact. It consists in the formation of an hypothesis from the facts by induction at the earliest possible moment in an investigation, deductive application of the hypothesis to known facts, and the search for others that ought to exist if it is true, until it proves itself imperfect. By the help of the new facts the hypothesis is improved (by induction), and again applied, until by successive approximations it reaches the truth."

If, then, we adopt in our teaching the scientific method of investigating Nature, it is essential that *those we teach should be placed in the attitude of discoverers*. I hold strongly, too, that the right course of teaching chemistry is suggested by the history of the science, and that the order in which problems have suggested themselves to successive generations is the order in which they may be most naturally presented to the individual. In practice, the problems on which great investigators were engaged one hundred years ago are found to be suitable for the modern schoolboy. I have found this to be a most valuable guiding principle, not only as to the order, but also the method, in which chemistry can best be taught. It tells me that in chemistry, as Huxley laid down in physiology, to proceed from the known to the unknown is a sounder rule than from simple to complex. Yet how many teachers and writers still cling with pathetic faith to the latter method! To them atoms are the simplest things, and they therefore begin with atoms: they treat of elements before compounds, and of primary compounds before more complex ones. How many of us are there this evening, I wonder, who did not begin chemistry with definitions of atoms and molecules, of elements and chemical compounds?

I am not arguing that we ought to build up the whole of

* "Thirty Years of Teaching." (Macmillan.)

our science by ourselves. There will be this difference between the relation of our pupils to their investigations and that of Black and Cavendish, Scheele and Lavoisier, who first attacked them, that these great men stood alone without a guide in their pioneering inquiries, while our pupils are led by us through our knowledge of the history and development of our science into lines of inquiry which have proved to be fruitful and important. The time will come when our pupils, if they continue their studies, must avail themselves of the results of the labours of others by means of lectures and books, but at school it is far more important that they should be placed at the outset in direct contact with facts, in the attitude of original inquirers, and that we should endeavour to imbue them with the research spirit.

Such a method is a live one. It will persist, as it should, when the teacher is not at hand, at home and in the holidays. I have found that students at college who have spent years of study on chemistry on what I would call the old lines often possess no grasp of the scientific method, while, on the other hand, I have been astonished at the power shown by boys at school who have been taught in the way I advocate. During a part of last term the highest class in a school worked over the ground described by Black in 1755 in his paper on "Magnesia Alba." In the examination at the end of the term they were given a substance they had never seen before, and simply told to examine, both qualitatively and quantitatively, the effect, firstly, of heating it in a Bunsen flame; and, secondly, of acting on it with hydrochloric acid. The substance was a basic carbonate of copper. The time allowed was only one and a half hours, yet one boy—a boy of whom his class-master almost despaired—determined, with an error of less than 1 per cent., both the percentage of carbonic acid it contained and also the loss of weight on ignition: he noticed that these results were not identical, as is the case with chalk, and correctly summarized his investigation by concluding that the substance was one containing copper and allied to chalk, but containing a lower proportion of carbonic acid. Few trained chemists could have done more.

I hold, therefore, that in working out in practice a school course in chemistry our *two guiding principles* should be, firstly, that the order in which problems have presented themselves to successive generations is the order in which they may be most naturally presented to the individual; and, secondly, that the methods of gaining knowledge are of greater importance than the knowledge itself.

From these principles follow two corollaries concerned with the *qualifications of the science teacher*. It follows from the first that the teacher should himself have a knowledge of the history of his science and should have the habit of consulting the original memoirs. If the teacher knows that in the papers of Priestley and Cavendish, Lavoisier and Davy, chemical symbols and equations are not to be found, he will understand that they are not essential to the study of chemistry. If he is aware of the long controversies, extending over decades, on the nature of acids and salts, he will be less likely to insist on definitions which will have to be unlearned later. If he is aware of the controversies at the beginning of this century between Proust and Berthollet, and of recent work on the nature of solutions and alloys, he will know that no complete definition of a "chemical compound" can be given. The "exact answer" of the chemist does not in fact exist.

If the second of the above propositions is admitted, it follows that it will be a gain if the teacher has himself carried on original research. This implies that a teacher must have spent at least three years at college. As things are, very few students are promoted to research before taking an Honours degree; this is a consequence, in part, of their previous training when they come to college—in part, a consequence of University curricula; but I believe that in a few years research will be obligatory on Honours men. I am convinced that, if a teacher has himself added something to the common stock of knowledge, he will the better enable his pupils to put aside in their inquiries the accidental and seize upon the essential, and he will more certainly infuse his class with enthusiasm and the true spirit of scientific investigation. He will also know the importance of a faithful record of the laboratory work, and the careful discussion of results obtained. At any rate, if he has never had the opportunity of doing original research, the science teacher must have an inveterate habit of inquiry if he is to stimulate the habit in others.

If I have in any measure succeeded in my object, I have now shown that, while it is easy to teach bad science which may leave in after years not a wrack of good behind, the teaching of science on sound lines should be given an adequate place in the upper classes of secondary schools, and necessitates special qualifications and a special training in those who undertake it.

THE NEW SPRING.

WAS it of love or of springtime that Caponsacchi was speaking when he said:—

I paced the city: it was the first Spring.
By the invasion I lay passive to,
In rushed new things, the old were rapt away!

He had just seen Pompilia, the woman whose noble simplicity and purity were to be among the regenerating forces which awakened him to the fact that he had been a "fribble" and "coxcomb"; but it is with a quite literal meaning also that he tells us that "it was the new spring."

Love and springtime—what new thing can be said of either, except that the eternal parable is rewritten every Easter, sealed with the profound significance of the most joyous fact in the world's history, and prophesying "some far-off divine event," in which shall be consummated that deepest and purest love of all which is, we are told, even more enduring than faith and hope?

Once again the earth is putting forth her symbols and unfolding her beautiful hieroglyph, not only in field and lane and woodland, but even in the by-ways and corners of town and city. Already the rosy splendour of the almond trees has glowed and paled again, and the leafless elms have shown their clusters of dusky red blossoms, and now I have seen one of them opening its green buds. Lilacs are rapidly unfolding their leaves, and here and there the hawthorns are showing a bright verdure.

In London the spring must always carry with it a certain charm of surprise and unexpectedness, a pathos and a touching incongruity. The exquisite cleanness of the new leaves and flowers, the stainless splendour of the vernal tints, the exhilarating purity of the early perfumes—who would look for these in the midst of so much smoke and grime, so much that is sordid, or worldly, or poverty-stricken? Yet here they are, unsullied as an angel's wing, and sweet as the airs of heaven. Already I have seen the loveliness of the budding trees at the back of the Marylebone Workhouse; already, after an early shower, I have met the penetrating and delicious odour of the sweet-poplar in St. James's Square—so unmistakable a fragrance that, though I have not discovered the tree, which may be hiding in a back garden or round an area corner, I know that it is there, as we know the sun is shining when we feel the light in our eyes. There are sheltered bits in Kensington Gardens which are already "a mist of green, and nothing perfect," and the little blue scyllas seem to be blooming this year even more fully than usual in outlying garden plots. As I stood last Sunday morning in St. Paul's Churchyard, watching the crowd of pigeons that walked about tamely and companionably round the feet of the children who were feeding them, I saw that the crocuses were at their most perfect moment of blooming, and recalled a charming letter from Mr. G. D. Leslie to his friend Mr. Marks, in which he evolves a theory of his own as to why the gold crocus is generally smaller than the purple or the white.

I know of one town in the Midlands, full of hot and noisy factories, where, at this time of year, the little windows of the back streets in the slums are adorned with glasses of the purple crocus, plucked by the eager flower-loving factory "hands" and their children, down in the flat meadows by the winding Trent. In those fields, in bygone days, the wild anemone, which generally is found in the woods, was wont to grow with a special grace and vigour, the witchery of its delicate outline enhanced by the deeper pink in its pencillings, which it owed probably to the lavish moisture. This year, of course, everything is early, and one half fears that the spring will be over in a flash before we have fully seen all its passing wonders. It is almost a relief that the plane tree, our London tree *par excellence*, still remains bare, except for the three little fairy-like balls of last year, which hang here and there from the

branches, and mark it out almost as distinctively as the peeling of the bark. On the north side of London the coltsfoot is in full bloom, and I have seen it also in Kent, where the earliest fruit trees are beginning to be snowy. The grey and gold of the sunset on Sunday evening was hardly more beautiful than the later sky which followed, when the moon and stars looked down through fleecy clouds and far-away azure deeps. And there has been more than one afternoon since, when the Law Courts and National Gallery, in the very heart of our great thoroughfares, have gloomed forth grandly against a pale gold background, touched with diaphanous cloud-ripples.

London owes much of its supreme fascination to the river and to the birds which fly above it. Sea-gulls and swallows are among the most beautiful birds in the world, and there are a host of others that, when the swallows are here with the May-time, will be sharing London festivities with them. It is wonderful how many singing-birds seem to make themselves happy in suburban gardens. But it happens that it has been further afield that I have this year heard the skylark most jubilant. I heard him some three weeks ago, beyond Eltham, one sunny, windy morning, when I watched two English girls on horseback taking their ditches very prettily, in company with a young brother, whose horse at first refused to follow for all the urging in the world. The lark was pouring forth his "harmonious madness" above a bit of grass-land, such as may often be found just outside London. It is wonderful what a variety of field and woodland, and wild, blossomy common surround this huge, struggling city. We owe much, too, to those hard-working enthusiasts who have secured to us many open spaces within our borders, and turned ill-kempt burial-grounds into cheering gardens. It is a moment when every one wishes success to the hard-worked people who are doing their best to save the glories of tree and moorland from the hand of the artificial spoiler.

Among London schemes which appeal to all hearts alike, apart from party prejudice or theological wrangling, there are two or three which seem to make a stronger appeal than usual in these first days of sunshine and fresh air. Not to speak of the Children's Country Holidays Fund, which every one knows and delights in, and the State Children's Aid, which aims at more individual home-life than can be possible in our present barrack schools, there is the Children's Invalid Aid Association, which seeks to give to every crippled child in London a helpful and understanding friend, and yearly does so much in arranging for needed rest and change in convalescent homes. There is the delightful enterprise lately set on foot for securing to outworn labouring women, and especially mothers, an occasional breath of sunshine and sweet air before they break down under the perpetual strain of their daily burden. There is also the great and pressing question, for which inquiry is now being urged, as to the over-work of wage-earning children in our Board Schools. We have heard of a little child of seven who was expected to do five hours of scrubbing daily in addition to her school-work; and we have in remembrance the hard lot of another little girl, two years older, who had to be up at 4 a.m. every day to call workmen in adjoining streets, as well as the case of an unhappy boy who was at work at Covent Garden at the same unearthly hour, both these children, of course, being expected to go through the ordinary school routine of the day afterwards. Nor is it at all unusual for little children employed in home industries to be kept at work till towards midnight. On the children of the nation depends the future of the race, and it is to be hoped that all possible influence, private as well as public, will be used to prevent the enslavement of the little street-arab of the past in the crushing labour-mill of never ending compulsion in and out of school, which now threatens to rob him of that precious vitality and enjoyment of life which make sunshine doubly welcome and spring-time an added joy.*

The beauty of London in the spring-time has at all times a deep pathos—its mingling of the infinite and the impossible,

* The Editor kindly asks for the addresses to which helpers and sympathizers may write. They are: Children's Invalid Aid, 13 Buckingham Street; Women's Holiday Fund, 47 St. James's Square, Norlands; Women's Industrial Council, 12 Buckingham Street; Children's Country Holidays Fund, 10 Buckingham Street, Strand; State Children's Aid Association, 61 Old Broad Street. "Omnia vincit amor" is the motto of the Children's E.C. Invalid Aid Association.

its conflict between the lavish blossoming of Nature and the straitening greed of man; but, if the ideal of civic responsibility fulfil the promise which has been slowly and gradually unfolding for nearly nineteen hundred years on behalf of the poor and the sorrowful, then, century by century, the world may draw nearer to that spring-time of the Golden Year when at last there will be written upon the walls of our cities: "Omnia vincit amor." A. M.

COLONIAL AND FOREIGN NOTES.

AUSTRALIA.

The Australasian Association for the Advancement of Science held its seventh session this year in Sydney, in the beautiful and commodious buildings of the University. In spite of a hot week in January, the hottest month of the year, the meetings were well attended, not only by the Sydney members, but by members and delegates from all the other colonies. The great triumphs of the year for the scientific world in the Southern Hemisphere are the expedition of Professor David (Sydney University) to the coral atoll of Funafuti, with its now world-known result, the re-establishment of Darwin's theory, and the expedition of Professor Baldwin Spencer (Melbourne University) to Central Australia, with its almost equally rich results in the extension of our knowledge of the strange survivals of that mysterious desert land. The lectures given by these explorers, illustrated by fine lantern slides, naturally carried off the palm as regards interest, and will remain the distinguishing features of the meeting of 1898. The usual work of the Association was well represented in all the sections. It will interest the readers of the *Journal* to know that the section devoted to Psychology and Education receives more than a fair share of attention, and that the character of the work done this year is considered to be above the average of any preceding session. Papers on "Idealism in Education," "Ethics and Education," and one embodying the results of original work on the "Psychology of Attention" (Rev. W. Cocks), called forth much interesting discussion. "A Study of Arrested Mental Development" (Mr. Macmanamey) was well followed by "An Account of Schools for Backward Children in England and Germany" (Miss M. Hodge). "Is there a Science of Education?" (Mrs. Atkins), answered by the writer in the affirmative; "Teaching *versus* Education" (Miss Newcomb); "The Finance of Secondary Education" (Mr. Robin); and "The Place of Museums in Education" (Miss Macdonald) sufficiently show the range of subjects taken within this section. It promises well for Australia that the education of the young occupies so large a place in the thought of her scientific men.

BELGIUM.

A professor of the University of Louvain, M. Collard, who already has to his credit some important reforms in the methods of secondary schools, has lately published a suggestive article as to the desirability of organizing periodical pedagogic conferences for secondary teachers in active employment. The primary teachers have had such conferences for some time past, and are allowed on all hands to be the better for them. The custom is for all the teachers in a given district to meet at regular intervals, under the presidency of an inspector. Papers are then read on some pedagogic subject announced at the previous meeting, lessons are given by selected teachers to their own classes, and the methods adopted in these lessons are afterwards fully discussed. M. Collard wishes to see secondary teachers doing something of the same sort, and we fervently echo his wish.

"Those," he writes, "who are already on the side of pedagogic science cannot help approving of the proposal; they are but too well aware that, however thoroughly the rules may be known, there is still much to be feared from routine and neglect. Those, on the other hand, who are afraid either of being roused from their torpor or humiliated in their presumption, who prefer to drift on without having ever seen any class but their own, without having ever opened a manual of method, will loudly cry the magic word 'experience'—often synonymous with the dreariest routine—and energetically protest, and make difficulties." We note two other points in M. Collard's proposals: (1) the lessons must be given by the best teachers, the object being, not to ascertain whether this man or the other is capable, but to set before everybody the example of really good work; and (2) questions of general pedagogics, which too often only give rise to the quotation of commonplaces from the text-books, must give place to the questions of practical pedagogics which arise as the lesson proceeds, and which are of so much value in turning the attention of the teacher to his own methods, and in leading him to consider his daily difficulties, and the best means of meeting them. In our own state of secondary chaos, such district meetings are obviously impossible. But why should not each school have its own? The good, though limited in scope, would be still good. We fear that for a long time to come the answer will be given by the allied forces of indifference,

incompetency, jealousy, and conceit, against which the struggle of disinterested endeavour as yet availeth nought.

The following statistics of the progress of primary education in Brussels, between the familiar dates 1837 and 1897, are not without interest:—

	1837.	1897.
Population	102,202	194,505
Number of primary schools	2	...
„ pupils	1,000	20,751
„ teachers	8	509
Cost per inhabitant	0 fr. 42 c.	9 fr. 0 c.
Illiterate recruits	59 per cent.	12 per cent.

In other respects—buildings, material, programmes, methods—the progress has been no less striking.

INDIA.

In accordance with an order of the Government of India, the Directors of Public Instruction in the various provinces have added to their Annual Reports published last year a *résumé* of educational progress since 1892. From the reports, or summaries, that have reached us, we learn the following particulars:—The percentage of scholars to the population of school age is 22 in Burmah and Coorg, 17 in Bombay, 15 in Madras and Bengal, 12 in Assam, 11 in the Hyderabad Assigned Districts, 8 in the Panjab and the Central Provinces, and 5 in the North-Western Provinces and Oudh. As none of these figures show more than a slight increase over the figures of 1892, advance must be looked for in another direction. Natives, for instance, are being more and more employed in the higher branches of the educational services; science and physical education are becoming increasingly popular; special efforts have been made to encourage the spread of primary education among the more backward races, despite the fact that certain forest tribes recently “burnt the school-house, and are said to regard police and education as equal forms of oppression”; finally, increased attention has been paid to the question of training for teachers, and increased efforts made to advance the education of women, though in a country where, on the one hand, normal students have to support themselves and often their families on six rupees a month, and cannot be induced “to eat enough food,” and where, on the other, “the respectability of any woman occupying the position of teacher in a public girls’ school is suspected,” it is scarcely surprising that progress, though perhaps sure, should be extremely slow.

In one report we read: “Direct moral instruction is not generally given except in institutions under the management of missionaries.” How, indeed, could it be? We scarcely know how to face the problem at home—much less in India. Discipline is said to have improved, and to be in a fairly satisfactory condition; but the following passage from the same report—and it does not stand alone—leads us to discount the satisfaction: “The practice of writing anonymous letters aimed against authority and couched in grossly disrespectful terms is still the means adopted for ventilating real or imaginary grievances. Such letters are discouraging indications of a want of moral tone among schoolboys, and when, as in some cases, there are only too good grounds for suspecting that teachers have associated themselves with their pupils in the composition of them, a really serious state of affairs is disclosed.” No wonder the cry is for the better training of teachers.

On the eve of the Tenth Annual Conference of the Teachers’ Guild of Great Britain and Ireland, it is interesting to light upon detailed notices of the recent Second Annual Conference of the Teachers’ Guild of Madras. The lines of such conferences are presumably much the same all the world over, yet it may be a surprise to some of us to learn that in Madras “there seems to be a tendency on the part of some otherwise estimable men to consider themselves above and beyond the sphere of educational conferences, and that they can get no good by attending them, or indeed any meetings on educational subjects.” And again, that “Teachers’ Guilds and Educational Conferences are meant for all teachers, whether first-grade college professors, or high-school masters, or primary school teachers.”

We note that the social gathering with which the Conference concluded took the form of a concert, and that of the three hundred teachers, Hindu and European, who attended the Conference, disappointingly few were ladies, owing to “an erroneous impression having crept abroad that the Conference was specially intended for male teachers.” The papers of most general interest were those on “Compulsory Education,” and “Some Practical Methods of imparting Moral and Religious Instruction to Indian Youth.” The discussion on the former consisted almost entirely of an indication of the difficulties in the way of such a change, difficulties connected not only with finance but with the Hindu social system. It was also pointed out that there were thousands of villages that had no primary schools at all, and that it would be better to remedy this defect before attempting to bring about a system of compulsory education.

The second paper turned rather on the general question of religious education than on any particular method of imparting it, but it nevertheless gave rise to a lively discussion, and the general impression seemed to be that the difficulty of religious differences would prevent

anything but a colourless book of morals being introduced into Hindu schools, and that such a book would be of little use. Some of the younger teachers, to the great concern of many of the Hindu teachers present, even doubted whether any advantage was to be gained by an ostensible attempt to teach morality and religion, though they laid great stress upon the influence of a truly moral and religious teacher’s personality. In the opinion of the Chairman, also, “the best moral text-book was the moral teacher.” At the close of the Conference a set of resolutions bearing on the subject discussed were formally passed, in order that they might be forwarded to the Director of Public Instruction, who, it is known from experience, is inclined to attach much weight to such expert educational opinion. But that is in Asia!

Madras having made such a success of her Guild and her Conferences, Bombay is about to follow suit. An enthusiastic preliminary meeting has been held, and a committee appointed to draft the constitution of a Teachers’ Association. It seems a pity that the word “Guild” cannot be retained. There are obvious advantages in calling the same thing everywhere by the same name.

CHINA.

A correspondent of the *Spectator*, writing from Shanghai, refers to “a projected school for the girls of the upper classes of China, whose tenth rule, to translate somewhat literally from the Chinese, runs as follows:—‘Foot-binding is a wicked custom, so after having been admitted into the school the girls shall advise each other to unbind their feet. For the present both girls with feet bound or unbound shall be similarly admitted, but after the lapse of a few years girls with bound feet will not be admitted.’ And, almost incredible though it may seem in England, so strong and so widely diffused is the principle of local government in China that this is the way it will probably be worked out, the girls themselves exhorting one another. ‘This school,’ to quote again from the proposed rules, ‘is to be established on the basis of Confucianism, and a tablet will be dedicated to his memory.’ The school is to have two secretaries—one foreign and one Chinese lady—who are always to live in the school, taking care of the pupils; and of the four teachers two are to teach foreign languages. The curriculum proposed is sufficiently varied and extensive: spelling and grammar and the ‘Readers.’ After that, history, geography, philosophy, and industrial arts will be taught. Three special branches of applied sciences shall be taught,—viz., mathematics, law, medicine and surgery. Each pupil shall take only one branch of these sciences, but those who are inclined to study either medicine and surgery or law must also have a fair knowledge of mathematics. Besides the above three special sciences, a training college will be established to train in the special work of a teacher. It is satisfactory to note afterwards that should the income of the school suffice, the young ladies are to learn the arts of spinning, weaving, painting, and drawing.”

ICELAND.

In the autumn of 1895, owing to the difficulty of obtaining any very precise information regarding education in Iceland, the United States Commissioner of Education sent a letter to the Governor-General requesting to be supplied with more specific data. The following is the reply, quoted in the Commissioner’s last annual Report:—“In reply to your letter, I have much pleasure in sending you the following notes on education in Iceland. As the bulk of the population is scattered over the country in isolated farm-houses, with long distances between them, schools are impracticable in the rural districts, and the children receive the rudiments of learning from their parents or any other qualified member of the household. This instruction is superintended by the clergyman of the parish, whose duty it is to examine candidates for confirmation, not only as to their religious knowledge, but also as to their proficiency in reading, writing, and the first rules of arithmetic, and to refuse or postpone that rite until the children have acquired the necessary knowledge. Of late years a system of ‘circuit teachers’ has been organized, and is in operation in many country districts. These teachers travel from place to place during the winter, remaining for several weeks at each centrally situated farmhouse, and teaching the children from all the surrounding farms within reach. They are supported by the people of their districts, and receive a small grant from the Icelandic treasury. In 1894 these circuit teachers numbered 165, and they taught 3,280 children, the subjects being reading, writing, orthography, arithmetic, and religious instruction. In the towns, trading stations, and fishing villages, there are 26 children’s schools, which in 1894 were attended by 896 children. These schools are open in the winter time for six to eight-and-a-half months, and have generally one, but sometimes two, teachers. The subjects taught are reading, writing, orthography, arithmetic, religious knowledge, geography, the rudiments of natural science, and Icelandic grammar. Some schools in addition to these teach history, Danish, English, singing, gymnastics, and swimming. All these schools are locally supported, receiving, in addition, grants from the Treasury. The higher and specialized schools are three schools for women, where the higher branches of education, needlework, and housekeeping are taught;

two 'Real schools,' one supported entirely by the Government, with three teachers; the other supported by private endowment and Government grant, and serving also part of the year as a seminary for teachers; one Latin school or high school in Reykjavik, with seven masters, besides assistants, and 115 pupils last year; four agricultural schools and one nautical school. There is also a school for the deaf and dumb. The professional schools are a theological seminary and a school of medicine, each with four teachers, and both situated in Reykjavik. Tuition is free in all the higher schools; most of them provide free lodging for their pupils, and bursaries are attached to some.

"For some time a movement has been on foot to establish a national University in the island. Such a step would not only obviate, for aspirants to University degrees, the necessity of residence in Copenhagen, but would also, it is believed, have an important effect upon the general education of the country. Is it superfluous to add that Iceland is a quarter as big again as Ireland, and had a population in 1880 of 72,000, of whom about 2,500 were in Reykjavik?"

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council, of June 19, 1884, the "Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but the "Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

TENTH GENERAL CONFERENCE, ABERYSTWYTH, APRIL 18-22.

The following additions should be made in the Provisional Programme of the Conference circulated at the beginning of March:—

A conversazione will be given by the Mayor and Corporation of Aberystwyth in the evening of Tuesday, April 19, in the Pier Pavilion, 8.30 to 10.30. This will be in addition to the conversazione to be given by Principal Roberts at the College.

The other opener (with the Principal of Lampeter) of the discussion on "The Relation of the Elementary to the Intermediate Schools; for example—when the bifurcation should take place," will be G. S. Turpin, Esq., D.Sc., Headmaster of the Grammar School, Swansea.

The other opener (with Miss Penstone) of the discussion on "The Practical Correlation of Subjects in Schools, and Herbart's Views on the same," will probably be Dr. S. S. Fechheimer.

The other opener (with Mr. Newton Coombe) of the discussion on "How far is it possible or desirable to co-ordinate County Councils with School Boards in the organization of Secondary Education?" will be J. Waugh, Esq., M.A., Headmaster of the Higher Grade School, Cardiff.

The other opener (with Miss Alice Woods) of the discussion on "Child-Study: how it should be conducted, and by whom," will be R. Langdon-Down, Esq., M.D., President of the Childhood Society.

The other opener (with Mrs. G. R. Scott) of the discussion on "The Co-operation of Parents and Teachers in the Education of Children" will be C. Simmons, Esq., M.A., Headmaster of the Preparatory Branch, University College School, London. On this subject there will also be a communication from the Headmaster of Harrow.

The officers' meeting will probably be held on Wednesday evening, April 20, immediately before the Annual General Meeting, which may be postponed till 8.30 p.m.

Members are reminded that names of those who intend to be present at the Conference can be sent to the Hon. Secretaries of the Branch, University College of Wales, Aberystwyth, at any time up to the eve of the Conference. It is desirable, however, that they should be received as soon as possible, to help hosts in the conversazione arrangements, and on other grounds. The Council earnestly desire that the Branches of the Guild may be properly represented, especially as the officers' meeting affords the best opportunity in the year for conveying the views of Branches on matters of organization to the Council.

TEACHERS' GUILD BENEVOLENT FUND.—At present only forty-one persons have contributed to the proposed Benevolent Fund. The contributions range from £5 to 2s., the total amount being £33. 6s.,—viz., annual subscriptions, £11. 5s.; donations, £22. 1s. As Miss Barlow's offer of £150 towards the Fund, on condition of the same amount being raised in or through the Guild, does not hold good beyond the 30th inst., it is necessary for those members who wish to contribute, or raise money for the fund, to take action at once.

The Executive Committee of Council sat on March 3. Present: Mr. H. Courthope Bowen, Miss Busk, Mr. Charles, Miss Edwards, Mr. Montgomery, Mr. Nesbitt, Miss Page, Mr. Russell, Miss Smither, Mr. Storr, Mrs. Sutton, and Mr. Wise. In the absence of the Chairman, Mr. Bowen was voted to the chair.

Twenty-nine applicants for membership of the Guild were elected,

viz., Central Guild, 20; Bristol and Clifton Branch, 3; Ipswich Branch, 4; and Manchester Branch, 2. It was announced that the Association of Headmistresses, the Association of Assistant Mistresses, and the Private Schools' Association had nominated their representatives to serve on the new Professional Joint Agency Committee for Women Teachers. The representatives of the College of Preceptors and of the Teachers' Guild would be appointed by their respective Councils before the end of March.

The first meeting of the new Agency Committee was held in the offices of the Guild on March 24.

CENTRAL GUILD, LONDON SECTIONS.

Section F.—The Rev. Professor H. C. Shuttleworth, M.A., will give a lecture on "Browning's Studies of Pictures and Paintings" on Tuesday, May 24, at 8 p.m. The lecture will be given, by kind invitation of Miss O'Connor, in the High School, Clapham (east side of Clapham Common. Trams from Balham and Clapham Stations, and Westminster, Blackfriars, and Waterloo Bridges, i.e., all *Tooting* trams, pass the door. Omnibuses from Clapham Junction pass near). Members of all Sections are cordially invited.

Mr. H. Courthope Bowen attended a meeting at Walsall on Monday evening, March 21. The meeting was brought together to take steps to form a local Branch of the Guild for South Staffordshire. The chair was occupied by Sidney Gedge, Esq., M.P. for Walsall. Many names were given in at the end of the meeting, and, as there are four ex-honorary officers of the Guild, in prominent educational positions in Walsall, working for the proposed Branch, the prospects are good.

Section B.—On Monday, March 21, Mr. M. E. Sadler gave a lecture on "Typical Curricula of Secondary Schools for Boys," at the City of London School, and Mr. A. T. Pollard took the chair. The lecture was so full of information and suggestions that it is impossible to give even an outline of it, and at the conclusion several of the headmasters who were present strongly urged that the lecture should be printed and circulated as widely as possible. In the outset, Mr. Sadler said that he wished he could throw his matter into the form of a dialogue; thus leaving various people to express opinions, while himself drawing no conclusions therefrom. He proceeded to try and find a definition of what a curriculum should be by quoting from Dr. Gow, on the one hand, as wishing for settled curricula and published time-tables, and Mr. Tucker, of New York, on the other, as thinking that education should be supplied in response to demand, and Mr. Herbert Spencer, as wishing for no curriculum at all, but to let children get knowledge as they can. Before settling on a curriculum, some one must determine what subjects are most wanted, and in what order they should be taught, and therein lies the great difficulty, as the pupils' environments vary so very much. Spencer says that science is a better educator than languages, which are full of dogmatic rules; while Dr. Arnold considered that classics imparted good historical evidence, and trained a boy to find out what was true and what was false; while Faraday said that too much of literary studies in early life got the mind into a literary bent, and made it unable to take in what he called real studies, viz., science. We must realize that the true aim of education was not so much to cultivate intellect as character, and it was well when a headmaster desired to have pupils, not disciples. It is necessary also to realize that the parent is not the only person to be considered when a future citizen of the nation is being brought up, and, therefore, his education should be appropriate to his future life; and, just as teaching ought to begin from what a child already knows, so it should end in relation to what the pupil intends to do; for, before a professional education is entered upon, much knowledge should not only have been gained, but have been made into a kneaded consistency. This general knowledge, Mr. Sadler supposed we should all agree, should, at all events, include some knowledge of religion; two or more languages; history, generally, and particularly the annals of our own country; some physiography and knowledge of the surface of the land; arithmetic, algebra; geometry; physics; chemistry, and some scientific method; some use of the brush and pencil, and also, if possible, some other kind of manual exercise. This general knowledge should be the outcome of school education; advanced studies should come later. *Multum, non multa*—much, but not a muddle of many things. Only after much general knowledge should come specialization. Mr. Sadler then gave a most interesting account of the education of boys in Germany, and specially in Prussia, and showed how this aim of general knowledge was attained under that system chiefly by there being so many various schools, each with distinct and separate aims, and showed that the composite character of a great many of our schools might be a source of weakness. He concluded by saying that we wanted the English traditions carried on, but they must be in their noblest forms; and that each school should have an idea behind it, and an ideal before it; and that, of course, we wanted ideally perfect teachers at the head of such schools. Teachers must love their work and have sympathy with their pupils, and have such personality that would awaken in the minds of their pupils a desire for what is good and true; and that, with all this, freedom and spontaneity were essential for the working out of our educational problems. Mr. Eastbrook, of Owen's School, Islington, proposed,

and Dr. Scott, of Parmiter's School, seconded, a vote of thanks to Mr. Sadler, which was most heartily supported by all those present.

Sheffield Branch.—The annual meeting was held on February 24, at the Girls' High School, Rutland Park, and was well attended. Sir Henry Stephenson presided. Among those present were: Professor Hicks, the Rev. V. W. and Mrs. Pearson, Mr. and Mrs. J. Newton Coombe, the Rev. H. Heap (Rotherham), Mr. and Mrs. W. E. Brown, Professor Addison, Mr. J. H. Morris, Miss Law (Rotherham), Mr. Lionel Smith (H.M.I.), Miss Marsden, Mr. John Derry, Miss Cleghorne, Mrs. Woodhouse, Mrs. Henry, &c. The eleventh annual report of the Council, read by Mrs. Henry, one of the Hon. Secretaries, described the financial position of the Branch as healthy, and stated that the membership had considerably increased since the previous annual meeting. The work of the year was reviewed, and thanks were expressed to various ladies and gentlemen who had entertained the members. The meetings had been well attended, and the interest shown in the work of the Guild was very encouraging. The several schemes developed by the Guild were steadily increasing in scope and usefulness. Incorporated in the general report was a report from the Art, Museum, and Lantern Slide Committee. This stated that the Art Committee have expended money in purchasing a collection of pottery for use as art models; new portfolios have been purchased, consisting of National Gallery reproductions and of portraits of illustrious personages of the court of Henry VIII.; and sets of lantern slides, partly historical and partly geographical, have been added. The Committee expressed the hope that these efforts might enhance the value of the teaching of geography and history. A museum cabinet, illustrating coal-measures, has been added during the year, and another, showing the geological formation of the district, is being prepared, while it is also hoped to provide, during the ensuing year, additional cabinets, and to duplicate some of the more popular zoological collections, with the view of extending the benefits to a larger number of schools. The authorities of the College of Preceptors applied for permission to exhibit several of these cabinets at their recent winter meeting for teachers. The *Journal of Education*, speaking of this scheme, said:—"Amongst the unofficial lectures given at the College of Preceptors during the winter meeting was one of special interest on 'Circulating School Museums.' Many a teacher of natural history, geology, and the like is handicapped for want of suitable specimens and illustrations. This difficulty has been in part overcome in Sheffield by the action of the Branch of the Teachers' Guild. Cabinets containing collections in illustration of science lessons are provided, and can be borrowed and exchanged by any school in the area of the Sheffield County Council. And this body has given most generous aid towards the expenses involved. The idea is most practical and useful, and, if one County Council can spend a part of its technical education money in this way, it does not seem hopeless to persuade others to follow suit." The general report went on to express regret that the Technical Instruction Committee of the Sheffield Corporation had not seen their way to recommend a continuance of the grant for 1898. This action would prevent any additions, beyond those already in hand, being made this year. The large balance appearing in the Treasurer's statement had been expended, although not actually paid. A scheme was at present under consideration for the formation of an educational library. The report and statement of accounts were read. Sir Henry Stephenson was re-elected President, the following being re-elected Vice-Presidents:—Professor Hicks, the Revs. E. Senior and V. W. Pearson, Mr. H. J. Wilson, M.P., Dr. Sorby, Professor Williams, Mr. W. P. Turnbull, Mr. J. Newton Coombe, and Mrs. Woodhouse. Mrs. Henry and Miss Leader were re-elected Hon. Secretaries, and Mr. G. J. H. Lloyd was appointed a third Secretary. Professor Hicks was re-elected representative on the General Council; Mr. J. Newton Coombe and Mr. W. P. Turnbull were chosen as representatives of the Branch on the governing body of the University College. Mr. J. H. Morris was re-elected Treasurer, and the Council was constituted. The President regretted that the Committee of the City Council had withdrawn the grant alluded to in the report, and explained that the accounts of the Guild were a little misleading, showing as they did an apparent balance in hand which did not really exist. That, he believed, was the reason. The withdrawal did not, however, prejudice the Guild for the future, and he hoped and believed the grant might be renewed next year. At a later stage of the proceedings Dr. Wormell, of the Central Foundation School, London, and a member of the Royal Commission on Secondary Education, gave a lecture on "The recent Development of Public Opinion regarding Secondary Education." The lecture was very highly appreciated. Music was given at intervals, and refreshments were served.

LIBRARY.

The Hon. Librarian reports the following additions to the Library:—Presented by the Agent-General for New South Wales:—The *Wealth and Progress of New South Wales, 1895-6*, by T. A. Coghlan, Vol. II.

Presented by J. Russell, Esq.:—Twenty-third Annual Report of the Minister of State for Education in Japan.

Presented by Messrs. G. Bell & Sons:—The Works of Vergil,

with a Commentary by J. Conington and H. Nettleship; Vol. I, *Eclogues and Georgics*, fifth edition, revised by F. Haverfield.

Presented by Messrs. Blackie & Son:—A School History of English Literature, by Eliza Lee, Vol. II., Shakespeare to Dryden; Sight and Sound Primers, Infants' Second Reader; Layng's Arithmetic, with Examination Papers, Part II.

Presented by Messrs. W. & A. K. Johnston:—Through the British Empire in Ten Minutes (pamphlet); Johnston's Handbook, Africa.

Presented by Messrs. Macmillan & Co. (Ltd.):—Vergil's *Bucolics and Georgics*, with Introduction and Notes by T. E. Page; An Arithmetic for Schools, by S. L. Loney; Scenes of Child Life in Colloquial French, by Mrs. J. G. Frazer, illustrated by H. M. Brock (2 copies of each).

Presented by Messrs. Swan Sonnenschein & Co.:—A Fourth German Writer, by R. Gordon Routh (Parallel Series).

Presented by the University Correspondence College Press:—Plato: *Laches*, edited by F. G. Plaistowe and T. R. Mills; *Ovid: Metamorphoses*, Book XIV., edited by A. H. Allcroft and B. J. Hayes; *Livy*, Book IX., edited by W. J. Woodhouse.

Purchased:—Special Reports on Educational Subjects (second copy); Ten Brink's *Early English Literature*, Vol. II., translated by W. C. Robinson.

CORRESPONDENCE.

UNIFORMITY OF COUNTY COUNCIL REPORTS.

To the Editor of *The Journal of Education*.

SIR,—May the secretary of a humble and obscure Southern county be allowed to expostulate with the editor of your "Technical Education Notes" in respect of certain observations in your March issue upon the report of the Cumberland County Council. *En passant*, I may perhaps remind your contributor that there are such counties as Kent, Hampshire, Devon, and Somerset, which fondly believe that their exploits in the field of technical education are at least equal to that of any county situated north of the Humber, even though they do spend their surplus funds upon country grammar schools rather than upon the support of brass bands and village choirs. But that is another story. The object of this letter is to point out the folly of the "annual report" fetish, since it can neither be, in Cumberlandese, "an accurate record," nor, in the language of the "contemporary," "such as to enable one to readily comprehend the entire scheme," nor, in the words of your contributor, "intelligently designed."

As a preliminary it may be said that such a report cannot be up to date, and therefore, alike to the Council and to the public, must relate to events which have long lost their interest. The much-bepraised Cumberland report, for instance, which the general public obtain in February, 1898, covers a period ending in a few respects in August, 1897, but in many matters of importance relating to nothing which took place after May, or even April—in other words, nine months behind time.

Now this must always be so. The County Council financial year ends on March 31; it is not possible to get ready a complete statement of expenditure, with a budget, before May; yet these facts ought to be an essential item of an annual report. The continuation school year also ends about March, but the Government reports and grants cannot be obtained until August; if published *at once*, with all details and such valuable criticisms and comparisons as appear in the Cumberland report, they serve as a great guide and assistance to the schools reopening in September; but if held back till the following February they are worthless for these purposes. Again, the Science and Art year (as well as that for technology, manual, and domestic classes) ends in May, but the full reports, list of grants, and successes cannot be obtained in a complete form before the following January. If, however, the County Council (as in the West Riding) has an inspector of its own, his report should reach those classes and the public in the previous September. Once more, the year for all outdoor agricultural work ends in September, and valuations, records, and balance-sheets can conveniently be got out in November. Again, scholarship examinations take place in May, June, and July, and should be published with all details not later than the last-named month. The secondary school year also ends in July, and reports upon work done in these should be out in September. To sum up, the least number of complete annual records we

can permit must be four, appearing in January, May, August, and November, and each dealing with a separate group of subjects. No county, I admit, has yet attained to this counsel of perfection; but we can go further. The object of County reports is (1) for the information of the public as to what is going on, (2) for the improvement of the schools and classes, and (3), in some cases, to convince the Council as to the good of certain work or the utility of a certain policy. The bare record business—the digging up of dead bones—for posterity is the proper work of the National Association of Dean's Yard or of Mr. Sadler's Intelligence Department. There is no reason to doubt that they are quite competent to carry it out.

If one might be captious as to Cumberland, surely a report which devotes all its large type and most of its emphasis to the "forms in use," and makes no mention of Clause VII. in its notes on the "Directory," deals largely in "tithes of mint and anise and cummin."—I am, yours obediently,

A SOUTHERN SECRETARY.

SCIENCE IN THE OXFORD LOCAL EXAMINATIONS.

To the Editor of The Journal of Education.

SIR,—Out of the large number of candidates entered for the Oxford Preliminary Local Examination in 1896—two thousand in round numbers—only some fifty were entered for science, and these fifty all came from two schools. I have not seen the figures for last year. I believe the numbers given above are correct, or practically so, but I am not able now to refer to the actual returns. This small proportion—about one in forty taking science—cannot wholly be due to the want of science teaching in lower forms. From my own experience I should think it is chiefly owing to the narrow and difficult character of the syllabus issued by the Delegacy.

It may or may not be an educational mistake to prepare candidates of twelve to fourteen years for these Preliminary examinations, with their three classes of honours. At any rate, the examination is popular, and apparently supplies a want felt in many schools. I certainly do think that the science course for the Oxford Preliminary might be modified so as to be more in touch with the elementary science teaching usual in secondary schools.

As at present arranged, a pupil, to pass in science, must satisfy the examiners in elementary mechanics and mensuration, and either botany or sound, light, and heat (including reflecting and refracting telescopes, camera obscura, and elementary notions of vibrations and waves). Where both botany and mechanics (a rather bizarre association) are taken no great difficulty will be felt in following the syllabus. In schools with physical laboratories, the number of which is greatly increasing, mechanics and mensuration naturally form the commencement of the work, to be followed by experiments on heat, and possibly magnetism and electricity or elementary chemistry. To do more than a few extremely simple experiments in acoustics, and still more in optics, requires apparatus and appliances not to be found at present in many school lecture-rooms, much less in laboratories. Experiments on them are not included in such books as Gregory's or Worthington's "Practical Physics." The work in these subjects will then have to be done mainly from books, with the help, at best, of blackboard or other diagrams. And this in spite of the almost universal demand for more practical teaching in science.

There are two other ways of looking at the matter. First, the importance of the subjects themselves to the pupils. No one can take up any branch of physical science with profit unless he has had a preliminary training in mechanics, hydrostatics, and heat, but he can gain a good deal of proficiency without being seriously handicapped by ignorance of sound and light. In this respect magnetism and electricity deserve a prior place. The difficulty of the subjects, as well as their comparative importance, would relegate light and sound to a later stage of school life. That this is to some extent the view of the Oxford authorities is shown by their offering heat as a subject for Junior candidates, while optics is postponed till the Senior examination.

Secondly, suppose the candidate has passed the Preliminary stage, and desires to enter for the "Junior" examination. He will be able either to continue his work in heat and mechanics, which are here separate subjects, to take up chemistry, or to

go over the old ground again, only this time he has elementary chemistry to do instead of light and sound. These latter subjects disappear—sound entirely, and light until we reach the Senior examination. Were they added as a make-weight to the Preliminary?

The Oxford Local Examinations have to cater for a great variety of schools, but in this respect seemingly unnecessary obstacles are placed in the way of schools which are attempting to teach elementary science in a practical manner, rather than from books. There would appear to be no reason why the Preliminary science syllabus should not follow the lines of one of the recognized courses of elementary practical physics, or give that as an alternative. Considering the ages of the candidates, the present syllabus in mensuration, mechanics, and heat would be quite sufficient by itself; but very simple chemistry or magnetism and electricity would be far preferable to sound and light.

If other science teachers have experienced any difficulty in connexion with this matter, possibly a sufficient pressure could be put on the Delegacy to induce them to make some modification in the syllabus for next year.—I am, sir, yours faithfully,
SCIENCE.

THE DATIVE IN MODERN GREEK.

To the Editor of The Journal of Education.

SIR,—I have no wish to enter into discussion with Dr. Jannaris, any inclination I may have had in that direction having been dissipated by the tone of—to say the least—scant courtesy with which he has seen fit to uphold his views.

With the following additional remarks, therefore, as regards the statement that "the dative has disappeared in modern Greek," I address myself to those readers of the *Journal* who are interested to know what is the actual state of affairs as to this point in the contemporary language, considered as we should consider every other language in questions of this nature. And, in the first place, I maintain that (modern) Greek is no more (modern) Greek "as spoken by the uneducated masses" than English is English "as spoken by the uneducated masses"; and that by using the two terms as synonymous—which is done in such statements as: "the dative has disappeared in modern Greek," and "Greek has dropped the dative case long ago"—a false impression is conveyed of the actual state of affairs, and one which is likely to be very misleading to those who have not had the opportunity of studying the contemporary language in its own country. In affirming this it must be borne in mind that I am alluding to the *present* state of the language, which is considerably modified from that which prevailed thirty or forty years ago, and which promises a continued modification, as the elements of rehabilitation and order, daily asserting themselves with greater force, finally prevail over the dissolution and neglect from which the language has but recently emerged.

I maintain that a language is to be judged, not as it is used by the "uneducated masses," but as it is used by the *educated* "classes," the latter not being limited to an exclusive aristocracy of learned individuals, or literary pedants, or faddists. This being so, I consider that a very fair criterion of the usages of a language is to be found in the style of ordinarily educated persons, speaking and writing with more or less care and accuracy, as the case may be, and who, indeed, often, through the medium of the newspapers, address themselves to the "uneducated masses," for, as I before implied, the latter, in Greece, are much addicted to reading the newspapers. I think, for instance, that a fair test of any language is to be found nowadays in the speeches delivered by members in Parliament, and by judges and barristers in the courts of law, in sermons, and other public addresses.

As a closing argument, therefore, I would draw attention to a speech delivered in the *Boule* on the 4th inst. by M. Streit, Minister of Finance. In the newspaper report (just over three columns) of this speech, which I forward, you will see that I have underlined with red pencil no less than forty-six instances of the use of the dative case, from among which I may here quote the following:—*ἐν τῇ ἱστορίᾳ; ὠφέλιμος τῇ πολιτείᾳ; ἐπὶ τούτῳ; ἐπὶ τῇ βίᾳ; ἐν συγκρίσει πρὸς τοὺς ἔλεγον; προτάσει τῆς ἐπιτροπῆς; τοὺς ἐδῶσαν; ἐν τῷ νομοσχεδίῳ; τῇ παρακλήσει μου; ἐν περιπτώσει; καὶ τοὺς προσφέρωμεν.*

Finally, since, although I can claim considerable familiarity with modern Greek from prolonged and varied intercourse in

different parts of the country, during which I have always had the study of the language in view, I have not the prestige of nationality on my side in this question, I subjoin a translation of the opinion given me by a Greek barrister of the University of Athens, whom I have consulted on this point, and who says: "In the language of the common people the dative is not often used. But modern Greek is not only the language of the common people. Every language possesses a dialect, so to say, of the people, in which we do not expect to find grammatical accuracy; but we need not go to the language of professors at the University, or that of the pulpits or the secondary schools, for instances of the dative, for even in the ordinary law courts and in the primary schools we find the dative case is frequently used. And not only this, but we constantly meet with the dative in ordinary conversation. Thus, we most frequently hear such expressions as the following used:—*πες τὴν γνώμην σου παρρησία; τὸ εἶπε παρουσία τοῦ δεινός*; whilst the following are in constant use among the people:—*τοιούτῳ τρόπῳ; ἐν τῷ ἄμα; ἐν τούτοις; ἐν πρώτοις; ἐν πλήρει τάξει; ἐν ὀλίγοις; ἐπὶ συστάσει; ἐπὶ τῷ λόγῳ ὅτι; ἐπὶ ταύτῃ; χάριτι θεῖα; λόγῳ τιμῆς; πρὸς τούτοις; ἐν τῷ μέσῳ; παρ' ἡμῖν*; and *πρὸς τοῖς ἄλλοις*. We assert unhesitatingly that there is no modern Greek language from which the dative case has been eliminated.—A. M. Idroménos, δικηγόρος."

It seems a pity, when Greeks themselves hold the above opinion, for I could quote many others to the same effect, did space permit, that the English should have an erroneous, because one-sided, view of the (modern) Greek language.

Corfu, March 15.

MARY C. DAWES, M.A.

UPPINGHAMISHNESS.

To the Editor of The Journal of Education.

SIR,—The name of a boy in my school is entered at Uppingham. I have received from the Headmaster of Uppingham a circular, not a letter, by which I am informed that it would be a convenience if I would kindly supervise his entrance examination. Amongst other instructions I am enjoined to read carefully certain directions. I am not trusted to conduct the examination properly, but am required to sign a declaration, that (in view, I presume, of my burning anxiety to get a boy into Uppingham) I have not been dishonest in conducting the examination. Surely, if the headmasters of other schools, however insignificant, are asked to conduct entrance examinations for Uppingham, the request might be made otherwise than by a circular, and it might be courteously assumed that the examination would be honestly conducted. But, apart from other considerations, compliance with these orders from Uppingham (they can hardly be called requests) would involve either (a) that a boy should do his Uppingham entrance examination whilst the regular form-work is going on; or (b) that one of the masters should be told off to supervise his work for four and a half hours, the time allotted to the papers; or (c) that the boy should give up his ordinary school examinations, and possibly the chance of commendation, for the sake of the Uppingham entrance examination.—I am, yours aithfully,

HEADMASTER.

HOURS IN GIRLS' HIGH SCHOOLS.

To the Editor of The Journal of Education.

DEAR SIR,—None but the rashest would venture to criticize a change which had not been in existence long enough to show results and justify the formation of an opinion, and it is twenty-five years since I looked upon the morning hours at high schools as a novelty. If the morning hours were *all*, no one need fear them, but are they two-thirds of the day's work? I am not yet convinced that, during the winter months when there is so little sunshine, it would not be a great benefit to the girls to be out in the fresh air from twelve to one, and, again, that in the summer time they would not benefit by release from the schoolroom and from effort at the time of greatest heat. There are high schools and high schools, and no one can read Miss Sandford's excellent article in a recent publication, "Teaching and Organization," without feeling quite happy about the girls under her care; but the writer knows a high school where, in the summer examination, girls not over thirteen sit at a written examination for *four* hours without break. If Miss Sandford would send that high school a word of hearty remonstrance, many a poor child would be saved a week of suffering.—Yours very truly,

Crag Foot, Ben Rhydding.

EMILY MIALLE.

March 2, 1898.

PROFESSOR KNOTT'S "PHYSICS."

To the Editor of The Journal of Education.

SIR,—Your *Journal* contains an appreciative note on my book on "Physics." It is stated, however, that certain points, "such as critical

temperature, spheroidal state, &c., are quite ignored." As a matter of fact, I devote a whole section (pp. 231-4) to the important question of critical temperature. The reference will be found (under "Temperature, Critical") in the index, which the notice condemns as "not satisfactory." A little experience in the use of the index would soon show the reader the principle on which it is constructed. As a general rule, a subject is indexed under the noun, and not under the adjective, involved in its nomenclature. By this means a compact, and yet complete, index is secured. In a book on general physics of 630 pages, there cannot but be omissions. My aim was to write a sufficiently simple yet logically connected text-book of limited size. A striving after excessive detail would have rendered the book a mass of disconnected jottings, of no value as an educative manual, and of very doubtful value to the student "cramming" for an examination. Teachers will always differ in their opinion as to the relative importance of certain facts; but I trust I have omitted nothing of first-class importance to a student beginning the study of physics.

I am tempted to say something about the arrangement of the book, especially with regard to the "novel" position of light; but this would lead me too far. I may, however, be permitted to refer to the preface and introduction to Part II. for an indication of the reasons which induced me to depart somewhat from traditional lines.—I am, respectfully yours,

C. G. KNOTT.

Edinburgh University.

RUBBISH SHOT HERE!

To the Editor of The Journal of Education.

DEAR SIR,—As Hon. Librarian of the Teachers' Guild, I am anxious to make as complete a collection as possible of books bearing on the history of education in England. Thanks chiefly to the late Mr. Quick's efforts in this direction, and to Mrs. Quick's generosity, we already possess a valuable nucleus; but, as what little money the Guild can spare for library purposes is necessarily devoted to keeping our modern side up to date, the historical side grows but slowly, and, unless others will assist, will never become the unique collection I desire to make it.

I wish, therefore, to appeal for help—help not so much in money (though *that* is always welcome) as in books—books of any sort and of any date that bear, however remotely, upon the subject of education. From the bookshelves of my own friends and from the lumber-rooms of two or three country booksellers I have already rescued many volumes that fill an important place in my scheme, though regarded as mere rubbish by their owners. If others would follow this easy example, and send me the result, they would, I believe, be rendering a real service in a great cause.

I would especially appeal to local branches of the Teachers' Guild, to organize search-parties and make a systematic visitation of their districts. Of course there will be many duplicates, and amongst the so-called rubbish some real rubbish, but for the present, postponing discrimination till I have a much larger choice of material, I am ready to accept, and, if necessary, to pay carriage on, anything that may come to hand.

Further particulars, with pleasure, upon application. But I may, perhaps, emphasize the fact that *any* book, of *any* date, in *any* tongue, will be welcome—school text-books, dictionaries, periodicals, children's books, moral tales, pamphlets, articles, and bound sets of school magazines, no less than the writings and biographies of the great teachers.—Yours faithfully,

J. RUSSELL.

The Teachers' Guild, 74 Gower Street, W.C.

March, 1898.

THE PESTALOZZI SOCIETY.—At the annual meeting of the Society, held, by kind permission of the Council, at the offices of the Teachers' Guild, on March 14, Mr. A. Sonnenschein was elected President, and Miss M. Crombie and Mr. Ebenezer Cooke were re-elected Treasurer and Secretary respectively for the ensuing year. During the past twelve months the Society has been considering and discussing Letters 1-4 of "How Gertrude Teaches Her Children." Portions of the translation have been revised under the guidance of Mr. A. Sonnenschein and Fräulein Schapel, late of the Pestalozzi-Froebel House in Berlin. The discussion on the text was opened in each case by Mr. E. Cooke. Lectures have also been given by Miss Agnes Ward and Mr. J. Russell. A translation of the "Evening Hour of a Hermit" has been prepared by Mr. W. Bateson, of Cambridge, who will also translate the "Swan Song." During the ensuing year the Society will consider the remainder of "How Gertrude Teaches Her Children," and papers have been promised by Mr. A. Sonnenschein, Miss Franks, and Mr. M. E. Sadler. The aim of the Society is, besides studying the original works of Pestalozzi, to examine them in the light of the writings of later educators, and to study their bearing on the problems of teaching at the present time. Further information about the Society can be obtained from Mr. E. Cooke, 15 St. John's Road, Upper Holloway, N.

OCCASIONAL NOTES.

IF we had said that the present Government were unable or unwilling to carry any large and comprehensive educational reform, we should naturally have been suspected of Radical prejudice, and we thank Sir John Gorst for sparing us the risk of such aspersion, and blurting out in the House of Commons an unpleasant fact that most of us, whether Radical or Conservative, must for some time have suspected. The moral that the Vice-President draws is a sound one. We must postpone our Utopian schemes—a school under local representative management within reach of every English child, undenominational training colleges, a State-organized system of secondary education—and bend our energies to secure those minor reforms on which sensible men of all parties are agreed—the raising of the school age, the improvement of attendance, the training and registration of secondary teachers. We accept Sir John Gorst's counsel with one proviso. We must not acquiesce in any partial measure that, even if desirable in itself, will hinder or hamper the larger scheme for the realization of which we must bide our time. We must, for instance, resist the creation of secondary schools, or the enlargement of the power of County Councils, if teachers have no voice in their management and the central authority over them is the Science and Art Department.

THE new President's address at the Cheltenham meeting of the National Union of Teachers must have surprised most of those who heard or read him, and it came as a painful shock to the Conservative and Church press. It proves that Mr. Waddington is a true educator, though his lot happens to be cast in a Church school. There is no disputing his statistics, which established the fact that the voluntary pupil is worse housed, worse equipped, and worse taught than the Board pupil; and his testimony against dogmatic teaching, though it cannot be supported by figures, is equally convincing. We agree with the *School Guardian*, that Mr. Waddington's contention amounts virtually to a demand for the abolition of voluntary schools.

WE are not, however, prepared to go so far as Mr. Waddington, and should be very loth to see the whole burden of education thrown on Imperial taxation. His argument from the Army and Navy will not hold water. In a sense, education is as much a national concern as national defence. But, in the one sense, a centralized and uniform system is essential; in the other case, the more variety the better, provided there is an adequate safeguard against inefficiency. We may agree with Mr. Waddington that charity schools are an anachronism, and yet hold that schools should be under local management and, in part, supported by local rates.

WITH so strong a case, it is a pity that Mr. Waddington should have allowed his rhetoric to run away with his logic. Teachers in Church schools are underpaid compared with Board School teachers, and a far smaller proportion of them are certificated. It was not only unwise, but impolitic, for the Church of England to have excluded teachers from the governing bodies of voluntary associations. We grant it all. But it does not follow that voluntary teachers are a missionary band, giving their services at a nominal rate out of pure zeal for the cause, and virtually making an annual contribution of a million and a half to the school fund. There are in Church schools men of exceptional ability like Mr. Waddington, but the rank and file are there simply because they are not good enough to get a post in a Board school. It is the haggle of the market. Managers pay less and get an inferior article.

THE concluding portion of the address was devoted to the half-time system and the low age of school exemption, and here Mr. Waddington was both eloquent and logical. He tells us that only one-fourth of our scholars are over eleven years of age; that in 70 per cent. of the school districts total exemption is granted to a child of eleven on passing the fourth standard. And yet, eight years ago, at the Berlin Conference, England pledged herself to adopt twelve as the minimum limit of school age, and that pledge was signed by the present Vice-President of Council, and ratified by the present Prime Minister. The Dole to Church Schools Act has passed; a Bill for raising the age of compulsory attendance is not even in prospect. Mr. Waddington has some excuse for echoing Lucretius:

Tantum religio potuit suadere malorum.

LORD CROSS took the opportunity of the opening of the new Church schools at Penzance to criticize the address of the N.U.T. President. He was shocked and grieved to hear a Churchman and the master of a Church school complaining of the pushfulness of dogma in the province of primary education, and pronouncing, as a teacher, that the theologian blocked the way. In fact, Lord Cross's feelings were so strong that he almost forgot his manners when he accused Mr. Waddington of not knowing the difference between education and instruction—spoke of the N.U.T. as "this Teachers' Union, or whatever they call it." The rest of the speech was an enforcement of the axiom, which no one worth considering denies, that all sound education must be based on religion, with the corollary, which no one worth considering in his heart believes, that Church schools teach religion and Board schools do not. Thrown in as a make-weight was the fallacy which we are tired of exposing, that the increase of Church schools is a proof that the working man will have his children religiously taught. Finally, Lord Cross quoted the main doctrine of the Apostles' Creed as the irreducible minimum of dogma for a Church school. We would venture to ask Lord Cross whether he thinks the doctrine of the Incarnation

or the Sermon on the Mount the fitter food for an infant school.

THE Headmaster of the Bristol Grammar School (Mr. R. L. Leighton), in the last number of *Macmillan's*, discusses commercial education from the schoolmaster's point of view, and tells business men some home-truths, which, if they are wise, they will lay to heart. Briefly, his indictment is, that our English merchants neither know the meaning of education, nor attach any value to the finished product of the secondary school. They prefer the raw material—the lad of fifteen or sixteen who can write a decent hand and add up correctly three columns of figures. He tells us that, in the course of his headmastership, over a thousand boys have left his school to enter on some form of business life, and in no single case, to the best of his knowledge, has a boy been helped or hindered by his school record. And the obvious retort, that the fault is the schoolmaster's, who teaches useless subjects, is well met by the double rejoinder—first, that business men are all at loggerheads as to what useful knowledge they would have taught, and, secondly, that all subjects which act as a moral discipline and an intellectual gymnastic must sooner or later tell in a business career. Perhaps Mr. Leighton hardly recognizes sufficiently that there is need for a proper technical education to follow on the secondary school. If only English merchants would put their hands in their pockets, and, instead of offering paltry prizes and commercial certificates, would establish commercial schools like those at Lyons and Marseilles, and then offer adequate prospects to the best pupils in these schools, they would find themselves amply recompensed, and might have their pick of our best public-school boys, who now try for the Home or India Civil Service, and, if they fail, take refuge in the teaching profession, the Church, or the colonies.

DR. ISAMBARD OWEN'S presidential address delivered at Aberystwyth on the occasion of the Teachers' Guild Conference may well rank with the best presidential utterances at previous Conferences. The subject—"The University of Wales and its Educational Aspect"—is of special interest at this moment when the London University is still before Parliament. Dr. Owen not only traced in clear detail—as may be read in full on another page—the inner history of the rise and progress of University education in Wales, but he also treated with much insight the dual nature of University life. Wales is determined, as far as possible, to fulfil the double intention of a complete University. Provision must be made for, and encouragement given to, the pursuit of knowledge and to original research; while at the same time candidates for degrees must be taught, and properly taught. In German Universities it is perhaps fair to say that research comes before teaching. At Oxford and at Cambridge research is handed over to professors who do not teach. Tutors act as house-masters, and coaches prepare for the University examinations.

IN Wales, says Dr. Owen, it is hoped to combine the work of research with the work of teaching. A candidate may not present himself for examination unless the University is satisfied that he has been well taught. Teaching is an art, and must be learnt by the professor. Dr. Owen also announced that the M.A. degree would in future depend partly upon a thesis showing some independent line of study. But, if the working of higher education in Wales is of special interest to us just now, the organization of intermediate or secondary schools is no

less pressing. Wales has been experimenting on lines which England must eventually follow. There is nothing like studying the working of a scheme at the fountain-head. And the discussions and conversations, showing the weak as well as the strong points of the Welsh system, should prove fertile to those who journeyed to Aberystwyth. Small schools *versus* large is a burning topic in Wales, and our own County Councils are now dealing with the same difficulty. Miss Hughes would have many schools, and small ones, so long as the numbers do not fall below seventy or eighty.

IN Wales at the present moment there are schools that fall far below this minimum. They seem to us to be indefensible except on Dido's plea of *rerum novitas*. Every deserving child should be able to attend a secondary school; but such schools should not be needlessly multiplied. The real difficulty in a hilly country, like Wales, not over well provided with railways, is found in the scattered rural districts or in the very small towns. The remedy we would suggest is this. In cases where it is not possible to have more than, say, fifty pupils, the curriculum of the school should be strictly limited, and no attempt should be made to compete with large and well-equipped schools. But deserving pupils from such a school should be sent on by means of bursaries, carrying boarding expenses, to complete their school education in a larger town. The smaller schools, owing to difficulties of staff and equipment, must be content to take lower rank, and to send on their best pupils just as the elementary schools are asked to do. Still we would not let the comparative cheapness of large schools outweigh the value of the feeling aroused when each town has its own school.

THE dual schools naturally came in for discussion. Mr. Humphreys-Owen was strongly in their favour, and based his argument on the natural continuation of home life. Dr. Isambard Owen, more cautious, stated that these schools were on their trial, but that so far no difficulties had been met with. Miss Hughes is inclined to Utopianism, if the word may be allowed. Her desire that the headship of these schools should be open to men and women alike is certainly not within the range of practical politics; though one day we may, to use Miss Hughes' phrase, "become sufficiently civilized" for such a course. Again, it would be disastrous to make headmaster and headmistress independent of one another. For efficient working there must be one head, and, at present at all events, that head must be a man. Only one speaker raised any objection to dual schools: and these objections were not very definite. The speaker was a lady, and stated that she knew nothing about boys.

IT is a somewhat awkward matter to lecture on the training of the voice. But one must beware of judging of a system by its exponents. Mr. Macdonald gives the impression that he wishes to prove by his manner that speaking is no exertion to him—so little effort did he make that the audience could not always catch his words. Mrs. Behnke goes straight to the point, and all she says is inspired by a sense of duty. But professional voice-trainers cannot, even if they wished, give away their secrets in a lecture of half-an-hour. The subject is of great importance, it is true. The sufferings of children, condemned to listen for hours a day to a strained, grating, harsh, or irritable voice, are truly pathetic. And the consequent exhaustion of the teacher is no less lamentable. Yet while voice-trainers fail to agree upon any scientific basis for their rules there will always remain in the public mind a suspicion of empiricism. Some

speakers thought that still another subject was to be added to the time-table. But, of course, this is not so. Children are taught the art of reading, singing, and the like. Voice-training is, or ought to be, the science underlying the art of elocution, and as such is to be studied by the teacher and not taught to the pupil.

THE higher-grade school, said Mr. Waugh, contains all that is necessary for the matriculant in Wales or London. It is all nonsense, wrote Mr. Newton Coombe, to talk of higher-grade schools knocking at the doors of the Universities: they are *écoles primaires supérieures* or *professionnelles*. We leave it to some one else to reconcile the disputants. We have often stated in these columns what we deem the right position of the higher-grade school. Both papers were somewhat off the subject of discussion, which was "How far is it possible or desirable to coordinate County Councils with School Boards in the organization of Secondary Education?" Mr. Waugh and Mr. Coombe both regard the matter chiefly from the borough point of view. Here there is little difficulty, if any. The area of the county borough and the School Board are probably the same. It is both possible and desirable to coordinate the two; and steps have been already taken in many places towards this end. But in the administrative county the case is more complex. No one wishes to preserve the small School Boards, but so long as they exist in their hundreds, and so long as they continue isolated units and are not grouped according to counties, there is no machinery by which the two authorities can be coordinated.

THE only permanent solution of the problem will be a Bill framed on the lines of the Bill of 1896. In the meantime all the counties can do is to coopt on their Education Committees one or more men representing the School Board interest. No speaker was opposed to some sort of union between the two authorities. Mr. Waugh, indeed had worked out a scheme. By some curious method the discussion worked round to an attack upon South Kensington. But it really seems little more than the survival of a superstition to gibe at the work of this Department. So great has been its improvement of late years that something may fairly be hoped from it. Even if things come to the worst, the educational associations can in a few years train the Department at South Kensington to realize its duty, even as the Department at Whitehall has already been trained. The voice of the teacher, of the educational expert, is not now raised in the wilderness; but he is listened to and at least given an opportunity of proving his case. Something was said, and said bitterly, about administrative action forestalling legislation. But where is the harm, if the administrative action is on the lines of the legislation we desire? Associations of teachers are wide enough awake now to guard the interests of schools and scholars.

BOTH the openers of the next discussion were absent. Indeed, six out of fifteen openers failed to appear. This, coupled with the absence of about fifty members of the Council, was a little hard on those who were present. The discussion turned almost entirely on the age at which primary pupils who are going on to an intermediate or secondary school should leave the former. No one was found to defend the exploded idea that each higher type of school should fit on to the top of the one below. But it was pointed out with some truth that the elementary teacher is called upon to make a genuine sacrifice if his clever pupils are to leave him at the age of eleven or twelve. Miss Dobell, who had kindly prepared a paper at the last moment to fill

the place of the absentees, was sound and lucid in her exposition of the three classes of children who must all be equally cared for. The first go only to a primary school, the second only to an intermediate school, and the third class to both. A scheme must be devised by which each of the three classes gets a good education; and the first two must not be sacrificed to the third. It is clear that for a long while to come such a classification must be made. But in "democratic Wales" it may be that all children may pass through the primary school, before we in England are civilized enough for such a revolution. Parents who can afford to do better will not send their young children to be taught in classes of fifty or sixty.

IT was generally agreed that each grade of school must form a complete cycle in itself. Naturally, the speakers, who were teachers in secondary schools, wished to catch their pupils young. But experience seems to show that the difficulty of scholars of thirteen or fourteen from the elementary schools fitting in to the work of a secondary school has been greatly over-estimated. On the question of the correlation of studies, we do not know that the Conference shed any noticeable illumination. But the matter is of the greatest importance, and the efforts of those who are trying to arrive at satisfactory schemes deserve our gratitude. Child-study has become a familiar term. We all study children, and those who love them understand them best. This does not mean that the fond parent is the best authority on his child's mental powers. It means that the cool scientific investigator, who deliberately probes a young child's mind in order to see its workings, will probably be deceived for his pains. Let us beware of daily observations, note-books ruled in columns, and forms of questions addressed to a class of children such as: "Write down what you are most afraid of."

ON the subject of the relation of teacher and parent, Mr. Welldon contributed a paper which we summarize elsewhere. Mr. Simmons had something to say of practical interest. He would abolish all home-work as it now exists. And in this we would heartily agree, were it possible. In its place he would put other work, of a totally different character, and not entering into the school curriculum. Such work might be suggested by the teacher and carried out by the parent. Excellent! but, alas! Utopian. Where the children are well employed at home in interesting and congenial pursuits, encouraged and helped by parents, home-work may be safely abandoned. Nor do we believe the progress in school-work would be retarded. Rather it would be quickened. But, when it is a choice of getting into mischief and home-work, then we must, perforce, choose the latter. When we have studied the child thoroughly, and have thoroughly correlated his school-subjects, then we may extend the system of correlation to home-pursuits, and, by that time, no doubt, a race of parents will exist who understand their duties, and can justify their action by arguments based on the science of education. Utopia is hovering near, but it yet eludes our grasp.

AND the net result of the Conference? We cannot sum it up in a word or two. Two things stand out. Wales, long held up to us as a model of democratic and organized education, has been brought nearer. Perhaps something of the unselfish spirit of the Teachers' Guild has been left behind to help to leaven the danger of all democratic schemes of education—utilitarianism; for that the general spirit of the Guild is one of unselfish desire to find out what is best for the child, and to do it, may be

stated without fear of contradiction. It is this very spirit that gives rise to the criticism that the Guild is vague and uncertain in its teaching and in its policy. There was no question at Aberystwyth of pensions, higher salaries, safeguards against oppression, or the like, though these and many similar reforms are urgent. The whole tone of the debates was on higher lines than these. Vagueness and uncertainty there must be, because we are seeking to know, and we do not yet know. The pity is that when some hundreds of teachers are assembled in this spirit the natural leaders of the Guild should be conspicuously absent.

THE importance of very prompt and skilled attention to broken teeth, so common at school, is imperfectly realized by most schoolmasters. It is due to the modern development of ingenious methods of dealing with the accident, which depend, for their success, and also for causing but little suffering, on the quickness with which they are adopted. A chance incident has given us the opportunity of obtaining the following note on the subject from one of the most eminent dental surgeons in London; the authority of its advice is absolute.

Broken front teeth are not uncommon accidents amongst school-boys, and are usually the result of direct violence applied to them. Decayed teeth are, naturally, more liable to such accidents, and with them the violence applied need not be great. Considerable violence is required to break a sound and well-formed front tooth. Such a tooth will oftener be found dislocated from its socket than broken across. The treatment of broken teeth should always be immediate. Delay means the most intense suffering, if the nerve pulp of the tooth be exposed by the injury, and is dangerous to successful after-treatment on account of the opportunity it affords for the formation of abscess. An abscessed tooth is never so satisfactory a tooth for an artificial crown to be fixed to its root as one in which no such inflammatory condition has been allowed to occur. Prompt action in sending a boy, the subject of such an injury, home to his dentist is, therefore, required of his school-master on both humanitarian and expedient grounds.

THE pamphlet just issued by the Howard Association on "Juvenile Offenders" is anything but pleasant reading to those who rest in the easy belief that education can achieve all things for our young people. The Association has several times been asked to institute an inquiry amongst competent authorities as to the best methods of dealing with juvenile offenders. A letter of inquiry has been addressed to magistrates, heads of reformatories, and others, asking for their views on the results of commitment to reformatories, on whipping and fines as deterrents. Of the increase of street rowdyism, ruffianism, of even armed assaults and depredations by boys, there can be no doubt whatever. Mr. A. de Rutzen puts the matter in a nutshell when he points out that since 1880 there has been an objection to sending young criminals to prison, and that since then "practically nothing has been done, with the result that, in nine cases out of ten, children are entirely masters of the position." They commit offences with impunity; police and magistrates alike are powerless.

AS the law stands at present, juveniles may be birched up to the age of fourteen. It is instructive to note that, out of some thirty-six letters in reply to the circular of the Howard Association, some of them carefully considered and concise statements as to methods of dealing with juvenile offenders, about thirty favour whipping as "the best and, indeed, the only remedy," to use Sir James Reckitt's expression, for dealing with young ruffians. Several gentlemen advocate the raising of the age for birching from fourteen to sixteen, and, indeed, if the remedy is an "efficacious" one at the earlier age, "of great service," "most humane and speedy," "the most effectual deterrent," there seems no

good reason for depriving the community of so solid and inexpensive a comfort. The order of our streets must be maintained at any price; we cannot give the key of the streets to armed young roughs who are a terror to women and children. But we hardly think that the much-recommended whip is the be-all and end-all of the matter. The Howard Association itself points out several other methods of dealing with young offenders.

BRIEFLY, these are modifications in the law referring to reformatories and industrial schools, the enforcement of parental responsibility, the disarming of young roughs by legal enactment, the extension of the First Offenders Act, especially the appointment of probation officers to render it more efficient, and more effectual legislation against juvenile intemperance, which lies at the root of juvenile ruffianism. Amongst preventive influences we are told of missions, gymnasiums, evening continuation schools, and technical schools. For our own part, we look to an extension of the school age as the most hopeful means of checking this evil; in many London schools children pass their standards at twelve, and, since life in one or two rooms is mostly unendurable, the street is the playground, with its many evil influences for very young persons. Evening continuation schools might easily be made compulsory in certain cases, for, although the author of "Juvenile Offenders" points out that juvenile crime has increased with "an immense extension of the education of the intellect," we should like to remind him that we have barely scratched the surface yet. We have swept vast numbers into the schools, but have not yet made education wide enough, deep enough, or long enough.

THE forty-fifth Report of the Charity Commission again emphasizes the urgent necessity for legislation. New schemes (we read) are opposed on the ground that legislation is imminent, and the problem is hopelessly complicated for the Commissioners by "the multiplicity of the local authorities which have been endowed with statutory functions independent of each other in matters of secondary instruction." It is further pointed out that a central authority is needed, not for the purpose of fixing the curriculum of secondary schools, but in order to remedy evils "which have themselves been caused by legislation in the process of improving and promoting secondary instruction." The N.U.T. holds that higher-grade schools are truly democratic institutions, and that if they oust the obsolete endowed grammar schools no great harm is done. The Commissioners take a different and, withal, a more statesman-like view of this internecine rivalry:—

The evil of undue competition makes itself felt whenever the same sort of education is offered in a new institution at a cost to the parent lower than can be given in a public school already established. The injury to the existing institution may take the form of a reduction of numbers sufficient to necessitate its being closed. But there is a form of injury more subtle, and as mischievous, when schools are carried on under the stress of competition at a fee too low to pay the masters fair salaries, or to defray the expense of proper educational appliances.

WE learn with grave concern from the report of the Cambridge Syndicate for Local Examinations that, out of some thousands of candidates who were examined for the Junior Certificate, "few gave the right meanings of the plural forms of *aieul*." This is a serious charge, and we hope that teachers of French throughout the country will lay it to heart. The word *aieul*, with half-a-dozen other grammatical curiosities, stands in the fore-front of every French grammar that is written by an Englishman. Therefore, their importance cannot be doubted. As we have had the examiner with us for a long time, and as his ways are

well known, it is indeed amazing that any masters should have been caught napping. Some day, perhaps, the examiner will allow us to teach language. The same report also states that "a straight black line is not a recognized cartographic symbol for a mountain range."

WE hope that the Hull School Board, perhaps, the most sweating Board in England, will now turn over a new leaf, letting the time past suffice for evil-doing. With its clerical majority, it has for the last three years distinguished itself by excessive parsimony, visible in insufficient accommodation, overcrowding, a low standard of cleanliness, understaffing, deficient apparatus—the Hull Board needs Her Majesty's inspectors' orders to demand what teachers have asked in vain—bad sanitary arrangements, excessive use of pupil-teachers' services. With this bad record and uncomplimentary report of Her Majesty's inspector, the clerical majority proceed to the poll, announcing that the local precepts for the coming school-year were to be diminished from £33,000 to £27,000. To educationists there is something pitiful in this appeal to people's pockets—to starve the schools for the sake of a tax-payer's shilling. The result of the elections showed a tie—seven Progressives and seven Voluntarists were returned. The balance of power lies with a Labour candidate, Mr. Belt, who scored nearly 13,000 votes more than the next candidate, Dr. Lambert, the clerical ex-Chairman of the late Board. Mr. Belt's vote will be on the Progressive side.

TECHNICAL EDUCATION.

THE recognition of County and County Borough Councils under "Clause VII." of the "Science and Art Department's Directory" continues. According to the *Record of Technical and Secondary Education*, steps have already been taken in this direction by nineteen counties and four county boroughs, while fifteen of these authorities have been accepted by the Committee of Council. The extent of the administrative changes involved in the "recognition" cannot be forecast. The Department, it may be assumed, will not easily be induced to relinquish many of the vexatious details of its vexatious system. There is a regulation for everything, and everything must be on a separate "form." Unless, therefore, County Education Committees are prepared to become "managers" of the schools and classes within their area, and add very considerably to the burden of office routine—without the merit of relieving South Kensington—the best policy is probably that of having local committees of management in direct communication with the Department.

THE machinery of official routine at South Kensington is doubtless so elaborate and complex that any change would tend to destroy its efficiency. But methods and restrictions essential, perhaps, on the part of an authority in London attempting to keep a firm hand upon remote local committees—cease to be either reasonable or necessary when responsible local authorities have come into existence. A change—and a radical change—must come. Until it comes, Technical Education Committees will probably be well advised not to accept any arrangement which does not recognize them as competent authorities entitled to be entrusted with full responsibility and wide powers. Meanwhile, the one really important function to be exercised by Committees recognized under Clause VII. is that of regulating the establishment of new schools and classes.

Education, Secondary and Technical, a Weekly Journal of combined Educational Interests, makes an appropriate plea for the adoption of a principle "applicable to all schools alike" in the allocation of grants to secondary schools. Such aid, it is suggested, should be based "upon careful and somewhat delicate inquiries as to cost, upon an accurate weighing of educational values of curricula and school conditions and impartial estimate of efficiency, and upon a firm insistence on compliance with regulations authoritatively declared." This is very wise and very proper. But, because the Technical Educational Committees of County Councils have in some cases adopted "rough and ready" methods in aiding secondary schools, it is scarcely a reason for attempting to discredit the value of the work done in this direction. The local authorities, it is suggested, either fail to realize their task or shrink

from the magnitude of it. They are "regardless of professional advice, and heedless of great questions involved." Money is "doled" here and "lavished" there as if no application of principles were possible. "No fewer than sixteen counties and four county boroughs follow the indefensible system of paying schools on a system of capitation fees, with the result that the more a school needs the less it gets. Durham pays £1,312 under this head; Somerset, £1,367; Liverpool, £1,743.

How far this charge of incompetent administration is true may be gathered from a brief reference to official reports. The Technical Instruction Committee for the City of Liverpool (to take two counties mentioned), according to the sixth annual report, includes five members who are not councillors. Of the five, one is the Principal of University College; another represents the Liverpool Institute; and a third the Liverpool Council of Education. Six secondary schools—four boys' and two girls'—were aided by the Committee, and the boys' schools were examined by Mr. E. Pinches, B.A. Mr. Pinches' report shows that in most cases the schools are doing exceedingly good work, and bears testimony to the very marked progress which has been made in certain cases where weakness was shown on the last occasion. In Durham, the report of the Education Secretary for 1897 relates: "All secondary schools receiving aid out of county funds are required to furnish for approval, within three weeks after the commencement of each term, time-tables of their courses of study. These are regularly examined, and, if not satisfactory, a communication to that effect is sent to the school in question. . . . Were application made to the secondary schools to know whether they had or had not benefited, and that very materially, through coming under the County Council purview, there could be but one reply. Since 1892—the date when the county scheme took practical shape—the grammar schools of the county had been reorganized, and the non-endowed public secondary schools saved from extinction."

AND further: "Improved and increased staffs have been obtained by means of the £4,000 maintenance grants distributed during the five years, and new physical and chemical laboratories have been fitted up, towards which the County Council has provided up to March 31 last £1,455. 17s. 11d. The fees of numerous boys and girls have been paid by means of scholarships, the aggregate value of which during the five years amounted to £5,623."

AGAIN, in Somersetshire, the County Education Committee made grants to nine schools, and, while it is correct to say the capitation principle is in operation, it is important to observe that the minimum annual payment to a school is £100. In no cases are grants given without a very careful inquiry into the circumstances and educational status of the schools, and there is every reason to suppose, from the official report, that very satisfactory progress has been made. And an inquiry instituted in any county in England would show a similar result. With their limited powers and resources, County Councils have not perhaps, in all cases, followed a carefully considered policy; but, generally, there can be little doubt that, partial as its influence may have been, County Council aid to secondary schools has "made for progress." It will probably be found that these bodies have established satisfactory relations with governing bodies and headmasters, and have paved the way for a more complete scheme of organization.

FIRST IMPRESSIONS OF AUSTRALIA BY A NEW CHUM.

LAST year, at the great assembly of the representatives from the different regions of a vast and scattered Empire, England was brought into close touch with her Colonies; that contact, brief as it was, will prove, in spite of barriers of time and space, a more effectual cement in keeping together the hearts of the English and those of the inhabitants of Greater Britain than any legislature could devise. To the younger and rising generation of Australians this visit "Home" has been a revelation, and the cordial reception they have received in the Mother Country has awakened a fervent response in their hearts. "I needed no letters of introduction—the fact that I was an Australian was my best passport everywhere," said a young Victorian in describing his experiences in England in '97. Our true hold on our colonists consists, as Burke said more than a hundred years ago, speaking of our settlements in the Western Hemisphere, "in the close affection which grows from common names, from kindred blood and from equal protection; these are ties which, though light as air, are strong as links of iron." These words were spoken to unheeding ears, and the links of iron melted under the blasting heat of self-interest. We are never likely to have the opportunity or the inclination to repeat the mistake of 1775; we have learnt by too bitter experience what

the effect of such a mistake may be; and we are, let us hope, less actuated by sordid and self-interested motives in 1897 than our ancestors were at the close of the "prosaic" eighteenth century. But an analogous error we may and do make. This vast Southern Continent, with its magnificent resources, its limitless possibilities, is regarded by us still too much in the light of a refuge for the destitute and incompetent among our countrymen, or as a boundless treasury from which to draw wealth—and yet, here is a limitless field affording the labourer an opportunity to do his best work, and offering to the capitalist an investment which will render his resources a blessing to posterity. No one, recently arrived from home, can help contrasting the sunshine and space of the new country with the gloomy climate and limited area of the old, with its crowded sunless alleys, and squalid and sordid slums. To gaze across the vast tracts of unoccupied land from the summits of the Blue Mountains, is to see, in imagination, innumerable farms dotted over the landscape and the busy hum of workers breaking the silence of the Bush. For poverty here, even where it does exist, is not the hopeless grinding poverty that we see at home. A man who can run up a humpy of kerosene tins, or logs of wood, is monarch of all he surveys in the Bush, and, instead of the stifling air of an overcrowded town, he has around and above him the glorious stretching trees and foliage, and the brilliant light of a sub-tropical sun. It is the potential prosperity of the country, the great future that lies before it, which must inspire the new comer with some of that hopefulness which is such a prominent characteristic of the people themselves. Their minds seem full of futurity; and well they may be, with such a country and such powers. Dr. Arnold once said of his pupils that, if they became more self-reliant and more independent, he did not trouble himself if they became less teachable. The great outcry of educators here is that the Australians are lacking in reverence—that is to say, they are not inclined to give their deepest respect to all those ideas and persons they are called upon to regard as deserving of that feeling. To inspire and to profess such unreasoning reverence does no credit to teacher or to pupil, and, while a nation is yet young, it can only be expected to be capable of the earliest stage of reverence described by Goethe in his "Wilhelm Meister," a reverence for what is higher than itself. This it is indeed eminently capable of feeling, and it would be difficult to find a more impressionable or eager audience than an Australian one—when once it is convinced that the subject is deserving of reverent attention. As a proof of this assertion the following illustration may serve. The subject, here, which is said to inspire no interest, is the subject of history—as there are no historical monuments except of a recent date, and, therefore, the children do not live in a historical atmosphere as they do in the older European countries. Some young Australians, having received an elementary education at a public school, were invited to look through a collection of Arundel prints and photographs of pictures, consisting, for the most part, of copies of early Italian and Flemish masters. They observed every detail of the pictures with the greatest attention, spending at least a quarter of an hour over the examination of Van Eyck's "Adoration of the Lamb," drank in every word of the description, and asked very intelligent questions, showing that they had completely assimilated what they had learnt. This seems to show that, where the concrete illustration is supplied, the interest will not be lacking.

Hopefulness, as has been stated, is a striking characteristic of this people. Their faces are turned towards the future, and in most departments of life they show a readiness to try experiments and a contempt for precedent, which is certainly not characteristic of the old country. The tendency, however, in matters educational, is to place the instruction of the people entirely under State control, and the public schools of New South Wales are all Government concerns, with no local controlling bodies such as the School Boards at home, and are by far the most numerous attended educational institutions in the Colony. The male and female teachers for these schools, after five years of pupil-teacher apprenticeship, receive one year's training at a Government normal college, and are then equipped for their pedagogical career. Some years ago an attendance at the University lectures was included in the course, which was then a two years' one, and some of the students took their degrees. As the double strain of teaching and learning was found to be too much for the students, the

practice was discontinued and the course limited to one year. The pupils at the schools pay 3d. a week, and receive an education which resembles, in most respects, that given in our Board schools; unfortunately the classes, too, are almost as large as at home.

There are also superior public schools where both boys and girls do more advanced work in the ordinary subjects; and, in addition to this, the boys study Latin, mathematics, science, and drawing; and the girls, French, drawing, and sanitary science.

The most striking advantages of the public-school education are its cheapness (and hence its accessibility to all), the excellence of its buildings, the strictness of its discipline, and its thoroughness in elementary subjects. The system has, also, certain defects, the chief of these being its imitative character. It is modelled on the English Code, instead of being adapted to the needs of the people and the country in which it exists, and it does not show the same elasticity and progressive tendency as its model. The State may, and frequently does, give a groundwork of education or instruction for all classes, but it does not attempt to give higher education.

The private schools, naturally, find competition with the public schools difficult, as, however excellent their organization and teaching, the average Australian, as the average English parent, is naturally desirous of educating his children as cheaply as possible. Yet the difficulties that the private schools have to encounter are not wholly the result of the existence of the public school system. There is no attempt, as in Germany on the part of the Government, by a rigid system of inspection, to crush the private schools out of existence. Here, in New South Wales, there is no sort of check on the establishment of a school in any district by a totally unqualified person in an utterly unsanitary house; the "unchartered freedom" of all destitute of resources to start schools as a last resource is even greater than in England.

The Teachers' Association of New South Wales has set itself the task of endeavouring to remedy the existing condition of things in the private schools. This Association, which numbers among its members the leading Professors at the University, is anxious to increase the interest in educational questions by affording opportunities for their free discussion, and to improve the position of teachers by raising the standard of their efficiency. For this purpose the Association has started a Central Registry for teachers, at the office of which details as to qualifications and salaries may be ascertained; it has also declared itself in favour of the professional training of teachers, and has elected a training Board, which has provided lectures and an examination for the kindergarten students, and has now given its name in favour of a wider scheme which will support teachers of all ranks.

It will be seen from this paper that there is much to appreciate, if there is, as is natural, something to condemn, in the existing condition of education. Much has been accomplished by self-denying effort, and it does seem incumbent on us all to help forward these efforts, which may have such far-reaching results. If more men and women would come out here, not actuated by the sole object of making a livelihood, but with the desire of establishing a really sound system of generous education, they would find a magnificent field for their labours. They would have their reward in opening out the delights of learning to eager and appreciative minds, and in their helping to promote the real unity of the Empire.

MARGARET HODGE.

CORRESPONDENCE.

PHONETICS AGAIN.

To the Editor of The Journal of Education.

SIR,—The letter of Mr. Beresford Webb gives gratifying evidence that the thought of improved phonetic teaching is fermenting in the minds of the teaching profession, but it shows at the same time, and in the most literal sense, that the A B C of the question is not yet a matter of common knowledge amongst them. There are some signs of a deplorable division into insularists and internationalists, which I am persuaded is founded upon misconceptions, and will never attain to any further growth if these misconceptions are carefully dealt with, and promptly.

I desire in this letter to consider the alphabet of the Association Phonétique from the insular point of view, and to ask objectors whether, from that point of view, anything much better can be constructed. It may conciliate British patriotism to remember that the so-called international alphabet had its origin in England. Nine-tenths of it is simply the Broad Romic of Dr. Sweet. The other tenth has been since added in response to the practical needs of a society which takes all language, or, at least, all pronunciation, to be its province. Starting from our ordinary stock of twenty-six Roman signs, the society has simply applied to those letters the principle which must underlie every truly scientific alphabet, namely, that every simple sound must have but one symbol, and every symbol but one sound. Observe the result: Fifteen sounds, *b, d, f, h, k, l, m, n, p, r, s, t, v, w, z*, retain their usual values; but they are forbidden to mean anything else. It is no longer possible for *s* to mean *z*, *n* to mean *ng*, *ti* to mean *sh*, and *h* or *l* to mean nothing at all. Of the rest, seven more, *a, e, i, o, u, j, g*, are simply restored to their Latin values—values already known to every schoolmaster and to most schoolboys. When this is done, the other four, *c, q, x*, and *y*, are found to have been superseded, namely, *c* by *k* or *s*; *qu* by *k* or *kw*; *x* by *z* or *ks*; and *y* by *j* or *ai* or *i*. These spare symbols are taken and used for other sounds, but, as none of them are English, they need not concern us here. It is better for us that they are discarded.

Still, there are many sounds in the language thus left without a symbol. How are we to provide for these? Mr. Webb suggests a plentiful use of diacritics. But the principle that a double sign should not be used for a simple meaning applies here with equal force. The German *æ* is not much improved by being written *ä*; it still calls up primarily the sound *a*, which it does not mean, and proceeds to give a direction to "modify" this sound, *i.e.*, to change it into something else. And who that has used Walker's *a', a'', a'''* is not ready to call down fire from heaven upon such abominations? The truth is that the English influence in the Association Phonétique has been consistently used towards the abolition of diacritics, and has notably triumphed in a society whose members mostly use numerous diacritics in their native languages.

For English, only three diacritics are needed, two of which are needed everywhere. The first is for length, and is placed *after* the sound to be prolonged, like the dot in music, save that it is made a double dot (:), to avoid confusion with the period. Confusion with the colon is avoided by substituting the semicolon.

The second diacritic is for accent, and consists of the usual sign (') placed in its logical position *before* the syllable which it directs to be stressed. But, for English, simplification is here possible. As a rule, English accent falls on the first syllable, and, in English texts, it is only necessary to mark accent when it does not fall there. In French texts it need not be marked at all, because the accent is always on the last.

The third diacritic which we need for English is (˘) an angular sign, a rudiment of *r*, to qualify the vowels usually spelled *ar, or*, &c.; which, outside London and the home counties, are rarely identical with *a, aw*, &c., but have what is called a coronal (tongue-tip) modification.

But, resuming our search for alphabetic signs to represent those English sounds which still remain unrepresented, the international scheme presents us at once with *ten*, having each the inestimable merit that it suggests its own meaning at sight. These are:—

- ŋ for the *ng* in *sing*, or *n* in *ink*.
- ʌ (inverted *r*) for the untrilled value, the usual conversational value when adjacent to *t, d, n, s, z, l*.
- θ for *th* in *thin*.
- ð (the Anglo-Saxon sign) for *th* in *then*.
- ʃ (the old-fashioned long *s*) for *sh*.
- ʒ for *z* in *azure*, or *si* in vision; thus getting rid of the objectionable double signs *sh* and *zh*, for sounds which have nothing to do with *h* whatever, yet still suggesting a real relationship to *s* and *z*.
- ɑ for *a* in *man*, to distinguish it from *a* in *father*.
- ɔ (inverted *c*) for *o* in *col*, or, in long form, *au* in *caught*; suggesting by its form a sound more open than *o*.
- ε (*epsilon*) short in *bed*, long in *Mary*, suggesting by its form a sound more open than *e*.
- ʌ (inverted *v*) for *u* in *but*, a sound unknown to Latin, and, therefore, unrepresented in the Roman alphabet.

But even the last sign has its reason. The sound is the least articulate of all the vowels. It occurs as an interjection, when an emission of voice is prompted so suddenly that the organs have no time to shape themselves for any definite sound. Sweet called it "unmodified voice." Hence the *v*.

Compound sounds give no trouble when we already have signs for each element of the compound; *I, how, boy, gin, judge, chick*, write themselves at once *ai, hau, boi, dʒin, dʒadʒ, tʃik*. Parenthetically, I may say that here in the North we do not possess the same ardent admiration of diphthongs as our Southern friends. We are content to say "*hi: hu: no:z*" (he who knows) like our fathers did, and to leave the new-fangled "*hij huw nowz*" to those who like it.

Another merit of the international scheme of transcription is that it pretends to no finality, and that it is sufficiently elastic to provide for national needs. It has grown by tentative steps, and is still growing. The advantage of a tentative procedure in the present stage of the question is that steps which turn out to have been mistaken can be retraced; and I fervently hope that this tentative stage may not be unduly shortened. I do not think English reformers have yet considered sufficiently what will be the *vis inertiae* of any system when once it has gained expression in numerous founts of type and a secure support in the prejudices of those who have become used to it.

It is probable that nine-tenths, or more, of the international system will, in any case, commend itself, by sheer force of logic, for adoption here. Why not adopt the rest? Why not co-operate in developing any signs which we feel still to be wanted? There is good work here to be done, as I will proceed to show. The international system is deficient in the representation of those obscure vowels which are so frequent in English unaccented syllables. In addition to *ʌ*, already mentioned, it provides only *ɔ* (inverted *e*), to represent equally the obscured vowel conversationally heard in *enough, about, and oblige*. But these three vowels are all somewhat unlike in sound; and they are widely unlike in articulation. Hence, in a little work on English phonetics which is now in the press, I have introduced, with the approval of M. Passy and Professor Vietor, two additional symbols here, *ɐ* and *ʊ* (inverted *a* and *o*). The three now suggest quite naturally a spoiled *e*, a spoiled *a*, and a spoiled *o*, which is, practically, just what they are. It remains to be seen how this innovation will be received. Meantime, other points worthy of debate remain. Is the English *wh* to be represented as a simple sound, in which case the international scheme offers the symbol *ɹ* (inverted *w*), or, rather, as a compound, *hw*? Ought the ordinary symbol *i* to be used for English short *i* (in *fill*, &c.), or ought its special timbre to be in some way indicated, *e.g.*, by inversion? It is, in some sense, a "spoiled" *i*, seeing that, even from the purely English point of view, it is not the correct short of *i* in *marine, feel*, &c. Is it worth while, again, to indicate in our signs the difference between the "dorsal" French types of *t, d, n*, and *l*, and our own "coronal" types, or can this be imparted better by the teacher only?

It is feared that the possession of two symbols for the same word may sometimes lead to bad spelling. No doubt it will, and, within reasonable limits, I hope it may. Such a result might, at least, lessen our national dread of that wooden fetish, the spelling-book. It would probably mean speedy reform of all our most outrageous spellings, and millions of hours annually diverted from the merest drudgery to some profitable work.

The thing which would bring the question here dealt with most rapidly to ripeness would be some attempt by those who desire to use what they call "English symbols only" to formulate a system of their own. Mr. Webb makes a very small beginning; he takes the three words *phonetic, phonétique, and phonetisch*, and in "English symbols" they come out as *fonetik, fonetick, and fonaytish*. The international transcriptions would be *fɒ'netik, fɒneti:k, and fɒn'e:tɪʃ*; and the sounds represented thereby would be given back by members of any of the score of nationalities comprised in the Association without inconvenient variation; but what any of them would make of Mr. Webb's all-British symbols one is grieved even to conjecture. Our ancestors were sensible men, and when they wrote *ay* they meant it (*a+y*), and when they wrote *ee* they meant long *e*, in the then current values. But we do nothing of the kind. We want *ay* to stand for something which its separate symbols do not at all express, and *ee* for something far away from its original and natural meaning. I do not think the partizans of an insular system quite realize yet the nature of the task which

they have cut out for themselves. But they have had fore-runners; and, if they are still unconverted by my preaching, they may, perhaps, be alarmed into penitence by some frightful examples. There are two weekly papers already published in England, of apparently considerable circulation, which have developed a full system of all-British transcription. They have been at work for some time in competition with each other, and it is, therefore, probable that their efforts now represent something near the perfection of anything that can be accomplished on that basis. These are Pitman's *French Weekly* and Hugo's *French Journal*; they can be had at the railway book-stalls anywhere. I take two examples each from the current issues of Hugo and Pitman respectively (February 5)—

Il^s parlent français et allemand.
il pah^l frahng-say eh ah-ler-mahng.
Ces demoiselles chantent-elles?
say der-mo'ah-zell shahng-ter-l'el?
Avez-vous autant d'or que d'argent?
Avvay-voo zohthahng dorr kur darzhahng?
N'avez-vous pas honte de votre conduite?
Navvay-voo pah horngt dur votr' korngdweet?

—and I pause for a reply.—Yours, &c., R. J. LLOYD.

PHONETIC SYMBOLS AND PLAIN ENGLISH.

To the Editor of The Journal of Education.

SIR,—In an article entitled "Phonetics and the Comic Papers," which appeared in your February issue, reference is made to a letter of mine which you were so kind as to publish in October last, where I incidentally alluded to my own practice in teaching the pronunciation of French. The writer of the article speaks of the system of "phonetic representations in plain English" (quoting from my letter); but, not possessing any precise information about the nature of the system, he goes wrong in his estimate of what such a description "must mean if it means anything"; and so he misrepresents my views and my practice. I beg that you will allow me to set things right by explaining what the system really is.

Suppose we wish to explain the pronunciation of the French word *aide*, which in school French is pronounced exactly like its English equivalent. A great deal of help may be given by the simple formula *edd*, which tells its own tale at once in "plain English," and requires no previous explanation of the value of the symbols employed. I need not argue the question whether the description *edd* for *aide* is or is not minutely correct; but this I boldly affirm—that it dispels an important misconception in the pupil's mind about the value of *ai* in the body of a French word, and that, if school French had no greater defect than that of pronouncing *aide* as *edd*, we should have ground to be thankful indeed.

I should not assert that every French syllable is capable of being accurately described on paper in plain English symbols; but, nevertheless, I hold that these symbols may be made the basis of correct teaching, even in the more difficult cases. For instance, I allow that *feu* and *fut* are not accurately described by *fur* and *fee*, but these representations may still be successful if accompanied with proper instruction. Thus, when an attempt is made to pronounce *fur* and *fee* with a certain position of the lips which modifies the result of the effort (lips protuded and rounded), the effect produced is very satisfactory for *feu* and *fut* respectively. Nor does the plain English system exclude the use of extra marks or signals attached to a formula as a reminder of the directions given. A small ring (°) attached to *fur* is very suggestive of the instruction: "Lips protuded and rounded." If my critic maintains that I had no business to apply the designation "plain English" to such representations of sound, I am unable to agree with him. When we contrast the plain English *fur*° with the phonetician's symbol *fu*, the justice of the designation is self-evident. At any rate, I feel at a loss to describe the system more faithfully in a single phrase.

It is a point very important to bear in mind that, though the phonetic sign *fu* for *feu* may symbolize to the phonetician the sound in question, yet it conveys to the schoolboy by its own nature not the smallest suggestion of how to pronounce the word. If it is urged as a motive for adopting phonetic orthography that the schoolboy who reads *feu* in his book goes home to do his preparation and forgets how his master pronounced

the word, then I would ask how will the future schoolboy, who learns phonetic French, remember how his master pronounced the phonetic *fu*?

Lastly, I wish to add that the system I advocate is not a mere conception of what ought to answer; by the use of it I have completely transformed the pronunciation not only of young pupils, but also of grown-up teachers in whom the habits of school French had taken deep root.—I am, Sir, yours obediently,

E. ALDRED WILLIAMS.

A ROMAN CATHOLIC UNIVERSITY FOR IRELAND.

To the Editor of The Journal of Education.

SIR,—There is something to be said against a Catholic University in Ireland, even if Catholics were to pay for it. I note that both the contributions which the *Journal* has made to the subject appear to take for granted that such a University should be endowed out of the Imperial taxation. Both Catholics and Free Churchmen are Dissenters. I would point out that the policy of the Free Churches in Britain has been to force the doors of existing Universities as leading to greater breadth and tolerance, and to see to it that new Universities and colleges of University rank are open to all without distinction of religion or sex. This has also been the Catholic policy in England—at least, of late years. In the past Ireland has been a deeply injured country. A sectarian University would simply be one more injury—another line of separation in a land where we need to heal wounds and fill up breaches.

May I point out that Maynooth, the Roman Catholic College for seven hundred priests, has a capitalized endowment of £500,000 granted by Parliament. When the Queen's Colleges were formed into the Queen's University in 1849, Parliament withdrew the grants to the Presbyterian Theological College, but left that of Maynooth.

I am aware that the late Established Church of Ireland enjoyed at least £600,000 as its yearly revenue. As Burke observed: "Few are the partisans of departed tyranny"; and it only eases just persons a very little to style that Establishment an infamous and unparalleled piece of tyranny. But nations cannot make restitution for past evil-doing by committing more folly. The day for founding sectarian Universities is over; it only remains to push open all doors.

I am one of those who attribute the present demand to the influence of the higher Catholic clergy. Left to themselves, I am persuaded that the Irish people would follow the example of the Dissenters in England, and use existing institutions.

FREE CHURCHMAN.

P.S.—I believe I am right in saying that the alteration in the English Catholic policy towards the English Universities dates about two years back. The Pope banned Oxford and Cambridge, and, just as Catholics regarded education or the Pope as most important, they disobeyed or obeyed—frequently the former. But even Popes have to yield to the *Zeitgeist*, and Leo XIII. did so in 1895 or 1896. Education for Catholics at Oxford or Cambridge is now permitted.

A NEW FRENCH DEGREE.

To the Editor of The Journal of Education.

DEAR SIR,—I beg to call your attention to the decision of the Council of the University of Paris, dated April 1, 1898, instituting the degree of Doctor of the University of Paris (not to be confused with the degrees of Dr. ès Lettres, Dr. ès Sciences, &c., which are granted by the State only). For the sake of brevity, I only enclose that part of the regulations which deals with the Faculty of Arts, but it must be understood that the new degree (like the German Ph.D.) is of an eclectic, not of a special, nature, and will be granted to students of science and medicine on similar conditions (*i.e.*, the composition of a thesis embodying original research).

The ordinary State degrees have always been, and still remain, practically beyond the reach of foreigners, the Government requiring all students, without distinction, to pass the various preliminary examinations, a process which involves a considerable loss of time. Such a restriction does not exist for the obtaining of the new degree, the regulations for which have been framed with due regard to the needs of foreign students

The "Doctorat" will, it is hoped, be of special value to teachers and students of modern languages and philology, and be sought by them as a fitting crown to their English University career. I shall be greatly obliged if you will kindly give to this communication all the publicity which lies in your power.—Thanking you in anticipation, I beg to remain, Yours faithfully,

Taylor Institution, Oxford. H. E. BERTHON,

LE CONSEIL DE L'UNIVERSITÉ DE PARIS.

VU L'ARTICLE 15 DU DÉCRET DU 21 JUILLET 1897, &c., &c.

Délibère :

ART. 1. Il est institué un Doctorat de l'Université de Paris . . .

ART. 5. A la Faculté des Lettres, les aspirants doivent, si ils sont étrangers, présenter des attestations d'études de la valeur desquelles la Faculté est juge.

La durée de la scolarité est de quatre semestres au moins.

Elle peut être accomplie soit à la Faculté, soit dans un des grands établissements scientifiques de Paris.

La durée peut en être abrégée par décision de la Faculté.

Les épreuves comprennent : (1) la soutenance d'une thèse, écrite en français ou en latin ; (2) des interrogations sur des questions choisies par le candidat et agréées par la Faculté.

THE DATIVE IN MODERN GREEK.

To the Editor of *The Journal of Education*.

SIR,—If I make a fresh appeal to your courtesy for more space in the *Journal of Education*, it is with no intention of prolonging the controversy between Miss Mary C. Dawes, M.A., and myself, but in the sincere hope of closing the subject. It will be remembered by those of your readers, if any, who have followed this correspondence, that your reviewer of my "Historical Greek Grammar" stated on my authority that the dative case has been dropped in modern Greek—modern Greek as handed down to us through bygone times, and as spoken by the uneducated people of to-day. Miss Dawes then wrote in the February number "to refute the correctness of the statement," and "to convince English scholars and students that the dative is by no means lost to contemporary Greek." To this end she adduced from Greek newspapers proofs of the practice in them of the dative case. I replied in the March number that the journalistic and literary or cultivated Greek is no criterion as to the survival of the dative case, and that modern Greek, as spoken by the uneducated masses (that is, as current in popular speech) affords *not one* instance of the dative, unless we count as such a very few crystallized adverbial expressions due to the influence of the Greek Church. Now Miss Dawes again retorts in the current (April) number, and this time she strives to prove her case by adducing testimonials from a solicitor! This is really embarrassing, and the almost pathetic complaint about "scant courtesy" on my part, even if it were founded, is no argument, unless she expects scholars of the ruder sex to treat historical and scientific subjects on the principle of *Place aux dames*! If Miss Dawes, whose sound knowledge of classical Greek no one will dispute, wishes to convince herself as to whether the dative case really survives or not in modern Greek, the best and most authoritative way would be not to appeal to the testimony of solicitors—the class of Greeks least qualified to pronounce on the history of the language—but to apply to specialists, such as Professor G. Hatzidakis, or, better still, to peruse the folk-songs of the last two hundred years, as collected and edited by Passow and Aravantinos (Continental Greece, Epiros, &c.), by Sakellarios (Cyprus), and by myself (Crete). If she adduces from these or other similar sources *one* instance of the dative case, I shall have no hesitation in making due apologies to her.

However, it would be unfair on my part to conclude here without taking notice of the fact that Miss Dawes has shifted her position, inasmuch as she now restricts herself "to the *present* state of the language, which is considerably modified from that which prevailed thirty or forty years ago." This admission is gratifying and does honour to the writer. On this point, too, I entirely agree with her. Modern Greek, as now written, and even spoken, in elevated and formal style, uses very often the dative; but then we must remember that this dative is not an ancient relic—a direct and lineal descendant of the classical dative—but marks a *revival* of the ancient usage. In a similar manner, we Greeks often write, and even

say (by way of archaism or revival), *οἱ γάμοι τελεσθήσονται* (or *τοῖς γάμοις τελεσθησομένοις*), *ἡ δημοκρατία γενήσεται*, *οἱ βουλόμενοι προσελθίωσαν*, *οὕτως εἰπεῖν*, *ὃ μὴ γένοιτο*, &c., but no scholar will even maintain that modern Greek speech still preserves the (simple) future, the third person imperative, the optative, or the infinitive of classical Greek.

Miss Dawes is further perfectly right in holding that a language is to be judged not only as it is used by the uneducated masses, but also as it is used by the educated classes. Accordingly, the literary and journalistic Greek of to-day—an artificial form of language dictated by practical needs and rightly adopted by the Greek nation—though offering little or no historical interest for us now, is, in all other respects, just as much entitled to consideration as modern English, which is practically literary English, inasmuch as it owes its present form to the influence of printed books and newspapers. It is, therefore, almost amusing to see sometimes foreign scholars, who are familiar only with Homer and the narrow Greek of 500–350 B.C. taught at school, assuming the part of censors—analogueous to that of the ancient Atticists—and branding contemporary or living Greek as a barbarous jargon; or, after paying a flying visit to Greece, even dogmatizing as to what form of language the Greeks of to-day ought to adopt in their public and private life.

A. N. JANNARIS.

The University, St. Andrews, N.B.

To the Editor of *The Journal of Education*.

SIR,—I confess to some surprise at reading a letter on Modern Greek in your current issue, because I thought the question had been settled long ago. But apparently there are still those who think that, because the dative case occurs in Greek newspapers, therefore it is a part of the modern Greek language. I know that many Greeks hold that opinion; but it is demonstrably false, because the newspaper Greek is an artificial dialect—a jargon, in fact, being a mixture of forms that have not been used for centuries, and French idioms, with a large proportion of the genuine national speech. It is not allowable to cite parallels from other countries, because there is no parallel. There is no other instance, so far as we know, of a nation young for the second time, but taking its ideals from a period two thousand years old, and, with these ideals, attempting artificially to revive the speech of that period. It is as if we had been enslaved and oppressed for centuries since the Norman Conquest; the invaders at last driven forth; and then as if we attempted to garnish our plain English with Anglo-Saxon inflexions. The Greeks are inordinately proud of their past, and some (as I have said) do maintain that the old inflexions can be called part of the living language; but I entirely deny that on this matter a Greek has more right to be heard than an Englishman who knows the facts. The facts are these. There are two languages in Greece—a so-called literary language and a popular language. The literary language is unintelligible to an unlettered peasant, not because the ideas are above him, but because some words and many inflexions he never in his life heard of. He has his own words and syntax to express the same ideas, and those are the genuine Greek language. The professors and lawyers quoted with such gusto leave their dative case behind them in Athens, and talk Greek in the country, simply because their jargon would be understood by no one but the clique that made it.

What we must hope is that some genius may arise who will do for Greek what Dante did for Italian. The same contempt was in Dante's day felt for the vulgar speech as many feel for the popular Greek; yet Italian was proved capable of being used to fine purpose. Greek is even more capable of being so used; for it is very flexible, has unlimited capacity for compounds, and is pleasant to the ear. The most successful Greek writers are those who have used this popular speech, and developed it on its own proper lines. A great poet, or an Authorised Version of the Scriptures, may yet make Greek a fine language; but it is idle to expect any such effect from speaking of *κρασί* as *ολίος*, or resuscitating the dative case.—Yours faithfully,

Rugby, April 7, 1898.

W. H. D. ROUSE.

[We cannot admit more letters on this subject.—ED.]

INTERNATIONAL CORRESPONDENCE IN SCHOOLS.

To the Editor of *The Journal of Education*.

SIR,—Professor Dr. K. A. Martin-Hartmann, the secretary of the Deutsche Centralstelle für internationalen Briefwechsel in Leipzig, has asked me to bring this important matter before your readers. He has recently issued two hundred copies of a circular giving full instructions and particulars to headmistresses and head-teachers of German in this country, but has only received two replies! This is much to be regretted, as I can testify from personal experience with my pupils that correspondence with German pupils is an excellent help and stimulus in the teaching of German. Our girls have taken up the matter most enthusiastically, and

are eagerly looking forward to their monthly letters. Of course, the correspondence must be under the superintendence of the respective teachers—without, however, assuming the shape of help and correction. Pupils should be told to use the dictionary as little as possible, and rather to construct their sentences from the stock of words in their possession; part of the letter to be written in German and part in English, the same being done by the German pupils. The correspondence gives a healthy interchange of views on school matters, customs of the countries, descriptions of towns and places, which cannot but be useful and helpful to the young correspondents. Particularly in the domain of idioms have I found the correspondence of great help, and the idiomatic mistakes made by the German pupils are in themselves a good lesson. For instance, a German girl wrote that “it made her great pleasure to receive a letter”; now this at once taught the receiver of the letter that the German idiom is “Vergnügen machen,” and not “Vergnügen geben”—“give pleasure”—and this idiom is certain not to be forgotten again. I could give dozens of similar examples. The young correspondents will also be very anxious to do their very best, for fear of causing ridicule by using wrong words or constructions, and will thereby be much improved in their ordinary school compositions. As one letter a month only from either side is demanded, it cannot be said to be a great tax on the pupils' time.

The international correspondence is getting a firm hold in most Continental countries, and the following statistics will, no doubt, be interesting to your readers. Since the formation of this Association in March, 1897, two thousand addresses have been issued among pupils by the Association alone in German schools, distributed as follows:—105 French high schools, 92 German, and 26 English; of which the girls' schools stand as follows:—9 in France, 18 in Germany, and 13 in England. Professor Mieille, of Tarbes, reports that five thousand addresses have been distributed in France with English correspondents. But, strange to say, the correspondence between this country and Germany does not seem to make much progress. Perhaps some of your readers may be able to explain this.

Professor Hartmann, Leipzig Gohlis, Wiesenstrasse 2, will be glad to furnish suitable addresses both for pupils and teachers, and I shall be glad to answer any inquiries on the subject.—Yours faithfully,
High School for Girls, Aberdeen, GUSTAV HEIN.

TRAINING OF CATHOLIC TEACHERS.

To the Editor of the Journal of Education.

SIR,—I was much interested in a letter on the training of Catholic teachers in your March issue, and I should like to say, as one who knows, that, far from objecting to the training and registration of teachers, the religious orders in England and Ireland are throwing themselves heartily into the movement. In 1894 a Catholic House of Residence for Women Students was opened at Cambridge for the benefit of the Catholics attending Miss Hughes' College. In 1895 the Religious of the Holy Child, Cavendish Square, W., and two Religious of the “Faithful Companions” passed through a year's course of training, and took their diplomas. That same year two members of the Dominican order, from Caltra, Dublin, were trained, and thus that convent has the honour of being the first in Ireland to train its teachers. The Ursulines, at Waterford, come second.

In 1896 the Sisters of the Holy Child, having secured their own diplomas, opened a class at 11 Cavendish Square, for the training of Catholic teachers in secondary schools. After working for two years under the supervision of Sir Joshua Fitch, this convent is now recognized by the Cambridge Syndicate as a training college under Section V. of their regulations. No less than forty applications have been received from various convents in England and Ireland for admission to this college, but, owing to the fact that an entrance examination is required, for which all were not yet prepared, the actual number of students, religious and secular, now in the class is only eight. There is a fair prospect of this number being more than doubled next year.—I am, Sir, yours, &c.,

ANOTHER READER OF THE “JOURNAL.”

LADIES AS ELEMENTARY SCHOOL TEACHERS.—TEACHERS' HOSTEL, SALISBURY.

To the Editor of The Journal of Education.

DEAR SIR,—Will you be good enough to draw attention to this institution, which was opened in January, 1898? My committee earnestly solicit your help in making it known to the clergy and other professional men. Its purpose is to enable girls of seventeen and upwards to pass the Queen's Scholarship Examination—the first step towards qualifying for the honourable profession of elementary school teachers—without the delay and the great mental and physical strain entailed by working up for it through pupil-teacherhood. This is in no sense a commercial undertaking, as, even with an honorary lady superintendent, kind guarantors will have to meet the deficiencies arising from a new venture, but it is hoped that with economy it will eventually cover its expenses. That we believe it will supply a deeply felt want makes us, however very anxious to render this Hostel as

widely known as possible; hence our appeal to your largely circulated paper for help.

I should add that this is in connexion with the excellent Training College established here many years ago, and is under the immediate educational supervision of the Principal, Rev. Canon Steward. The Summer Term will commence on April 16.—I remain, yours truly,

EDITH BONHAM CARTER.
(Hon. Acting Lady Superintendent.)

PRIVATE-SCHOOLISHNESS v. UPPINGHAMISHNESS.

To the Editor of The Journal of Education.

SIR,—I hope you like the rotund sound of the words with which I have headed this letter. I take sole credit (*moi, Alphonse, qui vous parle*) for the first compound, which, I assure you, was not made in Germany. I invented it as a correct parallel to the second word; partly because it is built up in the same style of architecture, and partly because it covers the same suggestion of moral obliquity. I have just the same right to impute to the preparatory schools of England the inferences of “Headmaster” as “Headmaster” has to impute to the traditions of Uppingham School an offence which he thinks he has brought home against the Headmaster.

The Headmaster can, doubtless, defend himself without help. But I fail to see, for my part, where the offence lies. Year by year I sign a circular, drawn up on all fours with the circular “Headmaster” impugns, to say that I have conducted the Oxford and Cambridge Schools Certificate Examination in accordance with their rules. I have never supposed my honesty, which is like Caesar's wife, has been called in question. I sign three times a year a health certificate for every boy at school, and have as yet conceived no grievance nor felt it an imputation against my honour. I look upon it as business, like signing a cheque. A circular is much better than a letter, which is a bore, as it requires an answer; and I am quite busy enough with my daily work.

ONLY AN USHER.

CAMBRIDGE JUNIOR LOCALS.

To the Editor of The Journal of Education.

SIR,—Last December six boys from my school entered for Book-keeping in the Cambridge Local Junior. The paper is divided into two parts, both of which parts must be attempted; two and a-half hours were allowed for the paper. Owing to the indisposition of the presiding examiner, only two hours were given. The first part of the paper would, I think, take quite two hours to work out. Only one of the six boys passed; and he, after getting hopelessly fogged in the first part of the paper, made a desperate attempt at the second part. The general secretary informs me that the examiner was informed of the shortened time, and told to mark accordingly. Is it fair to endeavour to estimate what a boy *might* do in half an hour by what he *has* done? I think the matter should be given publicity, for the effect on the successful candidate is not wholly to his good. I might add that my boys were the only ones entered for Bookkeeping at that centre.—Yours, &c.,

MONTAGU V. STEGALL, M.A., Cantab.

Elm Park, Shotley Bridge, by Newcastle-on-Tyne.

A CORRECTION.

To the Editor of The Journal of Education.

SIR,—An error has crept into the report of my lecture on “School Curricula” printed on page 251 of the April *Journal*. I was far from saying that “Mr. Herbert Spencer wished for no curricula at all, but would let children get knowledge as they can.” Happily for my argument, Mr. Spencer maintains just the opposite—viz., that the choice and ordering of a proper curriculum is, of all educational questions, one of the most fundamentally important. It is true that at one point in his argument he states the case for *laissez-faire* in these matters, but only to refute such a view and to prove it untenable. Mr. Spencer's very great authority is, therefore, on the side of those who urge the more methodic study of questions of curricula. The passage to which I referred in my lecture will be found in “Education, Intellectual, Moral, and Physical,” pages 5–7 and 67–69, in the large edition.—Yours faithfully,

MICHAEL E. SADLER.

Eastwood, Weybridge, April 2, 1898.

TO OUR REVIEWERS.—A MODEL OR A WARNING?

To the Editor of The Journal of Education.

SIR,—The way school-books are reviewed in your journal is simply disgraceful. One would think that there was not a single reviewer on your staff who, when a text-book was sent to him to overhaul, had a notion of what the merits of an educational primer should be, and so we are put off from month to month with the dreariest commonplaces conceivable. This is the more inexcusable in your case, because, were the reviewers to read the *Journal* themselves, instead of merely scribbling idiocies for it, they would not flood you with their menutal drivel.—Yours faithfully,

F. KETTLE.

The Clapham High School; April 5, 1898.

CASSELL'S EDUCATIONAL WORKS.

THE CHEAPEST DICTIONARIES IN THE WORLD.

"The new edition of 'Cassell's French Dictionary' seems fully to justify the claim made in its preface—that it is at once the cheapest, the most complete and extensive, the only thoroughly accurate book of its kind in this country."—*Record*.

CASSELL'S FRENCH DICTIONARY. 490th Thousand.
Cloth, pp. 1 150, extra crown 8vo, 3s. 6d.

"To say this is the best of the smaller German Dictionaries in the field is faint praise, and were it not for the special merits of one or two we might, without exaggeration, say that Miss Weir is first and the rest nowhere."—*Journal of Education*.

CASSELL'S GERMAN DICTIONARY. 207th Thousand.
Cloth, pp. 1,120, extra crown 8vo, 3s. 6d.

"This new edition of Messrs. Cassell's 'Latin Dictionary' has been well and widely overhauled. Its nine hundred odd pages are sure to prove a popular investment, and as regards price, at any rate, the book need fear no rival."—*University Correspondent*.

CASSELL'S LATIN DICTIONARY. 102nd Thousand.
Cloth, pp. 920, extra crown 8vo, 3s. 6d.

"'Cassell's Latin Dictionary' is the handiest, the most useful, and certainly the very cheapest to be met with."—*The Rock*.

CASSELL'S ENGLISH DICTIONARY. Together with American Words and Forms, Technical Terms, Colloquial and Slang Expressions, Obsolete and Archaic Words—the whole based upon the "Encyclopedic Dictionary." 1,100 pp., extra crown 8vo, cloth, 3s. 6d.

Ready in a Few Days. Demy 4to, cloth. Price 5s.

An important new work by W. E. SPARKES.

Blackboard Drawing.

With 345 Figures in 52 full-page Illustrations by the Author.

In exact accordance with the Syllabus recommended in the recent Departmental Report on the Pupil-Teacher System.

Just published.

A HISTORY OF ENGLAND. By H. O. ARNOLD-FORSTER, M.P. Fully Illustrated. Extra crown 8vo, over 800 pp., bound in cloth. Price 5s.

THE STORY OF ENGLISH LITERATURE. By ANNA BUCKLAND. Fourteenth Thousand. Cheap Edition. Cloth boards, 3s. 6d.

CASSELL & COMPANY, LIMITED, LUDGATE HILL, LONDON, E.C.

GEORGE PHILIP & SON'S LIST.

"An open sesame to colloquial French."—*Journal of Education*.

PSYCHOLOGICAL METHODS OF TEACHING AND STUDYING LANGUAGES.

By VICTOR BÉTIS and HOWARD SWAN.

FRENCH SERIES.

INTRODUCTORY—FIRST FACTS AND SENTENCES IN FRENCH.

(*Les premiers Faits et les premières Phrases*.)

A Collection of Simple Scenes described in easy language for the use of Beginners, and forming an introduction to the "Facts of Life." By VICTOR BÉTIS and HOWARD SWAN. Crown 8vo, cloth, price 2s. 6d.

"The system has been proved an admirable one for teaching. . . . All the common facts and actions of everyday life are dealt with in the different lessons, and we defy the most careless to go through the book without learning a great deal about the French language."—*Huddersfield Examiner*.

No. 1.—**THE FACTS OF LIFE**, idiomatically described and systematically arranged, forming a Text-Book for the Methodical Study of the French Vocabulary. In two Parts.

PART I. Second Edition. Demy 8vo, cloth, 3s. Class Edition (in Three Books), demy 8vo, paper cover, each 1s.

"A thoroughly workmanlike production, and should go far in reducing the difficulties which all have to surmount in learning a tongue other than that to which they have been accustomed."—*Oxford Review*.

PART II.

[In preparation.]

No. 2.—**CLASS-ROOM CONVERSATIONS.** A Graded Set of Elementary Exercises for Practice in Conversation. Demy 8vo, cloth, 2s. 6d. Class Edition (in Three Books), demy 8vo, paper cover, each 1s.

"This work is excellently printed and contains some very excellent conversations. The teacher will find an enormous quantity of very useful matter here; he will learn how to teach a class and how to vary his expression. . . . If it were carried out, the class would be far more interested than they are now in their French lessons at most public schools. The work is full of life."—*Cambridge Review*.

SIEPMANN'S FRENCH SERIES.—NEW VOLS.

L'Abbé Daniel. Par ANDRÉ THEURIET, de l'Académie Française. Edited by P. DESAGES, Senior Modern Language Master at Cheltenham College. Authorized Edition. Globe 8vo, 2s. 6d.

Sacs et Parchemins. Par JULES SANDEAU. Adapted and Edited by EUGÈNE PELLISSIER, Professor Agrégé au Lycée de Rochefort-sur-Mer, formerly Assistant-Master at Clifton College, &c. Globe 8vo, 3s. 6d.

Scenes from Child Life, in Colloquial French. A French Reading Book for Young Children. By Mrs. J. G. FRAZER. With Illustrations by H. M. BROCK. 1s. 6d.

Times.—"A charming little volume. . . Mrs. Frazer's dialogues are admirably adapted for beginners in French, and Bébé may perhaps become as familiar to the small boys and girls in nurseries and preparatory schools as Balbus and his wall are to their bigger brothers."

GERMAN.

SIEPMANN'S GERMAN SERIES.—NEW VOLS.

Zwischen den Schlachten. Von ORTO ELSTER. Adapted and edited by L. HIRSCH, Ph.D. (Bonn), Assistant-Master at Alleyn's School, Dulwich. Authorized Edition. Globe 8vo, 3s. 6d.

Sappho Trauerspiel. Von FRANZ GRILLPARZER. Edited by WALTER RIPPMAHN, M.A., Professor of German Language and Literature at Queen's College, and at Bedford College, London. Authorized Edition. Globe 8vo, 3s.

CLASSICS.

P. Vergili Maronis Bucolica et Georgica. With Introduction and Notes by T. E. PAGE, M.A., Assistant-Master at Charterhouse. Fcap. 8vo, 5s. *[Classical Series.]*

MATHEMATICS.

A NEW SCHOOL ARITHMETIC.

An Arithmetic for Schools. By S. L. LONEY, M.A., sometime Fellow of Sidney Sussex College, Cambridge. Globe 8vo, without Answers, 4s. 6d.; with Answers, 4s. 6d.

Nature.—"A comprehensive text-book, clearly written and well arranged. . . The examples are numerous, sensibly chosen, and carefully graduated. . . Deserves to rank with the best of its class."

A Treatise on Magnetism and Electricity. By ANDREW GRAY, LL.D., F.R.S., Professor of Physics in the University College of North Wales. In Two Volumes. Vol. I. Demy 8vo, 14s. net.

An Elementary Course of Physics. Edited by Rev. J. C. P. ALDOUS, M.A., Chief Instructor H.M.S. "Britannia," late Fellow of Jesus College, Cambridge. Demy 8vo, 7s. 6d.

In Three Parts:—Part I. MECHANICS; PROPERTIES OF MATTER; HYDROSTATICS; HEAT. 4s. 6d.—Part II. WAVE MOTION; SOUND; LIGHT. 2s. 6d.—Part III. MAGNETISM; ELECTRICITY. 2s. 6d. *[Britannia Series.]*

Notes on Observations. Being an Outline of the Methods used for Determining the Meaning and Value of Quantitative Observations and Experiments in Physics and Chemistry, and for reducing the results obtained. By SYDNEY LUFTON, M.A. Crown 8vo, 3s. 6d.

LONDON UNIVERSITY MATRICULATION, January, 1899.

Elementary General Science. By A. T. SIMMONS, B.Sc. (London), Associate of the Royal College of Science, London, Author of "Physiography for Beginners," &c., and LIONEL M. JONES, B.Sc. (London), Associate of the Royal College of Science, London, Science Master of St. Dunstan's College, Catford, S.E. Globe 8vo, 3s. 6d.

This book has been modelled upon the syllabus of the new subject "General Elementary Science," which is to be compulsory for all candidates for Matriculation at the London University. It is also suitable for the new "Elementary Science" paper of the Oxford and Cambridge Junior Local Examinations.

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, &c.—6d. per line; minimum charge, 5s.

Situations Vacant and Engagements Wanted.—30 words for 2s.; each 10 words after, 6d.

Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s. each 8 words after, 6d.

[These minimum charges do not include a copy of paper.]

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 86 FLEET STREET, LONDON, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "City Bank, Ludgate Branch." Postage Stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders should be "crossed."

American subscribers may conveniently remit through Mr. C. W. BARDEEN, 406 South Franklin Street, Syracuse, New York; or Messrs. E. L. KELLOGG & Co., 91 East 9th Street, New York.

LONDON: WILLIAM RICE, 86 FLEET STREET, E.C.

ELEMENTARY SCHOOL TEACHING AS A PROFESSION FOR GENTLEWOMEN.

By Mrs. E. M. FIELD.

FEW objects are more conspicuous in the bird's eye view of any English town than the solid masses of the elementary schools, largest and most thickly planted where dwelling-houses are smallest. Few things are odder than the average Briton's absolute ignorance of the working of a system for which he pays handsomely, and on which he believes himself to hold strong opinions. Teachers and scholars have been working in an isolation most remarkable in days when barriers have been thrown down everywhere and landmarks removed, and when the fierce light of publicity beats upon every line of life.

This isolation is, of course, no artificial product. It has grown up quite naturally out of the self-contained system under which the teachers have emerged from the ranks of the taught, and have begun their training within the school, and completed it in colleges established for their separate use. It is needless here to insist on the drawbacks of such a system, its lack of mental ventilation, and its narrow horizon. Efforts have for some time been made to remedy these faults, and the more serious of such efforts have naturally followed two main lines, the widening of the teacher's training, and the attracting into the profession of young people educated in part, at least, outside it, who should have gained a culture probably higher—certainly broader—than could be obtained under the self-contained system. With efforts for improved training came naturally the demand for "good material to train." The conviction that the children of the poor need no less than other children to be educated, and not merely hastily provided with a little information, causes intelligence and culture to be considered essential in the teacher. But these qualities cannot be crammed, and the candidate—the girl candidate especially—who comes from a home where mental nourishment is even more scanty than bodily food, starts with a heavy handicap in the effort to become a successful teacher according to present standards. Much that is learnt naturally in cultured surroundings must by her be acquired as "lessons," and, in spite of the noticeable improvement in the class of candidates during recent years, "inferior material" must still be one cause of a leakage so large that at

present only 50 per cent. of pupil-teachers who complete their apprenticeship eventually attain the Certificate. It is true that many of these who drop out reappear under Article 68 as recognized but uncertificated assistants. It is probable that this shifting secures the best of the present applicants. Undoubtedly there is no lack of women at once able and refined among existing schoolmistresses. But the ultimate result is a real insufficiency of certificated teachers, country schools finding great difficulty in supplying their wants. Now, as a crowd of young gentlewomen are asking for professional work, and as among high-school teachers and also among private governesses over-competition is causing much discouragement and some real suffering, the question may well be asked—Why does not the experiment which has in some instances been tried with encouraging success go forward more rapidly, and why should not gentlewomen enter in larger numbers the profession of the elementary teacher?

I believe that the ignorance already referred to has been the most active hindrance. There are certain other hindrances and difficulties, but these are for the most part of the nature of that wall of fairy tale which vanished whenever a traveller walked straight up to it. It may be useful to answer here the questions likely to arise first in the mind of an inquirer. Thus:—

How can a young lady enter? Must she become a pupil-teacher, and must not her own education be early broken off for this purpose?

What changes of regulation may arise out of the report of the Committee appointed to inquire into the pupil-teacher system we have yet to learn. But recent changes in the regulations of the Education Department have all been in the direction of enabling a girl to carry on her education as far as possible before beginning to teach. On the other hand, in the case of a girl left an orphan and impoverished before the end of her school-days, the opportunity of at once completing her own education and being trained to earn her own living, and that almost without cost, would surely often be thankfully seized if better known. Briefly, the regulations are these: A girl may become a probationer at thirteen. Or she may be apprenticed at fifteen. The term of apprenticeship—during which she may earn a salary rising, perhaps, from £12 to £20, and receive her instruction gratis besides—is generally four years. With consent of managers it may be shortened to three or two years. If she have passed a Junior Oxford or Cambridge Local, or taken First Class in the College of Preceptors' Certificate Examination, not more than two years previously, the candidate may be apprenticed for one year only, provided the managers are willing to take her, such short terms being naturally not the most convenient for them. Personal interest and friendship would here be helpful.

But the apprenticeship may be omitted altogether, and the student apply when at least eighteen years of age for a syllabus of the Queen's Scholarship Examination and permission to undergo it, both from the Secretary of the Education Department, Whitehall. Those who pass this are arranged in order of merit in three classes, and, if in the first or second class, are eligible for admission to a training college, may, in fact, become Queen's Scholars, as accepted students are called. But, as there is not at present nearly enough room in the colleges for all who pass, a good place—for the best colleges a very good place—in the list is essential. Failing to enter college, the candidate may become an assistant or a provisionally certificated teacher.

Would the college course, then, be very necessary or desirable for the girl who can have a good education otherwise? Is it costly?

At present "trained" teachers, as ex-students of colleges are called, have considerable advantage over others in competition for good posts. Actual practice in an ordinary elementary school forms an essential part of the course, and it is felt that these students have been taught to teach. Colleges are either residential and self-contained, or day, working in connexion with some University or college of that rank. The course lasts two years, a third being occasionally given to some specially promising student. It will be seen that they offer no small advantages when it is remembered that the only charge made is an entrance fee. This varies very much, a student paying £2. 10s. at Wandsworth (Catholic), and £22 at Homerton (undenominational), £10 at Truro and £20 at Tottenham (both

Anglican). At the end of each year of study an examination must be passed, these two together making the final test for the Certificate of the Education Department, which qualifies its holder to take independent charge of a school or department. But concessions are made throughout to those who have obtained other qualifications. Thus "graduates, or persons qualified by examination to become graduates, of any University in the United Kingdom, and persons over eighteen years of age who have passed University and other examinations recognized by the Department, may be recognized as assistant-teachers" (Art. 51), omitting the Scholarship Examination. A list of the tests recognized under this article may be found in the "Code" (price 5½d., from Eyre & Spottiswoode, and invaluable to any inquirer). It includes such examinations as the Oxford and Cambridge Higher Locals, Dublin Senior for Women, Froebel Union Certificate (for infant teachers), St. Andrews L.L.A., and others. Such graduates may, if they wish it, serve for a year or more as assistant-teachers and then offer themselves for the first year's examination, with a view to gaining the advantages of the college course for one year. Or they may attempt the second year's examination, and so, if successful, attain the Certificate at once. A still higher privilege is granted to such graduates as hold in addition a certificate of proficiency in the Theory and Practice of Teaching, granted by a University or collegiate body. The Certificate of the Education Department may be granted to them without further test beyond the probation in school for a year or eighteen months, with satisfactory report from H.M. Inspector, which in all cases precedes the actual bestowal of the parchment. These brief details of modes of access to the profession will show how largely the regulations are relaxed for the benefit of students from outside.

But are not the present teachers likely to resent the competition of such candidates? Is there not some fear of difficulty and unpleasantness? And will not a young gentlewoman find herself in uncongenial society?

I believe the danger of ill-feeling to be greatly over-rated. The best and ablest of the teachers have learnt to value culture and refinement. They keenly appreciate in a young fellow-worker qualities which they have striven to gain for themselves, both for their influence on the scholars and for the personal pleasure of companionship. There are many encouraging signs that this has proved to be the case, and good will and good feeling have been heartily expressed. Undoubtedly it rests with those young gentlewomen who are to some extent pioneers to see that no exhibition of arrogance or failure in tact or courtesy on their part should cause a revulsion of feeling. And, as regards the young lady herself, it may be fairly said that in towns, at least, she will find many fellow-workers who will prove by no means uncongenial companions.

But the life, after all, must be trying and depressing—a monotonous teaching of rudiments to children of a class whose personal habits and conditions would be a constant trial? The physical labour, too, must require exceptional strength?

No doubt the vision that rises before the mind of the ignorant person of work in an elementary school must be a depressing one. The best answer to this question is: Ask permission to see a morning's work, and the difference between imagination and reality will be startling. It is no despicable task to give a lesson in part-singing, or geography, or simple science to a class of thirteen-year-old town children. It is far from being a thing "any one" could do to train a roomful of infants in brush-work, or hold their attention to a profitable arithmetic lesson. And it is no mean or petty thing to be headmistress of a great Board school, where the girls alone may number four or five hundred, with corresponding staff. Good bodily health is undoubtedly essential. There is variety enough; one teacher may thrive best in the quiet routine and narrower course of subjects of a village school; another do best under the stimulus of the varied subjects, the constant introduction of new ideas, and improved methods of town work, in spite of the greater fatigue. In any case, there are the free Saturdays and Sundays, the regular holidays, and the absolute liberty in the evenings to choose work or recreation, society or solitude—a freedom which the private governess may well envy. As for the children, to them the teacher is a missionary. Habits of cleanliness and civility may be, and often are, taught in the school to so marked an extent that visitors have been known to remark: "How the neighbourhood must have changed! You have quite

a different class of children now." Undoubtedly the work of training the future citizen during an all-too-short school life is not one to be despised.

And the income would be reasonably good?

Varying as widely as the conditions, it may be sufficient for the present purpose to estimate it as ranging from £80, with a house, in the country, to £250, without one, in a town, for the headmistress. The salaries of certificated assistants would, of course, be on a somewhat lower scale. There are, of course, other posts to be reached in and through the profession in the teaching of special and technical subjects in schools, at pupil-teacher centres, and in colleges. Good offers sometimes come from the Colonies, especially from South Africa.

There remains still the post of assistant-teacher under Article 68. Her qualifications are merely that she is a woman over eighteen and approved by H.M. Inspector. To a gentlewoman past her first youth this means of entrance to elementary teaching might be useful either as a way of, so to speak, entering the Army through the Militia, or even as a better occupation than the usual wearying toil, and contempt therewith, of the unskilled nursery governess.

REVIEWS AND MINOR NOTICES.

Essays on Secondary Education. By Various Contributors. Edited by CHRISTOPHER COOKSON, M.A. (Clarendon Press.)

These sixteen essays take a wide range over the problems of secondary education. The High Master of Manchester discourses on Day Schools and their Difficulties; Mr. Lowry, of Eton, on the Tutorial System; Mr. Burge and the Editor on Various Problems of Sixth Form Teaching. Mathematics and Natural Science are handled by Mr. Joseland, Mr. F. W. Sanderson, and Mr. G. C. Bourne; Modern Languages, by Mr. Allcock, of Highgate School. Mr. Spence, of Clifton, and Mr. A. L. Smith, of Balliol, deal with the Teaching of Modern History; Mr. Howson, of Harrow, and Mr. Beeching, with that of English Literature. Canon Fowler discusses the London Matriculation; Dr. Gow, Professional Examinations. Lastly, Mr. P. G. Matheson speaks from full experience of Oxford Preliminary Examinations and that for Higher Certificates; and Mr. Lionel Ford, of Eton, treats of the eternal topic of Public School Athletics.

Three hundred short pages are no inordinate space for this variety of topics. The essays are all suggestive, and most of them characteristic of the time—that is to say, most of them are conscious of vague difficulties and disappointing conditions, and are inclined to lay the blame on other subjects, or parental obstinacy, or the "dead hand," or the perversity of Oxford or Cambridge. Many of them join Mr. Ford in his gentle and deferential sighs over the athletic craze: it is the fault of the parents, of the "atmosphere," of this, that, and the other—rarely does it dawn upon the writers that it is our own professional subservience to, and absorption in, these matters that must be reckoned the chief cause. It cannot be too often repeated that the evil does not arise from the people who play vigorously, but from those who take their exercise vicariously by watching that of others, and read nothing but compulsory lesson-books and then the literature of sporting papers. Yet Mr. Ford (page 304) positively contemplates this literature as fitting study for a master, provided he occasionally resigns it for something else!

Among the best and brightest of these essays we should reckon that by the Editor on "Sixth Form Teaching in a Day School," on which, it is needless to say, he speaks with authority. We are inclined to think that he rather overrates the amount of time absorbed in prefectorial government in boarding schools. There is a danger of it, under certain circumstances, but hardly a normal danger. Mr. Cookson would diminish it by reducing the numbers of a boarding house from seventy or forty to twenty! We wonder if he realizes the shriek of starvation which would arise from the capitalists of the profession! Mr. Bourne's essay on the "Teaching of Natural Science" is very keen and incisive, and puts the case for science, without any *animus* against classics, in a refreshingly vivid way. He wishes to see science viewed as equally essential to "culture" as a knowledge of classics: "let us have both

things," he says, in effect, "and call no man cultured till he has them." We have not a word to say for the pedantic view that "letters" are the only "culture"; but we incline to think that Mr. Bourne is a little too impatient of the diversities of human endowment. We must all, eventually, specialize to some extent; yet we admit most readily the cogency of Mr. Bourne's arguments on pages 138-48. Mr. Lowry fights pluckily for the "Tutorial System"—but to prove that its object was good is not to prove that its method is rational or defensible. Mr. A. L. Smith writes fascinatingly on the Teaching of Modern History; gladly (pages 188-9) would we join his class at Borcovicus! Mr. Howson, too, and Mr. Beeching, on English Literature, make one envy their pupils; the latter has a charming story, *à propos* of paraphrasing (page 223), of a boy who rendered Sir Andrew Aguecheek's "I had as lief be a Brownist as a politician" by "I would as soon join the Browning Society as go into Parliament"!

It is curious to observe that, in almost all these educational essays, there is an under-current of wistfulness—as if much effort led to scanty results, or, at all events, to results much less than would seem, *a priori*, attainable. It is a mood inevitable to teachers; let it be remembered that to force people to think, to whom thought is no pleasure, *must* be uphill work; the utmost we can expect, if the "forts of folly" ever do fall, is to be found, dead, *outside* the wall.

Modern English Literature. By EDMUND GOSSE. (Heinemann.)

In the epilogue to this volume Mr. Gosse has laid down two principles of literary criticism. "The first," he says, is primitive. "Does the work before us, or the author, perform what he sets out to perform with a distinguished skill in the direction in which his powers were exercised?" This question we may fairly ask concerning the work before us. Does Mr. Gosse succeed in his effort to trace the movement, the evolution of English literature from Chaucer to Tennyson, with particular attention to form, technique, and style? It seems obvious that it would be impossible to carry out such an ambitious undertaking in four hundred octavo pages. He has only failed where all would fail; but every reader of "Modern English Literature" will regret that it has been considered necessary to circumscribe so greatly the spaces allotted to the consideration of so wide a subject. Not only does the subject suffer, but the author suffers too by these limitations. For Mr. Gosse less than for almost any other writer of the day is it "pastime to be bound" in this manner; nor could he say, with Wordsworth:

In truth the prison unto which we doom
Ourselves no prison is.

The charm of Mr. Gosse, both as a lecturer and a writer, lies largely in a graceful, easy discursiveness—a playing over the surface of literature with a most delicate and appreciative touch. He is a delightful *raconteur*; he has a keen sense of humour, a sympathetic insight into many of the subtleties of literature, and a vivid, picturesque style. But to exhibit, as to enjoy, these qualities an atmosphere of leisure is essential, whereas in this volume we are hurried from author to author, from translations to sonnets, from prose to poetry, at lightning speed. All this is, doubtless, inevitable, but it is none the less to be regretted. In a sketch which aims at being both complete and brief it is necessary to say much that has been said before so often as to leave little room for originality; to re-state the commonplaces, in fact, of the history of literature—as, for example, "The advance which Chaucer made in psychology was immense;" and to curtail those comments of the critic which would be new and refreshing. Nothing could be better than Mr. Gosse's remarks on Herrick, his comparison of Macaulay and Carlyle, his review of the novels of Sir W. Scott, and his estimate of the style of Shaftesbury; but, on the other hand, we resent his cursory treatment of Sir Philip Sidney, of Miss Burney, and many others. The early translators and sonneteers are dismissed summarily, and it seems almost a pity not to have omitted altogether any mention of the York Plays, since their only claim to consideration is an occasional felicity of expression, nor does it seem necessary to name writers only to tell us that they are negligible. Burke is, perhaps, the crowning instance of inadequate treatment. It is surprising in a book confessedly devoted to the

consideration of style to find so great a master disposed of in a page, and hardly less surprising is it to hear that Burke's "oratory was too highly coloured for the eighteenth century, and too hard and resonant for the nineteenth," that there is in him an "absence of emotional imagination," and that he has encouraged a "hollow vehemence" of style.

In these days, when every historian and literary critic, as well as every examination candidate, has his "special period," we cannot expect that each age in the history of English literature will here receive an equal share of attention, or that the same grasp of detail and critical acumen will be displayed throughout. As might be anticipated, the author of "Seventeenth-Century Studies—from Shakespeare to Pope" and "Eighteenth-Century Literature" is at his best in dealing with the age of Dryden and Pope. He has still a good deal that is new to say, and he says it admirably.

Mr. Gosse has surmounted with considerable skill the difficulty of rapid transition from one author to another, or from prose to poetry. He has contrived to preserve the continuity of the history and to follow out a methodical plan in the examination of his subject-matter. An instance of the art which conceals art may be seen in his manner of introducing the consideration of ballad literature. It is unfortunate that there is no room for quotation and but little for summarizing the substance of any literary work, for wherever this has been attempted Mr. Gosse has been particularly successful.

Although it appears to us that in his "endeavour to keep expression and form always before him as the central interest, rather than biography or sociology," he has been led into omitting much that is of primary importance for a fair estimate of the development of our literature, there are in his book several facts of interest and importance concerning the influences at work on English literature on which he has been the first writer to insist—as, for example, the effect of the foundation of a school of music on the production of Elizabethan songs, or that of the foundation of the Royal Society on style.

The omission of any biographical sketches is serious, even if admitted to be necessary. Not one of these men of letters stands out from the canvas with any lifelikeness. They form, as it were, a Jubilee procession of figures all helping to produce a general impression of the greatness and glory of England, but having no individual mark as men. The study of this volume would never awaken that personal sympathy between the reader and the poet or prose-writer which it is one of the aims of the critic to cultivate, and which Mr. Gosse knows so well how to arouse.

Those qualities of Mr. Gosse's style which are easily recognized—clearness, crispness, conciseness, freshness, and piquancy—are well exemplified here, and many of his phrases are striking and suggestive. "Fuller would have made a superb leader-writer, and Howell an ideal correspondent," or, "Macaulay is satisfied with surfaces." His prose is often the imaginative prose of a poet, and he speaks of poetry with the knowledge of a craftsman. "Into fields made stony and dusty with systematic pedantry, the genius of Spenser poured a warm and fertilizing rain of romance." Of M. Arnold he writes: "Such absolute purity as his is rare in English poetry; Arnold in his gravity and distinction is like a translucent tarn among the mountains."

It is somewhat difficult to determine for what class of readers this book was intended. By its language and by the amount of knowledge which it presupposes it is unfitted for the schoolboy or schoolgirl. For the general reader it is too compact, too full of facts and information, too scholarly to be attractive. There is no space for the literary gossip which the casual reader demands. It will undoubtedly be both interesting and useful to the student who requires a clear *résumé*, a rapid survey, in a bright and vigorous style, of the work of our great men of letters.

Notes on Greek and Latin Syntax. By G. BUCKLAND GREEN, M.A., formerly Fereday Fellow of St. John's College, Oxford; Assistant-Master at the Academy, Edinburgh. (Methuen.)

The aim of the author is, as he explains, to help students of Greek and Latin syntax by directing attention to the most prominent constructions in the two languages. The method

adopted is therefore comparative: points of agreement and points of difference, and, at the same time, normal constructions and variations from these constructions, are very clearly placed before the eye. Much good sense is shown in the treatment of the subject. The book is intended for the higher forms of schools, and the work for which those forms are preparatory. An adequate grounding in the two separate languages is, therefore, presupposed. Before a boy reaches a sixth form, little more should be attempted in the way of comparative grammar than what a judicious and well-instructed teacher can throw out, as occasion offers, for purposes of alleviation, interest, and suggestion. But, when the sixth form is reached, a more systematic study of Greek and Latin together becomes thoroughly helpful. And, in catering for pupils of this stage, the author has done well in confining himself to these two languages. A more detailed comparison with other Indo-Germanic languages assumes greater knowledge than the student possesses, and leads only to confusion and superficiality; suggestive hints on real resemblances and differences and developments are enough.

Principles and rules are first given, illustrated only by few and typical examples; at the end of the book are very useful lists of examples which should be studied in connexion with the principles and rules previously laid down. The author deals with the cases, with the verb, its tenses and moods (the voices, strange to say, are not touched upon), the construction of sentences, the article, certain particles, prepositions, Homeric usages, and a few addenda. Some of Mr. Green's rules are excellent, e.g., "Action in time may be regarded as (1) incomplete, continuous, or progressive; (2) complete; and (3) complete with effects remaining." The differences between present, aorist, and perfect stem are correctly and happily here given. It would have been well, however, to call attention to the amalgamation of the aorist with the perfect stem in Latin. We are glad to see that Goodwin's scheme of conditionals is adhered to. It may not be ideally perfect—no scheme is—but it is eminently intelligible and workable, and lends itself excellently to a comparison between Greek and Latin. Why, however, should Mr. Green give only *si scribit* and *si scribebat* as general conditions? *Si scripsit* and *si scripserat* are typically Latin.

These notes should be very helpful to learner and teacher, especially if, as the author hopes, they lead to further investigation of larger works. Mr. Green has based his work primarily for Greek on Monro and Goodwin, for Latin on Roby, Gildersleeve, and Lodge. There is no reference to Delbrück's recent labours, notably his "Vergleichende Syntax der indogermanischen Sprachen," first part, 1893; second part, 1897; Goodwin's "Moods and Tenses," second edition, was published in 1889; Monro's "Homeric Grammar," second edition, 1891. Both these eminent scholars—the latter most certainly—would be the first to modify their opinions. It is only necessary to allude to Delbrück's treatment of the genitive as not essentially adnominal, to his latest treatment of the subjunctive, optative, and future (the last is not discussed at all by Mr. Green), and of the injunctive, to convince any one who is familiar with these investigations that Mr. Green, in a second edition of these notes, which we hope may be forthcoming, will have largely to modify his views throughout.

The Odyssey of Homer. Translated by J. G. CORDERY, C.S.I. Price 7s. 6d. (Methuen.)

"I have attempted to be as literal and as close to the original as a thorough substitution of English for Greek grammar and idiom will allow. I may fairly claim never to have degenerated into paraphrase, and not to have shirked any difficulty. With this fidelity I have sought to combine a spontaneous rhythm, with sufficient rise and fall in it to indicate to the English reader the existence of those passages in which Homer rises to heights far beyond the tether of any translator."

Let us first examine how far Mr. Cordery has adhered to the canons of translation that he lays down in the preface. We take at random a passage of plain narrative from the first book:—

The godlike youth Telemachus was first
To see her coming; for with harrowed heart
He sat distraught amongst the wooers' crowd,
Figuring in his mind his father brave,

If he, from somewhere in the world, might make
A scattering of those suitors through the halls,
Have honour and be loved in his own house.
Hence in these thoughts he saw Athene first
From where he sat; straight at the porch he went,
Thinking it shame to him a guest should stand
Long in his doorway, and approaching took
Her right hand and received the brazen spear,
And spake her welcome with these winged words.

Two points are missed in the sense. In Homer Telemachus sees the goddess *long* before the others, and he is not distraught, but sorrowful, and the seventh line refers not to Odysseus, but to Telemachus himself. The fourth line is weak in rhythm, and in the fifth we desiderate a substitution of English idiom, and "to go at a porch" is hardly English.

We will take next a more ornate passage—the opening of the last book:—

But now Cyllenian Hermes raised the wand
Of gold well-fashioned, wherewithal he seals
Or opens, as he lists, the eyes of men,
Calling the Phantoms of the Suitors forth.
With this their gibbering rout he moved and led.
Twittering they followed; like to bats that flit
Deep in a cavern measureless to man,
Twittering, i' off their cluster from a rock,
Whence each to other clings, one haply falls;
The spirits so together twittering passed,
Guided by Hermes on their mouldering way—
Hermes, the kindly Healer of mankind.

There is little here to criticize, and much to admire. The translator rises with his original. His lines have the echo of a Miltonic ring. Yet even here we have something less and something more than Homer. The "cavern measureless to man" is a tag from Coleridge; "their gibbering rout" is a stop-gap, and the last line is a paraphrase of a single word in the Greek. Again, in Homer we have first the fact—Hermes called forth the souls; then the incident—in his hand was the wand. Lastly, "he seals or opens" misses the climax "and even wakens out of sleep."

It is easy work picking holes in a translation—even Lord Tennyson's "experiment" is not faultless—and we frankly admit that we should find it hard to produce a superior version of the latter passage we have quoted.

To sum up our general impressions, Mr. Cordery's version is painstaking, accurate, and often spirited, but in the tamer parts it flags, and his blank verse is monotonous. We prefer it to Cowper's, but, for edification, we would still read our "Odyssey" in Butcher and Lang, and, for pleasure, in Worsley. In the lay of Demodocus, where Mr. Cordery has adopted the Spenserian stanza, he shows that he might have rivalled that true poet in his own line.

Chambers's Algebra for Schools. By WILLIAM THOMSON, M.A., B.Sc., F.R.S.E. (W. & R. Chambers.)

The broad outlines of a course of elementary algebra are now beginning to attain to something like permanence, and it would be difficult, if it would be wise, to introduce any radical change in order. Thus, it seems well established that after the first four rules are mastered a brief course of simple equations with easy problems shall be introduced, whether this be the correct logical sequence or not. In this and other respects, Professor Thomson has not deviated considerably from the order laid down by his predecessors, but he has, nevertheless, made a few changes and improvements. Difficulties and details in multiplication and division, for instance, are separated from the earlier work by the chapter on equations and problems. Simultaneous equations are taken late—after fractions; literal equations are treated in a separate chapter, and not, as in one important text-book, before the pupil has learnt to factorize; evolution precedes quadratic equations; the theory of quadratic equations and expressions is accompanied by an admirable section on grafts; logarithms and interest and annuities come between the progressions and permutations; the binomial theorem is succeeded by scales of notation, elimination, inequalities, and indeterminate coefficients.

In the treatment of the early bookwork, Professor Thomson has made no advance. Complete proofs of the fundamental laws for real quantities are not attempted; but it might fairly be argued that young pupils are not in a position to grasp more

than the simple cases here given. The later bookwork is, as usual, done more thoroughly, and, in one or two theorems, the proofs are condensed and simplified. Throughout the explanations are lucid, and are evidently the result of insight and experience.

The examples are numerous, exceedingly well selected, and interesting. While they are so carefully graduated that almost every conceivable difficulty which can present itself to a beginner is separately entertained, there are, at the same time, collections of problems hard enough to train and to test the more intelligent pupils.

During the last few years many text-books of elementary algebra have appeared, and among the very best the work before us will take a prominent place. With such competitors already in the field, it is something to be able to justify the existence of a new work. This Professor Thomson has fully done, and we feel confident that the employment of his "Algebra for Schools" will help to give a sound knowledge of the subject and greater interest in its study.

The Odes of Horace. Translated by A. D. GODLEY. (Methuen.)

When Mr. Godley tells us that no metrical version of the "Odes" can claim to be more than a frigid travesty, *scelustum miscuit integro*, he confounds Francis and Conington, Lord Lytton and Calverley. There is no need to belittle verse, or, indeed, to make any apology for producing "an exact rendering of the matter," and Mr. Godley's is the first prose version of Horace that satisfies this primary requirement. And it is more than accurate—generally polished and sometimes supremely happy. What, for instance, can be better than "To hear soft whispers at twilight's trusted hour—to hear the silvery tell-tale laughter from the far corner where lurks thy love"; or "Why should shame stint our grief for one so dear?" or "Fill high the bowl, tread free the measure"; or "Welcome misrule when friends come home"? All is not up to this level. The first Ode hardly rises above a schoolboy version. In I. 5, "poor credulous novice" does not render "qui nunc te fruitur credulus aurea"; in I. 37, "fierce Liburnians" is, to say the least, misleading; in II. 6, "pellitis ovibus" is not "fleece sheep"; in III. 10, "tinctus viola pallor" is not "pallor streaked with violet hue"; in II. 19, "Was hael" is a far-fetched rendering of "Evoc."

"The University Tutorial Series."—*Livy, Book IX.* Edited by W. J. WOODHOUSE. Price 3s. 6d. (Clive.)

A well-written introduction, founded mostly on Mommsen, sketches the relations of Samnium and Rome and the constitutional history of the time. We have also a map illustrating the Samnite wars. The notes pay more attention to history and less to elementary syntax than is usual in this series. As far as they go, they are quite satisfactory, but we think that, with an author so difficult to render, some help might have been given in the way of model translation. In chap. ii., § 7, *circa* does not "go with *perpetuis*," but with *montibus*. In chap. viii., § 13, *laudibus modo* cannot mean "with nothing but praises"; the text is certainly corrupt. In chap. xii., § 2, *potuerint* is wrongly explained. In chap. xix., § 16, *timere* of the text can hardly be right; at any rate, it needs an explanation. In chap. xxxix., § 6, *elevat* is not "lifts up," but "makes light of," "depreciates."

Passages for Unseen Translation. By A. M. COOK and E. C. MARCHANT. (Methuen.)

This selection of Latin and Greek unseens by two St. Paul's School masters differs from most of its kind by the wider range of authors that it includes. Thus in Latin we find Valerius Flaccus, Florus, Nemesianus, Rutilius, and specimens of More's "Utopia" and Bentley's commentary on Horace; in Greek, Josephus, Stobæus, and specimens of patriotic literature. This seems to us a distinct improvement. It is well to show even schoolboys that Greek literature does not end with the fall of Athens, nor Latin with Juvenal.

"Leaving-Certificate Handbooks."—(1) *Paraphrasing, Analysis, and Correction of Sentences.* By D. M. J. JAMES. (2) *Greek Verse Unseens.* By T. R. MILLS. (3) *Latin Historical Unseens for Army Classes.* By L. C. VAUGHAN WILKES. (4) *Higher Latin Unseens.* By H. W. AUDEN. (5) *Lower German.* By LOUIS LUBOVITZ. (Blackwood.)

This new series is extremely attractive—printed in large type and well bound. Designed primarily for the Scotch Leaving Certificate, it is no less well adapted for English secondary schools.

(1) The passages for paraphrasing and analysis are well chosen. That the former class are confined to poetry, is, we think, a mistake. Nor do the model paraphrases wholly satisfy us. Thus: "many rich sank down, as in a dream, among the poor" is rendered "many of the rich were all at once reduced to poverty." The difficulty—"as in a dream"—is shirked. The *corrigenda* in Part III. are more varied and sensible than any similar list we have seen. In some half-dozen of them we fail to detect any error—"Some persons go the length

of saying that nobody ought to be made to do what he dislikes;" "In this department he has more extensive knowledge than any one living;" "On the excavation of Pompeii, the streets and houses were found just as they had been buried;" "The more haste the less speed" is a familiar saying, yet how few give heed to the advice it contains!"

(2) The Greek verse is taken wholly from Homer, the three tragedians, and Aristophanes. The passages average twenty-five lines, and are fairly easy. A heading indicating the context might have been added. There is full room for a second volume, taken from tragic choruses, lyric poetry, and the Anthology.

(3) The *differentia* of this book is that the passages are arranged in chronological order, and an appendix of historical notes will enable the students to master enough of Roman history to satisfy the Army examiners. The plan is well carried out, but it labours under the obvious drawback that the earliest passages are sometimes the hardest.

(4) "I have tried not to select *crucis* and catchy passages, but such as may aid pupils in acquiring a grasp of different authors." Prefixed are some useful hints on translation.

(5) "Lower German" consists of extracts for translation, in difficulty about the Hans Andersen stage, and a supplementary grammar with exercises. Between the first and second part there is no correspondence. We see little use in the Epitome of the Accidence. Suppose a pupil to be using Eve's or Sonnenschein's Grammar, he will be utterly muddled by finding here five declensions. The German songs, with music in the tonic sol-fa notation, are a pleasant novelty.

German for Beginners. By L. HARCOURT. Second Edition. (Whittaker & Co.)

Most German grammars try to do too much. We have long been looking for a German grammar which covers the elementary ground in a way that is thorough, scientific, and human; and such, we think, we have at last found in this work by Miss Harcourt. It is based, like Mr. Siepmann's recent book, on the "new method"—i.e., language first and grammar after, by induction. The extracts in the reader are thoroughly German in subject and feeling, and are chosen from the best modern authors; moreover, they are carefully graduated, advancing from such beginnings as nursery rimes, proverbs, and letters, through tales and easy poems, to stories and more difficult poems. (It should be noted that the earlier pieces are printed in Roman, and the remainder in German, type.) Grammatical difficulties are only allowed to find their way into the text very gradually. Thus, no separable prefix is found before Extract 72, the subjunctive is not admitted till 113, and we travel as far as Extract 85 before a subordinate clause is encountered. It is a sound principle—but one which teachers are tempted to neglect owing to the time needed for adequate preparation—to use every piece of text read as the basis of at least six various processes. Hints on such processes by which the grammar may be developed from the reader are collected by Miss Harcourt in Part III., which is detachable from the book, being mainly intended for teachers. This section seems to bear the mark of many years' experience, and we fancy it was quite wise to leave the arrangement of English sentences to be turned into German to the teacher. One knows the difficulty of getting young pupils to turn set English sentences into German with even moderate correctness. They are nearly always too hard. In a German grammar we know to be used by several leading schools an amount of grammar is repeatedly assigned to one exercise that could not be properly assimilated in four or five. The grammar is often out of all proportion to the reading and composition. Part II. is a summary of the elements of German grammar. The device of a lucid index arranged in columns, the second and third columns indicating the grammatical points, makes it easy for the teacher to select reading adapted to the grammar under consideration. All we find here is strictly developed from the reader, and in thirty sections (or twenty-seven pages) all the really salient points are dealt with. Rules are often not given, but the pupil is left to induce from examples (e.g. Genders of Nouns, page 127). We would make bold to say that in these well-selected thirty sections is an efficient, practical equipment, both for reading and composition, and that observation, trained by the method here followed, may safely be trusted to do the rest. One thing only seems to be wanted to complete an admirable book for beginners—a German-English and English-German vocabulary of all words used in the reader. In short, Miss Harcourt's "German for Beginners" is at once scientific and human: the method is inductive, and the matter is that of everyday life. We ourselves, both *a priori* and *a posteriori*, are convinced that good results follow, both immediate and in the long run, such a system of teaching German as is here set forth.

A History of England for Lower Forms. Part I.: *From Early Times to 1603 A.D.* By C. H. SIMPKINSON, M.A. (7×4¼ in., pp. 258, illustrated. Wake & Dean.)

A statement which accompanies this book tells us that it is written in the spirit of the recommendation in the Lambeth Conference Encyclical Letter as to the need of school-books giving a true account of the Church of England's part in the national history. We must confess, however, that we have not noticed any striking difference in this respect between this and other school histories. What difference there is is

better indicated in the preface, where our attention is called to the plan adopted by the author—viz., to relate the chief events and describe the great characteristics of our English history with considerable detail, while long periods of less interesting years are passed over in a few lines. There can be no doubt that this is the right plan to adopt for young pupils. The Bishop of Oxford, Canon Warburton, and Professor Tout have all revised the chapters, so we may be sure that the facts and their interpretation are accurate. The style of the narrative is easy, simple, and clear. The illustrations are good, and a large part of them consists of pictures of churches and cathedrals. The book will, we think, be found acceptable.

The Odes of Keats. With Notes and Analyses and a Memoir by ARTHUR C. DOWNER. (Clarendon Press.)

This is a most elaborate and conscientious edition of Keats's masterpieces. The odes here included only run to some two hundred and fifty lines, and the volume contains one hundred closely printed pages. The introduction on Keats's poetry is thoughtful, and it embodies the best criticism of the best critics. The analyses are over-elaborate, and try to explain what can only be felt. Thus, in the "Ode to a Nightingale," we read: "These opening lines do not make it perfectly clear how the numbness arises from joy in the bird's happiness, but Mr. Forman pleads . . ." Surely the thought is perfectly clear—exhaustion following on too intense delight—and Mr. Forman's plea is an impertinence. So in the second stanza, "O for a draught of vintage," a discussion of Keats's drinking habits is absolutely wide of the mark. We are prepared for some commentator telling us that the "beaded bubbles" are an allusion to the poet's liking for champagne. We hasten to add that these are not fair samples of Mr. Downer's analyses; but he is often helpful in his criticism—sometimes subtle and acute.

"The Pitt Press Series."—(1) *King Lear*. Edited, with Introduction, Notes, Glossary, and Index, by C. W. VERITY (6½×4¼ in., pp. xl., 260; price 1s. 6d.). (2) *The Merchant of Venice*. By the same editor (pp. xlviii., 212; price 1s. 6d.). (3) *Macaulay's Essays on William Pitt and the Earl of Chatham*. Edited, with Introduction and Notes, by ARTHUR D. INNES, M.A. (pp. xxxii., 220; price 2s. 6d.). (4) *A Selection of Lamb's Tales from Shakespeare*. Edited, with Introduction, Notes, and an Appendix of Extracts from Shakespeare, by J. H. FLATHER, M.A. (pp. xii., 154; price 1s. 6d.).

Mr. Verity has already won golden opinions from all sorts of teachers for his editions of English classics for schools, and his editions of "King Lear" and "The Merchant of Venice" will certainly tend to confirm his reputation. But it would seem that he has still to learn what an introduction to a play should do for a young student. It should, at any rate, *introduce* him to, and prepare him for, what is to follow; give him what will enable him to understand and appreciate the play; turn his attention in the right direction, and strike the key-note. A discussion of the date of the play does nothing of this. If the young student wants it at all—which we doubt—he does not want it till the play itself has become interesting to him. It should come as an appendix if it is to come at all. The same remark applies to the section on "sources of the play," and to almost all the other sections of the introduction. In the case of "King Lear," the only sections which, to any appreciable extent, *introduce* are those on the period of the action of the play and on the characters—though, in the latter instance, the detailed exposition should certainly come *after*, and not *before*, the play has been carefully read. In the edition of "The Merchant" we are given Lamb's Tale—which is helpful in its way, but not quite what is wanted. What we have said is in no way intended as a reflection on the sections of the introduction as things in themselves. They are scholarly, sound, and well written. But, good as they are, they cannot take the place of what schoolboys and schoolgirls need—something to prepare them for reading the plays with interest and intelligence. Nor will the difficulty be met by merely postponing the study of these introductions to the end. In the editions of both plays we are given a glossary. This is a good plan, for it leaves the notes free to deal only with exposition and illustration; and the glossaries themselves are good. But we may remark, in passing, that the time for studying a dramatic work of art is not the time for studying etymology. Mr. Verity is, it is true, sparing with his etymologies; but he might have been still more so. A further example of the use of a word is more helpful than its derivation, which, often enough, is only misleading to a beginner. For the notes we have nothing but praise, and that high praise. They are excellent in every way, and especially so in that they never lose sight of the fact that they are dealing with a masterpiece of literature, and that a dramatic work. They are neither over-full nor over-learned, and are always helpful. It is true that Mr. Verity, as he gratefully acknowledges, had Furness's splendid editions of the plays to go to; but his notes are not merely selections and abridgments—in the main they are the results of his own thoughtful study and critical insight. The appendices added at the end are well chosen and useful; and, with each play, we are given a good index. In short, in spite of the faults we have mentioned, we consider "The Pitt Press Shakespeare" to be a series which no University need be ashamed of publishing.

Mr. Innes has treated Macaulay's two essays with scholarly and well-

informed care. Our only doubt is whether such very faulty productions were really worth so much trouble. However, Mr. Innes has decided in their favour, and has evidently spared no pains to do justice to his subject. The critical part of the introduction is good, and the "Historical Survey" is even better; while the notes are full without overflowing, and always helpful. Macaulay's animus against the successful rival of Fox is so unflagging that Mr. Innes has had much to do in these notes in correcting false impressions, and showing how far there were any grounds for unkind innuendoes. As far as we have noticed, he has let nothing slip by which needed a note of warning. At the same time, the editor has shown himself quite able to appreciate the fine passages and brilliant pictures which Macaulay has given us in his account of the days and doings of Pitt. There is nothing of one-sidedness and denunciation in the notes. The edition is a thoroughly satisfactory one.

Mr. Flather's edition of six of "Lamb's Tales" is meant to be used as a reading-book and as a first step towards the introduction of the young to the study of Shakespeare's plays. The six tales here given are: "The Tempest," "As You Like It," "The Merchant of Venice," "King Lear," "Twelfth Night," and "Hamlet." Naturally the notes are few and brief, and mainly restricted to explaining the not very numerous hard words and phrases introduced by the Lambs. In the cases of the first three of the plays just named, further illustrative passages are given in Shakespeare's own words. We are not of those who are ardent admirers of the "Tales"; but we have nothing at present to take their place, and Mr. Flather has done his work adequately and simply.

"Black's School Shakespeare."—*A Midsummer Night's Dream*. Edited by L. W. LYDE, M.A. (7 × 4½ in., pp. xxxi., 109; price 1s. net. A. & C. Black.) "Moffatt's Plays of Shakespeare."—*A Midsummer Night's Dream*. Edited, with Introduction and Notes, by THOMAS PAGE. (7 × 4¼ in., pp. 198; price 2s. Moffatt & Paige.)

Both of these are fairly useful editions in their ways. But the former tries to say as little as possible, and says it in bold clear type. The latter tries to say as much as possible, and says it in type too closely packed for comfort. Mr. Lyde's introduction is fairly adequate; but why he should devote eight pages to telling the story of the play, when Shakespeare has told it so much better, we cannot imagine. The notes are sensible, but rather bare and thin, and too much devoted to matters of ordinary everyday grammar—not peculiarly Elizabethan. However, it is a refreshing change to find too little annotation instead of too much; and the book is certainly beautifully printed. Mr. Page has given us a good deal which to our mind is superfluous, and, if this were removed, we should have a very satisfactory edition of the play left. We do not want, in an edition of this kind, the chief events of Shakespeare's life, nor an account of his works as a whole. It is superfluous to give us a list of passages to be learnt by heart and another of familiar quotations. But it is worse than superfluous to give us twenty-three pages, in small type, on the language of the play, meaning thereby grammar—and most of that not peculiarly Elizabethan; and the same may be said of the etymological dictionary (of seventeen closely printed pages) giving the derivations of some hundreds of words, most of which are quite common. Nor do we want an example of the grammatical analysis of sentences. The introduction itself, with the literary notes attached, we can praise heartily. The former tells us all that need be told, and the latter are well selected. The miscellaneous notes on the text also are very satisfactory in many ways. But we cannot say that we approve of the plan of printing the text with a broad margin on one side "for the student's own notes." The young should be taught to respect books; and this will not be done by inviting them to scribble on the margin, which would soon make the book deplorable to look at. Mr. Page has evidently taken great pains with his edition, and much that he gives us is so satisfactory that we are sorry we cannot give the result greater praise.

A Study of English Words. By JESSIE MACMILLAN ANDERSON. (7¼ × 5 in., pp. 118. American Book Co.)

This is a capital little book, intended to serve "as a stepping-stone from grammar to rhetoric and the history of English literature." But Miss Anderson is mistaken in supposing it to be "the first effort to bring within school-room scope and school-book form the latest discoveries of language students about English." Many such books have been published in England and in Germany, and, unless our memory deceives us, more than one in America. But this we will say, that of all the small books on the subject which we know this is one of the best. Here and there, it is true, matters are not quite up to date. "Grimm's Law," for instance, though interesting historically, is not now accepted without many modifications; and there are other "laws" whose existence might at least have been referred to—if the subject was to be touched upon at all. But it is not the phonetics or the etymology of the book which has interested us most. It is the never-failing consciousness in the author's mind that language is, before all things, the means employed to express thought and feeling, and that this fact is the best clue to guide us through the mazes of the subject. Neither phonetics alone nor history alone is sufficient. We must also have

some knowledge of how the human mind endeavours to express itself in words. The character of the contents will best be shown by giving a list of the topics treated. We give these in the order of the book:—General Principles of Language-Growth; Origin and Growth of English; Greek, Latin, and French Elements in English; Growth and Change in Form of English Words; The Spelling of Latin-English; Growth and Change in the Meaning of Words; Latin and Saxon-English; The Artist's and the Scientist's Use of Words; Synonyms; Rhythm. The last three are specially well dealt with; and particularly helpful and suggestive are the sections on the associations which attach themselves to words and considerably modify the impressions which they convey. Perhaps a little more stress is laid on the value of a knowledge of derivation than is quite necessary. Outside the body of professed scholars and men of science the derivation of words has next to no influence on those who use the language; and when it has any influence, this is, as often as not, misleading. But we are sure Miss Anderson would condemn as heartily as we do the pernicious idea, still prevalent among editors of English classics, that you explain a word by giving its derivation—at best you but tell what the word first meant. The book is written simply and clearly; the examples are well chosen, and the printing is refreshingly legible. We cordially recommend the book for those who are about to pass from the ordinary descriptive grammar of English to a wider study of the language. By the way, Trench's book is called "The Study of Words," not "Lectures on Words," as on page 76.

"Selections from the Poets."—*Wordsworth*. By ANDREW LANG. (Longmans.)

Wordsworth, perhaps, more than any other poet of the first rank, lends himself to selections, ranging as he does from "My heart leaps up" to lines of which "A Mr. Wilkinson, a clergyman," is hardly a parody. Of the half-dozen which have appeared during the last two or three years, Mr. Lang's is the prettiest, thanks in no small part to Alfred Parsons' illustrations. An index of first lines would be a grateful addition.

Chambers's English Dictionary. Edited by THOMAS DAVIDSON. Price 12s. 6d. (Chambers.)

The editor's endeavour has been to provide the plain man with a working dictionary that shall answer the questions that arise in everyday life, and, as far as we have been able to test it, he has succeeded in his object. With a vocabulary increasing even faster than the population it is not to be expected that the most industrious and wide awake editor can keep pace. For instance, in spite of a Royal Commission and books and pamphlets innumerable, "secondary" education has not found its way into the dictionaries. Mr. Davidson gives us "scorchers," but not "coasting." We have "X rays," but not the "X-rays" or "radiography," nor, to go back to the brewers, Bass's "entire." We miss "kine-matograph," "animatograph." The derivations are generally sound; the pronunciation is, to say the least, inadequate. The *ful*, in words like *unlawful*, is given as *fool*.

Principles of English Grammar for the Use of Schools. By G. R. CARPENTER. (Macmillan.)

It has been our misfortune lately to fall foul of several English grammars, one or two bearing distinguished names, and it is an agreeable change to recommend this unpretentious manual by a professor in Columbia University, as simple, logical, and thoroughly practical. It proceeds on the synthetical method: we have first the parts of speech, then accidence, then syntax, and, lastly, analysis of sentences. Historical grammar is kept well in the background, the author's object being that the pupil may have afterwards nothing to unlearn. Once and again we find ourselves dissenting as when *my*, *thy* are classified as pronouns in the possessive case, and when *climbing* in "I saw him climbing" is termed a participial infinitive; but these are minor points, and generally the doctrine is thoroughly sound, and the method of imparting it that of a practical teacher.

Just Forty Winks. By HAMISH HENDRY. (Blackie.)

This is one of the many stories which seem to owe their origin to "Alice in Wonderland." Old nursery-time acquaintances, such as Old King Cole and Jack Horner, figure in a dream pageant with talking beasts and birds. Children will be amused by the oddities of the story, and Miss Bradley's illustrations are very clever and spirited. The book is nicely got up.

From Messrs. Blackwood we have received the following additional volumes of their series of "Ancient Classics." Attention was called to the convenient form of these reprints in December, 1897:—*Pliny*, by A. CHURCH, M.A., and W. J. BRODRIBB, M.A.; *Euripides*, by WILLIAM BODHAM DONNE; *Juvenal*, by EDWARD WALFORD, M.A.; *Aristophanes*, by the Rev. W. LUCAS COLLINS, M.A.; *Hesiod and Theognis*, by the Rev. JAMES DAVIES, M.A.; *Plautus and Terence*, by the Rev. W. LUCAS COLLINS, M.A.; *Tacitus*, by WILLIAM BODHAM DONNE; *Lucian*, by the Rev. W. LUCAS COLLINS, M.A.; *Plato*, by CLIFFTON W. COLLINS, M.A.; *The Greek Anthology*, by LORD NEAVES; *Livy*, by the Rev. W. LUCAS COLLINS, M.A.; *Ovid*, by the Rev. A. CHURCH, M.A.; *Calpurnius, Tibullus, and Propertius*, by J. DAVIES,

M.A.; *Demosthenes*, by the Rev. W. J. BRODRIBB, M.A.; *Aristotle*, by Sir ALEX. GRANT, Bart., LL.D.; *Thucydides*, by the Rev. W. LUCAS COLLINS, M.A.

Bacon's *British Empire Tree* illustrates in pictorial form the growth of the British Empire. The constituents of the United Kingdom form the root; India, America, Africa, &c., the branches; and the minor States the branchlets. A rough notion of the extent of the Empire is given, but respective sizes and dates of acquisition do not admit of arboreal illustration.

Bacon's *Picture Lessons in Natural History* professes to give the comparative size of animals; but the drawing is very crude (the elephant's tusks spring from his trunk), and the seal is about the size of the rabbit, and half the size of the otter.

FRENCH READING BOOKS.

(1) *Quand j'étais petit*. By LUCIEN BIART. With Notes and Vocabulary by JAMES BOIELLE. (Cambridge University Press.)

(2) *Les Femmes Savantes*. By MOLIÈRE. Edited by ALCÉE FORTIER. (Isbister & Co.) (3) *Achille et Patrocle*. By LÉON CLAUDEL. Edited by ÉMILE B. LE FRANÇOIS. (Blackie.)

(1) A prettily told tale, with brief notes and a full vocabulary, suitable for fourth-form work. (2) Professor Fortier gives a fairly full biography of Poquelin, and some criticisms on this play, and on "Les Précieuses Ridicules." Short notes, mainly translations of difficult phrases, are added. (3) A short story of a soldier under the first Napoleon, containing notes, a vocabulary, and fairly copious exercises for re-translation, according to the now common and useful style of a third-form reader.

(1) *The Fairy Tales of Master Perrault*. Edited by W. RIPPMAUN, M.A. (2) *Remi et ses Amis*. A selection from "Sans Famille," by MALOT. Edited by MARGARET DE G. VERRALL. (3) *Quand j'étais petit, histoire d'un enfant racontée par un homme*. Part II. By LUCIEN BIART. Edited by JAMES BOIELLE. (4) *La Fortune de d'Artagnan*. An episode from "Le Vicomte de Bragelonne," by Dumas. Edited by ARTHUR R. ROPES, M.A. ("Pitt Press Series.") (5) *Exercises in French Composition*. Based on MÉRIMÉE'S "Colomba." By A. C. KIMBALL. Part II. (Boston, U.S.A.: Heath & Co. London: Isbister.) (6) *New Grammatical French Course* (Elementary, 1s.), and *New Grammatical French Course* (Intermediate, 2s.). By ALBERT BARRIÈRE. (Whittaker & Co.)

(1) The text, which has to some extent been modernized, consists of eight well-known fairy tales, and it will be found very suitable for elementary classes (age about twelve to fourteen). Mr. Rippmann does not "share the objection to notes on syntax which prevail in some quarters," and has not hesitated to introduce a large number of them. We regret that he gives no reason for his belief in notes on syntax. The argument against introducing them is a very strong one: it is that the teacher is the only person competent to judge what grammar, and what amount of grammar, is to be taught to his class. We expect that most teachers will consider the editor's notes on the subjunctive, the plurals of compound nouns, the construction of *faire* with an infinitive, the omission of *as*, and the like, somewhat too advanced for pupils in the elementary classes for which this book has been prepared. Of far more importance from the teacher's point of view is the vocabulary, and this has been excellently done. Grammatical notes can safely be ignored, but an incomplete vocabulary is a source of perpetual annoyance in the class-room. A useful list of irregular verbs has been added for the sake of reference.

(2) A useful text for intermediate forms. The notes are short, and, apart from those having reference to syntax, are to the point. The vocabulary might have been made more complete. We find in the text: "J'ai la tête trop sensible depuis que Garofoli m'a tant frappé dessus." The latter part of the phrase is difficult, there is no explanation of it in the notes, and *dessus* in the vocabulary is translated "above," "from above," "from over," none of which meanings can be applied. All the tense-meanings of *devoir* ought to have been given, and we should like to have seen the more difficult tense-forms, such as *devrais*, *aïlle*, *mimes*, reproduced in the vocabulary, with their infinitives attached. The mechanical process of hunting up these words in a grammar is about as educative and stimulating as the picking of oakum, and is not calculated to produce a fiery enthusiasm for the work in hand.

(3) The text seems to us somewhat difficult for elementary classes, and we are by no means sure that this history of a somewhat girlish French boy of ten will interest English boys in intermediate classes; but, as we have not used the book, we will not commit ourselves to a definite opinion. Advanced students will certainly find much of it delightful reading. A number of the notes strike us as superfluous. Half a page, for instance, is devoted to the agreement of the past participle. "An endeavour has been made," says the editor, "to make the vocabulary . . . a small dictionary, where the student will have to exercise his own discretion as to choice of meanings to suit his text." Our own experience is that the young student has an

aggravating way of picking out the wrong meaning and of treasuring it ever afterwards. In some cases it would be impossible for him to know which meaning to select. In the text we have *l'abbé Hugon* (75), and in the vocabulary "*abbé*: vicar, priest, abbot." There are some omissions in the vocabulary, and on page 77, line 6, a misprint—*ma faisaient*.

(4) This story deals with one of the most notable exploits of the worthy musketeer, and will make a very interesting Reader for more advanced students. The notes are carefully done and to the point. No vocabulary.

(5) These are continuous pieces of prose. They will help to fix the vocabulary of "Colomba" in the pupils' memory, but the exercises are not made to illustrate grammatical rules, and, if the pupil is allowed to blunder through them by himself, he will contract a habit of writing slipshod French which it will be difficult to eradicate.

(6) It is interesting to note that the publishers still find it worth their while to produce new editions of this old-fashioned text-book. The method, if nothing else, is venerable: (1) rule; (2) French sentences; (3) English sentences and questions on the grammar. The voice of the modern language reformer is still the voice crying in the wilderness. In the elementary course some incomplete rules on pronunciation are given, and we are told that *est* = *é*. Otherwise the work has been carefully done.

"Modern French Series," advanced texts—(1) *Nouvelles Contemporaines*. With Notes and Biographical Sketches by J. DUHAMEL. Price 2s. net. (2) *Sacs et Parchemins*, par Jules Sandeau. Edited by B. MINNSEN. (Rivingtons.)

Consists of eight short stories by Theuriet, Claretie, Legouvé, Coppée, and less-known writers, averaging about ten pages each. The stories are interesting and full of idiomatic phrases. The notes on words like *gendarmérie*, *Président de la République*, *Sainte Pélagie*, give useful information not easily found in books of reference. There are a good number of slips and misprints: *voix cassante*, "sharp vice"; "love of God," for "law of God"; "Phædra," for "Phædrus"; "*L'Hôtel des Invalides*, the English Chelsea Hospital"; *Fleur* is not the Latin *florens* (*sic*), but from the German *flür* (*sic*); *liacul*, for *lincol*: "opium is the juice of the semiferous poppy," &c. The English language may have susceptibilities unknown to the French, but it makes no bones about "a poor devil."

(2) Sandeau's novelette is very familiar to all in its dramatized form, *Le Gendre de M. Poirier*. That the style is excellent goes without saying, but we doubt whether the plot will greatly interest English schoolboys. M. Minssen has done his part well. Now and then we desiderate a note. Thus, on page 4, *les yeux bien fendus* and *un caractère positif* are likely to grieve the average pupil.

FRENCH PRONUNCIATION.

(1) *The Versin Phono-Rhythmic Method, French and English*. By M. and J. VERSIN. (Lippincott.) (2) *L'Abécdaire of French Pronunciation*. By GABRIEL LEPRÉVOST. (Griffith Farran, Browne, & Co.)

Both these books may be found useful to a certain degree, but neither of them contains any real "phonetics," though the word is used often enough. The first is a manual specially intended for singers, and contains very full and sensible explanations and diagrams, but still only valuable in connexion with oral lessons. The second book is also of little use apart from a teacher. It chiefly consists of lists of words for practice in pronunciation; but no attempt is made to explain the sounds more difficult to Englishmen. There are useful hints on the elision of the mute *e*, division of syllables, and connexion of words.

FRENCH GRAMMAR AND EXERCISES.

(1) *The Beginner's French Grammar and Exercises*. By H. R. HARPER. (Rivington.) (2) *Nelson's Second French Book*. (3) *Cassell's Lessons in French*. By LOUIS FASQUELLE. Two volumes and a key.

Little need be said of Mr. Harper's book. He has found the beginner's book too hard, and tries to provide something easier. The book consists of easy phrases in French, with equally simple English phrases for re-translation, and a few grammar rules. The sentences are all detached. *Nelson's Second French Book* gives easier syntax rules and irregular verbs, with the usual exercises of detached sentences thereon. There are also a few pieces of continuous prose for reading and two vocabularies. *Cassell's Lessons* are similar in style, but are harder and fuller. They are reprints from the pages of the "Popular Educator," and as some hundred and forty thousand copies have been sold, it is evident that volumes of detached sentences are still popular. A key is provided, that the books may be used without a master.

Primer of French Philology and Literature. By E. TH. TRIÈ. (Williams & Norgate.)

With all respect for Mr. Triè, we cannot think it wise to attempt to compress the information on French philology necessary for the Scotch Leaving Certificate into forty small pages. This leaves about sixty for

a survey of French literature. Still, within its limits, the book is brightly written and its information clearly set out.

Mr. Nesfield has sent us a voluminous reply to the criticisms on his "English Grammar," for which we regret that we cannot find space. Only one of his strictures on our "hasty review" needs comment. "I never said that Gray made *lea* rime with *day*, and I never mentioned *day* at all." We accept the correction; but, if readers will turn to the paragraph (page 288), they will see that our reviewer's misapprehension was not unnatural.

PUBLICATIONS RECEIVED.

- ABBOTT, JONES & CO.—N.U.T. Edition of New Code, 1898. By J. H. Voxall and T. A. Organ. Price 1s. net.
- AMERICAN BOOK CO. (New York).—Applied Physiology, including the Effects of Alcohol and Narcotics. By Frank Overton, A.M., M.D. Advanced Grade. Price 80 cents.
- EDWARD ARNOLD.—Macaulay's Essay on Addison. Edited, with Notes, by Herbert Augustine Smith, Ph.D. Price 2s.—Concrete Arithmetics. Scheme B. By R. Lishman. Standards I., II., III., IV., and V., 2d. each; Standards VI. and VII., 3d. each.—Tellers of Tales. Edited by Richard Wilson. Price 1s. 6d.—Standard English Classics: Macaulay's Essay on Addison. Edited by Dr. H. A. Smith.—College Series of Latin Authors: Plantus, Captives and Trinummus. Edited by E. P. Morris. Price 5s. 6d.—Caesar. Book I. By Arthur W. Roberts.—Pope's Translation of Homer's Iliad. Books I., VI., XXII., and XXIV. Edited by W. Tappan.

- T. THOMPSON.—Knowledge, for April. Price 6d.
- UNIVERSITY CORRESPONDENCE COLLEGE PRESS.—Milton: Paradise Regained. Edited by A. J. Wyatt, M.A. Price 2s. 6d.
- FREDERICK WARNE & CO.—Stories from Dante. By Norley Chester. Price 3s. 6d.

CALENDAR FOR MAY.

(Items for this Calendar should be sent in before the 24th of the month.)

- 2 and following Mondays.—"Elocution and Voice Production," by Bernard P. Macdonald, 5.15 p.m. (College of Preceptors' Lecture Course.)
- University College, London. Faculty of Medicine opens.
- 3.—Parents' National Educational Union. Lecture, "He Prayeth Best who Loveth Best," &c., by Canon Wilberforce, 5 p.m., at 12 Kensington Palace Gardens.
- University College, London. First of a Course of Lectures on "Form and Style in English Poetry," by Professor W. P. Ker, 10 a.m.
- University College, London. First of a Course of Lectures on "Wages in the United Kingdom in the Nineteenth Century," by A. L. Bowley, 5.30 p.m.
- 3, 5, 10, 12, 17, 19.—"The Teaching of the Humanities (History and Literature)," by Dr. J. J. Findlay. (College of Preceptors' Lecture Course.)
- 3, 10, 17.—Lectures on "The Moral and Political Philosophy of John Stuart Mill," by W. H. Fairbrother, M.A., Lecturer in Philosophy, Lincoln College, Oxford, at 8.15 p.m., at London School of Ethics, Tavistock Place, W.C.
- 3, 10, 17, 24.—Royal Institution, Albemarle Street, 3 p.m. Four Lectures on "The Historical Development of Europe," by Samuel R. Gardiner, M.A., D.C.L., LL.D.
- 4.—University College, London, 4 p.m. First of a Course of Lectures on "Celtic Art," by Mr. J. Romilly Allen.
- 5.—Royal Institution, 3 p.m. Lecture on "Sir W. Scott," by the Rev. Canon Ainger, M.A., LL.D.
- 5, 12, 19, 26.—Sesame Club. Lectures on Wagner's "Der Ring der Nibelungen," by Mr. G. C. Ashton Jonson, at small Queen's Hall, Langham Place, 8.45 p.m.
- 6.—Royal Institution, 9 p.m. Lecture on "Living Crystals," by Mr. E. A. Minchin.
- 6 and following Saturdays.—"Education in its Ethical and Political Aspects," by Dr. J. J. Findlay, 10.30 a.m. (College of Preceptors' Lecture Course.)
- 7, 14.—Royal Institution, 3 p.m. Lectures on "Programme Music," by Sir Walter Parratt.
- 10.—St. Andrews Entrance Scholarship Examinations begin.
- High School for Girls, Norland Square, Notting Hill, 8 p.m. Lecture on "Some Characteristics of Victorian Literature," by Mr. J. N. Hetherington. (Teachers' Guild.)
- 10, 11, 12, 13.—Parents' National Educational Union Conference, Portman Rooms, Baker Street, 10.30 a.m. to 1 p.m. each day.
- 11.—Clapham Modern School, Clapham Common, 8 p.m. Lecture on "Education in Ontario," by Professor W. H. H. Hudson, M.A. (Teachers' Guild.)
- "The Relation between Physical and Moral Training," by Rev. Canon E. Lyttelton, 8.15 p.m., at Portman Rooms, Baker Street.
- 11, 12, 18, 19, 25, 26.—University College, London. Public Lectures by the Rev. E. Moore, on Dante's "Purgatorio."

- 11, 18, 25.—Lectures on "Greek Literature," by Arthur Sidgwick, M.A., LL.D., Corpus Christi College, Oxford, 8 p.m., at London School of Ethics, Tavistock Place, W.C.
- 12.—Lecture on "The Direction of the Will and Regulation of the Desires," 5 p.m., at 15 Belgrave Square.
- 12, 19, 26.—Royal Institution, 3 p.m. Three Lectures on "Natural Philosophy," by the Right Hon. Lord Rayleigh, M.A., D.C.L., LL.D., &c.
- 13.—University Hall, Gordon Square, W.C., 8 p.m. Discussion of some of the "Conference Subjects." (Teachers' Guild.)
Royal Institution, 9 p.m. Lecture on "Recent Experiments on certain of the Chemical Elements in relation to Heat," by Professor W. A. Tilden, D.Sc., F.R.S.
- 14.—Lecture to Children, "The Interest of Common Things," by Professor Hulme, 3.30 p.m., at 29 York Place, Baker Street.
- 15.—Post Translations for Competition.
- 20.—Royal Institution, 9 p.m. Lecture on "The Early Life and Work of Shakespeare," by the Right Hon. D. H. Madden, LL.D.
- 21, 28.—Royal Institution, 3 p.m. Two Lectures on "Biology of Spring," by J. Arthur Thomson, M.A.
- 22.—Post all School News, &c., and all Advertisements for May issue.
- 24.—The High School, Clapham, 8 p.m. Lecture on "Browning's Studies of Pictures and Painters," by Professor H. C. Shuttleworth, M.A. (Teachers' Guild.)
- 24, 27, 31.—"The Teaching of Mathematics," by Dr. J. J. Findlay, 5.15 p.m. (College of Preceptors' Lecture Course.)
- 28 (noon).—Latest moment for receiving urgent prepaid advertisements of Posts Wanted or Vacant for May issue.
- 31.—Royal Institution, 3 p.m. Two Lectures on "Literary Criticism in Greece," by Professor S. H. Butcher, LL.D., Litt.D.

The June issue will not be ready till FRIDAY, JUNE 3.

THE PRIVATE SCHOOLS' ASSOCIATION held their Conference at Birmingham. On the subject of the equipment of private schools, Mr. G. Brown (St. John's College, London) said that they, as private teachers who were so seriously involved, and whose capital was heavily at stake, should keep their eyes open to see that, in the changes which were about to come, no injustice was done to them. It was acknowledged by all statesmen that private enterprise had been carrying on a grand work in secondary education. Universities admitted that many of their best pupils came from private schools, and some of our best statesmen had acknowledged that they received the better part of their education in private schools. They, as private teachers, were not opposed to the reorganization of secondary education, if it could be shown that the country needed it. They asked no favour, but they claimed and demanded justice. The verdict of the Royal Commission, which recommended that private schools should be preserved, was a verdict to which the Commission had been compelled to come by the evidence placed before it. Was the country prepared to stand by that recommendation? The Science and Art Department was a usurping Department. It had in the past not merited, or at any rate not earned, the confidence of the people. If the schools needed reorganization, let the authorities say so, and let the changes be by Act of Parliament, and then no one could complain. Already twelve counties had been established as local authorities for the control of secondary education, and other counties had been notified to do so, and unless some stop was put to this quickly it would be too late. The effect on private schools was killing, because all the advantages offered to other schools were denied to private schools, however efficient. All efficient schools should be treated alike, and the grants made to pupils in other schools should be made to those in private schools. Mr. Bayley (Wellington College, Shropshire), the President, said that they were in competition with the rest of the world in education. The higher-grade Board schools were thoroughly equipped as regarded apparatus, books, and teachers. There were many School Board schools which were in many respects also equipped, but they lacked the qualified teachers. They had, he believed, one adult certificated teacher for 115 pupils, whereas in private schools they had an adult teacher for every fourteen or fifteen children, but they had not as yet all their teachers trained for their work. The Government should do what it could to remove all barriers which prevented the best of the assistants from undertaking work amongst the private schools. The Government would be justified in demanding the same cubic space per child from them as was expected from Board schools. The Government of England lacked that spirit of justice which should belong to a Christian nation. He challenged the Government to take him to any schools, however much they might be endowed, which did better work than private schools which he could point to. The moment they got a Registration Bill they would have a *status* such as the doctors had, and the Government would have to acknowledge them. He called it very un-English and unfair that they were not able to get a Registration Bill.

THE ANTWERP CONFERENCE ON COMMERCIAL EDUCATION.

By CLOUDESLEY BRERETON.

THE International Congress on Commercial Education was held this year at Antwerp. The choice was a happy one. Not only is the city one of the principal *entrepôts* of Continental trade, but it is specially remarkable in the annals of commercial education as the first town to found a veritable University of Commerce, which has served as model to all institutions of a similar nature that have since been erected in other countries.

The English contingent at the Congress was far the largest—the Government, the London Chamber of Commerce, the London County Council were all represented, not to mention a certain number of educational bodies of Yorkshire and Lancashire. The preponderance of the English element was recognized by the placing of two English presidents on the committee in place of the single representative accorded to other countries.

Four questions were set down for discussion: (1) The Utility of a complete Commercial Education; (2) The Extent of Commercial Instruction proper to Primary Education, (3) to Secondary Education; (4) The Nature of Higher Commercial Education.

Several speakers on the first question protested against early specialization. Your correspondent read a paper in French on "Higher Commercial Education in France." In the course of a fourfold inquiry in the scholastic and official worlds, among parents and business men, he had come to the conclusion that the higher commercial French schools had been of great service to that country. He showed that at the outset the idea of systematic commercial teaching had encountered as much active and passive opposition as it did to-day in England, but that, thanks to the exertions of such a thorough-going advocate as Monsieur Siegfried, the great mass of the mercantile world had been won over to the cause. What England wanted was that one of her merchant princes should follow the example of Monsieur Siegfried, and take up the crusade in London, or one of the business centres of the North.

On the second question the great majority of the *orateurs* were agreed that primary instruction should remain intact. Mr. Barlow, of London, said one was anxious in England to give the young Sandford and Merton of to-day a primary education which should be practical without specialization. This was denied by Mr. Nixon, of Manchester, who said there were English children of eleven and twelve taking up shorthand and typewriting. No doubt this was wrong, but it was done in deference to the wishes of the children. Strange argument this, to consider the children to have arrived at such years of discretion as to be capable of choosing for themselves! Mr. Layton, of Antwerp, rose to protest against a preposterous scheme that had been fathered on to the Bradford Chamber of Commerce, and to which the Associated Chambers of Commerce had consented to act as sponsors. This scheme, with a list of subjects long enough to satisfy the most exacting "faddist," was said to be based on the curriculum of the Preparatory School (non-existent!) of the Antwerp Institute. The latter is only open to students over seventeen, and this scheme was proposed as a proper standard of work for boys of fourteen! As the ideal of future ages the scheme is magnificent, but as the "would-be" practical proposal of a set of hard-headed business men it is simply deplorable. In commercial education, no doubt, the schoolmaster without the merchant may not be sufficiently practical, but the merchant without the schoolmaster seems even less so. Things are better managed in Germany, where, as a speaker informed the Congress, the commercial intermediate instruction is arranged by a joint board of pedagogues and business men, who regard each other's advice as indispensable in the drawing up of the curriculum. The English educational expert may well envy his German *confrère*, who is not without honour even in his own country.

The rest of the debate was merely a series of condemnations pronounced by the various speakers against any attempt to specialize in a commercial sense primary education.

The next day was devoted to the question of "commercializing" secondary education. Mr. Fabian Ware quite carried the meeting with him in a fervid profession of faith as to the real importance of education in the true sense of the word. He began by attacking a paper of a commercial educationalist *d'outrance*, who hailed from the Lycée Gala, Galashiels. (Surely a *lycée* is strictly a Government school, to which Eton or one of the twelve "public schools" might be regarded as equivalent; but this small cloth-manufacturing town can at best have but a "fustian" *lycée*?) Mr. Ware was, however, no foe to commercial specialization at the proper time. At Bradford, for instance, boys could specialize after the age of sixteen. Herr Stegemann said they had over two hundred intermediate commercial schools in Germany. There were seven in France, according to a French delegate, who complained of the discredit attached to the "modern" degree. The recipient was nicknamed "Bachelor of Grocery" (or, as we should say, "Licentiate in Tea-dealing"). Monsieur Siegfried summed up the discussion. Among all nations, it seemed to be felt that secondary education should not receive a commercial specialization,

but alongside of it in certain countries there did exist special schools of commerce for forming the rank and file of the commercial army.

Saturday's debate was devoted to expounding the utility of higher commercial education. At the request of Mr. Morant, who said the English delegates had come there to learn, speaker after speaker came forward and testified to the advantages of such an education.

Never was there such a cloud of witnesses, never such a consensus of favourable testimony. If the English delegates had but ears to hear, their ears should be ringing still with the evidence which was dinned into them. Herr Stegemann described the new Commercial University that was about to open at Leipzig. He gave an interesting account of the movement that led to its foundation. An inquiry was made among some five hundred merchants. Over four hundred were found favourable to the idea of a Commercial University, and only some fifty hostile or neutral. Students would be free to come and go as they liked; every subject would be brought up to date and left there; they had no notion of lowering the standard at first, to attract students, or of going out into the highway and hedgerow to compel them to come in. The standard was set high because they believed they were fulfilling a want, and they were not deceived in their belief: they had already had two hundred applications, although the building was not yet open. Happy Germany, where knowledge is assessed at its true value! Other speakers insisted on the excellent training afforded by these colleges to professors of commercial subjects, or to those entering the consular service. The Belgian Government, by throwing open many consular appointments to students leaving the Antwerp Institute, has recognized that the diplomate is not only despatched abroad "to lie for his country," but also to send back "home-truths" about defects in his country's commerce. In these days, when the diplomate becomes more and more a simple telegraph operator in close connexion with the Foreign Office, the commercial side of his duties tends to grow in importance.

To sum up: the Congress, though composed of those interested in commercial instruction, showed itself jealous of the rights of general education, and, as regards the higher commercial education, it is devoutly to be hoped that the English delegates "found salvation."

JOTTINGS.

THE Delegacy of Local Examinations of Oxford University, recognizing that masters and mistresses of schools may wish to qualify themselves for the Diploma in Education offered by the University, but may be prevented by their professional engagements from attending during term the course of practical work and instruction which is an essential part of the scheme, propose to hold another vacation course similar to those in August, January, and April last. This course of supervised lessons, criticisms, and lectures will last for four weeks, and will take place between the dates of August 6 and September 3, 1898. The fee for the course will be £7. 10s. Applications should be sent, before July 1, to Mr. M. W. Keatinge, M.A., 3 Keble Road, Oxford.

IN the Queen's Bench Division of the High Court, before Mr. Justice Wright, without a jury, an action was tried in which the Church of England Schools Company sued a clergyman named Merry for £20, school fees in lieu of notice of withdrawal of his two sons, whom he had refused to send back to the school, without giving the regular quarter's notice. The defendant made allegations of cruelty and incompetence against the management of the school. His lordship held that the headmaster of the school had been proved to have committed an error of judgment sufficiently grave to justify him in giving judgment for the defendant, with costs.

ACCORDING to the last report of the Cambridge Syndicate the December examination was held at 229 centres for boys and 197 for girls, boys and girls including 19 new centres each. The total number of candidates entered last year was 14,884, as against 14,416 in 1896 and 370 in 1858. In the 1897 Preliminary Examination 1,283 boys under fourteen were examined, 20 per cent. passing in honours out of 80.5 per cent. total passed; while among the 736 girls of the same class 7.1 per cent. passed in honours out of 56 per cent. total passed. 75 per cent. of the 1,206 boys above fourteen examined passed, and 80.5 per cent. of girls above fourteen passed out of 843 examined. Of 4,234 Junior boys under sixteen, 32.5 per cent. passed in honours out of 74.4 per cent. total passed; while 2,187 Junior girls under sixteen showed a result of 71.5 per cent. total passed, 23.3 per cent. passing in honours.

OF Junior boys between sixteen and eighteen, 57.7 per cent. passed out of 944 examined, and of Junior girls of the same age 62.4 per cent. passed out of 836 examined. 762 Senior boys under nineteen were

examined, 23 per cent. passing in honours out of 69.4 per cent. total passed; while 1,221 Senior girls under nineteen yielded 17 per cent. passed in honours out of a total passed of 73 per cent. 54 Senior boys above nineteen were examined, 24.1 per cent. passing; while of 84 Senior girls above nineteen examined 35.7 per cent. passed.

HOLIDAY courses still multiply. We have received most attractive programmes from Marburg and Jena. At the latter University, a special course in German for foreigners is held from August 3-23; and in the former there are courses in French, German, and English, both in July and in the latter part of August and beginning of September.

ON May 2 the London School of Medicine for Women begins its summer session. On that date its extensive new laboratories will be opened for the accommodation of students. These consist of large well-ventilated chemical and physiological laboratories, with a dissecting room at the top; all three rooms run the entire length of the building, can accommodate fifty students at once, and have lecturers' rooms and dressing and store rooms attached. The building has cost £7,000; it will be equipped with all the latest apparatus and furniture at an additional cost of £3,000. In the basement there is space for a physics laboratory, which can be fitted up when means will permit. This is the first of the three new buildings of the London School of Medicine for Women which the Council contemplate erecting; it lies on the east side of the garden of the present school, adjoining Wakefield Street. The second building, lecture-theatres, cloak-room, and library, will be on the north side of Handel Street. The third building, comprising common room, refectory, secretary's room, Board room, will stand on the east side of Hunter Street, from which the entrance will be made. The new buildings have been made necessary by the marked increase of the number of students, the last session beginning with a hundred and sixty-three. The Council are to be warmly congratulated on their distinguished success. It is good to see that room for a tennis-court—only one—has been left in the pleasant old garden of 30 Handel Street.

M. PAUL BARRIER writes from University College, Cardiff, as *délégué* of the Alliance Française, to call the attention of our readers to the courses the professors of the University of Paris will deliver to foreign students during the months of July and August. He says: "A feature of these courses on French language and literature, elocution and pronunciation, &c., of great professional value to English teachers, is that at the completion of the courses a board of professors will examine orally, as well as by written papers, those candidates who desire to sit for the *diplôme élémentaire* or for the *diplôme supérieur*."

THE *diplôme élémentaire* is awarded to candidates who are able to understand, to speak, and to write French; the *diplôme supérieur* is awarded to such of the candidates as shall have attended the various courses, and who, besides knowing French grammatically and speaking correctly, are able to teach it abroad. About two hundred lectures, lessons, &c., are included in the two months' courses, the inclusive fee for which is £6. Students may choose shorter courses, fee accordingly. Last year some fifteen English teachers obtained the diplomas. The lectures will be varied with a social and recreative programme.

IN a recent issue of the *Courrier de Londres* is published an eloquent appeal by M. George Petilleau, of Charterhouse School, Godalming, honorary president and *doyen* of the Société Nationale des Professeurs de Français en Angleterre, on behalf of a fund for the relief and assistance of the secretary of the Society, M. Gabriel Leprévost, who has been stricken with blindness beyond hope of recovery. M. Leprévost is known not only as a professor of French and as secretary of the Society, but as a poet and author of works of high literary merit. He has given painstaking and unsparing service to the Society, and his industry has hastened the blow which, threatened for some time past, has now fallen upon him. The effort set on foot by M. Petilleau is directed to the object of providing M. Leprévost with a small pension. Subscriptions are received at the office of the Society, 20 Bedford Street, Strand; or at Messrs. Coutts' Bank, in the Strand; by M. Petilleau, or other members of the Committee associated with him in the appeal.

PRESIDENT MOORE, of the New York Ethical Association, has created a sensation in Brooklyn by a recent intemperate temperance address, in which he said: "It is a fact that in some of the Brooklyn public schools the question has been raised as to requiring pupils to bring their luncheons to school, because many of the children who now go home at the noon recess, are permitted to drink beer with their dinners, and their school duties in the afternoon are seriously interfered with by the semi-stupor which follows beer intoxication." All the leading authorities of the Brooklyn schools characterize the statement as pure fiction, and have never even heard a whisper about such a state of things.

IN consequence of the great demand for tickets for the Summer Meeting of the London Society for the Extension of University Teaching, the Council intend to restrict the sale of guinea tickets to University Extension students. A limited number of tickets will be issued to other applicants at a charge of two guineas. A programme, with particulars of the meeting, can be obtained on application to Dr. Kimmins, University Extension Office, Charterhouse, E.C.

THE Rev. John Sidney Boucher, whose death occurred lately, was a scholar and exhibitor of St. John's College, Cambridge, where he graduated in 1845. He was one of the earliest masters at Radley, under Mr. Sewell; he was Headmaster of St. Paul's Grammar School, Knightsbridge, in the time of the Westerton riots; and he was subsequently master at the King's School, Warwick, and of a large school at Birkenhead. For eighteen years he was the Principal of the North Wales Training College, Carnarvon, and then he retired to a Suffolk rectory.

IN spite of the talk about the discontinuance of the courses of preparation for the London degrees at the Welsh University Colleges, provincial examinations in connexion with the London University continue to be held in the three Welsh University towns. The next half-yearly examination for Matriculation is announced to begin on June 13, and among the provincial centres are the University College, Aberystwyth; the University College, Bangor; and the Dumfries College, Cardiff (for the University College).

MR. ALEXANDER PECKOVER, Lord-Lieutenant of Cambridgeshire, has given £4,000 for the purpose of erecting a block of schools and workshops at the Eastern Counties Asylum for Idiots and Imbeciles. During the last few years a great advance has been made at this institution in teaching and training the higher-grade imbeciles in such work as wood-carving, carpentry, basket-making, tailoring, shoe-making, and mat-making, and it is for the purpose of further developing this branch of technical education that this gift has been made.

THE Town Council of Norwich have accepted a tender of £16,939 to erect the Technical Institute. It is hoped that the building may be ready for use by the autumn session of 1899.

THE Pinder Testimonial Fund, which is being raised for a presentation to Mr. T. R. Pinder on his retirement from the Headmastership of Norwich Middle School, has already reached nearly £300.

MIDSHIPMAN, who has just joined the China Fleet, is asked by the Admiral, who knows his people at home, to dinner. *Admiral*: "Well, young 'un, I suppose it's the old story, the fool of the family sent to sea?" *Middy*: "No, Admiral, that's all changed since your day."

PISCATOR writes to us: "Fishing this Easter on Dartmoor, I had for gillie a blue-eyed chubby lad of sixteen, with whom I conversed freely in the intervals of business. He had been five years at the Holne Schools, and two years at the Buckfastleigh Schools to finish up with, and had passed the sixth standard. Arithmetic? Yes, he'd done all arithmetic, and mental arithmetic was his forte. 'I walk four miles due north from my front door, and three miles due south: how far am I from home?' 'Twelve.' 'Think again' (question repeated in other words). 'Seven.' After a third unsuccessful guess, 'That beant no arithmetic, sir.'"

THE King Alfred School will open at Hampstead on May 2. Mr. C. E. Rice has been appointed Headmaster. As Mr. Rice comes from Bedales, we may look to see something of the influence of Dr. Reddie shown in the management of the school.

ANOTHER new school besides King Alfred's will open this month. Mrs. Findlay has made arrangements to start a kindergarten and training department in connexion with the North London High School for Boys.

THE Joint Agency will open early in May. The Rev. Frank Taylor, assistant-master at Bedford Modern School, has been appointed Registrar, at a salary of £250.

THE Library of the Education Department has been removed from 43 Parliament Street to St. Stephen House, Cannon Row, Whitehall. Cannon Row is exactly behind 43 Parliament Street.

THE article on "French Tenses" in the *Modern Quarterly*, which we assigned last month to Professor Victor Spiers, was from the pen of his brother.

THE new Lectureship in Education at Aberdeen University has been filled by the appointment of Mr. John Clarke, M.A. R.U.I. Mr. Clarke has had long experience in teaching work at Edinburgh Collegiate School and latterly at Aberdeen Grammar School, and has, moreover, acted as organizing secretary to the Technical Instruction Committee of the County Council of Aberdeen and clerk to the County Committee on Secondary Education.

THE Council of University College, London, have appointed Mr. H. L. Callendar, F.R.S., late Fellow of Trinity College, Cambridge, and now Professor of Physics in the McGill University, Montreal, to the Quain Chair of Physics in University College, about to be vacated by Professor Carey Foster.

MR. F. E. SWINSTEAD has been elected Honorary Secretary of the Assistant-Masters' Association in succession to Mr. J. Montgomery. For Mr. Swinstead twenty-seven votes were recorded, against seventeen for Mr. Longsdon.

THE REV. A. R. WHITHAM, M.A. of Magdalen College, Oxon., has been appointed Principal of the Culham Training College.

THE REV. A. B. BATER, B.A., lecturer at Warrington Training College, has been appointed Principal, Chaplain, and Secretary of Derby Training College.

THE REV. H. A. LESTER, tutor of St. John's College, Battersea, has been appointed Lecturer of Warrington College, in place of the Rev. A. B. Bater.

MR. S. W. FINN, M.A., late scholar of St. John's College, Cambridge, has been appointed Headmaster of Sandbach School, Cheshire. He was twelfth Wrangler, 1890, and for the last six years has been senior mathematical master and a house-master at Bedford County School. There were nearly two hundred candidates.

MR. P. K. TOLLIT, M.A., assistant-master at Bromsgrove Grammar School, has been appointed Headmaster of Derby School.

MR. T. HEADLAND SIFTON, M.A., second master at Sir William Turner's School, Coatham, Redcar, has been appointed to the Headmastership of King Henry VIII's School, Abergavenny, from which Mr. J. Webber is retiring at the end of the summer term.

FROM ABERYSTWYTH.

MEETINGS of teachers are known to be next to the most solemn meetings in the world. One speaker, enthusiastically dealing with the importance of the teacher's work, said: "A child's extremity is the teacher's opportunity." Not a smile was visible.

THERE are in Wales, with a population of two millions, eighty-seven intermediate schools with six thousand pupils, and three University Colleges with eleven hundred students.

TOO much breath, said Mrs. Behnke, dilutes the voice just as water dilutes whisky.

MRS. SANDFORD instanced the case of a pupil from an elementary school who, when transferred to a secondary school, was second only to the daughter of Dr. Murray.

HOME-WORK, said Mr. Simmons, is a wearisome superfluity to clever boys, and a serious drawback to dull boys. Preparation is teaching.

A GOOD child-story was told by Miss Woods:—

Child: I don't know many people that have their birthdays in March.

Mother: No, dear; none of your brothers or cousins were born in March.

Child: But I should think there must be a great many. It is such a dusty month.

Mother: Why do you think so.

Child: Well, the Bible says we are made of dust.

MR. HOLMAN had another interesting one.

Inspector: What are the manufactures of this town? (Silence and perplexity in the class.)

Teacher (timidly whispers): It's geography, children. (Then came eager answers.)

This is on a par with and explainable on the same grounds as another story we lately heard :—

Inspector : How many legs has a fish ?

(Unanimous answer)—Four.

Inspector : Have you ever seen a fish ?

Class : Yes.

Inspector : Well, how many legs has a fish ?

Class (as before) : Four.

Inspector : Have you ever caught a minnow ?

Class : Yes.

Inspector : How many legs has a minnow ?

Class : Four.

The form of the question suggested a lesson on quadrupeds, and the class needed a teacher to whisper that this was not a question from the book, but was addressed to their own observation.

"THE larynx is a box in which the voice is kept."—Such an answer illustrates the uselessness of trying to teach children something that has no connexion with their existing "apperceptive masses."

In order that English people may the better understand Welsh educational questions, Miss Hughes would like a new map of the country, where the distances between towns are based, not on the mileage, but on the time taken to get from one place to the other.

UNIVERSITIES AND SCHOOLS.

LONDON.

The expected has happened, and Mr. Fletcher Moulton has been put forward for the vacant seat on the Senate as a thorough-going opponent of the scheme embodied in the London University Bill. Dr. J. Bourne Benson, as most of us anticipated, has been put up as the strongest possible candidate for the votes of Convocation in favour of the Bill. If, as seems likely, he is defeated by Mr. Moulton, it will be a striking proof that Convocation is dissatisfied with the scheme, as Dr. Benson will, doubtless, carry with him, at any rate, some of his old supporters, and, of course, all the advocates of the Cowper Scheme will cast their votes in his favour. The election is fixed for May 24, the ordinary meeting of Convocation, and the result may affect the fortunes of the Bill in Parliament, if it has not been disposed of by that time. This contingency seems very possible, as the second reading, which was fixed for April 19, has been indefinitely postponed, and there have been rumours that the Government intend quietly to drop the Bill. Although the opposition in the Commons, as I foreshadowed, will be far more serious and general than was expected, it is stated that the Lord President intends to press the measure. Careful examination of the Bill shows that, to the three important points in which the Compromise of last July is broken by amendments in favour of the University teachers, must be added a fourth, providing that the Senate shall *consult the Academic Council* before recognizing as University teachers members of the staffs of institutions within a radius of thirty miles. This goes towards investing the faculties with power to co-opt future members of their own fellowship, which will thus tend to become a "close" body. Taken with the excision of the University examiners from the faculties, referred to last month, this indicates a move in the direction of oligarchical rule in the new University. No one has a good word for the insertion in the Lords of the words "as far as possible" in the provision for equality of standard in the examinations for internal and external students, and a London journal favourable to the Bill has just advocated the omission of the words "if practicable" in the clause arranging that in all examinations the Senate shall appoint in each subject at least one examiner who is not a teacher of the University. I am in hopes that my other points, mentioned last month, will be conceded when their reasons are understood. Sir John Lubbock will strongly oppose the Bill as it stands.

WALES.

The fourth annual meeting of the members of the Guild of Graduates took place at Aberystwyth on April 15, under the chairmanship of Mr. T. E. Ellis, M.P., the Warden of the Guild. Mr. J. E. Lloyd read the report of the literature section, which dealt with the progress made in the carrying out of the scheme adopted at the Cardiff meeting of the Guild for the publication of editions of the Welsh classics. Arrangements have now been made for the printing of the first volumes of the series. Two editions of each volume, differing somewhat in paper and binding, and priced at about 3s. and 1s. 6d. respectively, will probably be issued; and, as the literary labour involved in their preparation need not be very heavy, it is hoped that the volumes will appear in fairly rapid succession. At present the following have been definitely arranged for: (1) A complete edition of the works of Morgan Llwyd o Wynedd, edited by Mr. T. E.

Ellis, M.A., M.P. This is now ready for the press. The reprint will include several tracts which have not been republished since Morgan Llwyd's own day, and in it will be included for completeness sake some pieces by the author which are only known to exist in MS. (2) "Definiad Ffydd Eglwys Loegr." The editing of this volume has been undertaken by the Bishop of Bangor, who was arranging for its early appearance when laid aside by the severe illness which has occasioned such general concern. (3) "Synwyr Pen Pob Cymro," a collection of proverbs supposed to have been printed in 1546, and the "Primer" (which is dated in that year)—the two little books which lead off the annals of Welsh printing. Mr. Swenogfryn Evans and Mr. J. H. Davies have promised to see through the press a reprint of these two in one volume. (4) "Drych y Prif Oesoedd," Part I., a school edition, with notes by Mr. S. J. Evans, Llangefni. (5) One of the early Welsh versions of the "Imitatio Christi," to be edited by the Rev. H. Elfed Lewis.

Professor Anwyl reported that in the dialect section of the Guild a great deal of progress had been made in fixing the boundaries of the Welsh dialects.

The following officers and committees were elected :—Clerk, Mr. D. E. Jones. Treasurer, Mr. R. H. Pinkerton. Committee, Messrs. E. Anwyl, Charles Morgan, R. J. Rees, J. E. Lloyd, Charles Owen, J. Young Evans, Edgar Jones, J. H. Davies, Miss Diana Thomas, and Miss Dobell.

On the same day a discussion took place on scientific and technical education in Wales. An admirable paper was read by Mr. R. E. Hughes, M.A., H.M.I.S., in the course of which, giving a comparison between Wales of 1887 and Wales of 1897, Mr. Hughes stated that in 1887 Wales and Monmouthshire possessed twenty-seven endowed secondary schools with an annual endowment of £12,800. The schools were for boys only, and were attended by 1,540 scholars, less than 500 of whom were learning some rudiments of natural science and none receiving any trade or technical education. There were 150 private secondary schools, educating 2,290 boys and 1,807 girls. Cardiff, Merthyr, and other large towns had no endowments for secondary education. Merioneth, with a population of 54,790, had 40 boys only receiving secondary education. In 1897, on the other hand, there were in Wales 95 public schools, of which 69 were founded under the Welsh Act. Of that number 86 were county schools: 19 for boys only, 19 for girls only, 42 dual, and 6 mixed; so that girls now get equal justice with boys. Those schools were attended by seven thousand boys and girls, all of whom were receiving complete and thorough education. Of the old endowed schools in Wales, nine were required to teach some branch of science or technique, but the work was either not done or done in a haphazard and irregular fashion. There was neither in North nor South Wales an efficient chemical or physical laboratory, excepting at the University colleges, nor was there experimental science taught. Science was taught at Brecon and Llandovery, but the fact that the science scholarships were awarded at Jesus College, without, he believed, any practical test whatever, indicated how rudimentary the instruction in practical science was. How different all was to-day! The colleges were so equipped as to challenge comparison with the very best institutions in England. In Wales there were nearly a hundred public schools where science was a necessary feature of the curriculum. About 60 per cent. of the schools were housed in substantial and up-to-date premises, possessing laboratories where practical science could be taught and where also the technical applications of science suitable to the locality would be given. To-day about £92,000 per annum was spent on intermediate education in Wales. After giving instances of the work done in intermediate schools of Wales, Mr. Hughes asked if scientific and technical education was in as flourishing a condition as at first sight it appeared to be. Quoting figures, Mr. Hughes said the greatest number of papers were worked in what are generally termed elementary school subjects, and hoped that did not mean that county schools were at present only higher elementary schools. Out of a total of 55,861 papers worked, 4,926 only were on science or technical subjects, which was not one in ten. Out of the eighty schools in agriculture and mining in Wales, only four taught agriculture, and one only taught mining. In practical science matters were still worse, for only six schools professed to teach practical chemistry. Four professed to teach practical physics, and three only manual instruction. There was no doubt from the examiners' remarks that science was not taught as generally or efficiently as it should be. The examiners pointed out that the methods of teaching were often most at fault. Thoroughness should never be sacrificed for area. The pupil should be taught nothing except how to use his hands, how to observe accurately, and how to deduce rational conclusions. In short, science teaching should be a series of organized object-lessons. Teaching should be entirely practical, and the laboratory the only lecture-room required. That was not difficult if the examiner could be kept out, and the inspector only allowed to enter, for examination was no test of thorough teaching. For the sake of Wales, do not let them drift back to the dark days of the examination fiend. He was absolutely convinced that examinations were utterly pernicious and wrong, ruinous to the morals of examiner and examinee, and in science unreliable as the criterion of the quality of the teaching. The weakest

point in Welsh educational armour, Mr. Hughes continued, was the absence of first-class technical schools.

The Warden of the Guild (Mr. T. E. Ellis) said that Mr. Hughes illustrated one difficulty in the intermediate system of Wales. The progress of Wales during the past few years in organizing its educational system was so great and so rapid that every official report soon got out of date. Take, for instance, the question of temporary schools or the number of chemical and physical laboratories in Wales. Every day put the figures out of date and made them a sort of an anachronism, and he ventured to say that in the course of the next five years there would not be more than about ten schools, or even less, in the whole of Wales without a fairly complete chemical laboratory, and that a very large number of schools would also have a physical laboratory for the practical work of science. In regard to the financial provision for intermediate education, Mr. Hughes stated that the total sum available for intermediate education in Wales was £92,000. He might also have made a rough calculation of the amount spent upon building.

Mr. Hughes said it was £170,000.

The Warden believed that at the end of the present year the figures would be nearer a quarter of a million spent upon actual buildings in Wales and Monmouthshire. That would not include some of the larger schools, such as the boys' school at Cardiff, upon which a vast sum of money would have to be spent. With regard to the £92,000 devoted to the annual maintenance of intermediate education, which, as it was, was far larger than was anticipated a few years ago, it was already wholly insufficient for the purpose, and very soon—the sooner the better—Wales would have to start a movement to increase the halfpenny rate, and the halfpenny Exchequer contribution to meet it, to a penny rate, and an equal sum from the Treasury, in order to get the schools thoroughly well established. There was nothing providential in the grant of a halfpenny rate, for that sum was the lowest possible, and very many people in Parliament—and, he was bound to admit, many of his own colleagues in the representation of Wales—were very fearful that Wales would not adopt the halfpenny rate. Instead of that, every county in Wales had not only adopted the halfpenny rate, but the majority had levied a technical rate. The halfpenny rate produced about £19,000 in Wales, to which the Treasury added another £19,000, or £20,000. If a penny instead of a halfpenny rate was levied and the Treasury made a corresponding contribution, Wales would have nearly £40,000 for the purpose of intermediate education. While he was very willing to accept everything by way of criticism of science teaching in intermediate schools, he should like to modify somewhat Mr. Hughes's survey. He said there was only one intermediate school taking mining, only four taking agriculture, and comparatively few taking practical chemistry and practical physics. He (Mr. Ellis) thought that was incidental to the present condition of intermediate schools in Wales. For some years they would have to cope with two great difficulties. The first difficulty was that a large number of children come from primary schools quite unacquainted with science teaching and with many intermediate and secondary subjects. Secondly, intermediate schools had to cope with the whole subject of the organization of the schools themselves. He had no doubt that when those difficulties were surmounted there would be more general teaching of scientific subjects. There was another modification he should like to suggest. It was true that only one intermediate school taught mining. But then it should be remembered that mining was distinctly a very special subject, and, at any rate, South Wales had taken a very forward step in coping with that difficulty by the County Councils concerned commissioning the South Wales colleges to do the higher technical training. There was also good work being done at Swansea. He looked forward to the time when, in addition to the splendid work being done in the College, a splendid school, such as existed in Manchester, Bradford, and Leeds and some of the West Riding towns of Yorkshire would be established at Cardiff. With regard to the question of agriculture, Bangor and Aberystwyth were doing admirable work, and were taking up the threads of scientific teaching in agriculture.

SCOTLAND.

Among those whom Aberdeen University delighted to honour by conferring on them the degree of LL.D. was Professor Saintsbury. Among his merits the local newspapers—the matter was not referred to at the graduation ceremony—included his well-known knowledge of cookery. Another honorary graduate was Mr. Adam, of Cambridge, the Plato authority.

A feature of the last winter session at Aberdeen was the success of the women students. They carried off quite a notable number of prizes. The number of these students is at present seventy. The University is in need of some reinforcement of its numbers, for the figures for the last four years are not encouraging. The number of candidates at the last bursary competition was only 156.

We observe that Dr. Glog, who is conducting the Biblical Criticism Class at Aberdeen, received a presentation in recognition of his services. After the ceremony there was a service in the chapel. Professor Johnston was present, but when it became necessary to shake hands with the students he held back!

At the first annual meeting of the Aberdeen University Endowment Association, the pleasing announcement was made that Miss Cruikshank had offered £15,000, to be used in acquiring, laying out, and endowing a botanic garden for the University, in memory of her brother, the late Mr. Alexander Cruikshank. The remaining objects regarded by the Association as pressing are: (1) The establishment of a Professorship of History and Archaeology; (2) the provision of additional funds for the administration of the University Library and for the purchase of books; (3) the endowment of a Lectureship in German. At present there is a balance at the credit of the Association of only £274. 15s. 2d., so that money is urgently required. Meantime Honours classes in French and German have been established.

The Lectureship in Education at Aberdeen has been given to Mr. Clarke, of Aberdeen Grammar School, recently examiner in education. The strongest applicant for the post was, of course, Mr. Adams, of the Aberdeen Free Church Training College. One is curious to know how he came to be passed over. There was one lady among the candidates.

The Grant-Bey collection of some 1,150 objects is to be placed in Aberdeen University.

A distinguished graduate of Aberdeen University died recently, Dr. Morrison, Principal of Geelong College, Australia. His eldest son is the correspondent of the *Times* at Peking, the gentleman whom Mr. Curzon admires so much.

Mr. Matthew Shirlaw has the distinction of being the first to obtain by examination a musical degree at a Scottish University. He was presented last month for the degree of Bachelor of Music at Edinburgh University. The Professor of Music there, Mr. Niecks, is delighted with the power of the Edinburgh school-children to join in part-singing at sight. Their proficiency, he says, excels anything he has seen in Germany.

Professor Charteris has resigned the Chair of Biblical Criticism in Edinburgh University. He has held this post since 1868.

In addition to his bequest for the foundation of a Professorship of Ancient History and Paleography, Sir William Fraser has left a large sum for library purposes, and for the encouragement of history, &c., at Edinburgh University.

The Edinburgh University Council has made the sensible suggestion—which has been made in these columns more than once—that benefactors of the University would increase the value of their donations by omitting to attach specific conditions. These often hamper Universities, who would prefer to have a free hand in applying moneys.

The Glasgow University Court has instituted Honours classes in French and German. The Court has also approved a report by the Joint Committee of the four Universities upon penal or disciplinary powers over graduates, and has resolved to support the proposal that the General Medical Council should endeavour to obtain from Parliament an amendment of the Medical Act, 1858, to prohibit any medical graduate of the University from continuing to take or use the name or title appropriate to his degree after his name has been erased from the register, and so long as such an erasure continues in force.

Some excitement was stirred at Glasgow University by the attempt of an excited gentleman, with a grievance—non-academical in origin—against Professor Ramsay, to assault the Professor. The attempt was visited with seven days' imprisonment.

A conference has been arranged between St. Andrews University and Dundee University College. It is hoped that the conference will lead to a settlement of the matters in dispute. Another proof of the calmer feeling prevailing may be found in the fact that at the last meeting of St. Andrews University Council Principal Donaldson acknowledged the great diligence and impartiality of the Marquis of Bute as Lord Rector, and the gratitude due to him by the University of St. Andrews for his great interest in it.

The School Boards continue to draw attention to the desirability of retaining children at school for a longer period. The Aberdeen Board think children should not leave till they have passed the sixth standard, or, preferably, till they have reached thirteen years of age. An amendment moved by Mr. Keir, President of the Trades Council, is interesting. It aimed at retaining children till the age of thirteen, and till the age of fourteen if they have not passed the sixth standard. There is, however, a considerable body of opinion adverse to any change.

The Glasgow School Board will not undertake to maintain the Hutcheson's Schools on their present footing unless the *whole* of the endowment applicable to the schools is transferred with the schools. This will not suit those that wish to devote more of the Hutcheson Trust money to charitable purposes.

There is a proposal to set up an Agricultural College for the south-west of Scotland, but the Glasgow Technical College is naturally unfriendly to a proposal that threatens a department of the College work.

Everybody was pleased to find Sir John Gorst praising the advanced state of education in Scotland. He said things very pleasing to our national vanity about the superior condition under which primary education is conducted on this side of the Tweed. Mr. Macnamara was less complimentary.

At the last examination for admission to training colleges 239 men

and 1,113 (!) women passed. The time seems to be approaching when primary education will be wholly in the hands of women. The total number of candidates—1,628—seems to show that teaching is popular in spite of its drawbacks.

IRELAND.

The Annual Congress of the Primary Teachers has been held in Dublin since Easter. It was opened by the Lord Mayor, who attended in full state, accompanied by the officers of the Corporation and escorted by a troop of mounted police. The teachers have the full sympathy of every class and rank and of all creeds and politics in the struggle they are obliged to carry on against Government for the simplest justice—for fair remuneration and the improvement of the system of education. Their grievances are so well known now and have been so often discussed that there was comparatively little time spent on their further exposition at the Congress; but they were all reviewed in the able address of Mr. Clarke, the President. The Congress was a stormy one, being chiefly occupied by a discussion on the report of the Executive Committee. The Committee last year were engaged in trying to get back the arrears of fee-grant, amounting to nearly £100,000, of which the teachers have been defrauded by the Treasury. About the same time the Government had discovered that the pension scheme must be reconstructed if bankruptcy was to be avoided. After prolonged negotiations, the Executive Committee last July agreed to accept the new pension scheme (without, however, fully knowing its provisions) on condition of at once receiving the full amount of the arrears. In acting thus, without consulting the body of teachers which they represented, they undoubtedly made a serious mistake. When the conditions of the pension scheme were fully known they were indignantly refused by the teachers, and the Executive Committee repudiated their bargain with the Government. The result is that the arrears have never been paid, and it is extremely doubtful if the Government intend to pay them, judging by the last reply given to a question on the subject in the House. This is plainly disgraceful conduct on the part of the Government, for the arrears are actually part of the teachers' salaries, of which they were deprived for several years through the arrangements and bad management of the Treasury.

The chief evils in the new Pension Scheme are the largely increased premiums the teachers are required to pay, and the reductions in the amounts of the pensions. It is a question whether such changes can be introduced without a new Act and compensation to existing teachers who entered their profession under what were supposed to be certain fixed conditions, which have now been altered much for the worse. Legal opinion differs on the subject, but recently Chief Baron Palles, perhaps the highest authority in law on such points, has declared that the Lord Lieutenant has no power to enforce the new regulations. The Chief Baron is one of the Commissioners of National Education, and, under his advice, the latter are hesitating to hand over to the Treasury the amount of the increased premiums which, due on April 1, the teachers have paid to the Commissioners. The Government have said in the House that the question can be settled by an action in court. It remains to be seen if they themselves will take an action against the National Board to recover the money paid over to the Board by the teachers.

At the Congress, severe criticism was expressed on the Executive Committee for their action in agreeing to the Pension Scheme, and finally the report was, by a great majority, only "received," not "adopted." Strong resolutions were passed, pledging the teachers to oppose the Pension Scheme to the utmost.

On the educational side, the Congress again reiterated the demand of the teachers for compulsory education, the abolition of the results-fees system, and the appointment of a certain number of able teachers to inspectorships, and to seats on the National Board. It is a fact that most of the present inspectors are so little practical educationalists that they have never been inside a primary school till they enter it to inspect it.

The managerial question remains still unsettled. In the Synod of the Episcopal Church, held the week after that in which the Congress met, a motion, introduced by the Rev. Kingsmill Moore, was passed, offering to the teachers a court of appeal against dismissal by a manager, consisting of the Bishop of the diocese and any other opinion he chose to obtain. This offer will be of little avail. In the first place, it would hardly be used by Protestant teachers belonging to the various Dissenting bodies; and, secondly, the teachers have at the recent Congress, and repeatedly before, declared that they will not accept an appeal to a wholly clerical authority. Lord Justice Fitzgibbon pointed out, at the Synod, that any court of appeal is of little use till the law is altered. The manager has still power, legally, to dismiss any teacher, and need not, unless he chooses, yield to any court of appeal; nor have even the National Commissioners power to compel him.

The question of scientific and technical education has been prominent in Dublin lately. The Royal College of Science in Stephen's Green is prevented from meeting the requirements of the present time in Ireland, or even carrying on the work laid down for it thirty years since, by want of suitable buildings and appliances. Government

inquiries on the subject have been held more than once, and affirmed the need, but nothing has been done. A strong agitation is now being carried on to force Government to take some steps, stimulated, no doubt, by the fact that £2,555,000 is about to be spent in London on buildings for science and art, and other purposes—money to which Ireland contributes far more than her fair share.

As a specimen of the treatment by the Department and Treasury of the Irish College, we may take the case of Dr. Lyon, who, six years ago, was appointed to teach practical engineering, but has been left without the necessary appliances for teaching it ever since, and has been employed instead in teaching geometrical drawing, for which he is not specially qualified. Such management is pure waste.

Meantime the Kevin Street Technical Schools have become so overcrowded that new buildings are urgently needed. The governors have been saving their unexpended balances from the Science and Art grant and the rate struck by the Corporation, for some time, and considered that they had now a sufficient sum with which to begin building operations. When, however, the matter was laid before the Corporation, the Finance and Leases Committee took alarm lest the Corporation should be held responsible by the Local Government Board, such unexpended balances not being available for expenditure on lands and buildings. This view is confirmed by legal opinion. So matters are brought to a halt.

Meantime it appears that many of the students in the schools are being taught English, arithmetic, writing, and other subjects of general education, to which students is due some of the overcrowding. This teaching may be necessary from the deficiency in the general knowledge of the pupils who come to the schools, but such subjects should be taught in the primary schools (already paid to teach them), and the passing of a simple examination in them be required from all entering the Technical Schools.

It is also maintained by Professor Fitzgerald and others that the schools should be in connexion with the College of Science and under one roof with it in a large central building. There would be immense advantages in this, undoubtedly, both in economy and in giving the highest advantages to the students. It is, however, opposed by some of the professors of the college, apparently from the fear that it might lower and impede the higher teaching of science in the college. This is not at all necessary, nor is it even probable, seeing that every day is making such higher science-teaching more essential in industrial pursuits. It might be said that working men would go more readily to schools scattered through the city, and at their own doors, than to a central institution at a greater distance. Dublin, however, is a small city with a splendid locomotive service, and most of the present students in Kevin Street come from considerable distances.

It is to be hoped technical education may be placed on a proper footing next year (at the latest), when it is hoped we may obtain a Board of Agriculture and of Industries, the legislation for which was postponed last year. In remedying this, perhaps the worst of Irish grievances, it is to be hoped that scientific instruction may be freed from the control of the English Department, which seems as unable to understand Irish conditions as it is wholly indifferent and negligent in providing for them.

UNIVERSITY COLLEGE, LONDON.

Owing to the return of Professor Sully, whom everybody was delighted to see restored to health, the Psychological Laboratory was got into working order last term. Professor Sully is assisted in the work by Dr. H. R. Rivers, and they were joined by six students. The students have been mainly concerned with making experimental tests, such as the estimation of lifted weights and the measurement of certain aspects of sight and hearing, also in measuring one another's ability to discriminate points of contact, heat and cold spots. The new department seems likely to be much appreciated.

The summer term of the Faculties of Arts, Laws, and Science commenced on April 26. In addition to the regular courses, there are a great many special courses to be held this term. In the department of Archaeology the Yates Lecturer, Mr. Romilly Allen, will give a course of eight lectures: Wednesdays, at 4 p.m., on "Celtic Art"; Professor Flinders Petrie, who has recently returned from Egypt (Thursdays, 3 p.m.), on "Recent Discoveries"; in the department of Political Economy, the Newmarch Lecturer, Mr. A. L. Bowley (Tuesdays, 5.30), on "Wages in the United Kingdom in the Nineteenth Century"; in the department of English, Professor Paton Ker (Tuesdays and Thursdays, 10 a.m.), on "Form and Style in English Poetry," and Dr. Gregory Foster (Fridays, at 5), on the old English epic "Beowulf"; in the department of Italian the Barlow Lecturer, the Rev. Dr. Moore (Wednesdays and Thursdays in May, 3 p.m.), on Dante's "Purgatorio"; in the department of Zoology, by Dr. G. H. Fowler (Fridays, 11 a.m.), on "Recent Oceanic Exploration"; in the department of Architecture, by Professor Roger Smith (Tuesdays, 6 p.m.), on "Renaissance Architecture."

The prospectus of the summer session of the Faculty of Medicine, which opens May 2, is made specially attractive by two frontispieces, one showing the beautiful dome of the College, the other the plans

for the new Hospital, now in course of erection by Sir Blundell Maple. The clinical work of the Faculty will not be disturbed, as the present Hospital will not be pulled down until enough of the new building is complete to enable the work of the Hospital to go on without interruption.

The spirit of cooperation, by which alone a real University in London can be made, is spreading to the medical schools: the Medical Faculty of the College, in conjunction with that of King's College and seven other medical schools—Charing Cross, Guy's, Middlesex, St. George's, St. Mary's, St. Thomas's, and Westminster—has arranged a joint system of clinical instruction for post-graduate students.

The College is cooperating with the London Extension Society in making the Summer Meeting a success. Professors Sully and Ramsay are lecturing, and, by permission of the Council, a conversazione will be held on June 2.

The College has lost one of the most distinguished of its Fellows in Sir Richard Quain. By his death a vacancy is caused on the Senate of the University of London.

Dr. Bourne Benson, a member of the College Council and a London graduate of great distinction, is standing as the candidate supporting the University Bill now before Parliament, and should receive the votes of all who desire to help on the reform of the University.

The arrangements for the opening of the new athletic ground and pavilion are not quite complete, but it is understood that the ceremony will take place at the end of May or beginning of June. Foundation Day has been fixed for June 17. The Oration will be delivered by Professor Augustine Birrell.

PRIZE COMPETITIONS.

The Translation Prize for April is awarded to "Naturam expellas furca."

The winner of the Translation Prize for March wishes to remain anonymous. The £2. 2s. has been forwarded to the Children's Country Holidays Fund.

The name of the winner of the Translation Prize for January was accidentally omitted; it is R. S. Pirie, Esq., Feuerstein Villa, Mellison Road, Tooting, S.W.

La nature est impitoyable; elle ne consent pas à retirer ses fleurs, ses musiques, ses parfums et ses rayons devant l'abomination humaine; elle accable l'homme du contraste de la beauté divine avec la laideur sociale; elle ne lui fait grâce ni d'une aile de papillon, ni d'un chant d'oiseau; il faut qu'en plein meurtre, en pleine vengeance, en pleine barbarie, il subisse le regard des choses sacrées; il ne peut se soustraire à l'immense reproche de la douceur universelle et à l'implacable sérénité de l'azur. Il faut que la difformité des lois humaines se montre toute nue au milieu de l'éblouissement éternel. L'homme brise et broie, l'homme stérilise, l'homme tue; l'été reste l'été, le lys reste le lys, l'astre reste l'astre.

By "NATURAM EXPELLAS FURCA."

Nature knows no pity. She will not abate aught of her flowers, her music, her scents, or her sunshine before the abomination of man. She overwhelms him with the contrast between divine beauty and the ugliness of human life; she will not spare him a butterfly's wing or a bird's note. In the very midst of his slaughter, his vengeance, and his barbarity, he has to face the gaze of sanctities; he cannot escape the boundless reproach of universal gentleness or the relentless calm of the blue above him. In the fierce light of the eternal the deformity of human laws must show in all its nakedness. Man may break and bruise, man may waste, and man may slay, but summer remains summer, lily remains lily, and star remains star.

We classify the 182 surviving versions as follows:—

First Class.—Staffa, W.S.M., 100,000, Vetter aus Bremen, Nazianzen, Bobus, Acta non verba, E.M.W., Sirach, W.H., Aix, Leod, (J. H.) Lierre, W.W.W., Macken, Ann, Citizen, Sans merci, Ugolino, Fortes et fideles, Antiqua, Peterite, Naturam expellas furca, Tintner, Apathy, A.M., E.H.O., Ποι.

Second Class.—Quasimodo, Youngaton, Stamford, Field Ermine, Spitzbergen, St. Moritz, Bloodstone, Silly Suffolk, Garameta, John Edals, A.P., Lierre, Du, H.D.E., Vernex-Montreux, Chick, Marelizar, Wanderer, L'oisel, Birthwood, Fiona, 79th, Sirama, Covasson, Chingleput, S.C.C.R., J., Eicarg, Arbor Vale, Little Erasmus, G.U.I., Canterbury, La Claquette, Frig, A.L.L.P., Spindrift, Gwynedd, Penarth, Enryb, Aimée Martin, Jack Point, Rolobo, Dr. Dee, E.M.C., Estuary, Peashooter, Function, Jean, Piano-organ, Shirwood, D'Auban, Prospero, Hector, Jargos, Carrington K.H.S., Doris K.H.S., Bella horrida bella, Calvados, Ryber, Tip, Besom, Tachot, Kent, E.A.M., El Machobi, En avant, H.M.S., Wem, Reprox, Solidar, Instar

EDUCATIONAL WORKS BY **ALFRED HILEY, M.A.**

1. MENSURATION AND LAND SURVEYING.

Fourteenth (Enlarged) Edition. Pp. 244. Answers at end. Price 2s. 6d. This work has been placed by the London School Board on their Requisition List for the use of Pupil Teachers.

2. RECAPITULATORY EXAMPLES IN ARITHMETIC.

Sixteenth Edition. Pp. 243. Either with or without Answers. Price 2s.

Published by LONGMANS & CO., LONDON.

NEW WORK BY PROFESSOR EARLE.

Recently Published. Crown 8vo, 6s.

A SIMPLE GRAMMAR OF ENGLISH NOW IN

USE. By JOHN EARLE, M.A., Rector of Swanswick, Rawlinsonian Professor of Anglo-Saxon in the University of Oxford, Author of "English Prose: Its Elements, History, and Usage," "The Philology of the English Tongue," &c.

The *Morning Post* says:—"Can be studied with profit by every student of English."

From the *Athenaeum*:—"Professor Earle's book is extremely interesting, and contains a great deal of original and usual information."

LONDON: SMITH, ELDER & CO, WATERLOO PLACE, S.W.

Adopted by the London School Board.

THE ONLY COMPLETE ENGLISH EDITION.

Students' Edition, complete in One Vol. demy 8vo, cloth, 328 pp.

Price
5s. Mothers' Songs,
Games, and Stories.

An English Rendering of **Frebel's "Mutter- und Kose-Lieder."**

By FRANCES AND EMILY LORD.

With an Introduction by FRÄULEIN HEERWART.

This Edition is identical with that originally published at **7s. 6d.**, and contains faithful reproductions of **ALL** the quaint Woodcuts of the original German Edition. The **whole of Frebel's Music** is given (75 pages), with an added **Accompaniment for the Pianoforte.**

A section of ruled paper for students' notes is bound up at end of volume.

"No one can study it without being benefited by its genuine knowledge of child nature."—*The Kindergarten (Toronto).*

"Miss Frances Lord shows that she has entered upon her work with the true instinct of a teacher. The book should be in the hands of every mother."—*School Guardian.*

LONDON: WILLIAM RICE, 86 FLEET STREET, E.C.

PROFESSOR MEIKLEJOHN'S SERIES.

The United States: their Geography, Resources, and Commerce, with Tides and chief Ocean Currents. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. Crown 8vo, 96 pp. . 6d.

A New Arithmetic. By G. A. CHRISTIAN, B.A. Lond., and G. COLLAR, B.A., B.Sc. Lond. Crown 8vo, 562 pp. Second Edition . 4s. 6d.

"We recommend teachers and students to judge for themselves what a powerful auxiliary to success has been given them by the experience and judgment of the able authors."—*Schoolmaster*.

"We also welcome it because in several of its chapters—such, for example, as those on factors, decimal fractions, involution and evolution, surds, and logarithms—it seems to us to mark a distinct advance on the majority of its predecessors."—*School Guardian*.

"It is not too much to prophesy that this reliable exposition of the principles of Arithmetic and carefully collated examples will become the leading text-book for P.T. Centres, Schools, and Colleges."—*The Pupil Teacher and Scholarship Student*.

"Have nothing but praise for your book, and will immediately put it on our list of recommended text-books."—H. B. Ayres, Esq., Correspondence Classes, Barnsbury, N.

A School Algebra for Junior Forms. By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. . 1s. 6d. With Answers, 266 pp. . 2s.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.

"The scientific method, from known to unknown, from Arithmetic to Algebra, has invariably been adopted, while lucid explanations and proofs precede oral exercises, followed in turn by numerous carefully-graduated examples for attaining the necessary mechanical accuracy."—*The Educational News*.

The English Language: its Grammar, History, and Literature. By J. M. D. MEIKLEJOHN, M.A. Sixteenth Edition. Enlarged, with Exercises and additional Analysis. Crown 8vo, 470 pp. . 4s. 6d.

To this well-known standard work the following important practical additions have just been made:—

1. A new chapter on Auxiliary, Defective, Anomalous, Peculiar, and Impersonal Verbs, furnishing clear guidance on disputed and difficult points.
2. A full list of Words which are used as Different Parts of Speech.
3. The most recent Examination Papers—Pupil Teachers', Queen's Scholarship, and London Matriculation—with references to the pages supplying answers.

"I know of no book generally so suitable for an ordinary student."—*Alfred Barriball, Esq., B.A., Westminster Training College*.

"An admirable book, adapted for pupil-teachers, training-college students, and London University Matriculation students."—H. Major, Esq., B.A., B.Sc., School Board Inspector, Leicester.

A New Geography on the Comparative Method. With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twentieth Edition. 105th Thousand. Crown 8vo, 630 pp. . 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of Geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education*.

"For all that is best worth knowing no better book than this could be studied."—*Educational News*.

A New History of England and Great Britain. With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Twelfth Edition. Crown 8vo, 740 pp. . 4s. 6d.

"Your books are simply indispensable to students preparing for the Certificate Examination, and to pupil-teachers."—*One of Her Majesty's Inspectors*.

"The amount of pains, of which I have already seen proofs, and the ingenuity of the methods for assisting students' memories, are fairly overwhelming."—*One of Her Majesty's Inspectors*.

The Principles and Practice of Teaching and Class Management. By JOSEPH LONDON, F.G.S., Vice-Principal and late Master of Method in the Saltley Training College. Third Edition. Crown 8vo. . 5s. 0d.

"We have no hesitation in saying that this is one of the best treatises on this subject which has appeared for some time, and we cannot too strongly recommend it to the attention of all interested in the practical work of education."—*Educational News*.

The British Empire: its Geography, Resources, Commerce, Landways, and Waterways. By J. M. D. MEIKLEJOHN, M.A. Crown 8vo, 350 pp. Fourth Edition . 3s. 0d.

"It is certainly one of the best books of the kind that have come under our notice for a long time, and can be heartily recommended to teachers."—*St. James's Gazette*.

Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 88 pp. . 6d.

This book gives a succinct account of the geography, resources, and commerce of the different Colonies in Australasia. It includes a notice of the recently explored gold fields of Western Australia, and contains a full chronicle of Australian discovery.

The British Colonies and Dependencies: their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. Adapted to the requirements of the Code for the Upper Standards. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 96 pp. . 6d.

"This manual is terse and full; intelligently paragraphed and skilfully managed typographically. It does credit to the compiler, and we hope this work may gain the recognition it really merits."—*Educational News*.

Africa: its Geography, Resources, and Chronicle of Discovery up to 1897. By M. J. C. MEIKLEJOHN, B.A. Oxon. Second Edition. Crown 8vo, 76 pp. . 4d.

"This little book is, for its size, remarkably full of information about Africa, and gives pithy explanations of such current expressions as 'sphere of influence' and 'hinter-land,' &c."—*The Teachers' Aid*.

The New Drawing Cards. For Infants, Kindergarten. Designed by F. G. JACKSON. Eighteen Cards in Packet, in Two Colours, Red and Blue . 1s. 6d.

"The Kindergarten cards are beautifully designed, tastefully coloured, and artistically executed. The figures are interesting and varied. The training given to hand and eye by the use of this excellent series of cards must be great."—*The Educational News*.

The New Drawing Cards. Standards I. and II. Suitable for Varied Occupations. Designed by FRANK G. JACKSON. Thirty-two Cards in Packet (in Colour) . 2s. 6d.

"A packet of thirty-two splendid cards to gladden the hearts of the youngsters in the two Lower Standards. As a varied occupation, nothing could be nicer than reproducing, both in shape and colour, these beautiful designs."—*The Teachers' Aid*.

The New Freehand Drawing Cards. By FRANK G. JACKSON, of the Birmingham Municipal School of Art; Author of "Lessons in Decorative Art," and "Theory and Practice of Design."

Standards III., IV., and V. . 2s. 0d. each.

Standards VI. and VII. . 2s. 6d. each.

"Nothing so good has yet been offered to teachers of drawing as this excellent series of cards."—*The Schoolmaster*.

"These cards are excellent. The systematic arrangement, combined with the thoroughness of their artistic analysis, ought to make them very acceptable to teachers. In each standard there is plenty of variety in the designs, and included in each set there are good examples of brush work. There should be a large demand for these cards."—*The Head Teacher*.

Adopted by the School Board for London.

"We were thoroughly pleased with the earlier Readers of this series; we are no less pleased with this later instalment. We most heartily commend these Readers to the notice of teachers."—*The Teachers' Monthly*.

"The 'New Readers' are printed in an unusually clear type, and are bound in a way that is likely to prove well adapted to the every-day wear and tear of school work."—*The School Guardian*.

omnium, Eaton, OO, La Margerite, Anchor, Les Goncourt, Tate, χρυσῶν χάλκεια, Innis, Mac.

Third Class.—F.D., Marius, Dodo, Big Claus, Mars, Bank Holiday, H.B., A.B.C., Kurz, Ennui, Cassandra, L.M.M., Becky, Geroit Mor, Chauvel, Stuttgart, B., Ajax, Agnes Bernauer, Chemineau, Aspromonte, Katisha, Violette de Neuilly, Shepherdess, Montagnard, Mae Straulx, Glück auf, Pessimist, Silver Pen, Cossette, Spikes, No. 2, Forward, Bat, Grézy, Jumbo, A. Robinson, Noved, Gammar, Azaka, Windmill, Finetta, Montserrat, Debacle, Daisy K.H.S., Brutus, Alicia, T.H.G., A. Mortimer, Un misérable, O, Medice Hedera nostra, Σειδιππος, ὁ ἀγαθὸς ἄνθρωπος.

Fourth Class.—White Heather, A.C.G., Audaz, Colin Maillard, Zenda, Hypatia, Nolo cognosci, March, Ha Kuaka, A Ff., Nonyeb, Little Claus, De Landeville, Paddie, L. Heath, Zeus, Rhona, Hoc Facto, Lynsted.

I must begin with a confession and apology. Some hundred, more or less, of the versions sent in are unclassified. These had been looked over, and duly marked, but were left on the floor of a village inn and used to light the fire by the maid of all work. I can only plead that no one has thereby been robbed of the prize, and offer, as the best amends in my power, to assign a class to any one who cares to send a duplicate.

To pass to Victor Hugo, the general sense is plain as a pike-staff, and, I should have said, was impossible to miss, but that I got such renderings as "reality is no less real" (*P'té reste P'té*), and "the aster is still an aster." These were individual aberrations, and the classification depended mainly on style—the proper balancing of clauses, the general rhythm. I note one or two test phrases. *L'abomination humaine*, "human abomination" is hardly English; "abominations" is better English, but I prefer "the turpitude (the vileness) of men." Again, "social ugliness" is strained; better, "the loathly aspect of society." *Elle ne lui fait grâce*, "she does not spare him," cannot be bettered; the sights of natural beauty are the miscreant's condignest punishment. To give the force of the reiterated *en pleine* we must paraphrase—"In the very act of murder, in the full tide of vengeance, in the lowest depths of savagery." *Il subisse le regard*, "he must endure the gaze." The French might mean either "he must gaze on," or "he must be gazed on by," but the context favours rather the latter meaning. *L'immense reproche*, "the infinite reproaches of all-pervading tenderness, or the remorseless calm of the blue heavens." *L'éblouissement éternel*, "the fierce light of eternity." "Man breaks and bruises, man lays waste and slays, but summer still is summer, the lily is still a lily, the star is still a star." Note the alliteration. *Astre* is any heavenly body, including sun and moon, but "star" is here the only possible equivalent.

A Prize of Two Guineas is offered for the best translation of the following passage from Chateaubriand's "Le Génie du Christianisme":—

Les forêts des Gaules ont passé à leur tour dans les temples de nos pères, et nos bois de chênes ont ainsi maintenu leur origine sacrée. Ces voûtes ciselées en feuillages, ces jambages, qui appuient les murs et finissent brusquement comme des troncs brisés, la fraîcheur des voûtes, les ténèbres du sanctuaire, les ailes obscures, les passages secrets, les portes abaissées, tout retrace les labyrinthes des bois dans l'église gothique; tout en fait sentir la religieuse horreur, les mystères et la divinité. Les deux tours hautaines plantées à l'entrée de l'édifice surmontent les ormes et les ifs du cimetière, et font un effet pittoresque sur l'azur du ciel. Tantôt le jour naissant illumine leurs têtes jumelles, tantôt elles paraissent couronnées d'un chapiteau de nuages, ou grossies dans une atmosphère vaporeuse. Les oiseaux eux-mêmes semblent s'y méprendre et les adopter pour les arbres de leur forêt: des corneilles voltigent autour de leurs faîtes et se perchent sur leurs galeries. Mais tout à coup des rumeurs confuses s'échappent de la cime de ces tours et en chassent les oiseaux effrayés. L'architecte chrétien, non content de bâtir des forêts, a voulu, pour ainsi dire, en imiter les murmures, et, au moyen de l'orgue et du bronze suspendu, il a attaché au temple gothique jusqu'au bruit des vents et des tonnerres, qui roule dans la profondeur des bois. Les siècles, évoqués par ces sons religieux, font sortir leurs antiques voix du sein des pierres, et soupirent dans la vaste basilique: le sanctuaire mugit comme l'ancre de l'ancienne Sibylle; et, tandis que l'airain se balance avec fracas sur votre tête, les souterrains voûtés de la mort se taisent profondément sous vos pieds.

An Extra Prize of One Guinea is offered for the best paraphrase of the last stanza of Wordsworth's "Ode on Intimations of Immortality"—"And O, ye fountains . . . tears."

All Competitions must reach the Office by May 16th, addressed "Prize Editor," JOURNAL OF EDUCATION, 86 Fleet Street, E.C.

WILLIAM BLACKWOOD & SONS' NEW LIST.

BLACKWOOD'S SCHOOL SHAKESPEARE. Edited by R. BRINLEY JOHNSON. Each Play complete, with Introduction, Notes, and Glossary. In crown 8vo volumes. Price 1s. 6d. each.

Now ready.

THE MERCHANT OF VENICE.

The following are in preparation:—

RICHARD II.—THE TEMPEST.—JULIUS CÆSAR.—AS YOU LIKE IT.—TWELFTH NIGHT.—A MIDSUMMER NIGHT'S DREAM.—HENRY V.—CORIOLANUS.—MACBETH.—KING LEAR.—HAMLET.

HIGHER LATIN UNSEENS. Selected, with Introductory Hints on Translation, by H. W. AUDEN, M.A., Assistant-Master at Fettes College, Edinburgh. 2s. 6d.

HIGHER LATIN PROSE. With an Introduction by H. W. AUDEN. 2s. 6d.

HIGHER GREEK UNSEENS. Selected, with Introductory Hints on Translation, by H. W. AUDEN. 2s. 6d.

LOWER GERMAN. Reading, Supplementary Grammar with Exercises, and Material for Composition. By LOUIS LUBOVITZ, German Master, Govan School Board, Glasgow. 2s. 6d.

HISTORY OF ENGLISH LITERATURE. By J. LOGIE ROBERTSON, M.A., Senior English Master, Edinburgh Ladies' College. Second Edition. Crown 8vo, 3s.

PARAPHRASING, ANALYSIS, AND CORRECTION OF SENTENCES. By D. M. J. JAMES, M.A., Gordon Schools, Huntly. Crown 8vo, 1s.

LATIN VERSE UNSEENS. By G. MIDDLETON, M.A., late Scholar of Emmanuel College, Cambridge. Crown 8vo, 1s. 6d.

GREEK VERSE UNSEENS. By T. R. MILLS, M.A., late Lecturer in Greek, Aberdeen University, formerly Scholar of Wadham College, Oxford. Crown 8vo, 1s. 6d.

LATIN HISTORICAL UNSEENS. For Army Classes. By L. C. VAUGHAN WILKES, M.A. Crown 8vo, 2s.

A MANUAL OF AGRICULTURAL BOTANY. From the German of Dr. A. B. FRANK, Professor in the Royal Agricultural College, Berlin. Translated by JOHN W. PATERSON, B.Sc., Ph.D. With over 100 Illustrations. Crown 8vo, 3s. 6d.

STORMONTH'S ENGLISH DICTIONARY. Pronouncing, Etymological, and Explanatory. Revised.

Library Edition.—New and Cheaper Edition, with Supplement. By WILLIAM BAYNE. Imperial 8vo, handsomely bound in half-morocco, 18s. net.

School and College Edition.—The Fourteenth. Crown 8vo, pp. 800. 7s. 6d.

Handy School Edition.—New Edition. Thoroughly Revised.

Second Edition. Now Ready. In Crown 8vo, extra, handsome cloth, 16s.

GREEK ANTIQUITIES (A MANUAL OF).

For the use of Students and General Readers. By PERCY GARDNER, M.A., D.Litt., Professor of Classical Archaeology and Art in the University of Oxford; and F. B. JEVONS, M.A., Litt.D., Principal of Bishop Hatfield's Hall, in the University of Durham.

"A work which, although crammed full of information, is everywhere readable."—*Athenaeum*.

"Fresh, thoughtful, and cleverly arranged."—*Academy*.

ROMAN ANTIQUITIES (A MANUAL OF).

By WILLIAM RAMSAY, M.A., late Professor of Humanity in the University of Glasgow. Revised and Edited by RODOLFO LANCIANI, D.C.L. Oxon., LL.D., &c., Professor of Classical Topography in the University of Rome. Fifteenth Edition. 10s. 6d.

* * * The FIFTEENTH EDITION includes a New Map and Plans prepared by Prof. LANCIANI.

"The chief interest in the New Edition centres in the chapter on 'Roman Topography,' which has been entirely rewritten by Prof. Lanciani, the greatest living authority on this subject. . . . It is the best and handiest guide yet produced."—*Athenaeum*.

CRAIK'S ENGLISH LITERATURE.

New Edition. Now Ready.

In Two Vols. Royal 8vo, handsomely bound in cloth, 25s.

A COMPENDIOUS HISTORY OF ENGLISH LITERATURE AND OF THE ENGLISH LANGUAGE FROM THE NORMAN CONQUEST. With numerous Specimens. By GEORGE LILLIE CRAIK, LL.D., Late Professor of History and English Literature, Queen's College, Belfast.

"Professor Craik has succeeded in making a book more than usually agreeable."—*The Times*.

Tenth Edition, Revised and Enlarged. Crown 8vo, cloth, 7s. 6d.

A MANUAL OF ENGLISH LITERATURE, for the use of Colleges, Schools, and Civil Service Examinations. Selected from the larger work, by Dr. CRAIK. With an Additional Section on Recent Literature, by HENRY CRAIK, M.A., C.B., LL.D., Secretary to the Scotch Education Department, Author of "A Life of Swift."

"A Manual of English Literature from so experienced a scholar as Professor Craik needs no other recommendation than the mention of its existence."—*Spectator*.

A HISTORY OF ROMAN LITERATURE. By the Rev. C. T. CRUTTWELL, M.A., Hon. Canon of Peterborough Cathedral. From the Earliest Period to the Times of the Antonines. Fifth Edition. 8s. 6d.

"Full of good scholarship and good criticism."—*Athenaeum*.

A HISTORY OF GREEK LITERATURE. From the Earliest Period to the Death of Demosthenes. By FRANK B. JEVONS, M.A., D.Litt., Principal of Bishop Hatfield's Hall, in the University of Durham. Second Edition. Cloth, 8s. 6d.

"Beyond all question the best history of Greek literature hitherto published."—*Spectator*.

A LITERARY HISTORY OF EARLY CHRISTIANITY. By the Rev. C. T. CRUTTWELL, M.A., Hon. Canon of Peterborough Cathedral, formerly Fellow of Merton College, Oxford. In Two Vols., demy 8vo, handsome cloth, 21s.

"Mr. Cruttwell has accomplished his task with remarkable success. His history is eminently readable."—*Athenaeum*.

PREHISTORIO HISTORIES OF THE ARYAN PEOPLES. A Manual of Comparative Philology and the Earliest Culture. By Dr. O. SCHRAEDER. Translated from the Second German Edition by F. B. JEVONS, M.A. Large 8vo, handsome cloth, gilt top, 21s.

"It would be hard to find any book more to be recommended to the early student in philology and prehistoric archaeology."—*Classical Review*.

THE VOCABULARY OF PHILOSOPHY and Students' Book of Reference, on the Basis of Fleming's Vocabulary. By HENRY CALDERWOOD, LL.D., Professor of Moral Philosophy in the University of Edinburgh. Fifth Edition. Cloth, 10s. 6d.

STANDARD ILLUSTRATED CLASSICS.

By ARCHIBALD HAMILTON BRYCE, D.C.L., LL.D., Senior Classical Moderator in the University of Dublin.

THE WORKS OF VIRGIL. Text from HEYNE and WAGNER. English Notes, original, and selected from the leading German and English Commentators. Illustrations from the Antique. Fourteenth Edition. Fcap. 8vo, cloth, 6s.

In Three Parts { PART I. *Bucolics and Georgics.* 2s. 6d.
" II. *The Aeneid*, Books I.–VI. 2s. 6d.
" III. *The Aeneid*, Books VII.–XII. 2s. 6d.

"Contains the pith of what has been written by the best scholars on the subject. The notes comprise everything the student can want."—*Athenaeum*.

By JOSEPH CURRIE, formerly Head Classical Master of Glasgow Academy.

THE WORKS OF HORACE. Text from ORELLIUS. English Notes, original and selected, from the best Commentators. Illustrations from the Antique. Complete in One Volume. Fcap. 8vo, cloth, 5s.

Or, in Two Parts { PART I. *Carmina.* 3s.
" II. *Satires and Epistles.* 3s.

"The Notes are excellent and exhaustive."—*Quarterly Journal of Education*.

LONDON: CHARLES GRIFFIN & CO., LIMITED, EXETER STREET, STRAND.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

TENTH GENERAL CONFERENCE, ABERYSTWYTH.

THE charming town of Aberystwyth put on its sunniest aspect to welcome the members of the Tenth General Conference on Monday, April 18. The first item on the programme was a *conversazione* given in the University College by invitation of the Principal, Mr. Roberts, who is also Vice-Chancellor of the University of Wales. Mr. Roberts's welcoming address struck the right note for such an occasion. He spoke of the enthusiasm of Wales for education and culture, and of the help England could get from the sister country in the solution of administrative problems; and, on the other hand, he referred in words of high praise to the disinterested work the Guild had done for the science and art of education, and said that here Wales in her turn might learn from the discussions to be held. Mr. A. C. Humphreys Owen, M.P., President of the local Branch, seconded the welcome in a speech full of clever and pleasant humour, in which he asked for the assistance of expert opinion in deciding administrative problems such as the relations of primary and secondary schools, the value of dual schools, the provision of rural schools, and the object and aim of education as a whole. The Central Board made no claim to have solved these difficulties, but it was facing them, and hoped much from general discussion and the general widening of educational opinion. The ratepayer still needed to be roused to a sense of his duty. Mr. Russell, of University College School, replied on behalf of the Guild, and then visitors were free to listen to the Welsh music provided for their entertainment.

On Tuesday morning the proceedings opened with the presidential address from Dr. Isambard Owen, Senior Deputy-Chancellor of the University of Wales. Dr. Owen speaks with inner knowledge and authority on this subject, and we are glad to reproduce his very excellent address in full:

THE UNIVERSITY OF WALES AND ITS EDUCATIONAL THEORY.

On the 30th of November, 1893, the Great Seal was affixed to a Charter constituting the University of Wales. The University thus brought into being was a public authority, empowered, subject to certain conditions specified in its Charter, to confer academic degrees on candidates presented by the public University colleges which had of recent years been incorporated in Wales, and to advance such graduates to further degrees upon conditions which it should itself lay down with the sanction of its Visitor. The University commenced its operations in June, 1895, when its first examination for matriculation was held. Of the results of its work it is as yet premature to speak; but the 530 students who have matriculated in it during its first three years are welcome evidence of the confidence it has inspired among the Welsh people and a hopeful presage for the future. Few documents of similar nature, one may venture to say, were ever more fully and minutely considered than the draft of the Charter thus carried into effect. Its main lines were laid down by a public Conference held in the autumn of 1891, its every detail was anxiously discussed by a representative Committee in a series of meetings which extended through the greater part of the succeeding year; and it is somewhat remarkable that, although the earlier meetings had appeared to show almost irreconcilable antagonisms of opinion on essential points, the scheme which eventually emerged from these laborious discussions was one which had gained not merely the acceptance, but the cordial approval, of nearly every member of the Committee. It was referred by the Committee to the original Conference; by the Conference it was remitted to the colleges, to the sixteen County Councils of Wales, to the Press, and to the public, and in the columns of the newspapers from end to end of Wales for six months further, before a draft was laid before the Lord President of the Council for acceptance. From this ordeal and from the further scrutiny of legal advisers and of a Committee of the Privy Council the scheme emerged unscathed, and, save for a few minor points of detail, the Charter which passed into law in November, 1893, is identical in its provisions with the scheme which was framed and submitted in the preceding December by the Charter Committee. The constitution of

our University, therefore, and the detailed provisions in which it is embodied in our Charter are not the result of compromises between conflicting views and opposing interests, but represent a fairly uniform intention and embody a consistent educational theory; and I thought that I could not better occupy the time allotted for this address than by attempting, however imperfectly, to give you some idea of the views upon which our Charter was based, and of the manner in which the promoters of the scheme endeavoured to give effect to them.

A University must needs be considered under two aspects, for it has a double duty to perform. Its business is at once to promote the advancement of knowledge and the cultivation of learning among its members, and to undertake the education of aspirants to its degrees. Though in practice best united, the two duties are technically separable, and at different epochs and in different Universities one or the other has assumed the greater prominence and come to be regarded as the more especial University function. It may, perhaps, be said that in modern Germany the former duty has somewhat tended to obscure the latter, while in the United Kingdom it is unduly sacrificed to the imperious requirements of undergraduate education. Our institution, we trust, will equally occupy both provinces of University work, and it is not from indifference to the former that I am fain to give but scant time to it on the present occasion. We are, indeed, but feeling our way towards it, and at the present stage one can only indicate the lines on which we believe our work in it will develop. Properly speaking, it will be in large measure the province of our colleges rather than of the University itself; but our colleges are, as I shall show in detail later, so closely knit with the constitution of the University that, for University purposes, it is difficult to regard them otherwise than as parts of the same institution.

How best the advancement of knowledge by way of research may generally be promoted is a difficult and delicate subject on which much has been said and little definitely settled. The highest class of research is, indeed, independent of promotion, and, one may add, of discouragement as well. The Harveys and Galileos are natural phenomena, which institutions can do little to evoke or to suppress. But the journey-work of research has to be done as well as its pioneering, the plodding through the clay as well as the dash across the heights. The pursuit of knowledge by research is often but a dull piece of task-work, often disappointing, often discouraging, often productive of no worldly reward beyond the satisfaction of labour done. How best can a University or a college hold a helping hand to the men on whose work its fame will depend?

Of the direct endowment of research, about which a few years back we heard so much, little need now be said. Grants in aid of specified inquiries, administered by competent authorities, are, indeed, among the most productive of benefactions. One such, by the generosity of the Gilchrist Trustees, our University is already empowered to administer, and valuable results have not been wanting; but, if by the direct endowment of research is meant the establishment of permanent pensions, pledging their holders to no definite obligations, but meant in general terms to enable them to live a life of learning or research, it would be lost time to argue that while human nature is what it is such endowments are not likely to produce any commensurate results. Man is at best but an indolent animal, and procrastination his besetting sin when the spur of immediate obligation is wanting.

From the older English Universities there is, unfortunately, less to learn than one would wish. Their output of research is notoriously out of relation to the number and wealth of their academic foundations. It must be remembered that the promotion of research, as we understand it to-day, was no part of the original scheme of an Oxford or Cambridge college. But the accidental utilization of part of their income as in some sort an endowment of research has shown, at least, the defects of the Oxford and Cambridge system as applied to this particular object. We see men definitely chosen for the academic career at far too early an age—before their real bent or capacity has had time to show itself. We see them chosen for prowess in the examination-room alone before they have proved their capabilities either in teaching or in independent work. We see them placed in a position in which no adequate future career is open to them that is to be achieved by the pursuit of special learning or original investigation. To the young resident

Fellow of his college seniority may bring an increase of emolument, talent for organization a tutorship or bursarship, personal respect the headship of his house; but the distant and doubtful prospect of an ill-paid University professorship weighs light in the scale against the solid rewards that are before him if he will but abandon the higher intellectual work for the lucrative office of coaching undergraduates for examinations.

If we wish to succeed, we must learn of the successful. In Germany, the land of research *par excellence*, we find the business of research deemed in practice inseparable from the office of teaching; we find examination successes counted as only one, and that not the most important, of the qualifications for the academic life; we find each aspirant required to serve a period of probation before being definitely admitted to the University office; and we find a career placed before him, when admitted, which he may hope to surmount, stage after stage, by his own exertions, both in the field of genuine teaching and in that of original research. Finally, we find the educational work of the University placed on a basis which offers little encouragement for "coaching," as understood in the English Universities. We need not, indeed, go so far as Germany for such an example. We may see a system based on identically the same principles in full work in a nearer set of institutions, which, up to the present, have not engaged the attention of educationists as much as, perhaps, they deserve. The contributions of our own metropolis to the current rapid advance of medicine and surgery are, in the main, the result of the application of these principles of selection and promotion in the ordering of the London medical schools. Something of the kind, it seems probable, will, eventually, work out in Wales, as the available means of our colleges progressively increase. Their teaching is on a professorial basis; and, in reference to University work, is necessarily so. As the number of students increases, the need of sub-professorial positions proportionally augments; all such appointments, by the constitution of the colleges, are staff appointments, made by the college itself, and the tendency is towards the creation of an ordered academic service, ranging from rank to rank. As the material prosperity of the colleges augments the remuneration of their academic staff, the junior offices will become more and more objects of ambition to men who aspire to the senior posts, and a system of promotion within the service tend, as in older Universities, more and more to become the rule.

One connecting link is needed, and that the University is endeavouring to supply—the link between undergraduate and official life. We want some means to enable the promising young graduate to remain a few more years in connexion with his college, or to resort to some other seat of learning without losing touch with his University, to spend his time in advanced study, to prove his bent or show his capacity for academic life. We want to create a reserve of our own graduates upon which to draw as occasion may serve. This we are endeavouring to effect by an establishment of University fellowships open to our graduates; offices meant not to be regarded as mere prizes, but as specifically granted for the purpose of advanced study or original work, and forfeitable if the intention of the endowment is not duly carried out. May one prophetically see in some not distant future the staffs of the colleges recruited by preference from the ranks of the University Fellows, the successive steps of academic promotion placed before the recruits to achieve, and each step bearing, thanks to the wise generosity of our wealthy countrymen, the substantial remuneration which is its rightful due?

What more the University is doing or proposing to do in this province I must postpone to a later part of my address. So much I have thought it right to say in order to show that we are alive to the importance of the union in our colleges of the two classes of University work. In practice, indeed, one cannot long flourish without the other. The pursuit of knowledge is in danger of growing languid unless kept in tone by the obligation of communicating it, and educational methods of becoming dry and barren if they be not refreshed by irrigation from the living spring of original intellectual work. But, in its present stage, the University of Wales must be judged mainly from an educational standpoint; and my immediate object is to speak of the educational theory which guided its promoters and to which they endeavoured to give effect in its Charter of foundation. It is with the educational aspect of a University, indeed, that the provisions of a University Charter in this country are chiefly

concerned. The educational power, or, rather, the power of verifying education, is, with us, the one function of a University for which a public legislative Act is essential; and the questions involved in the grant of a Charter are, with few exceptions, questions of the conditions under which undergraduates may present themselves as candidates, and under which initial degrees shall be allowed to issue. This has, probably, largely helped in fixing the minds of our compatriots, as undoubtedly they are fixed, too exclusively on the educative side of a University's work.

The fundamental ideas on which our Charter was based were few and simple. They were, briefly, that education implied systematic training of the powers of the mind, and not merely the imparting of a given bulk of knowledge; that direct personal teaching is an element of immense importance in education; that the University stage of education should imply such teaching at the hands of highly qualified specialists, each dealing with his own particular subject; that teaching is an art in itself, which needs, like other arts, to be learned before it can be successfully practised; and that examinations, as practically possible, are but a partial and imperfect means of testing educational results. These ideas are not original; in such an audience as the present I think I may even venture to claim that they are orthodox; but some measure of interest may attach to the manner in which they have been embodied in our scheme. Whatever subject we take, beyond the most elementary, that is ordinarily taught for educational purposes, it is obvious that it must be taught with some further end than the mere acquisition of facts. Geometry, logic, and philosophy, as school subjects, have hardly ever even made the pretence of being directly useful. Latin, it is true, was in the middle ages as needful to know as French and German are now, and Greek was originally introduced merely as a key to the literature it contained; but the employment of these languages in education has continued long after learned men ceased to write and converse in Latin, and long after literary interests ceased to centre mainly in the classical tongues. It may be said that the maintenance of classical studies in our schools is but a respectable tradition, from which we are too timid to break away. Let us look, then, at a subject which has no tradition at all to support it, one that we have but lately introduced into our schools, with our nineteenth-century eyes wide open—the system of mechanical exercise which the Swedes call *Slöjd*. The visitor to some of the most modern of our schools will see the pupils during certain hours of the week engaged in cutting spoons and bowls and other domestic articles out of pieces of wood. Are they taught this art in order that when grown up they may make their own spoons and bowls instead of buying them in the shops? Certainly not, but in order that they may acquire habits of close observation and attention to detail, of careful measurement, and of working by and to measurement, and the power of making the hand follow the intentions of the mind. It is not the art of carving wood, but the principles and methods of mechanical work in general, that the pupils are making their own. Once thoroughly and systematically grasped, the pupils will readily learn to adapt them to any particular set of conditions they may subsequently have to meet.

So with the classical languages: the average grammar-school boy is not taught them in order that the average educated man may be able to read, write, or speak Latin and Greek (the average educated man, we well know, can do nothing of the kind); but that he may acquire, amongst other similar things, the habit of minute attention to verbal forms and to the shades of meaning they may be used to convey, the habit of distinct realization of the ideas he desires to express, the habit of exact verbal construction and the power of detecting and avoiding verbal pitfalls; in a word, the principles and methods of language, the instrument of half his future life. Or history: the average man is not directly concerned to know what points were in dispute between the Roman *plebs* and the Roman patricians twenty-four centuries back, or what particular events led to the rise and the fall of the Roman Empire whose very shadow has passed away; but he *is* concerned, and deeply concerned, to understand the springs of collective human action, to know how men or masses of men are swayed by interest, by pride, by passion, prejudice, or patriotic zeal, to be able to foresee the probable conduct of his fellows under given sets of circumstances; and precisely this is what such a history as that of Rome, in the hands of a competent guide, is capable of teaching

him. Should he pursue his historical studies to greater depth, he will gain, what is at least of equal importance, an acquaintance with methods of historical study, and the principles on which verbal statements may be accepted or rejected as constituting historical evidence.

Professed utilitarians in education press hard the claims of the natural sciences even as school subjects; but it is difficult to see on what the idea of their direct utility to the average man is based. In this country, at least, they are not a very remunerative occupation, and four-fifths of our countrymen will pass their lives without finding an opportunity to earn a sixpence by their school knowledge of the natural sciences or losing any appreciable sum for want of it. But the educationist who is not a utilitarian has a far more logical reason for urging their claims, since, apart from the intrinsic interest of their subject-matter, the student who pursues them in a truly educative manner may gain, what will be of more value to him than many facts, an insight into the methods of scientific inquiry and into the nature and principles of scientific proof.

I am skimming lightly over the surface of a very large subject, to illustrate, and with no idea of precisely defining, the views of the nature of a liberal education which appealed to the University's promoters. Roughly speaking, I think we should all have been agreed that its main object is less the communication of facts (important as "brute knowledge" undoubtedly is) than the inculcation of principles and the training to their proper use of the various powers of the mind—the powers, let us say, for example, of observation, concentration, and memory, first of all; the powers, next, of measurement, interpretation, expression, and construction; finally, the power of using the several methods, the mathematical, the philosophic, the scientific, the historic, by which logical conclusions may be reached and truth in mundane affairs approximately arrived at. Collectively and individually we are voyagers on the sea of life; the more methods we learn of keeping and correcting our reckoning, the better we shall be able to shape our course.

Of an education such in kind as I have roughly attempted to indicate, an education comprising mental discipline as well as store of knowledge, dealing with principles and methods no less than with facts, it was the desire of the promoters of the University that its initial degrees, the degrees that transferred its students from the apprenticeship to the freedom of the corporation, should imply the possession. The further degrees which graduate members might afterwards aspire to take should, it was generally held, be treated as recognitions of more specialized erudition or of special original work.* Such an education as we contemplated for our initial degrees, one may readily admit, a few exceptional students might manage to reach by their own unaided use of written books; but legislation cannot be limited to the case of exceptional men, and in this company I need scarcely argue—I may take it to be the accepted result of scholastic experience—that for all the shortest and safest, for most the only possible, way of attaining such an education is by the contact of living mind with living mind, the direct personal instruction of teachers who are both masters of their subjects and masters of the art of imparting them to others. Such an education, in Wales, is fortunately now within the reach of ability and industry, from whatever class they may spring.

Half a century ago, had one asked a prominent educationist how a University should satisfy itself as to the character of the education on which it was asked to place a stamp, his reply would have been prompt and unhesitating: "By rigid and impartial examination." The experience of fifty examination-ridden years has insensibly modified this view, and educational opinion in the present day seems rather in danger of underestimating than of over-valuing the efficacy of examination tests. In theory, no doubt, the process of examination is capable of all that was once credited to it; but in framing our policy we had to consider examinations not as under some ideal set of circumstances they might be, but in the form to which practical experience has shown that University examinations must be restricted—examinations, that is to say, conducted mainly by written papers, and those of limited number, with but sparing resort to *viva voce* tests.

* The regulations of the University require candidates for the degree of Master in Arts to present a thesis or dissertation embodying independent work, as well as to submit themselves to an examination.

There are certain rigid conditions with which questions that can with fairness be set in examination papers must needs conform; and the practical examiner, setting papers in any given subject, soon discovers that the number of questions he can set in it complying with all the necessary conditions is a somewhat closely limited one, and that there are considerable portions and aspects of the subject, probably of educational value equal to the rest, which elude his power of framing admissible questions upon them. The teacher who teaches for the sake of the subject and not of the examination will take his pupil through every part of the subject alike; but the tutor whose primary aim, for any reason, is his pupil's place in the examination list will be judicious enough to direct him to neglect those portions and aspects of the subject in which no questions are to be expected, and to concentrate his attention on those which according to the tutor's experience are likely to be "set." Between the student who has been fully taught and the student who has only been judiciously prepared the examination paper may fail to detect the difference, even when the plainest and barest set of facts is in question. Nor, further, can paper work furnish any satisfactory criterion of the depth and permanence of the candidate's information, whether it is "ingrain," or merely surface colour, deliberately and thoroughly built up or dexterously piled together for the purpose of the paper and destined to fall to pieces almost before the list is out. Either kind of knowledge may furnish answers correct in substance and form; between the two an examiner may guess, but cannot know; or, if he can, he is not permitted to use his knowledge.

If such are the shortcomings of examination where plain matters of fact are alone involved, it is hardly to be expected that its results can be more satisfactory when the question is of the candidate's grasp of principles and methods. Questions now become still more difficult to frame, their scope more narrowly limited, and the difficulty of distinguishing between a reply which is the result of the candidate's independent thought and one which has been merely conned by rote in direct anticipation of a question is correspondingly greater. Much, of course, depends on the nature of the subject and the degree in which practical exercises can be introduced to test the candidate's mastery of its principles. In mathematics, and in the traditional form of classical training, the efficacy of the examination process is, perhaps, at its greatest; far less when the natural sciences are in question; and in history, probably, at its least.

Could *viva voce* be more generally employed, matters would, doubtless, be improved. The method is more flexible, and can be made to cover ground which written questions are unable to reach, while the cumulative method of questioning that oral examination permits—I mean the basing of further questions on answers already given—enables an examiner to form a far more accurate idea than a written paper of the extent to which the candidate understands what he is speaking of. But in examinations on which important decisions hang *viva voce* can only be very sparingly introduced. It is impossible, satisfactorily, to equalize the severity of different sets of questions put to successive candidates, and there is always an unknown quantity to be accounted for—the specific nervousness or shyness of the individual examinee.

But, while recognizing the limits of efficacy of the examination process, the framers of our University scheme would not have it supposed that they under-estimated the real value in education of examinations or of the work of preparation for examinations. All intellectual exercise must be educative in some kind, and the process of preparation for examination, however it be conducted, is in itself a training of a very valuable sort—a training in concentration, alertness, rapid grasp of facts, habits of system and order, readiness in producing and marshalling available knowledge when wanted; mental qualities of no small service in the actual business of life.

To the conduct of examinations, therefore, for educational as well as prudential reasons, the Charter Committee, as will be presently seen, devoted particular attention. The University's scheme of examinations has been worked out with no less care than any other part of its system, and on the score of our examinations alone, as at present conducted, we might be content to court comparisons, even though passing them were the only qualification required for our degrees. But some more direct assurance of the fulness and completeness of the education which aspirants to initial degrees have received we

held the University must require than examinations were able to afford. We held that it must take cognizance of the character and methods of the teaching it was expected to recognize as well as of the results that could be displayed in examination form. Nay, as the education in our eyes was the essential end, and the examination mainly a means to it, we thought it well that the language of the Charter should give no doubtful indication of its intentions on this point. In our Charter, therefore, and in the statutes and regulations based upon it, the qualification for an initial degree is nowhere to be found defined as the passing of examinations alone, but invariably as the pursuance of a scheme of study approved by the University, followed by the passing of such corresponding examinations as the University may direct. Our syllabuses are not published as syllabuses of examination, but in formal terms as schemes or courses of study. The distinction may seem an academic one, but phraseology is not an unimportant agent in determining the course of human affairs.

The prescribed, or approved, schemes of study for our candidates being laid down, what evidence have we of the manner in which they have been carried out? Have we any means of testing what the examination test cannot reach? There is, of course, no machinery that will serve this turn. It is a case in which we have to rely, not on machinery, but on men. Our guarantee is the character of the men by whom the educative process is carried out and the nature of the conditions under which they work. The apparatus of University teaching it was not left for the University to create. It had already been called into existence. The University College whose hospitality we are enjoying had been at work since 1872; the University College of North Wales, which has its seat at Bangor, began to teach in 1884; and the University College of South Wales and Monmouthshire had opened its doors at Cardiff in the preceding year. These colleges are independent bodies, over which the University has no direct control; but they are, like the University itself, public corporations, established by public Acts for public purposes, their government for the most part representatively constituted and directly responsible to public authority. The constitution of these colleges, the professorial basis of their teaching, the distinguished bodies of teachers they had attracted, and the character of the education they had given, even while fettered by the requirements of the University of London, indicated them as bodies upon which academic responsibilities might safely be placed: and, indeed, it was upon their petition, and in view of the nature of the work they had already done, that the University itself was called into being.

Now I think I have said enough to explain the particular text of the clause of our Charter by which the power of admission to initial degrees in secular faculties is conveyed. The somewhat involved wording of this clause is not, as might be conceived on first reading it, an effort of legal subtlety; every phrase in it was carefully considered, and has its educational significance. It is the first section of Article XIV., and runs as follows:—

The Court may, in accordance with its Statutes for the time being in force, admit to the initial degree of the University (which shall be that of Bachelor or Master, as the Court shall by Statute hereinafter determine) in any one of the following Faculties—namely, Arts or Letters, Science, Technical or Applied Science, Law, Music, and such other Faculties as may from time to time be established with the sanction of the Visitor—any person who, after having pursued in one of the Constituent Colleges during such period as may be determined by Statute of the University a scheme of study approved for the College and for the degree in question by the Court in the manner hereinafter provided, shall be presented by the said College as having diligently pursued and duly profited by the said scheme of study, and as being of good character and conduct, and who after such examination or examinations as may be prescribed by the Court in accordance with this our Charter, and with the Statutes of the University, shall be reported to the Court by the examiners as a proper person to be admitted to the degree in question.

The initial degree of our University, therefore, implies a double guarantee. For the adequacy of the scheme of education pursued the University is responsible; for the graduates' knowledge of the subject of it, as far as examination may test them, it is again responsible; but for the manner in which the prescribed course has been carried out, for the quality of the educative process which has vivified the dry bones of the subjects employed, the reputation of the college and its teach-

ers are the pledge. Direct responsibility, as regards the significance of our degrees, is thus placed upon the colleges as well as on the University, and they are given a large share of authority to execute it. No student of the University can claim the right of examination by the University until his college is itself satisfied with the progress he has made and formally presents him for the examination—a provision, this, adopted and systematized from the practice of many of the London medical schools, where it has been found to be productive of the most salutary results.

Terms are so often misleading that it may be of use to remark in passing that a college in our system has no more analogy to a "college" as understood in the system of Oxford or Cambridge than it has to the College of Physicians or the College of Heralds. An Oxford or Cambridge college is primarily a domestic, or at most a disciplinary, institution, a body of members of the University having a common dwelling-house within its precincts, living under certain rules and enjoying certain corporate funds. Its teaching functions are secondary, not in every case matter of original obligation, and a College lecturer, in the theory of the University, teaches with little more authority from it, or responsibility towards it, than any other resident graduate. It is not a constituent of the University, and has not, in its corporate capacity, any part in the government of the University; its powers are those of its individual Fellows.

Our colleges are specifically educational corporations, and nothing else, and as such are essential members of the University. The Universities of Oxford and Cambridge existed before their colleges were founded, and would continue were every college in them to be straightway suppressed. Our University could no more exist apart from its colleges than a man's head could live apart from his body. The colleges are the University in its teaching capacity, and their teachers are the University's teachers, though teaching in three centres instead of one. University and colleges virtually, though not formally, are parts of a single institution; and, translating constitutional fact into the language of ceremonial, the chief officers of the colleges are regarded by us as University dignitaries, entitled to University precedence and insignia of University rank.

At this point of their system the promoters of the Charter were met by a delicate question, to which I may devote a few words. While the soundness of their views on education was generally accepted in Wales, there were some whose natural anxiety lest any deserving student should be excluded from the University led them to urge that the obligation of collegiate study should not be made absolute, but that powers should be taken to confer degrees on a purely examination qualification as well. No appeal on behalf of the poor student could meet with indifference from a Welsh educational body; but, even apart from the merits of the question, in our particular case the proposition was impracticable, for it was quite certain that a provision establishing another "open" degree in Great Britain would have met with strenuous opposition from quarters outside Wales. I am not one of those who regard a pure examination degree, such as given by the University of London, as an evil. The kind of education which it evokes, though, not according to the views I share, the best kind, is still an education of value; and, disastrous as the monopoly of London by the titular University of London has been to the development of teaching institutions in the capital, that University has undeniably done a work of vast benefit to the country at large. But that the two systems could ever be successfully combined in one University has always seemed to me an impossibility, and I think there was no member of the Charter Committee who did not share this view. A University degree, to fill its full measure of educational utility, must be used as an encouragement to students to seek the best education within their reach. How it can do so if it offers equal recognition to those who seek the best and those who are content with what is not the best is not easy to see. A primary object of a University such as ours is surely to encourage and develop the art of teaching. How can it do this if it places the same mark of honour on the well- and ill-taught alike? And a University which attempted to combine the London system with one such as ours much needs face a serious dilemma. Are the examinations for the same degree to be of the same standard for the two classes of candidates, or is the standard to differ?

If the former, the "internal" graduates will, with reason, claim to form a superior class, as having not only passed the examinations, but followed the educational courses as well. If an attempt is made to balance matters by adding to the external students' examinations, they will, in turn, and with equal reason, make a similar claim, as having passed the severer set of University tests, and the internal students will be tempted to drift away from collegiate teaching to follow tutorial classes for the external examinations. The qualification for an examination degree and that for an educational degree seem to me, in short, incommensurable quantities, whose standards cannot possibly be equalized.

I am, of course, aware that the University of Dublin confers a small number of degrees on an examination qualification alone; but the question I am discussing is not whether an exceptional and little-known facility may be safely granted by an ancient University of established fame, which is at liberty to put an end to its experiment if it finds any inconvenience from it, but whether the two procedures can successfully be combined in a University as essential and obligatory portions of its chartered system. The new London University scheme I need hardly, I suppose, notice as an element in the argument. The scheme is admittedly a *pis-aller*—a compromise between hopelessly irreconcilable interests; and no one, as far as I know, professes to consider it intrinsically a good one.

The University, I have said, prescribes the schemes of study and holds the examinations. In what kind of authority is the responsibility of setting and maintaining the standards of the University actually lodged? A question obviously of the first importance, and one which the Charter Committee most anxiously debated. The conclusion that gradually emerged from its deliberations was that the best safeguard for the standard of our qualifications lay in a responsible public authority acting under the constant guidance of expert advice. Education is a matter of public business in Wales to an extent that may seem strange in England and in a manner that would probably seem equally strange in France or Germany. We have few of the ancient endowments that have placed English education so largely in the hands of private corporations. The requirements of national individuality and the subsidy of national education among us from local taxation have demanded local educational control; in the absence of separate Departmental administration for Wales education has in our country largely and frankly become a branch of local self-government; and few public men in Wales are without experience of educational administration. The constitution of our University Court, in which the entire legislative and executive power of the Corporation is lodged, though it may seem somewhat singular in English eyes, to us in Wales appears a simple and natural arrangement. Of this body of a hundred and one members the three constituent colleges, themselves, as I have already said, public institutions, appoint twelve members each. Twenty-six are named by the County Councils, thirteen by the Crown, and thirteen by the graduates; while the connexion of University education with the earlier grades is maintained by the nomination of six members by the Central Board of Intermediate Education, of three by the headmasters and mistresses of public intermediate schools, and three by the head-teachers of public elementary schools in Wales. The total of a hundred and one is completed by the Chancellor, who is elected by the Court, and holds office for life.

Next, as to the expert advice. In the section of Article XIV. which I read just now we heard of schemes of study "approved for the college and for the degree in question in the manner hereinafter provided." On this formal phrase "in the manner hereinafter provided" hang some of the most important provisions of our Charter. If teachers in the sense in which we are here regarding teachers are to teach to profit, it is clear that they must have a large share in settling the lines on which their teaching is to run. One course of instruction may perhaps not be abstractedly better than any other course; but, if it is one in which the teacher himself has confidence, which follows the direction in which his own thoughts move, which brings into prominence the aspects of his subject which most command his own interest, which lays stress on such illustrations as to him seem most apposite, it is obvious that his teaching will be more living and effectual than if he is compelled to teach on lines that are repugnant to his mental attitude or less accurately represent his habits of thought. Men's minds inevitably differ, and teachers cannot all be cast in the same mould. Our object was

to obtain the greatest possible educative effect from every individual teacher ; to reduce, so to speak, friction to a minimum and enable each part of the educative machinery to work to the best possible advantage at the greatest economy of force.

The academic bodies of the three colleges are represented, as well as their lay governors, in the constitution of our University Court ; but, in addition, all such of their members as are heads of their respective departments of teaching in the several colleges—that is, all who are engaged on an independent footing and not under the direction of other teachers—are, by right of their college offices and without any further election, members of the University Senate, the “second estate” of our academic realm, and by Charter the principal advising body of the University in matters relating to University studies and examination. The Senate is an advisory body, without direct legislative or executive functions ; but its advisory authority is ample and amply secured. In Article XVIII. of the Charter it is provided (I quote only the gist of the section) that no statute, by-law, or regulation concerning schemes of University studies or examination shall be enacted, or, if already enacted, shall be revoked or amended, unless such enactment or revocation or amendment have either been recommended by the Senate or submitted to the Senate for consideration, and reasonable time allowed to the Senate for considering and reporting upon it. No step, therefore, can be taken by the Court in academic business without immediate expert advice. Though the resolutions of the Senate are formally but recommendations, it is hardly necessary to point out what real power belongs to recommendations of so authoritative a character, or how large an influence they must needs exercise over the decisions of the authority ultimately responsible. In speaking of the Senate, I am not, of course, speaking of an unorganized body, deliberating and voting *en masse*. The Senate has its own organization of Committees of Faculty and Departmental Committees, among which its members are distributed, and before which questions submitted to the Senate in the first instance come.

To return to our main argument : to obtain the maximum of educative result under our system it was not, as we viewed the matter, enough to give to the teachers as a body, or to the teachers in any one subject as a body, a share in determining the courses to be approved by the University. We wished to go much further ; we wished to give the individual teacher as large a share in shaping his own courses as was compatible with the maintenance of uniformity of standard for degrees. We saw no reason why in any given subject the same course should necessarily be imposed on every college or every teacher, as long as the severity of the courses was kept in equivalence. We desired, on the contrary, to secure for our teachers as large a measure as possible of that personal *Lehrfreiheit* which is regarded as so essential a feature of the Universities of Germany.

We have, therefore, in our system no University curricula or syllabuses of examination as such things are understood in London or, let us say, in Cambridge. Our schemes of study and examination and the courses of which they may be composed are approved, as the language of Article XIV. has already indicated, specifically “for the college and for the degree in question,” and by the second section of Article XVIII. each college is formally accorded the right of initiative in proposing such schemes for the University’s approval. But for the preservation of uniformity of standard it is provided in the same Article that every scheme so proposed by a college must undergo the scrutiny of the Senate before being presented to the University Court, and, unless the Senate is satisfied, the scheme cannot go forward to the Court, or at least can only do so by a formal process of appeal on behalf of the college concerned. The uniformity of our standards, we considered, would be best secured by this provision—the expedient, in a word, of requiring each two of the colleges to satisfy themselves of the equality with their own of the courses proposed by the third.

What is less superficially apparent is the security this system in practice offers for the maintenance of the University’s standards as a whole. It constitutes, in effect, a sort of rack arrangement, in which an upward movement is far more easy than one in the opposite direction. There are, it will be seen, four parties to the University’s standards—the three colleges for their academic representatives, and the University Court. The impulse of any one may tend to push the standards higher ; without the joint action of three at least they cannot well be

lowered. Though the liberty of divergent curricula in the same subject is an essential feature of our system, it must not be supposed that in practice it is universally adopted. In actual fact, the courses approved for the three colleges are to a great extent identical, and, indeed, the need for divergence varies widely in different subjects. In mathematics, for example, there is, perhaps, little occasion for divergence, though even here our present courses are not absolutely the same. In Latin and in Greek there are traditional ways of teaching and traditional lines to be followed ; but among teachers of Latin and Greek one may have a particular bent towards the philological aspects of the languages, one may set more store by verse composition than another, one may desire particularly to dwell on the archaeological, and another on the humanistic or philosophical, side of their literatures. It is not in our view incumbent on the University to decide between the relative merits of each of these possible views of classical teaching, or to insist on a compromise being arrived at between them. All in our theory may be equally good as long as the teacher can use them to arouse and rightly direct his pupils’ thoughts. In history the need for divergence will, I think, be found essential. I need not press the argument that one professor may be particularly a mediævalist, another a classicist, and a third a special authority on some other period. Specialization in periods, it may be said, is not appropriate to a Bachelor’s course : but, though the period taught may be the same, an historian will almost inevitably be found to have his own individual point of view in the treatment of it—the point of view, let us say, of a constitutionalist, of a legist, of a populist, or of a statist ; all alike educationally valuable, provided the subject be treated with real interest and freshness of thought. If one zoologist, again, has found that he can best inculcate the elements of zoological principles and methods by directing his pupils’ attention particularly to the anatomy of the crayfish, while another, for the same purpose, prefers the domestic cat, and another, again, desires a wide field of illustration, what object is gained by forcing all to adopt the same examples as their text ? The principles and methods are the main object : the particular framework on which they may be stretched for exhibition is matter mainly for individual choice. To bind all teachers in a subject to teach on a uniform scheme is to run the risk of an unsatisfactory and useless compromise, or of a curriculum overloaded with matter in a vain attempt to meet every one’s wishes at once.

So far we have considered the requirements of University study. I will now speak, as I undertook, of the conditions of examination prescribed by our Charter. In framing the Charter we were, on the one hand, solicitous to secure that the examinations held for degrees should be correlated to the courses of study that the candidates had pursued, and, thus far, were in sympathy with the principle so dear to the Scotch Universities of examination by the teachers themselves. On the other hand, it was obvious that, if the degrees of a new University were to command the acceptance we wished for them, there must be no room for doubt in the mind of the public as to the strictness of the standard or the absolute impartiality of the examinations ; and it was perfectly obvious that the greatest security we could offer in this regard would be in the conduct of the examinations by a wholly independent authority. But the two principles, on consideration, did not appear to us to be by any means incompatible ; for it seemed possible to meet all that is essential in the former by associating the teachers in the conduct of the examinations, while, at the same time, satisfying the latter by reserving the ultimate authority in determining results to impartial examiners appointed from outside.

Article V. of the Charter, therefore, lays the University under the following obligations :—

The Court shall appoint at least one person who shall not be a member of the teaching staff of any constituent college as examiner for each subject in which it holds examinations as a qualification for degrees. Examiners so appointed by the Court shall be called external examiners.

Every examination conducted by the Court as a qualification for a degree shall be conducted by the external examiners of the University for the subjects concerned jointly with examiners (herein called internal examiners) appointed by the constituent colleges in such numbers as may be prescribed by statute, and no examiner’s report shall be received by the Court unless the external examiners have concurred in the said report.

Under this article, as reduced to practice, each college appoints one internal examiner in each subject in which it presents candidates for examination, and an external examiner (one only at present) is appointed by the Court or by a Committee of the Court empowered in that behalf. The Vice-Chancellor, the external examiner, and the internal examiners constitute the Examining Board of the University in that subject. The Board meets twice : once before the examination to set the paper, and once afterwards to determine the lists. The external examiner looks over all the papers, each internal examiner those from his own college in the first place, and, subsequently, half of the rest. The final results are the outcome of consultation between the members of the Examining Board ; but, under the provision of the Charter I have just quoted, an absolute authority rests with the external examiner, and he may nullify any resolution of the board by refusing his assent to it. On him, therefore, the full responsibility as regards the University rests. Such a system obviously needs external examiners of exceptional qualifications and authority, and, thanks to the action of H.M. Treasury in this respect, such men we have been able to secure. A glance at the list of our external examiners will show that it is a list of men for whose awards we may unhesitatingly claim the confidence of the academic world.

Such, in general terms, is the theory of undergraduate education which was in the minds of the promoters of the University Charter, and such were the main provisions by which they aimed at carrying it into effect. The provisions I have quoted apply to all our faculties alike, with one exception. Our Faculty of Theology, properly speaking, is one into which the question of undergraduate education does not enter, for its curriculum is open only to students who are already possessed of University degrees. But there were other reasons which rendered it necessary for the Faculty of Theology to be established on a footing different from that upon which the other faculties are placed, for it is the only one for which the constituent colleges can bear no share of the responsibility. They are debarred by their Charters from undertaking theological education ; the principal subjects of the faculty are not included among their Chairs, and are, in consequence, unrepresented in the University Senate, from whose cognizance the schemes of study and examination qualifying for degrees in Theology are, therefore, excepted, the entire responsibility for the conduct of this faculty being vested in the University Court.

The Court has by statute created an advisory body in theological study under the name of the Theological Board, and the conditions under which regulations in respect of theological study are enacted, and qualifications for degrees in Theology determined, are as far as possible approximated to those obtaining in the faculties of secular education. It is probable that the constitution of the Faculty of Theology will undergo further development in a not far distant future, when the general organization of theological education in Wales has settled into more permanent form. I need hardly add that in Theology, as in other matters, the University holds inquisition into knowledge and skill alone, and that its courses of study and examination imply no question of persuasion or belief. The Churches of England and Scotland, the principal Nonconformist bodies, and scholarship pure and simple, are alike represented in the list of the Theological Board and among the examiners in the Faculty.

And now I must return upon my track, pick up the broken end of the first part of my subject, and speak further of the means by which our Charter aims at promoting the advancement of knowledge and the cultivation of learning among the members of the University. I have already attempted a forecast of the way in which this may be expected to work out in the colleges and among the college teachers and University stipendiaries ; but we had something more than this in view, an aim in which we wished every graduate to have a share. We wished to make the University an intellectual bond of union among all her children, an encouragement to the cultivation of learning among them even when they have passed from the discipline of her colleges, and a means of enabling them the better to compass it. We wished to make the feeling of corporate fellowship among members of our body stronger and more real than is the case in most modern Universities, and to evoke something of that corporate sense which is not among the least valuable results of Oxford or Cambridge life. A "Convocation" or General Assembly of Graduates is indeed a part of

most modern University schemes, realized or unrealized ; but the name of "Guild" which we gave to the "third estate" of our University was intended to signify that we looked forward to far more than a series of formal meetings for the purpose of electing representatives or passing resolutions on matters of University policy. Article XIII. of the Charter, which prescribes the proceedings and powers of the Guild of Graduates, is unfortunately but a *frustum*, for some of its most significant provisions were in form, though, I hope, not in substance, elided from the Charter in its passage through the Committee of Council, in the fear, as was understood, that they might prove an obstacle to it in a later stage. The Guild, like the University Court, is required to visit each of the colleges of the University in annual rotation—so much of our plan still remains ; but the framers of the Charter held that the most effectual means of ensuring participation and living interest in the affairs of the Guild on the part of its members was to make it an authority capable of administering independent funds and undertaking definite independent work. In the draft it was therefore specifically provided that the Guild should be empowered to appoint trustees to hold funds for its benefit apart from the general funds of the University, and to devote them to the encouragement of learning or of original research. As the Charter now stands, no indication of our intentions in this direction remains, and the one specific duty proposed for the Guild is not that of *administering*, but of *collecting*, funds for the foundation of scholarships and prizes. This particular provision, I may take the opportunity of stating, is one for which the University Conference was not responsible.

"The words have fled, the melody remains" (Sir Lewis Morris will forgive my transposing his verse), and the Guild, notwithstanding these formal deletions, has already, under the energetic guidance of its Warden and Honorary Secretary, done much to realize the original intentions of the Charter Committee. Not only have the proceedings of its meetings held at the seats of the constituent colleges been full of interest and value ; it has also entered upon a serious literary task—the re-editing and republication of the works of some of our ancient Welsh authors. The Warden himself has found time amongst his official labours to lead the way, and his edition of Morgan Llwyd o Wynedd will speedily see the light. From my present audience I may, without hesitation, ask both sympathy and interest for the work and the future of an institution that bears the name and embodies the idea of a Guild.

Finally, I must apologize to one portion of my audience for having left until the last a very important feature of our theory. In the first article of the Charter we read :

Women shall be eligible equally with men for admittance to any degree which the University is by this our Charter authorized to confer. Every office hereby created in the University and the membership of every authority hereby constituted shall be open to women equally with men.

On this question the promoters of the University felt no hesitation, and dreamed of no half-measures. The clause I have just read, in almost identical words, is to be found in the original draft of our University scheme, and of all the many clauses of that and of succeeding drafts it is, as far as my recollection serves, the only one that was never challenged or made the subject of any amendment.

The presidential address was followed by a discussion as to whether it is preferable, in the organization of intermediate schools, to have a large number of small schools or a smaller number of large schools.

Miss E. P. HUGHES, Principal of the Teachers' Training College, Cambridge, in opening the debate, said that her experience had made her distrust large schools, and she believed that the best educational results would in future be obtained in small schools. A small school, in Miss Hughes' opinion, is one numbering between eighty and three hundred pupils. Below this minimum the cost would be out of proportion to the numbers. There were, in her opinion, seven or eight reasons why a school of over three hundred was not so educationally valuable as a school of fewer number. In the first place, the size of the school often affected the size of the class. It was only in large schools that they found monstrous classes. In the second place, a very large school was a great strain on the head of it, and, to some extent, the finer person at the head the greater the strain was felt. The schools in future would, she trusted, be more educational than military. In the third place, the influence of the head did not affect individual pupils sufficiently. In the fourth place, in a school of over three hundred there was a great deal of more or less mechanical work, which must of necessity fall to the head, so that he would have less time and energy to do more

important work. In the fifth place, there were usually more rules and less freedom in a large school; the individual was less important and of necessity less studied. In the sixth place, teachers were human, and could do best work at the head of affairs. Few were capable of becoming heads of large schools, but many were capable of being head of a small school. It was an advantage to the teaching profession that there should be a large number of headships. In the seventh place, a large number of small schools meant that a larger number of children could live at home. Day schools were becoming more and more popular, and rightly so; and in a poor country like Wales a large number of day schools was a great advantage. In the eighth place, a school did not consist merely of teachers and pupils: every school should be a centre of education to the parents as well as to those who had to take part in the management. Only so far as the people improved would the schools improve. The larger the number of schools the larger would the number of governors be who would be educated to understand education. Miss Hughes also looked forward to the time when the country should become sufficiently civilized to throw open headships of dual schools to men and women equally.

In this view Mr. R. W. JONES, M.A., Headmaster of Lewis's School, Pengam, agreed; but on the main question he differed, preferring larger schools of about two hundred pupils. He gave statistics as to cost in relation to efficiency, but had other reasons to adduce in favour of fairly large schools. He said that the development of the social element was obtained by school discipline which diffused through all the influence of one dominant personality. It had been the aim of English teachers to develop and encourage corporate life in the school. The full life of a school could exist only when fairly large numbers were brought together in one organization. As in a small community public spirit languished and died, so in a small school. Without the sympathy of numbers, and the inspiration which they gave, the school life was but feeble and the moral influences were inoperative. Whatever advantage might accrue to a boy in school in the sphere of intellect, it was not to be compared in its effect upon his character with the silent influences which were daily and hourly emanating from his fellows who were all charged, as it were, with the spirit of the head and thus unconsciously moulding his thoughts and actions. That the character of instruction imparted should be as good and as perfect as could be obtained would be generally admitted. In that respect large schools had an immense advantage over small schools, inasmuch as teachers of superior qualifications might be obtained. In a small school each teacher had to teach a little of everything. He was like a country doctor who had to deal with all the ills that flesh is heir to. In large schools, on the contrary, pupils could be under the instructions of teachers who had made a special study of the subjects they taught and had therefore a living interest in their work. A teacher could be only really effective in imparting knowledge in a subject which he had made his own. From the nature of the case, small schools could not have teachers with those special qualifications, or, if the teachers possessed the qualifications, they would lack opportunity for their employment. Teachers should be specially qualified to meet the need of special instruction in the upper part of the school. The demand was growing for ampler provision for instruction in natural science, in commerce, and in the technical arts, and that ampler provision could only be made where considerable funds were available. The more complex the system became and the more varied and elaborate the apparatus necessary, the greater the expense and so the greater need of economizing by means of fairly large schools.

The succeeding discussion was pretty evenly balanced, although a certain vagueness in the use of the words "large" and "small" made it sometimes difficult to catch a speaker's exact meaning.

Professor AINSWORTH DAVIS, of Aberystwyth, condemned small schools with great decision on the ground that educational resources were frittered away, and that no properly efficient equipment was possible. On the whole the discussion implied that a hundred pupils was the lowest workable minimum for an efficient school, and that three hundred was a safe maximum.

In the afternoon the Conference divided into two sections sitting contemporaneously. A few devoted Herbartians discussed their master's views of the correlation of subjects. Miss PENSTONE, of the Home and Colonial Training College, opened the debate with a paper in which she explained Herbart's view of the ideal masses constituting the mind, and showed how the apperceptive force of these masses determines the sequence of school subjects. Miss Penstone's language evidently puzzled our reporter, and we must be content with an abstract of the paper that followed, written by Dr. Fehheimer Fletcher, and read, owing to his absence, by Mr. RUSSELL.

Dr. FLETCHER said that the curriculum of our schools at present consisted of a multiplicity of subjects which were chiefly characterized by their variety and their disconnectedness. The correlation of subjects was that important part of the Herbartian system of education which attempted to overcome the diversity of the many subjects that were taught in the schools by establishing an interrelation of the subject-matter of all that were dealt with in a class. The problem had, comparatively speaking, only recently arisen. At the time when the classical languages were the chief and almost only subjects in the school, there was no necessity of correlation. But when the demands of our present

century gradually added mathematics, modern languages, and the various sciences to the school curriculum the problem of establishing some sort of unity amongst a multiplicity of subjects forced itself upon educationists. And the Herbartians especially had to face the problem and attempt a solution. Their theory of education had for its chief aim the building up of character and the training of the will. Herbart and his great disciple Ziller had done much for education in Germany by finding for every class one subject of a moral or religious nature which would arouse and maintain the interests of the child to such an extent that it would carry the interest excited by that subject over to the investigation and study of the other subjects. While he doubted whether the time was yet ripe for the adoption of a practical scheme of correlation in English schools, he considered that the time had come for seriously considering the subject and for weighing its practical possibilities. He wished especially to call attention to three points. First, as to the principle of correlation, ought the subjects that were taught in schools to be correlated? As far as he was concerned, he unhesitatingly answered the question in the affirmative. Unless the many different school subjects were correlated in the teaching, it would be very difficult for the child to unite them by his own effort. Secondly, how was correlation to be effected? He had no practical scheme to offer. Only patient labour and experiment would supply them with one. But he believed that Ziller had supplied them with the principle that would aid them in finding such a scheme. He meant the principle that the centre of the instruction must consist of a subject suited to the mental capacity of the child, a subject strongly interesting in its own subject-matter, and one that would especially lend itself to the training of the character of the child; and that all the other subjects must be brought into close relation to it. Thirdly, the dangers and difficulties of correlation. These were many; but the chief was the tendency to establish accidental relations among the subjects. This must be avoided most carefully, and they could best avoid it by only establishing vital and essential relationship among the subjects. Any other correlation was worse than useless, and could be justified neither psychologically nor ethically.

A vigorous discussion followed, and one that was probably the most fruitful of the whole Conference. The general feeling was distinctly that, in view of the multiplicity of subjects in the modern curriculum, some correlation must be found. But so far everything is tentative and experimental.

While educational theory was being dealt with the larger number of the visitors were listening to papers on educational practice. Mr. MACDONALD gave an address on "The Development and Training of the Voice." He was followed by Mrs. EMIL BEHNKE, who, in the course of a masterly and eloquent address of twenty minutes, which was listened to with deep attention and interest, said the gold in Klondyke would be of little use unless there were means of conveying it into the markets of the world, and all the learning and diplomas of the colleges would be of little use to a teacher unless he could convey his knowledge to others by means of audible speech. At the present time between one thousand and two thousand teachers and others whose livelihood depended on being able to impart knowledge by speech broke down annually for want of voice development and training. Instead of developing a natural and easy voice, the "vocal chords" were strained, and ultimately become diseased and ineffective. The tendency in addressing large audiences was to pitch the voice high, in the belief that a high voice carried further than a low voice. That, however, was a fallacy. The air-waves created by a high voice were thin, and were soon dissipated. Each voice had its peculiar features and its peculiar key. Training for one voice would not do for another voice; nor was it advisable to try to train the voice of young children for speaking any more than it was advisable to try to train the voice of children for singing. Each person should endeavour to ascertain the natural key of his voice, to modulate it by easy gradations in speaking, and to develop it by the proper action of the respiratory organs.

A discussion followed, which, not unlike other discussions, tended to wander from the point. Mrs. BEHNKE spoke of the needs of those who use their voices in their work. And for them no doubt training is exceedingly valuable. But subsequent speakers were confused between this view and the need of teaching children clear articulation. Dr. BROUGH caused some amusement by saying in apology for his own voice that it was the result of five voice-trainers. He was inclined to scoff at the empiric-expert view, but hoped that science would soon come to our help, not only to cure voice-troubles but to teach us how to avoid them.

After the discussion the visitors were invited by Miss Carpenter to afternoon tea in the Alexandra Hall of Residence for women students, the whole of which was thrown open to inspection.

In the evening the Mayor of Aberystwyth vied with the Principal of the College in the cordiality of welcome and generosity of hospitality. Certainly the visitors were well treated. Mr. Peter Jones, in the name of the Mayor and Corporation, greeted the assembly in a terse speech in which he said Aberystwyth appreciated the honour the Guild had done it by selecting it as this year's meeting place. He also dwelt on the progress of Welsh education, remarking that Wales availed itself in a remarkable manner of the powers of the Elementary Act of 1870; that two years later it had established the University College of Wales at

Aberystwyth, and of recent years had covered the country with intermediate schools, which he hoped would not only be of benefit to Wales, but a guide and incentive to England as well.

The next day, Wednesday, which according to the programme was to be devoted to excursions, proved to be the one rainy time in a week of ideal spring weather. Yet those who were brave enough to visit the Devil's Bridge were well rewarded.

In the evening the Annual General Meeting took place. The Report of the Council was presented, and after a valuable discussion adopted. But the discussion, though valuable, was by no means commensurate with the deserts of an excellently written Report, proving the very considerable activity of the Council during the year.

On Thursday the sun shone brightly again, and it was with some reluctance that visitors entered the debating hall, through the open doors of which the white-crested waves could be most alluringly seen.

Mr. THELWALL, of Clifton, made a strong appeal on behalf of the Guild Friendly Society. It does not seem likely that this scheme, over which the Council have taken infinite pains, will be continued unless the members at once show their realization of its needs.
